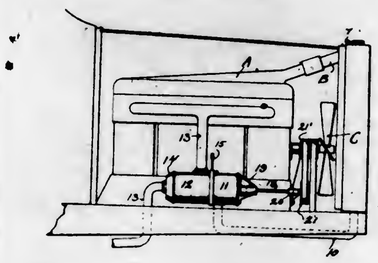
another similar series of bolt holes, outside of the openings to receive bolts, to connect adjacent coupling members together; a gasket, between the flange members and a batten ring in the inner conduit bridging the space containing the gasket.

1,389,769. HARVESTER. CHRISTIAN MAUL, Batavia, N. Y., assignor to Massey-Harris Harvester Company, Inc., Batavia, N. Y., a Corporation of New York. Filed Oct. 14, 1919. Serial No. 330,550. 7 Claims. (Cl. 56—70.)

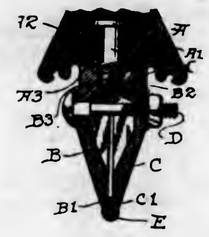


1. A harvester comprising a binder deck, a bundle tying mechanism, means for adjusting said tying mechanism transversely and parallel with the plane of said deck, including a driven shaft, a power mechanism including a driving shaft, an intermediate shaft, a pair of intermeshing gear wheels connecting said intermediate shaft and driven shaft, and means for operatively connecting said driving shaft and intermediate shaft including a driven gear wheel arranged on the intermediate shaft, a sleeve splined on the driving shaft and provided with two driving gear wheels adapted to engage with opposite sides of said driven gear wheel, and means for shifting said sleeve comprising a lever operatively connected with said sleeve, and means for holding said lever yieldingly in its neutral position.

1,389,770. COOKING UTENSIL. MINNIE M. MAY, Evansville, Ind. Filed Sept. 24, 1920. Serial No. 412,491. 3 Claims. (Cl. 53—5.)

1. A cooking utensil comprising a pan having an imperforate bottom and inclosed sides, and a handle therefor, a woven wire frame hinged to the pan having edges adapted to rest on the upper edges of the pan and a flat bottom adapted to extend into the pan below the upper edges thereof, a handle for said wire frame and means on said handle adapted to coöperate with the pan for fastening the members together.

1,389,771. TEMPERATURE CONTROL FOR RADIATORS. EDWIN E. MELLENTHIN, Waukesha, Wis. Filed Feb. 10, 1921. Serial No. 443,942. 1 Claim. (Cl. 123—174.)



In a temperature controlling apparatus for water cooled engines having a spent gas exhaust pipe and a radiator provided with jacketed upper and lower heads connected by jacketed water channels, there being an air space between the jacketed parts and a vent for the air space; the combination of a drum having a heating compartment incasing a portion of the engine exhaust pipe and an open ended air intake end, a valve for regulating communication between the air intake end and the heating end of the drum, a motor driven fan mounted in the air receiving end of the drum, and a pipe in communication with the air intake end of said drum and air space about the radiator parts, whereby air from the drum at predetermined temperatures may be positively forced about the water circulating system of the radiator.

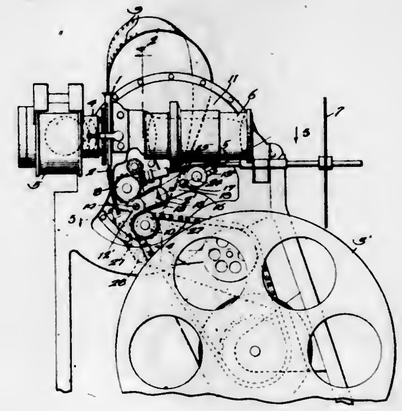
1,389,772. FOUNTAIN-PAINTBRUSH. FREDRICK J. MILLER and ARTHUR H. MILLER, Silver City, Iowa. Filed Apr. 28, 1920. Serial No. 377,248. 2 Claims. (Cl. 91—39.)

2. A fountain paint brush comprising a paint brush having flexible tubing to which paint is conveyed through a flexible hose, said flexible hose being connected to a paint container, said paint container being formed from a pliable material and provided with means whereby the container may be suspended from the body of the operator and means for compressing said container, said means comprising plates engaging each side of the container and springs arching the container and having their arms pivotally connected to the plates.

1,389,773. TROLLEY-WIRE SUPPORT. HENRY L. MILLER, Knoxville, Tenn. Filed Dec. 5, 1919. Serial No. 342,618. 4 Claims. (Cl. 191—43.)

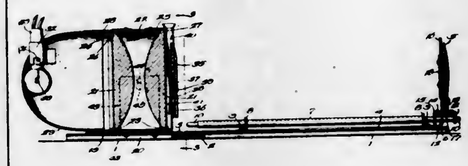
1. In a support of the nature described, the combination of a pair of jaws having their lower edges adapted to grip a wire, and one of said jaws being formed for attachment to a superposed member and having a single lateral extension and the other jaw having a socket to receive said extension, whereby a semi-universal joint is formed, and means located below said extension and socket and acting horizontally, for drawing said jaws toward each other, substantially as described.

1,389,774. CONE-BAKING MACHINE. WILLIAM E. MOORE, Chicago, Ill., assignor to Angus Henderson, Chicago, Ill. Filed Feb. 7, 1919. Serial No. 275,641. 28 Claims. (Cl. 107—66.)



6. A machine for making pastry cups comprising a table, a plurality of molds carried thereby, a head, a plurality of plungers for shaping the interior to the cups carried by the head for coöperation with the molds, a rotatable shaft, a crank carried by the shaft, a pivotal mounting for one side of the head, a connection between the pivotal mounting and crank, a second crank carried by the shaft and a link connecting the second crank with the head at a point spaced from the pivotal mounting.

10. A machine for making pastry cups comprising a mold, a plunger for shaping the interior of the cup movable with respect thereto, a plate having an aperture registering with the peripheries of the mold at its top, and movable with respect to the mold, a second plate having an aperture registering with the plunger and mavoble with respect thereto and means for simultaneously moving the two plates with respect to the mold and plunger for shearing the edges of the cup while the plunger is in the cup.

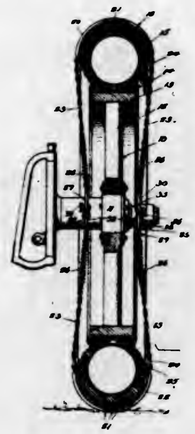


1,389,775. PICTURE-PROJECTION APPARATUS. ALBERT B. MUELLER, Chicago, Ill. Filed Nov. 7, 1917. Serial No. 200,690. 2 Claims. (Cl. 88—17.)

1. Picture projection apparatus including a reel carrying a picture bearing film; a pinion structure in mesh with the film; idler rollers between which the pinion structure is disposed, and which rollers are near said pinion structure to maintain the film in mesh therewith; a mounting for said rollers which is movable from its normal position to separate the rollers from the pinion structure; a spring for moving said mounting; and a

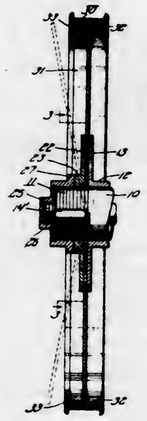
latch for holding the mounting against the action of the spring.

1,389,776. PICTURE-PROJECTION APPARATUS. ALBERT B. MUELLER, Chicago, Ill. Filed Jan. 17, 1919. Serial No. 271,555. 1 Claim. (Cl. 88—26.)



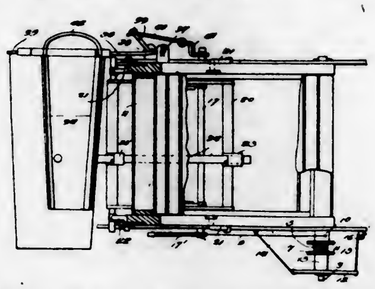
A stereopticon including a condensing lens structure; a lamp housing; a slide holder; a projection lens; a base plate upon which the aforesaid condensing lens structure, lamp housing and slide holder are mounted; a pair of rods extending longitudinally of the stereopticon upon which the projection lens is mounted; a pair of sleeves in telescoping engagement with said rods; another base plate in which said sleeves are mounted; and a third base plate supporting the aforesaid base plates that have sliding engagement with the third base plate longitudinally of the stereopticon.

1,389,777. NON-SKID TIRE ATTACHMENT. CATHARINE D. MULERTZ, San Francisco, Calif., assignor of one-half to Loyd R. Taylor, Modesto, Calif. Filed May 12, 1920. Serial No. 380,849. 1 Claim. (Cl. 152—16.)



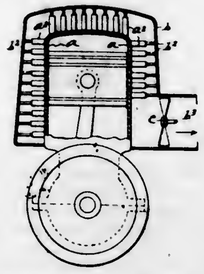
In a device of the class described, the combination of a pair of split collars adapted to encircle a wheel hub, links pivoted to the members of the respective collars at one side of the hub, similar links connecting the members of the respective collars at the opposite sides of the hub, means to secure the last-mentioned links to hold the collars in closed position, coil springs connected at

their inner ends to said split collars and extending radially from the same, flexible element connected to the



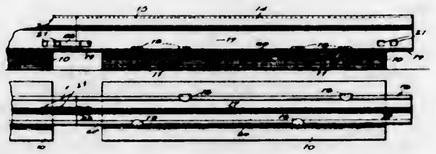
outer ends of said coil springs, and an annular ground-engaging body secured to the outer ends of said flexible elements.

1,389,778. VEHICLE-WHEEL. FRANK B. MULFORD, St. Louis, Mo. Filed Sept. 11, 1920. Serial No. 409,525. 8 Claims. (Cl. 301—11.)



1. A vehicle wheel comprising a hub member having a flange extending outwardly adjacent one end thereof, a disk mounted upon said hub-member, the said disk comprising a plurality of parts pivotally mounted to be inclined toward each other to lessen the periphery of the disk, a rim having stop members arranged in spaced relation on its inner periphery to form a groove for receiving the periphery of said disk, means threaded on said hub for clamping said disk against said flange and expanding the periphery of said rim, and means for establishing a positive driving connection between said disk and said hub and rim respectively.

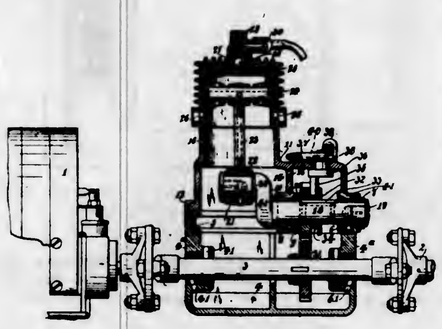
1,389,779. SHOCK-FORMING DEVICE. ANDREW H. PALMBUSH, Conrad, Mont. Filed Apr. 9, 1918, Serial No. 227,546. Renewed Dec. 31, 1920. Serial No. 434,382. 4 Claims. (Cl. 56—422.)



1. In a device of the character described, a main frame, conveying means on said frame, coacting clutch means associated with the conveying means and arranged so that the conveying means normally operate, a secondary frame movably supported in the main frame, means for operably connecting the secondary frame with the clutch means, shock forming means rockably mounted in the secondary frame, retaining means engaged with one end of the shock forming means for preventing rotation thereof, and other means connected to the secondary frame and operable when the secondary frame is moved for effecting disengagement of the forming means from the retaining means.

1,389,780. APPARATUS FOR AIR-COOLING CYLINDERS. FREDERICK W. PECK, Royal Oak, Mich. Filed Mar. 8, 1920. Serial No. 364,187. 2 Claims. (Cl. 123—171.)

1. The combination of a cylinder, cylindrical cavities having walls connected with the walls of said cylinder, a casing inclosing said cylinder and apertures formed through the walls of said casing opposite said cavities and at a distance therefrom and means for projecting a jet of air through said apertures.

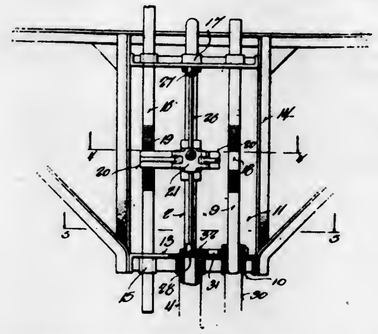


1,389,781. TRACK. GUY HARRISON PEIFER, Hazleton, Pa. Filed Jan. 4, 1921. Serial No. 434,879. 14 Claims. (Cl. 238—10.)

11. A rail having a rebent sheet forming a tubular ball portion, a web portion and a base portion, and a

core in said ball and extending throughout the length thereof, whereby when abutting rail sections are secured together, the ends of said cores will contact to form a continuous conductor.

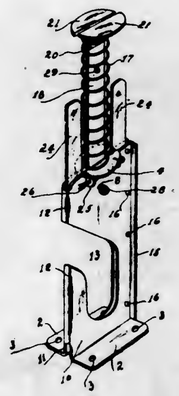
1,389,782. AUTOMOBILE-PUMP. JOHN G. PERRIN, Detroit, Mich. Filed July 16, 1914, Serial No. 851,258. Renewed Apr. 9, 1920. Serial No. 372,717. 5 Claims. (Cl. 230—27.)



1. In a device of the class described, the combination with a relatively short shaft designed to connect the magneto directly with a water pump, of a casing forming an extension from the engine base and containing practically all of said shaft whereby a relatively large casing may be disposed to occupy practically all of the small space between the magneto and water pump, a base plate carried by said casing, a pump body carried by said base plate and including a pump cylinder, a pump crank shaft journaled between the pump body and base plate and removable therewith, means for fastening said pump body and base plate to the casing, a pump piston in said cylinder actuated from said crank shaft and a clutch connection between said magneto and water pump shaft and said pump crank shaft.

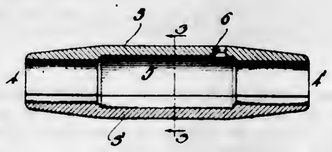
3. In an automobile construction, the combination with a shaft opposite ends of which are provided with means for connecting the same with a magneto and water pump, of an air pump including an actuating shaft paralleling the first named shaft, a driving clutch connection between said shafts, manually actuated means for moving said clutch into and from its operative position and means coacting with said manually actuated means for automatically locking said clutch in position.

5. In combination with an extension from an engine base constituting a crank shaft chamber and a shaft mounted in said chamber and driven from the engine, of a casing open to said chamber and including an air pump cylinder, a pump shaft mounted in said casing and removable therewith as a unit, a piston reciprocating in said cylinder and operatively connected to said shaft, said pump shafts and piston being lubricated from said crank shaft chamber and a clutch connection between said shafts.



1,389,783. PUMPING ATTACHMENT. JOSEPH F. RADEY, Cuto, Wis. Filed May 25, 1920. Serial No. 384,104. 2 Claims. (Cl. 103—62.)

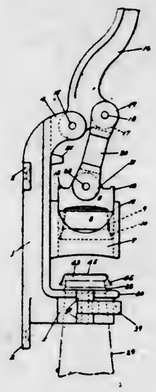
1. In an apparatus of the class described, a reciprocable operating device, a power driven actuating member, a manually driven actuating member, and means for selectively connecting either of the members with the operating device comprising a pivoted bracket, means on the bracket for selectively cooperatively engaging either of said members when the former is swung to either one of two positions, a crank, a rod connecting the crank and bracket, a



rotatable member and a connection between the rotatable member and crank to oscillate the latter by rotation of the former.

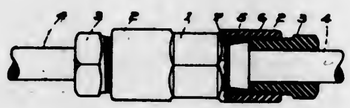
1,389,784. POULTRY-KILLER. FRANK S. RECE and ALBERT P. CUNNINGHAM, Dallas, Tex. Filed Dec. 14, 1920. Serial No. 430,660. 4 Claims. (Cl. 17—30.)

4. A blank for the frame of a poultry killer consisting of a single integral sheet having a large inverted U-shaped slot therethrough at its center and provided with spaced openings adjacent its side edges and further provided with bendable tongues projecting from its end edges.



1,389,785. CABLE-REPAIR DEVICE. ROYAL N. RIBLET, Spokane, Wash., assignor of one-half to Byron C. Riblet, Spokane, Wash. Filed May 8, 1920. Serial No. 379,827. 3 Claims. (Cl. 22—116.)

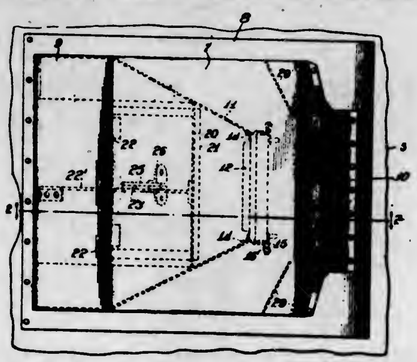
1. A cable repair device comprising a longitudinally divided sectional sleeve and applied about a fractured



portion of a cable with the cable closing the ends of the sleeve, and means for integrally bonding said cable within the sleeve.

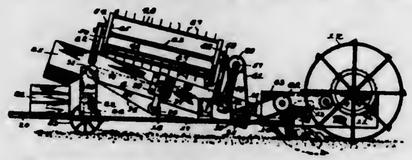
1,389,786. BOTTLE-CAPPER. LOVELL M. ROUSE, Portland, Oreg. Filed Sept. 24, 1919. Serial No. 326,066. 2 Claims. (Cl. 226—84.)

1. In a bottle capper, a frame piece, a capping member supported on said frame, means on said frame for operating said capping member, a shelf for supporting a bottle by its neck beneath said capping member, said shelf comprising an annular closed seat formed of a pair of relatively movable sections, one of said sections being rigidly related to said frame and comprising more than 180° of said seat.



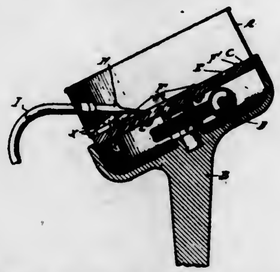
1,389,787. COUPLING FOR RODS. THOMAS R. STANLEY, Oil City, Pa. Filed Sept. 20, 1919. Serial No. 325,198. 5 Claims. (Cl. 287—107.)

1. A coupling for rods comprising in combination, a body provided at both ends thereof with a screw-thread, also a face for abutment of the rod to be coupled; a rod provided at its end with a tapering head, tapered toward its free end and having oppositely-positioned faces spaced longitudinally of said rod; and a member provided with a screw-thread coöperating with said body screw-thread, an opening in said member into which said rod extends, also a clamping face between which and said body clamping face, the respective faces of said head are clamped.



1,389,788. CAR-VENTILATOR. AUGUST STEGER, Chicago, Ill., assignor of one-fourth to George A. Woodman, Chicago, Ill. Filed June 14, 1917. Serial No. 174,749. 5 Claims. (Cl. 98—22.)

5. A car ventilator comprising a shell having top, front and back walls, a bottom wall having an opening therein, converging side walls inclosing the front portion of said opening and forming an outlet, an inclined door hinged to the shell at the top thereof behind the outlet to close

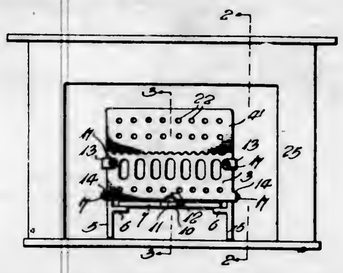


the passage leading thereto, means for operating said door, and a screen in said outlet in front of said door.

1,389,789. POTATO-PICKER. MILO M. STEPHENS and WILLIAM STEPHENS, Lakeview, Mich. Filed Nov. 15, 1920. Serial No. 424,131. 8 Claims. (Cl. 130—30.)

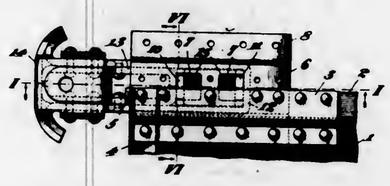
1. In a separating machine, the combination of a frame, a conveyer carried by said frame, a vine clearer carried by said frame above said conveyer including fingers movable through the material while it is on said conveyer at right angles to the direction in which it is being conveyed, and means for operating said conveyer and said vine clearer.

1,389,790. WORK-PIECE FEEDING MECHANISM. EDWIN V. SWANGREN and VICTOR SWANGREN, Maywood, Ill., assignors to F. J. Littell Machine Co., Chicago, Ill., a Corporation of Illinois. Filed Feb. 5, 1921. Serial No. 442,648. 6 Claims. (Cl. 218—2.1.)



3. In a device for feeding objects in column, a hopper, a rotary feed-plate having an annular channel adapted to collect and arrange the objects with their longitudinal axes in column, and a stripper constructed with a bore corresponding to the channel and with an end coinciding therewith; said stripper comprising a tubular stylus adapted to receive and confine the objects in column, and being related to the channel to permit the objects to extend in continuous column from the channel into the stripper.

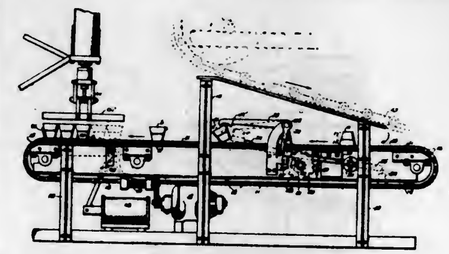
1,389,791. PROCESS OF PRODUCING ARTIFICIAL RESIN. ARTHUR L. TANNEHILL, Gary, Ind. Filed Mar. 27, 1919. Serial No. 285,545. 12 Claims. (Cl. 134—26.)



1. The improvement in the art of producing artificial resin by the polymerization of solvent naphtha obtained from coal gas or coal tar, which improvement consists in arresting the polymerization while the resin is in a highly fluid state.

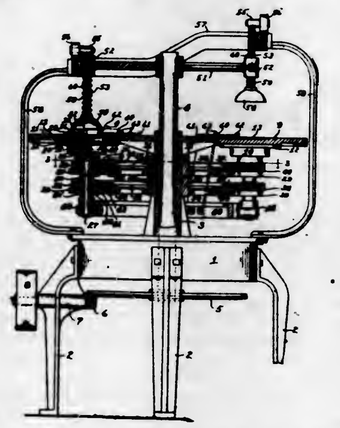
1,389,792. COAL-GRATE. JAMES WILLIAM TATUM, Durham, N. C., assignor to Shaker-Dump Coal-Grate Co., Durham, N. C. Filed Feb. 17, 1921. Serial No. 445,649. 3 Claims. (Cl. 126—164.)

1. A grate comprising a fire box having a rear wall, a forward wall and end walls, a depending fulcrum element carried by said rear wall, supporting means carried by said end walls, and a bottom grate extending beneath said forward wall and resting upon said supporting means and having its rear edge portion engaging said fulcrum to mount the grate for oscillating movement in a horizontal plane.



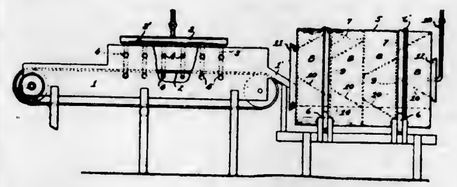
1,389,793. DRAFT-RIGGING. GEORGE E. THACKRAY, Westmont borough, Pa. Filed Mar. 10, 1920. Serial No. 364,618. 3 Claims. (Cl. 213—42.)

1. In a draft rigging, a bar of U-shape having its free ends extending outwardly, another shorter bar bent into link-form and secured to and within the first mentioned bar, the free ends of said shorter bar projecting inwardly toward each other, and a draw-bar head and buffer abutting said free ends and secured to the aforesaid bars.



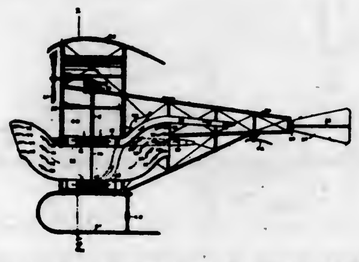
1,389,794. LEAD-STACKING MACHINE. ADOLPH A. THIELE and JOHN W. INGERSOL, Omaha, Nebr., assignors to American Smelting and Refining Company, New York, N. Y., a Corporation of New Jersey. Filed Nov. 8, 1919. Serial No. 336,641. 16 Claims. (Cl. 214—6.)

1. In a bar stacking machine, the combination with a bar receiving conveyer and a bar discharging conveyer for receiving the bars discharged from the receiving conveyer, a stop at the discharging end of said discharging conveyer for limiting the movement of the bars thereon, power means operatively connected to both conveyers for driving the same in unison, means associated with the receiving conveyer for arranging the bars in a position different from the position which they possess when received on said receiving conveyer and means associated with the



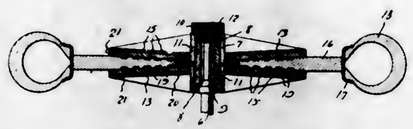
discharging conveyer for assembling certain of the bars in a set, in a desired position, with the first bar of the set engaging said stop.

1,389,795. PEACH-PITTER. ALBERT R. THOMPSON, San Jose, Calif., assignor to Anderson-Barngrover Mfg. Co., San Jose, Calif., a Corporation of California. Filed June 7, 1921. Serial No. 475,642. 15 Claims. (Cl. 146—6.)



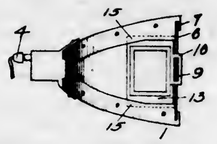
6. A peach-pitter comprising means for holding the fruit; a reciprocative blade adapted to penetrate the fruit, exterior to the pit; and means for revolving said penetrated blade about the pit.

1,389,796. METHOD OF PEELING FRUIT. ALBERT R. THOMPSON, San Jose, Calif., assignor to Anderson-Barngrover Mfg. Co., San Jose, Calif., a Corporation of California. Filed July 5, 1921. Serial No. 482,455. 4 Claims. (Cl. 146—14.)



1. The method of peeling fruit comprising initially softening the skin by subjection to heat, and then immediately removing the softened skin by subjecting the fruit to the action of an aqueous saline solution.

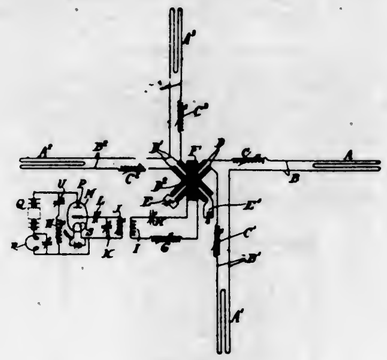
1,389,797. AIRPLANE. ROBERT M. THOMPSON, Tacoma, Wash. Filed Oct. 23, 1918. Serial No. 259,391. 12 Claims. (Cl. 249—18.)



1. An airplane embodying two air tunnels disposed at right angles to each other, the outermost openings of said tunnels being supplied with lifting planes against which air may be forced, the direction of said forced air being by a common outlet intermediate said planes.

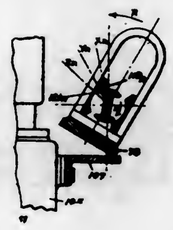
1,389,798. VEHICLE-WHEEL. OSCAR TROMLITZ, Cleveland, Ohio. Filed Nov. 15, 1920. Serial No. 424,145. 2 Claims. (Cl. 152—28.)

1. A wheel comprising an inner hub sleeve, a pair of abutting outer tubular hub sections fitting upon the outer side of said sleeve and covering the same lengthwise, each section having a radially extending disk the inner surface of which is inclined to form a tapered space between the disks, an outer tapered disk fitting between said disks, and cushions between the surfaces of the tapered disk and the inclined surfaces of the first mentioned disks.



1,389,799. ILLUMINATED SIGN. FRED M. VANSICKLE, Lewiston, Idaho. Filed June 23, 1921. Serial No. 479,718. 1 Claim. (Cl. 40—132.)

The combination in an illuminated sign with a lamp casing having complementary flanges and retaining plates, of a license plate, a transparent plate and an open slide frame supported in said complementary members, said slide frame having a front slotted tongue and a rear angular slotted lug projecting beyond the casing, an exterior display device having a slotted keeper plate to receive the slotted tongue, and sealing devices for the ends of said slide frame.

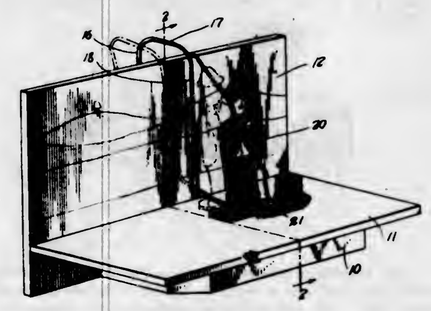


1,389,800. RADIOSIGNALING APPARATUS. ROY ALEXANDER WEAGANT, New York, N. Y., assignor, by mesne assignments, to Radio Corporation of America, a Corporation of Delaware. Filed Feb. 1, 1918. Serial No. 214,827. 8 Claims. (Cl. 250—20.)

1. In combination, at a radio receiving station, a plurality of separated antennæ, tuned to the same frequency and adapted to receive horizontally propagated waves in a plurality of directions, and receiving apparatus for

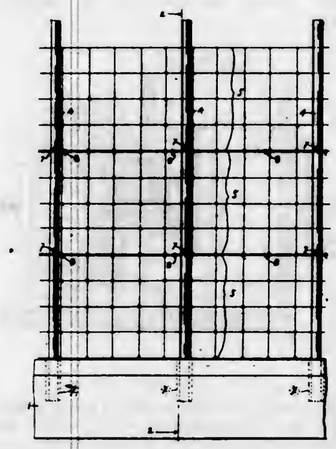
utilizing the signal waves, including means for eliminating the interference due to static disturbances.

1,389,801. AUTOMATIC GOVERNING MECHANISM FOR INTERNAL-COMBUSTION ENGINES. WILLIAM B. SMITH WHALEY, Malden, Mass., assignor to American Whaley Engine Company, Boston, Mass., a Corporation of Massachusetts. Filed July 28, 1917. Serial No. 183,368. 12 Claims. (Cl. 123—99.)



4. In combination with an internal combustion engine, a rotatable governor member adapted to be coupled with said engine to be rotated thereby; an angularly movable bracket member operating about an offset axis; a magneto mounted on said bracket and having the armature of said magneto coupled to rotate with said engine and centered with the axis of said bracket; and means coupling said governor member with said movable bracket for angularly positioning the latter for angularly setting said magneto supported thereon to vary the position of the poles thereof in relation to the armature for accordingly variably controlling the ignition timing of the engine.

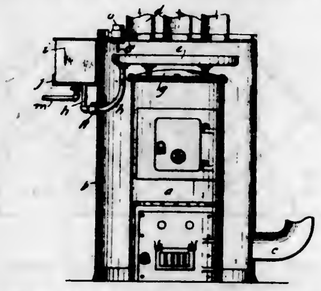
1,389,802. TOY. LAWRENCE J. WIDNESS, Brooklyn, N. Y. Filed Jan. 27, 1921. Serial No. 440,262. 4 Claims. (Cl. 46—40.)



1. A toy comprising a base, a plate representing a background at the rear of said base; an image, a single

wire support for said image, extending over said plate and secured in the rear edge of said base; and a single

helix in said wire, said wire permitting free action of said image over the base.

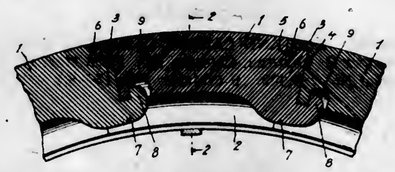


1,389,803. REINFORCED CONCRETE CONSTRUCTION. FRANK D. WOLFE, San Jose, Calif. Filed Oct. 22, 1919. Serial No. 332,445. 8 Claims. (Cl. 25—131.)

1. The method of constructing a concrete wall or the like which consists in providing a plurality of spaced substantially parallel reinforcement supporting elements, mounting reinforcement elements thereon, erecting forms to inclose said supporting elements, anchoring said supporting elements between said forms, pouring the concrete, and finally withdrawing said supporting elements before said forms are removed.

1,389,804. HUMIDIZING ATTACHMENT FOR HOT-AIR FURNACES. JOHN O. WRENN, Portland, Oreg. Filed June 3, 1919. Serial No. 301,572. 2 Claims. (Cl. 126—113.)

1. In a hot air furnace, humidifying means comprising a water-pan located at the top of the furnace within the outer casing thereof, and an automatic water feed for said water-pan whereby a constant sheet of water is maintained in the latter, said automatic water feed being

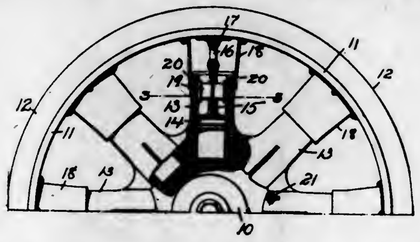


adjustable for varying the depth of said sheet of water according to atmospheric requirements.

1,389,805. LOCK. ARTHUR JEFFERSON WYCHERLEY, Wellington, New Zealand. Filed Aug. 30, 1920. Serial No. 407,049. 4 Claims. (Cl. 70—46.)

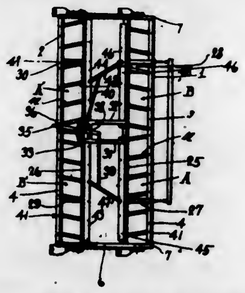
3. A lock cylinder fixing device comprising a body having a bushing portion to fit in a mortise in a door and to inclose the cylinder and connecting bar of a lock, and also having a front flange to bear against the face of the door, the body being of such form as to prevent it from being turned in the mortise, and being provided with an opening corresponding with the cross-section of the lock cylinder.

1,389,806. TIRE-FILLER. ROBERT AMBÜHL and MARX TEITSCH, Troy, N. Y. Filed Aug. 22, 1919, Serial No. 319,075. Renewed Mar. 19, 1921. Serial No. 453,707. 3 Claims. (Cl. 152—5.)



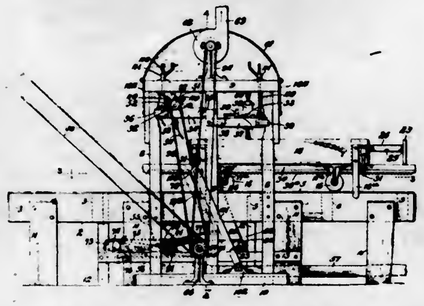
2. In a tire, a series of segmental blocks of resilient material placed end to end, each block having one end reduced in diameter to provide a projecting portion, the opposite end having a complementary recess, the outer face of said projecting end having a segmental socket formed therein, and the wall of the said recess having a complementary rib formed thereon, the said projecting end having on its inner side a longitudinally projecting finger terminating in an outturned hook, the other end having a recess adapted to receive said hook.

1,389,807. WHEEL. GUSTAV BAUMANN, Rahway, N. J., assignor of one-half to Anton Lederle, Rahway, N. J. Filed Oct. 20, 1919. Serial No. 331,913. 4 Claims. (Cl. 152—48.)



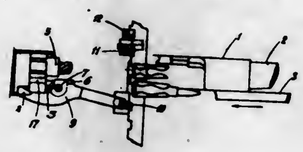
1. A wheel having a rim and hub, one member having a series of cylinders independent of each other and

adapted to have the air partially withdrawn therefrom, pistons in the cylinders, and links connecting the pistons



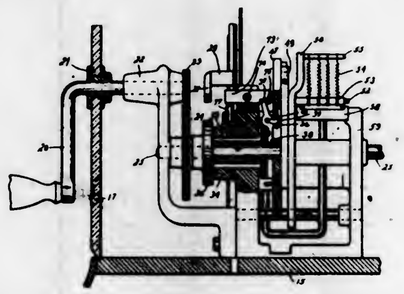
and the other member, said links being under tension when air is withdrawn.

1,389,808. LEVELING-HARROW. JOHN C. BLOOMFIELD, East Columbus, Ohio. Filed Nov. 17, 1919. Serial No. 338,509. 1 Claim. (Cl. 55—22.)



A harrow comprising a rectangular frame, blades each pivotally mounted on two parallel sides of said frame, angle irons carried by said frame and parallel with the sides mounting said blades, flange members bolted to the adjacent ends of said blades and overlying said angle irons whereby a sliding guide is formed, and means connected with said flanges for moving the same to vary the angle of the blades with respect to the frame.

1,389,809. RUG AND CARPET CLEANING MACHINE. AUGUST H. BOELTER, Chicago, Ill. Filed Mar. 17, 1919. Serial No. 283,092. 9 Claims. (Cl. 15—8.)

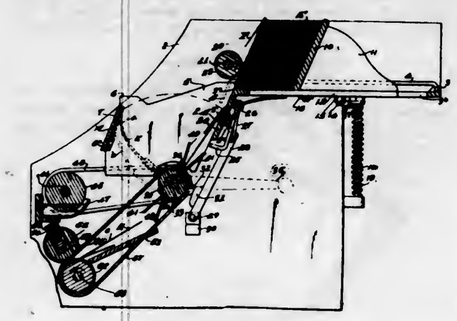


1. In a machine for cleaning rugs and the like, a support for the rug, cleaning devices associated with the support, carrying means for the rug on opposite sides of the support, and extensible carrying means for the rug at one end of the support.

1,389,810. GAS-OPERATED MACHINE-GUN. EMILE ALEXANDRE LOUIS BOURDELLES, Paris, France, assignor to Societe Anonyme Des Etablissements Delaunay Belleville, St. Denis, Seine, France, a Corporation of France. Filed Jan. 7, 1918. Serial No. 210,763. 1 Claim. (Cl. 89—33.)

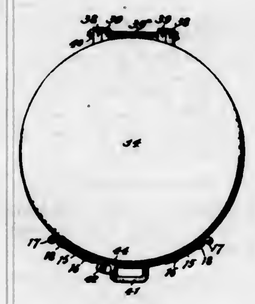
In an automatic gun of the class described, including a cartridge belt and a movable breech cylinder, an oscillating feed lever for said belt having a cam thereon cooperating with the breech cylinder to actuate the lever upon the rearward movement of the cylinder, retaining catches for the cartridge belt, a spring actuated piston for returning the lever to its initial position upon the forward movement of the breech cylinder, and means carried by said lever coöperating with the breech cylinder to positively position said lever.

1,389,811. VENDING-MACHINE. EUGENE F. BOWEN and EPHRIAM J. SCOTT, Providence, R. I. Filed Sept. 15, 1920. Serial No. 410,418. 13 Claims. (Cl. 194—91.)



1. An improvement in coin controlled vending machines comprising a drive shaft provided with a clutch member rotatable therewith, a rotatable actuator member, a movable dog carried by the actuator member, a spring acting to move said dog into engagement with the clutch member, a pivotally-supported tripper for normally locking said dog against the tension of said spring, and means for forcing a coin into engagement with said tripper to actuate the same to release said dog.

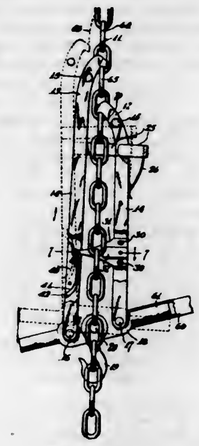
1,389,812. ENVELOP-SEALER. JOSIAH H. BYERLEY, Los Angeles, Calif. Filed Mar. 4, 1920. Serial No. 363,296. 7 Claims. (Cl. 120—6.)



1. A machine for automatically moistening and sealing the flaps of letter envelops comprising means for automatically advancing a row of envelops from a table; means for successively shifting the advancing envelops; means operative to engage and periodically release the successive envelops; means for clamping the envelops after they are disengaged successively and for moving them against an abutment so as to open the flap from the

body of the envelop; a moistening device across which the open and gummed flap of each envelop is drawn to

moisten the gum; and means for receiving the moistened envelops and for pressing the flaps to sealing position.

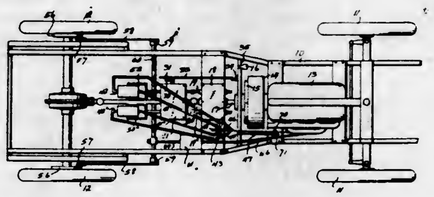


1,389,813. FIRELESS COOKER. JOHN E. CHAMBERS, Shelbyville, Ind., assignor to Chambers Man'fg Co., Shelbyville, Ind., a Corporation of Indiana. Filed Oct. 31, 1917. Serial No. 199,506. 10 Claims. (Cl. 126—39.)

10. In a fireless cooker, the combination of concentric cylindrical walls having an interposed filling of heat insulated material, rings or collars interposed between said walls at the top and bottom thereof, a cover hingedly connected to the upper collar, said upper collar having an inwardly projecting annular series of segmental supporting flanges forming intermediate spaces for the passage of products of combustion, a cooking vessel having an annular bead at its upper edge supported, on said flanges, and a portable heat transmitting member within the casing below said vessel, said last mentioned member being bodily removable as a complete unit, and means within the cooker for supporting said member in position.

1,389,814. WEIGHT-LIFTING DEVICE. EARLE E. CHAPMAN, Los Angeles, Calif., assignor to Miller-Chapman Company, a Corporation of California. Filed June 28, 1920. Serial No. 392,509. 8 Claims. (Cl. 254—75.)

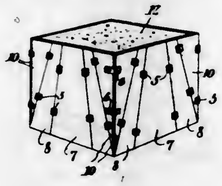
1. A weight lifting device comprising a suspended member having projections thereon, a lever to which the weight to be lifted is attached, two hooks pivoted to said lever on opposite sides of the attachment point of said weight, said hooks engaging the projections on said suspended member from opposite sides, spring means for forcing said hooks toward each other, and cam means for



forcing said hooks apart to disengage them from said suspended member.

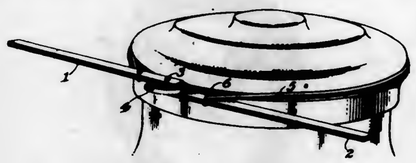
1,389,815. INNER TUBE FOR TIRES. REUBEN F. CORLESS, College Park, Ga. Filed July 19, 1921. Serial No. 485,820. 5 Claims. (Cl. 152—13.)

1. An inner tube for tires, having its tread portion provided with a groove and vacuum cups arranged on opposite sides of said groove.



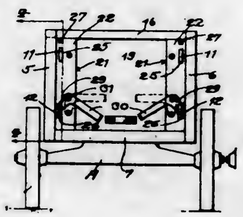
1,389,816. CONTROL APPARATUS FOR TRANSMISSIONS AND BRAKES OF AUTOMOBILES. CHARLES B. DAY, LUTHER F. DAY, and JESSE FORREST BAKER, Lamar, Colo. Filed Dec. 18, 1920. Serial No. 431,719. 8 Claims. (Cl. 74—58.)

1. In combination with an internal combustion engine having an intake pipe, a transmission embodying operating rods, a brake applied to mechanism driven by the



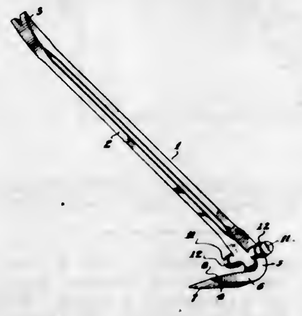
engine through said transmission, a member embodying portions shiftable under vacuum and connected with said operating rods, a second member embodying a portion shiftable under vacuum and connected with the brake, conduits connecting said members with the intake manifold, and means operating in the intake pipe for selectively directing the suction through either of said conduits.

1,389,817. CONCRETE-MOLDING FORM. ISAIAH E. DEAL, Quilcene, Wash. Filed Nov. 22, 1920. Serial No. 425,842. 2 Claims. (Cl. 25—121.)



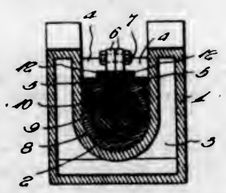
1. In a form for molding concrete pedestals, form sides comprising a central member having beveled edges, a plurality of side members fitting said edges, corner members fitting the edges of the said side members, means for detachably connecting the said side members with the said central member and with the corner members, and means for detachably securing the corner members together for opening and closing the form.

1,389,818. PRESERVE-JAR OPENER. HAROLD W. DEARING, New York, N. Y. Filed May 17, 1920. Serial No. 381,913. 3 Claims. (Cl. 81—3.1.)



3. The combination with two metal bars or handles with rounded ends, a pivot pin uniting their rounded ends, a metal disk carried by the pivot pin and a wire loop the ends of which are connected to the bars on opposite sides of the pivot pin.

1,389,819. END-GATE-FASTENING DEVICE. WILLIAM H. DILLET, Ralston, Okla., assignor of one-third to James M. Harp and one-third to William T. Harp, Ralston, Okla. Filed Mar. 5, 1921. Serial No. 449,629. 3 Claims. (Cl. 296—53.)

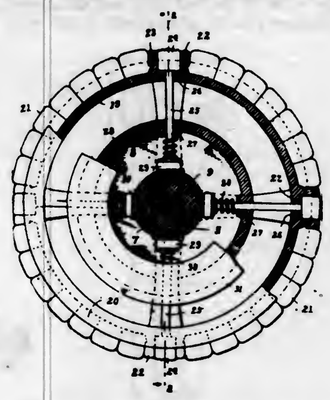


1. An end gate fastening device comprising a standard carried by each side of a vehicle body and supported in spaced relation to said side, each standard having hook members extending in spaced relation to each other, an end gate disposed between the standards, a holding member carried by each end of the gate, said members being disposed between a portion of the standards and the sides of the vehicle body and having openings for the reception of the hook members, and fastening means carried by the holding members for engagement with the hook members.

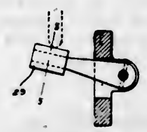
1,389,820. WRECKING-TOOL. ANDREW DOWNEY, Columbus, Ohio, assignor of one-half to Frederick Martin, Columbus, Ohio. Filed Apr. 9, 1920. Serial No. 372,459. 2 Claims. (Cl. 254—131.)

1. A tool of the class described, comprising an elongated handle portion, an angularly disposed tongue projecting from the lower end of said handle portion, a fulcrum for said tool comprising a laterally extending stud projecting rigidly from the portion of said tool connecting said handle and tongue, said stud being of substantially circular cross sectional formation and capable of producing a substantial support for said tool irrespective of the operating positions which the latter may assume, and means formed with said stud to maintain the latter in an operating position and to preclude slipping thereof.

1,389,821. TIRE-VULCANIZER. CLARENCE E. EVERETT, Milwaukee, Wis. Filed Nov. 8, 1920. Serial No. 422,616. 8 Claims. (Cl. 18—45.)



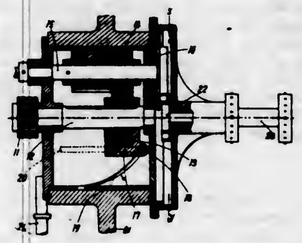
1. A tire vulcanizer comprising a tire receiving mold, a core of elastic compressible material for reception in the tire, and means for exerting transverse pressure on said core and thereby laterally expanding the same.



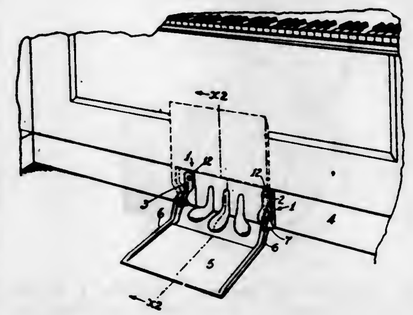
1,389,822. NON-SKID WHEEL. RICHARD J. FARRELL, Palmer, Mass., assignor of one-third to Mathew Kardes, Waterbury, Conn., and one-third to Joseph Bolewicz, Palmer, Mass. Filed Mar. 29, 1919. Serial No. 286,064. 2 Claims. (Cl. 301—46.)

1. In a non-skid wheel of the character described, the combination of a wheel having a hub and rim portion and pockets forward in the rim, adjustable lugs snugly fitting

said pockets and having stems extending through radial holes in said rim, springs for normally holding said adjustable lugs seated against the rim, and means for causing the lugs to leave their seats against the rim and to become extended from the periphery of the wheel.



1,389,823. PICKER-CHECK. EDWARD FRIAR, Hope, R. I., assignor of one-half to John P. Craig, Hope, R. I. Filed June 7, 1921. Serial No. 475,762. 2 Claims. (Cl. 139—22.)

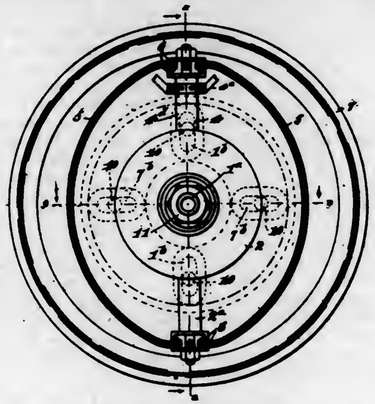


1. A picker check for looms comprising a bracket adapted to be bolted in position, a horizontally-disposed spring-pressed check arm extending into the path of the picker, a pivot pin rotatably mounted in said bracket to which pin said check arm is fixed, said pivotal pin having a bearing both above and below said arm, and a spring acting on said pin whereby the resistance thereof is transmitted through said pin to said arm.

1,389,824. ARRANGEMENT FOR REGISTERING IMAGES IN CINEMATOGRAPHIC PROJECTING APPARATUS. PIERRE SYLVAIN GAURIAT, Paris, France, assignor to Etablissements Continsouza (Societe Anonyme), Paris, France, a French Corporation. Filed Apr. 7, 1920. Serial No. 371,948. 1 Claim. (Cl. 88—17.)

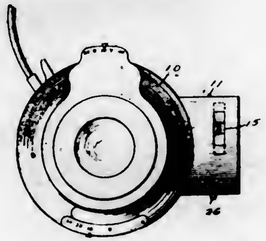
In a fixed registration device for cinematographic apparatus, the combination with a rotating shutter and a film feeding drum, of a mechanism for simultaneously operating said shutter and drum, a Maltese cross and coöperating pin drive connecting the drum to said operating means, a drum axially mounted on a driving shaft interposed between said operating mechanism and Maltese cross driving connection, a cylindrical housing surrounding said drum, a pinion slidably keyed to said drum supporting shaft and inclosed within said drum, a pinion mounted on a stub shaft eccentrically positioned within said drum and in mesh with and adapted to revolve about said first-mentioned pinion, said stub shaft extending through the drum and supporting the Maltese cross, symmetrical helicoidal ramps cut through the walls of said drum, horizontal grooves formed in said cylindrical housing intersecting said ramps, a guide for said concentrically mounted pinion and a guide-rod carried by said pinion casing having its opposite ends mounted in said horizontally disposed grooves in the housing in a position to be engaged by said ramp, whereby a partial turning of the housing will cause a rotation of the eccentrically mounted pinion and Maltese cross about the concentrically mounted pinion, and lock the same in its adjusted positions, for maintaining correct synchronism between the feeding of the film and the operation of the shutter.

1,389,825. SUPPORTING AND PROTECTING PIANO ATTACHMENT. JOSEPH GERVAIS, Jr., Los Angeles, Calif. Filed Oct. 1, 1919. Serial No. 327,789. 5 Claims. (Cl. 84—183.)



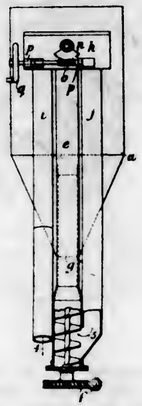
1. A piano attachment comprising a pair of spaced brackets secured to the front board of the piano, on opposite sides of the pedals, an outwardly extended arm pivotally supported on each of said brackets, a shelf attached to and connecting said arms, forming a rest for the feet of the player, an opening being provided between the said front board and said shelf, so as to permit the movement of said arms and said shelf without interference with said pedals, said arms having means thereon engaging said brackets for supporting said shelf above the level of the floor, and adapted to be elevated above said pedals, and held stationarily in position when not in use for the purpose described.

1,389,826. SUSPENSION-WHEEL. WILLIAM F. J. GOMRSCH, Cleveland, Ohio. Filed Dec. 20, 1920. Serial No. 431,898. 3 Claims. (Cl. 301—136.)



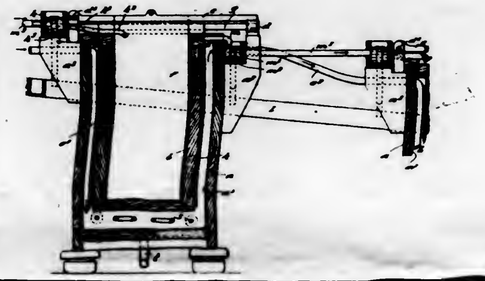
1. A resilient suspension wheel comprising a rotatable member provided with a hub, a non-rotating element mounted on said hub, a fixed supporting element with which said non-rotating element has a correlative radial movement and is suspended therefrom by expansion springs provided, said springs being firmly attached to the two non-rotating elements, a traction wheel member rota-

table on bearings provided on fixed element around the hub, driving means connecting the traction element and the

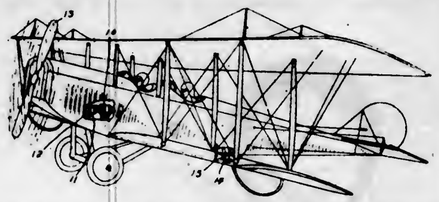


rotating hub element, said means providing correlative radial movement of said rotating elements.

1,389,827. REGISTER FOR CAMERAS. STANLEY LORING HAGAN, Butte, Mont. Filed Apr. 23, 1920. Serial No. 376,114. 5 Claims. (Cl. 235—91.)

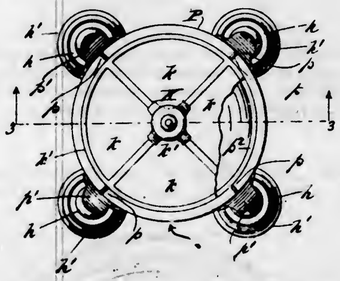


1. In a register for cameras, embodying a shutter casing, a casing adapted to be secured to the shutter casing, a horizontal shaft mounted in said casing, an indicia bearing wheel rotatably mounted upon said shaft and provided in one side thereof with notches, a vertically disposed lever having at its upper end a nose adapted to engage the notches of said wheel, said lever being adapted to be shifted to raised and lowered positions, a spring connected with one of said apertures, a by-pass tube connected with the other of said apertures for returning the fuel to be re-fed by the fuel tube, and an adjustable valve in said chamber pivoted substantially in line with the axis



of the feed screw, and adapted to close communication between the feed tube and either of said apertures, and means for adjusting said valve to either of said positions or any desired intermediate position.

1,389,829. METHOD OF ELECTROLYZING A SOLUTION OF NICKEL SALT. CHRISTIAN HEBERLEIN, London, England. Filed Dec. 7, 1918. Serial No. 265,746. 4 Claims. (Cl. 204—14.)

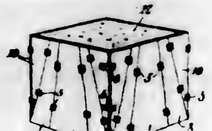


operable proportional to the relative speed of the air and airplane, and a differential indicator controlled by the

first named and last named means to indicate propeller efficiency.

1,389,831. ELECTRIC-LIGHT CHANDELIER. SIDNEY M. ISRAEL, Richmond Hill, N. Y. Filed Aug. 4, 1920. Serial No. 401,128. 1 Claim. (Cl. 240—78.)

An article of manufacture comprising an electric light chandelier of the character described, embodying an opaque concavo-convex plaque the inner portion of the rim of which is provided with an annular shoulder, and a cover of inverse concavo-convex form for said plaque supported by said shoulder and formed of a light transmitting material, said cover inclosing the concavity of the plaque to constitute a light-receiving chamber, a lamp socket in the bottom of the plaque, and means on the rim of the plaque for the attachment of suspending means for the chandelier.

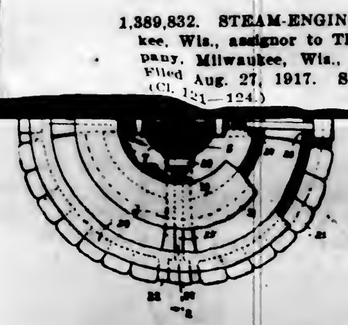


1,389,832. STEAM-ENGINE. JOHN G. KELLER, Milwaukee, Wis., assignor to The Vilter Manufacturing Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Aug. 27, 1917. Serial No. 188,395. 2 Claims. (Cl. 121—124.)

versely to the valve stems and to the axis of the cylinder and connected with the valve stems, valve opening and variable releasing gear connected with each rocker shaft of the admission valves, wrist plates having connections for actuating the rocker shafts to open the valves, means tending to close the valves, reciprocating eccentric rods arranged lenthwise of the cylinder and releasable couplings for operatively connecting and disconnecting the eccentric rods with the wrist plates, each comprising a clamping sleeve pivoted on a wrist plate and fitted on an accentric rod, a clamping screw intersecting the bore of the sleeve on one side and adapted by engagement with a notch in the eccentric rod to lock the sleeve in working position on the rod, the clamping screw being formed in another side with a notch which when turned into register with the bore of the sleeve, releases the rod and permits it to slide freely in the sleeve, and a spring pressed tapered pin fitted in the sleeve and adapted by engagement with a corresponding tapered socket in the eccentric rod, to bring the notch therein into exact register with the cross bore in the sleeve for the clamping screw.

1,389,833. HOOK. CHARLES E. KENT, Los Angeles, Calif., assignor of one-fourth to Walter L. Bowers, Los Angeles, Calif. Filed June 4, 1919. Serial No. 301,796. 2 Claims. (Cl. 24—129.)

1. A hook for tow lines and the like comprising a central shank having a corrugated section to assist in holding a rope hitch, a return bend at one end of the shank having a flattened and widened end, a right angle bend at the shank end opposite to the return bend and a second return bend beyond the right angle bend arranged transversely relative to the first named return bend.

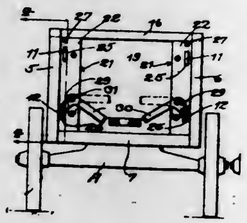


sontal grooves formed in said cylindrical housing intersecting said ramps, a guide for said concentrically mounted pinion and a guide-rod carried by said pinion casing having its opposite ends mounted in said horizontally disposed grooves in the housing in a position to be engaged by said ramps, whereby a partial turning of the housing will cause a rotation of the concentrically mounted pinion and Maltese cross about the concentrically mounted pin-

bearing wheel rotatably mounted upon said shaft and provided in one side thereof with notches, a vertically disposed lever having at its upper end a nose adapted to engage the notches of said wheel, said lever being adapted to be shifted to raised and lowered positions, a spring

1,389,832. STEAM-ENGINE. JOHN G. KELLER, Milwaukee, Wis., assignor to The Vilter Manufacturing Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Aug. 27, 1917. Serial No. 188,395. 2 Claims. (Cl. 121—124.)

justable lugs seated against the rim, and means for causing the lugs to leave their seats against the rim and to become extended from the periphery of the wheel.

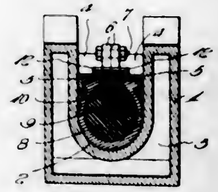


1. In a form for molding concrete pedestals, form sides comprising a central member having beveled edges, a plurality of side members fitting said edges, corner members fitting the edges of the said side members, means for detachably connecting the said side members with the said central member and with the corner members, and means for detachably securing the corner members together for opening and closing the form.

1,389,818. PRESERVE-JAR OPENER. HAROLD W. DEARING, New York, N. Y. Filed May 17, 1920. Serial No. 381,913. 3 Claims. (Cl. 81—3.1.)

3. The combination with two metal bars or handles with rounded ends, a pivot pin uniting their rounded ends, a metal disk carried by the pivot pin and a wire loop the ends of which are connected to the bars on opposite sides of the pivot pin.

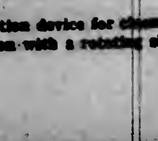
1,389,819. END-GATE-FASTENING DEVICE. WILLIAM H. DILLET, Ralston, Okla., assignor of one-third to James M. Harp and one-third to William T. Harp, Ralston, Okla. Filed Mar. 5, 1921. Serial No. 449,629. 3 Claims. (Cl. 296—53.)



1. An end gate fastening device comprising a standard carried by each side of a vehicle body and supported in spaced relation to said side, each standard having hook members extending in spaced relation to each other, an

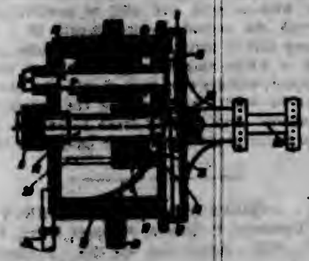
1. A tool of the class described, comprising an elongated handle portion, an angularly disposed tongue projecting from the lower end of said handle portion, a fulcrum for said tool comprising a laterally extending stud projecting rigidly from the portion of said tool connecting said handle and tongue, said stud being of substantially circular cross sectional formation and capable of producing a substantial support for said tool irrespective of the operating positions which the latter may assume, and means formed with said stud to maintain the latter in an operating position and to preclude slipping thereof.

1,389,821. TIRE-VULCANIZER. CLARENCE E. EVERETT, Milwaukee, Wis. Filed Nov. 8, 1920. Serial No. 422,616. 8 Claims. (Cl. 18—45.)



1. A tire vulcanizer comprising a tire receiving mold, a core of elastic compressible material for reception in the tire, and means for exerting transverse pressure on said core and thereby laterally expanding the same.

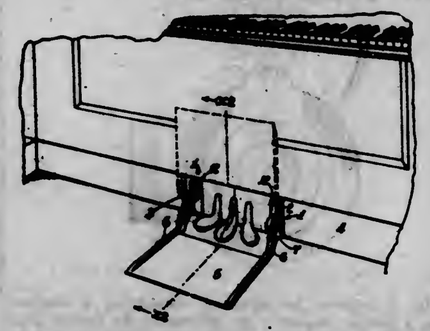
1,389,822. NON-SKID WHEEL. RICHARD J. FARRELL, Palmer, Mass., assignor of one-third to Mathew Kardos, Waterbury, Conn., and one-third to Joseph Bolewicz, Palmer, Mass. Filed Mar. 29, 1919. Serial No. 286,064. 2 Claims. (Cl. 301—46.)



1. In a non-skid wheel of the character described, the combination of a wheel having a hub and rim portion and pockets forward in the rim, adjustable lugs snugly fitting

1,389,823. PICKER-CHECK. EDWARD FRIAR, Hope, R. I., assignor of one-half to John P. Craig, Hope, R. I. Filed June 7, 1921. Serial No. 475,762. 2 Claims. (Cl. 139—22.)

1. A picker check for looms comprising a bracket adapted to be bolted in position, a horizontally disposed spring-pressed check arm extending into the path of the picker, a pivot pin rotatably mounted in said bracket to which pin said check arm is fixed, said pivotal pin having a bearing both above and below said arm, and a spring acting on said pin whereby the resistance thereof is transmitted through said pin to said arm.

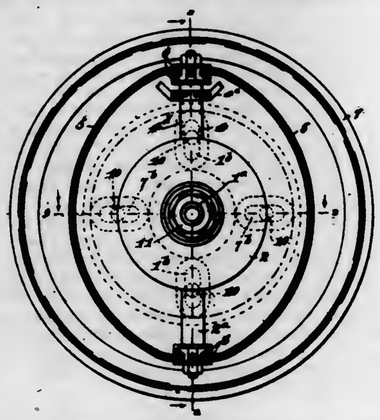


1,389,824. ARRANGEMENT FOR REGISTERING IMAGES IN CINEMATOGRAPHIC PROJECTING APPARATUS. PIERRE SYLVAIN GAUMAT, Paris, France, assignor to Etablissements Continsouza (Societe Anonyme), Paris, France, a French Corporation. Filed Apr. 7, 1920. Serial No. 371,943. 1 Claim. (Cl. 88—17.)

In a fixed registration device for cinematographic apparatus, the combination with a rotating shutter and a film

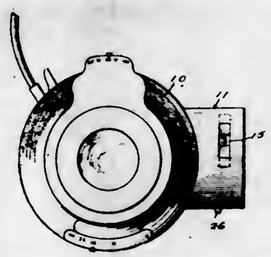
zontal grooves formed in said cylindrical housing intersecting said ramps, a guide for said concentrically mounted pinion and a guide-rod carried by said pinion casing having its opposite ends mounted in said horizontally disposed grooves in the housing in a position to be engaged by said ramps, whereby a partial turning of the housing will cause a rotation of the eccentrically mounted pinion and Maltese cross about the concentrically mounted pinion, and lock the same in its adjusted positions, for maintaining correct synchronism between the feeding of the film and the operation of the shutter.

1,389,825. SUPPORTING AND PROTECTING PIANO ATTACHMENT. JOSEPH GERVAIS, Jr., Los Angeles, Calif. Filed Oct. 1, 1919. Serial No. 327,789. 5 Claims. (Cl. 84—183.)



1. A piano attachment comprising a pair of spaced brackets secured to the front head of the piano, on opposite sides of the pedals, an outwardly extended arm pivotally supported on each of said brackets, a shelf attached to and connecting said arms, forming a rest for the feet of the player, an opening being provided between the said front board and said shelf, so as to permit the movement of said arms and said shelf without interference with said pedals, said arms having means thereon engaging said brackets for supporting said shelf above the level of the floor, and adapted to be elevated above said pedals, and hold stationarily in position when not in use for the purpose described.

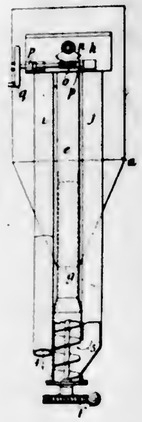
1,389,826. SUSPENSION-WHEEL. WILLIAM F. J. GERMUS, Cleveland, Ohio. Filed Dec. 20, 1920. Serial No. 431,208. 3 Claims. (Cl. 301—105.)



1. A resilient suspension wheel comprising a rotatable member provided with a hub, a non-rotating element mounted on said hub, a fixed supporting element with which said non-rotating element has a compulsive radial movement and is suspended therefrom by expansion springs provided, said springs being firmly attached to the two non-rotating elements, a traction wheel member pulv-

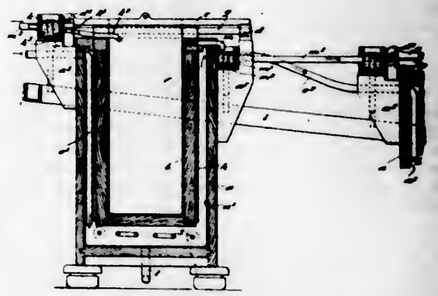
table on bearings provided on fixed element around the hub, driving means connecting the traction element and the

rotating hub element, said means providing correlative radial movement of said rotating elements.



1,389,827. REGISTER FOR CAMERAS. STANLEY LORING HAGAN, Butte, Mont. Filed Apr. 23, 1920. Serial No. 376,114. 5 Claims. (Cl. 235—91.)

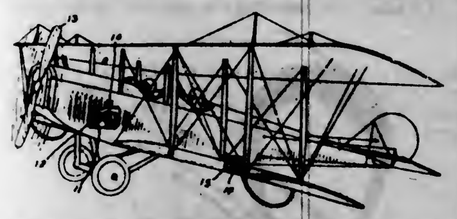
1. In a register for cameras, embodying a shutter casing, a casing adapted to be secured to the shutter casing, a horizontal shaft mounted in said casing, an indicia bearing wheel rotatably mounted upon said shaft and provided in one side thereof with notches, a vertically disposed lever having at its upper end a nose adapted to engage the notches of said wheel, said lever being adapted to be shifted to raised and lowered positions, a spring holding said lever in engagement with said wheel and in lowered position, a shifter slidably mounted within said casing and having one end extending through the wall of said shutter casing, the end of said shifter being loosely connected with a movable part of the shutter to be shifted in one direction thereby, means for returning said shifter to normal position, and a cam face formed on said shifter adapted to engage the lower end of said lever and elevate the same.



1,389,828. MEANS FOR FEEDING POWDERED FUEL TO FURNACES. LEONARD CHARLES HARVEY, Malden, and HARRY SYDNEY BUCKLEY, Westminster, London, England. Filed Aug. 5, 1920. Serial No. 401,341. 3 Claims. (Cl. 198—15.)

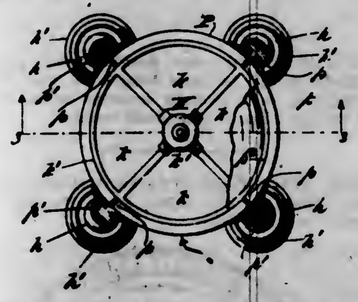
1. Apparatus for feeding powdered fuel to furnaces comprising a hopper, a vertically disposed feed tube communicating with the hopper, a rotatable feed screw extending through the feed tube, a chamber at the upper end of the feed tube, said chamber being provided with delivery apertures on opposite sides of the feed tube, a delivery tube connected with one of said apertures, a by-pass tube connected with the other of said apertures for returning the fuel to be re-fed by the fuel tube, and an adjustable valve in said chamber pivoted substantially in line with the axis

of the feed screw, and adapted to close communication between the feed tube and either of said apertures, and means for adjusting said valve to either of said positions or any desired intermediate position.



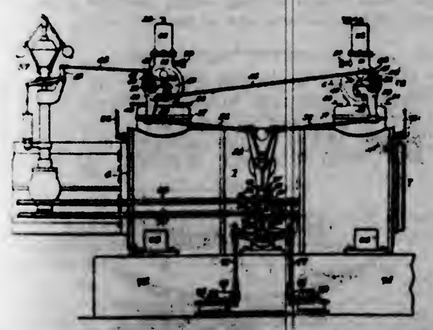
1,389,829. METHOD OF ELECTROLYZING A SOLUTION OF NICKEL SALT. CHRISTIAN HERRLEIN, London, England. Filed Dec. 7, 1918. Serial No. 266,746. 4 Claims. (Cl. 204—14.)

1. The continuous cyclic process for electrolytically producing nickel which consists in electrolysing a slightly acid liquor containing nickel salt, obtained by treating nickel ore with an acid, and kept in continuous circulation through the cathode compartments of a series of electrolyzing vats in serial order, the insoluble-anode compartments of which vats are traversed by a similar circulating liquor, withdrawing part of said last named liquor as soon as its acidity has exceeded the optimum acidity in the catholyte, and treating fresh nickel ore with said withdrawn liquor to produce further quantities of the first liquor.



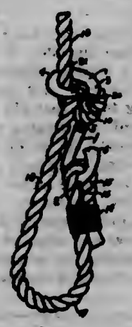
1,389,830. AERO-PROPELLER EFFICIENCY-INDICATOR. THEODORE P. HORNE, Newport News, Va. Filed Sept. 1, 1920. Serial No. 407,494. 5 Claims. (Cl. 244—1.)

1. The combination in an airplane, of means operable with the propelling means of the airplane, other means operable proportional to the relative speed of the air and airplane, and a differential indicator controlled by the



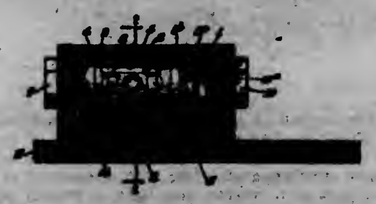
first named and last named means to indicate propeller efficiency.

1,389,831. ELECTRIC-LIGHT CHANDELIER. SIDNEY M. ISRAEL, Richmond Hill, N. Y. Filed Aug. 4, 1920. Serial No. 401,128. 1 Claim. (Cl. 240—78.)



An article of manufacture comprising an electric light chandelier of the character described, embodying an opaque concavo-convex plaque the inner portion of the rim of which is provided with an annular shoulder, and a cover of inverse concavo-convex form for said plaque supported by said shoulder and formed of a light transmitting material, said cover including the concavity of the plaque to constitute a light-receiving chamber, a lamp socket in the bottom of the plaque, and means on the rim of the plaque for the attachment of suspending means for the chandelier.

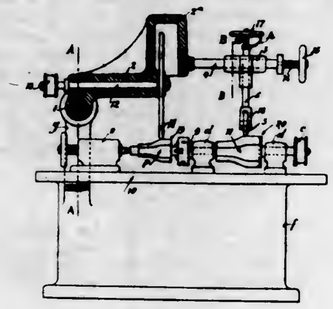
1,389,832. STEAM-ENGINE. JOHN G. KELLER, Milwaukee, Wis., assignor to The Vilter Manufacturing Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Aug. 27, 1917. Serial No. 188,205. 2 Claims. (Cl. 121—124.)



1. In a steam engine the combination with the cylinder and piston, of bonnets mounted on the cylinder, poppet steam-admission and exhaust valves having stems guided in the bonnets, rocker shafts mounted in the bonnets transversely to the valve stems and to the axis of the cylinder and connected with the valve stems, valve opening and variable releasing gear connected with each rocker shaft of the admission valves, wrist plates having connections for actuating the rocker shafts to open the valves, means tending to close the valves, reciprocating eccentric rods arranged lengthwise of the cylinder and releasable couplings for operatively connecting and disconnecting the eccentric rods with the wrist plates, each comprising a clamping sleeve pivoted on a wrist plate and fitted on an eccentric rod, a clamping screw intersecting the bore of the sleeve on one side and adapted by engagement with a notch in the eccentric rod to lock the sleeve in working position on the rod, the clamping screw being formed in another side with a notch which when turned into register with the bore of the sleeve, releases the rod and permits it to slide freely in the sleeve, and a spring pressed tapered pin fitted in the sleeve and adapted by engagement with a corresponding tapered socket in the eccentric rod, to bring the notch therein into exact register with the cross bore in the sleeve for the clamping screw.

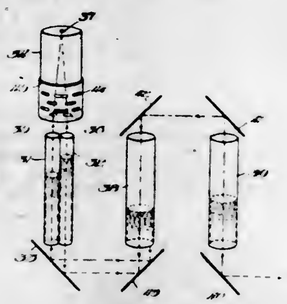
1,389,833. HOOK. CHARLES B. KENT, Los Angeles, Calif., assignor of one-fourth to Walter L. Bowers, Los Angeles, Calif. Filed June 4, 1919. Serial No. 301,796. 2 Claims. (Cl. 24—129.)

1. A hook for tow lines and the like comprising a central shank having a corrugated section to assist in holding a rope hitch, a return bend at one end of the shank having a flattened and widened end, a right angle bend at the shank end opposite to the return bend and a second return bend beyond the right angle bend arranged transversely relative to the first named return bend.



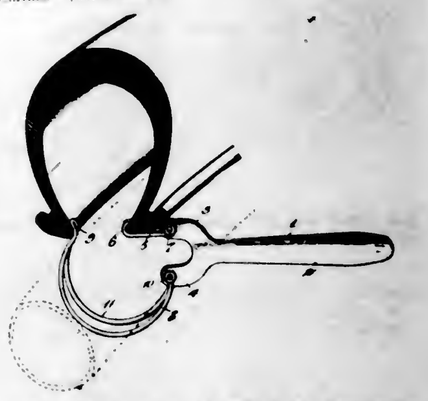
1,389,834. FLOW-CONTROLLER FOR CELLULOSIC SOLUTIONS. FREDERICK G. KRAFT, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Jan. 16, 1920. Serial No. 351,979. 9 Claims. (Cl. 106—44.)

1. In a flow controller, a casing providing a bearing, an element concentrically received substantially fluid-tight in said bearing for turning movement therein upon its longitudinal axis only, said casing having fluid passages com-



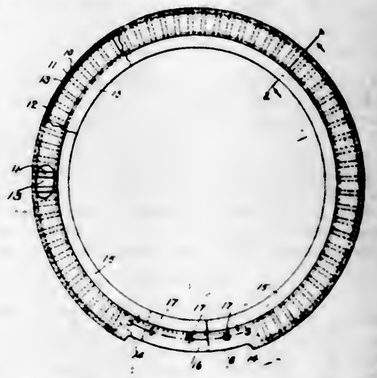
municating with said bearing and said element presenting fluid spaces for registration with said passages, means associated with said spaces, and operable by the fluid, for permitting one space to fill with fluid and for simultaneously expelling fluid from the other space, and means for turning said element.

1,389,835. GRINDING-MACHINE. ALBERT LECOMTE, Thiais, France. Filed May 24, 1920. Serial No. 383,859. 3 Claims. (Cl. 51—101.)



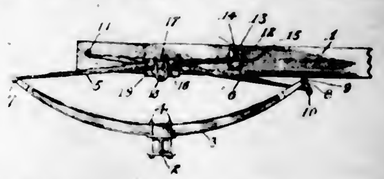
1. A grinding machine comprising in combination a machine frame, a carriage movable on said frame along the axial line of work, a master pattern, means on said carriage for holding together said pattern and the work, means for imparting to the pattern and the work a common rotary movement, a swinging frame having its axis horizontal and perpendicular to the line of work, a grinding wheel, a shaft supporting said grinding wheel and a guiding rod on said swinging frame, both perpendicular to the axis of the latter, means for rotating said shaft, a carriage movable on said guiding rod, a feeler member supported by said carriage and adapted to engage the pattern and means for adjusting the position of said feeler both in directions parallel and perpendicular to said guiding rod.

1,389,836. COLORIMETER AND THE LIKE. MELVIN MOONEY, Chicago, Ill. Filed July 7, 1919. Serial No. 309,107. 6 Claims. (Cl. 88—14.)



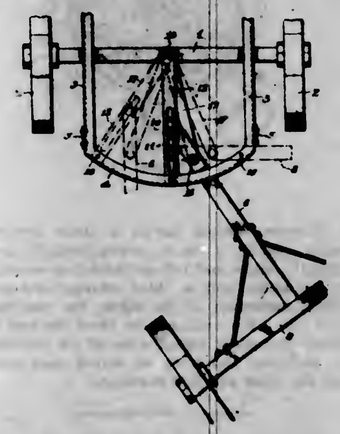
6. The method of testing a material to ascertain its color which consists in combining the color of the material with its complementary color, and also combining the same complementary color with a standard of comparison such as to produce gray light, to thereby produce gray light in both instances, and which consists in simultaneously observing both of said gray lights so produced for purposes of comparison, whereby the standard of comparison becomes a measure of the color of the material under test, substantially as described.

1,389,837. AUTO SHOE-EXPANDING TOOL. CHARLES A. MOORE, Elizabeth, and DAVID K. THORNTON, Roselle Park, N. J. Filed Oct. 30, 1920. Serial No. 420,712. 2 Claims. (Cl. 152—27.)



1. In a device of the class described, the combination of a handle member having a bifurcation, and a pair of hook members, each pivotally mounted on a respective one of the furcations of said handle member.

1,389,838. TIRE-COVER. WILLIAM H. MOORE, Pasadena, Calif. Filed Mar. 25, 1920. Serial No. 368,545. 5 Claims. (Cl. 150—54.)

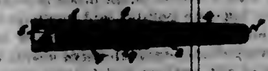


1. A tire cover comprising an annular casing substantially semi-circular in cross section provided with a plurality of air chambers open to the atmosphere.

1,389,839. SPRING SUSPENSION OF SELF-PROPELLED VEHICLES. HERBERT H. NEALE, New York, N. Y. Original application filed Oct. 6, 1916, Serial No. 124,036. Divided and this application filed August 19, 1919. Serial No. 318,451. 3 Claims. (Cl. 267—41.)

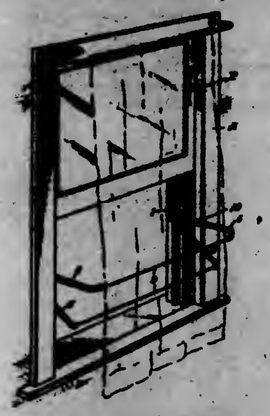
1. A spring suspension for motor vehicles consisting of a substantially rigid cradle supported by the vehicle axle at right angles thereto, and double cantaliver springs, each cantaliver being connected by its free end to one of the ends of said cradle and secured at its base and opposite end to the frame of the vehicle.

1,389,840. COUPLING DEVICE FOR VEHICLES. ROY J. NEELY, Detroit, Mich., assignor to Liberty Tractor Corporation, Detroit, Mich., a Corporation of Michigan. Filed July 24, 1919. Serial No. 313,014. 7 Claims. (Cl. 213—67.)



1. The combination of a vehicle axle, end frames supported from said axle, a longitudinal member connected to said axle and said end frames, a trailer tongue extending between said end frames and slidably held relative to said longitudinal member, and means connecting said tongue to said axle.

1,389,841. BURNER-SUPPORT. SYDNEY PEARSON, Brooklyn, N. Y. Filed Dec. 3, 1920. Serial No. 428,144. 2 Claims. (Cl. 126—96.)



2. In a lamp support, a base, said base including a lamp chamber, a shaft operating above the lamp chamber, and having arms, hook members carried by the lamp, means carried by the arms and adapted to contact with the hook members for connecting the arms and hook members, and means for moving the shaft to raise the lamp within the lamp chamber.

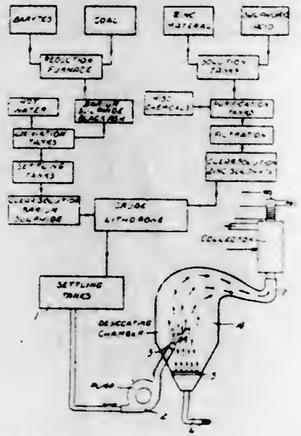
1,389,842. CIGARETTE-HOLDER. CHARLES H. PLUMER, Newark, N. J. Filed Jan. 12, 1920. Serial No. 350,577. 1 Claim. (Cl. 131—10.)

A device of the class described, comprising a cigarette-holding member provided with a bore therethrough terminating in a cavity located in one end thereof, a mouth-piece provided with a bore therethrough slidably secured to said cigarette-holding member, an aluminum tube one end of which is secured in said mouth-piece and the other end of which is located in the bore of the cigarette-holding member, a perforated flattened disk secured to the end of the tube located in the bottom of said cavity, adapted to normally close the base of the cigarette-holding member and to be projected forward in said cavity, and a spring arranged upon the tube and engaging the ends of the cigarette-holding member and said mouth-piece tending to separate them.

1,389,843. CURTAIN-GUARD FOR WINDOWS. ADOLPH H. REHMANN, Detroit, Mich. Filed Feb. 10, 1920. Serial No. 357,635. 2 Claims. (Cl. 126—98.)

1. In a device of the character described, the combination of opposed arms, means for pivotally attaching each arm to a window casing comprising a pair of members between which one end of the arm is pivotally supported and means for securing the members to a window casing and for drawing the same into frictional contact with the arm, and a cord connecting the free ends of the arms.

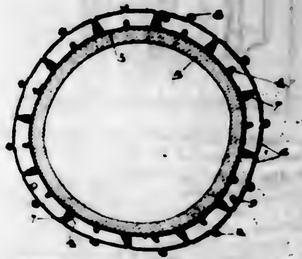
1,389,844. PLATE COOLING AND FINISHING MACHINE. OSCAR ROSSEL, New York, N. Y., assignor to R. Hoe and Co., New York, N. Y., a Corporation of New York. Filed July 14, 1919. Serial No. 310,668. 32 Claims. (Cl. 29—21.)



1. The combination of a cooling bath, means for forwarding a plate, a rotary carrier, means for holding a plate on the carrier between its straight edges, and means for rotating the carrier to dip the plate in the bath.

1,389,845. NUT-LOCK. ROBERT C. ROSS, Cleveland, Ohio. Filed Nov. 6, 1920. Serial No. 422,811. 8 Claims. (Cl. 151—53.)

1. A nut lock formed of a single piece of spring steel and comprising a [illegible]



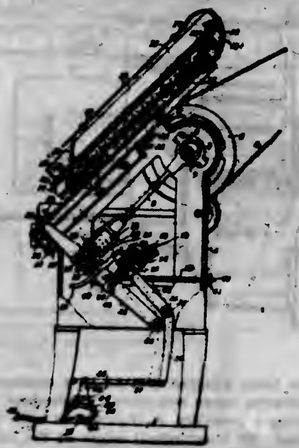
1,399,500. PROCESS OF MANUFACTURING LITHOPONE. CHARLES B. KUZELL, Clarkdale, Ariz. Filed Aug. 15, 1921. Serial No. 492,342. 7 Claims. (Cl. 134—78.)

5. The process of manufacturing lithopone which consists in precipitating crude lithopone from a mixture of barium sulfid and zinc sulfate, discharging the liquid containing crude lithopone as a fine spray into a current of heated air whereby the zinc sulfid constituent of the lithopone will undergo a partial superficial oxidation and thereafter collecting the finished product as a finely divided powder.

conducting material serving as one contact and of predetermined depth for receiving the base of an electrical lamp or plug, said socket having its other contact insulatingly mounted interiorly of said hollow member of protecting means comprising a hollow element having an outer diameter less than the said uniform diameter of said recess and positioned within said recess, said protecting device when in position in said recess freely exposing the contacts of said socket for electrical connection, said hollow element having a length appreciably less than said predetermined depth of said recess, whereby upon insertion of the lamp or the plug the base of the lamp or the plug extends through said hollow member to afford electrical connection between the contacts of the socket respectively with the contacts of said base respectively.

1,399,503. CYLINDRICAL KILN AND DRIER. GEORGE MCCRAE, Brantford, Ontario, Canada. Filed Oct. 6, 1920. Serial No. 415,199. 7 Claims. (Cl. 222—7.)

1,399,505. LIGHTING SYSTEM AND MEANS FOR CONTROLLING THE SAME. WILLIAM K. MCIVOR, Elgin, Ill., assignor, by mesne assignments, to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed Oct. 14, 1916. Serial No. 125,724. 5 Claims. (Cl. 200—1.)

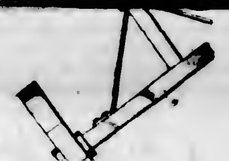


2. An electric switch comprising a plate adapted to be attached to a supporting member, an open-ended cap mounted in inverted position on said plate, an insulated base secured in the upper end of said cap, switch blades mounted on said base, and an operating member mounted on said plate for operating said switch blades.

1,399,506. MANUFACTURE OF CADMIUM PIGMENT. JOHN R. MARSTON, Clarkdale, Ariz. Filed Aug. 15, 1921. Serial No. 492,472. 5 Claims. (Cl. 134—78.)

3. In the manufacture of cadmium pigment, the process which consists in treating zinc dust precipitates containing metallic copper and cadmium with dilute sulfuric acid to dissolve the zinc as zinc sulfate, thereafter heating the mixture to a temperature to effect a solution of the cadmium as cadmium sulfate, drawing off the solution and

consists in advancing the column of blanks in stages and continuously forcing one end of the column of heel-blanks in a path diverging from that of the column, in such manner as to bodily deflect each blank in turn from the column without disturbing the relative positions of the assembled lifts composing the blank.



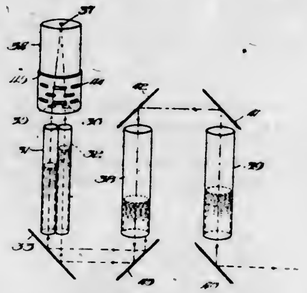
8. In a machine of the class described, the combination of a holder for a series of heel-blanks and counterboxes in column formation, means for forcing successive blanks and counterboxes into the holder at one end thereof and

1. A grinding machine comprising in combination a machine frame, a carriage movable on said frame along the axial line of work, a master pattern, means on said car-

1. *In a device of the class described, the combination of a handle* member having a bifurcation, and a pair of hook members, each pivotally mounted on a respective one of the furcations of said handle member.

1,389,838. TIRE-COVER. WILLIAM H. MOORE, Pasadena.

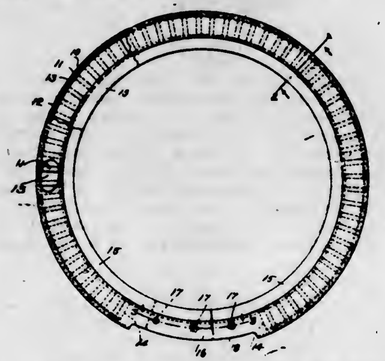
sists in precipitating crude lithopone from a mixture of barium sulfid and zinc sulfate, discharging the liquid containing crude lithopone as a fine spray into a current of heated air whereby the zinc sulfid constituent of the lithopone will undergo a partial superficial oxidation and thereafter collecting the finished product as a finely divided powder.



3. In the manufacture of cadmium pigment, the process which consists in treating zinc dust precipitates containing metallic copper and cadmium with dilute sulfuric acid to dissolve the zinc as zinc sulfate, thereafter heating the mixture to a temperature to effect a solution of the cadmium as cadmium sulfate, dragging off the solution and

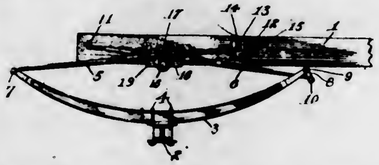
8. In a machine of the class described, the combination of a holder for a series of lead-blanks and capsules in column formation, means for forcing successive blanks and separators into the holder as the successive blanks

1. A grinding machine comprising in combination a machine frame, a carriage movable on said frame along the axial line of work, a master pattern, means on said carriage for holding together said pattern and the work, means for imparting to the pattern and the work a common rotary movement, a swinging frame having its axis horizontal and perpendicular to the line of work, a grinding wheel, a shaft supporting said grinding wheel and a guiding rod on said swinging frame, both perpendicular to the axis of the latter, means for rotating said shaft, a carriage movable on said guiding rod, a feeler member supported by said carriage and adapted to engage the pattern and means for adjusting the position of said feeler both in directions parallel and perpendicular to said guiding rod.



1,389,836. COLORIMETER AND THE LIKE. MELVIN MOONEY, Chicago, Ill. Filed July 7, 1919. Serial No. 309,107. 6 Claims. (Cl. 88—14.)

6. The method of testing a material to ascertain its color which consists in combining the color of the material with its complementary color, and also combining the same complementary color with a standard of comparison such as to produce gray light, to thereby produce ... light in both instances, and which consists in simul... observing both of said gray lights so produced ... of comparison, whereby the standard of ... es a measure of the color of the ma... ubstantially as described.

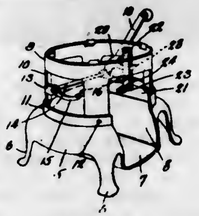


1. In a device of the class described, the combination of a handle member having a bifurcation, and a pair of hook members, each pivotally mounted on a respective one of the furcations of said handle member.

1,389,838. TIRE-COVER. WILLIAM H. MOORE, Pasadena, Calif. Filed Mar. 25, 1920. Serial No. 368,545. 5 Claims. (Cl. 150—54.)

1. A tire cover comprising an annular casing substantially semi-circular in cross section provided with a plurality of air chambers open to the atmosphere.

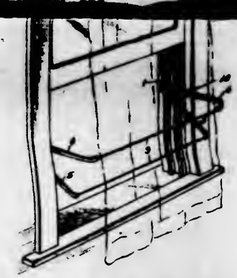
1,389,839. SPRING SUSPENSION OF SELF-PROPELLED VEHICLES. HERBERT H. NEALE, New York, N. Y. Original application filed Oct. 6, 1916. Serial No. 124,036. Divided and this application filed August 19, 1919. Serial No. 318,451. 3 Claims. (Cl. 267—41.)



1. A spring suspension for motor vehicles consisting of a substantially rigid cradle supported by the vehicle axle

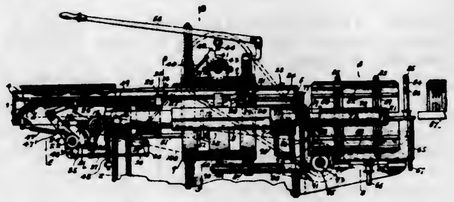
1. The combination of a vehicle axle, end frames supported from said axle, a longitudinal member connected to said axle and said end frames, a trailer tongue extending between said end frames and slidably held relative to said longitudinal member, and means connecting said tongue to said axle.

1,389,841. BURNER-SUPPORT. SEVERIN PEARSON, Brooklyn, N. Y. Filed Dec. 3, 1920. Serial No. 428,144. 2 Claims. (Cl. 126—96.)



2. In a lamp support, a base, said base including a lamp chamber, a shaft operating above the lamp chamber, and having arms, hook members carried by the lamp, means carried by the arms and adapted to contact with the hook members for connecting the arms and hook members, and means for moving the shaft to raise the lamp within the lamp chamber.

1,389,842. CIGARETTE-HOLDER. CHARLES H. PLUMER, Newark, N. J. Filed Jan. 12, 1920. Serial No. 350,877. 1 Claim. (Cl. 131—10.)



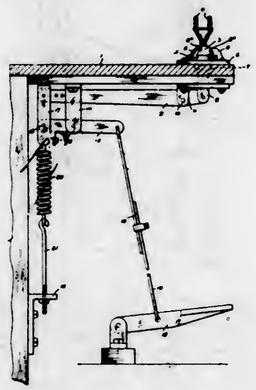
A device of the class described, comprising a cigarette-holding member provided with a bore therethrough termi-

1. In a device of the character described, the combination of opposed arms, means for pivotally attaching each arm to a window casing comprising a pair of members between which one end of the arm is pivotally supported and means for securing the members to a window casing and for drawing the same into frictional contact with the arm, and a cord connecting the free ends of the arms.

1,389,844. PLATE COOLING AND FINISHING MACHINE. OSCAR ROESEN, New York, N. Y., assignor to R. Hoe and Co., New York, N. Y., a Corporation of New York. Filed July 14, 1919. Serial No. 310,663. 32 Claims. (Cl. 29—21.)

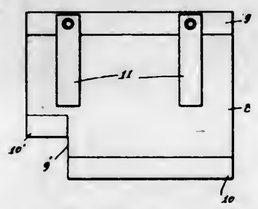
1. The combination of a cooling bath, means for forwarding a plate, a rotary carrier, means for holding a plate on the carrier between its straight edges, and means for rotating the carrier to dip the plate in the bath.

1,389,845. NUT-LOCK. RALPH G. ROSE, Catesby, Okla. Filed Nov. 6, 1920. Serial No. 422,311. 2 Claims. (Cl. 151—53.)



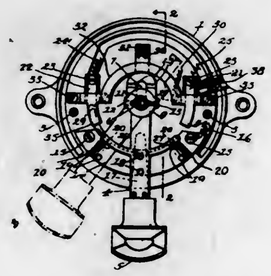
1. A nut lock formed of a single piece of spring steel and comprising a perforated diskilke body, a tongue formed

on said body and curved for facilitating its free end over the body, the free end of said tongue being split and providing angularly projecting extensions having their



inner facing edges disposed at substantially right angles, the outer side edge and ends of said extensions being rounded to provide cam surfaces.

1,389,846. LASTING-JACK. REID B. SCOTT, Naugatuck, Conn., assignor to The Goodyear's Metallic Rubber Shoe Company, a Corporation of Connecticut. Filed Oct. 8, 1919. Serial No. 329,292. 7 Claims. (Cl. 12—123.)



1. A last jack comprising a casing constituting the upper member of a clamp, a ball within said casing having means for engaging and supporting a last, a ball-engaging member below said ball and adapted to frictionally engage the same and a resilient member acting to move said ball-engaging member upwardly to clamp the ball against a member of the casing.

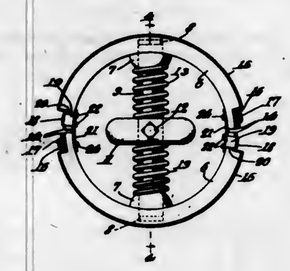
1,389,847. AUTOMOBILE ATTACHMENT. JOSEPH M. SEARS, Lockhart, Tex. Filed May 25, 1920. Serial No. 384,062. 2 Claims. (Cl. 74—81.)

1. In combination with the floor board of an automobile having clutch pedal openings formed therein, a protecting member formed of flexible material, protecting strips secured to the front and rear edges of the protecting member, and means secured to the protecting member for normally urging the same into engagement with the floor board to close the clutch pedal openings.

1,389,848. THREE-WAY SWITCH. CLAUDE DE F. SMITH, New York, N. Y., assignor to Smith Signal Corporation, New York, N. Y., a Corporation of Delaware. Filed Jan. 24, 1920. Serial No. 353,722. 15 Claims. (Cl. 200—4.)

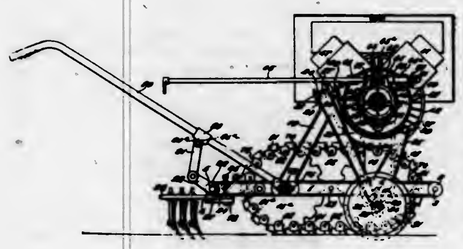
1. A three-way switch having a blade provided with a mounting whereby it can be swung laterally and moved longitudinally, right and left stationary contacts engageable by swinging, and a third contact engageable by longitudinal movement of the blade, the relations being such that the blade engages the third contact through longitudinal movement irrespective of its position in respect to swinging and when so moved does not engage either of the right and left contacts.

1,389,849. COMMERCIAL INSTRUMENT. GEORGE B. STILLWAGON, Redstone township, Fayette county, Pa. Filed Nov. 6, 1919. Serial No. 336,106. 3 Claims. (Cl. 283—60.)



1. A store check comprising a sheet having thereon columns starting adjacent one edge with the highest number which corresponds to the value of the check, contrasting markings extending parallel to and across said columns and dividing the numbers thereof into multiples of a given value, the numbers at the adjacent ends of alternate pairs of adjacent columns being successive, whereby the amount of a purchase in any transaction within the total value of the check may be deducted from said check by removing in a single piece from the body of the sheet a portion carrying one or more of such numbers equivalent to the amount of such purchase.

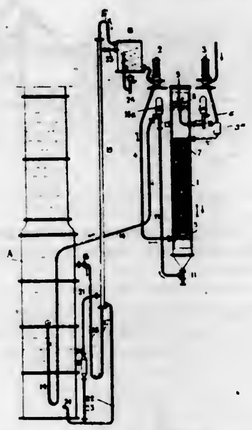
1,389,850. ENGINE-CYLINDER DRESSER. OTTO STROBERGER and REZIE E. LEE, Creighton, Nebr. Filed Nov. 1, 1920. Serial No. 421,016. 1 Claim. (Cl. 51—194.)



A device of the character described, comprising a pair of complementary semi-cylindrical sections each of which being provided with a recess in its inner face and located at diametrically opposite points, said sections being also provided with longitudinal recesses upon their outer faces and at their longitudinal edges, abrasive sheets embracing the outer faces of the sections and having their ends disposed in the recesses, clamping bars holding one end of each sheet in position, and resilient clips disposed in the

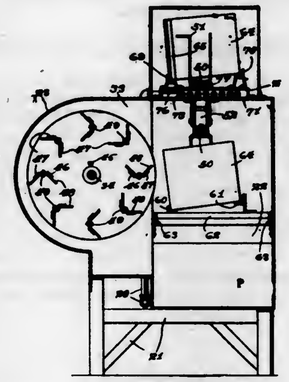
other recesses and holding the opposite ends of the sheets in place, a pin having its ends engaged in the recesses, a shank adapted to be connected with a rotating tool and provided with an eye at one end through which the pin extends and has positive connection therewith, coil

springs on the pin bearing against the eye and sections to urge the latter away from each other, plates carried by the inner face of each section, each of which being provided with a slot, and a pin carried by each section and engaged in the slot.



1,389,851. TRACTOR. HENRY C. BAINES, East Cleveland, Ohio, assignor to The Baines Engineering Company, Canal Dover, Ohio, a Corporation of Ohio. Filed Feb. 19, 1919. Serial No. 278,041. 7 Claims. (Cl. 180—9.1.)

1. The combination, with a motor shaft, of a sprocket on said shaft, connections between said shaft and said sprocket for driving the latter at a speed different from that of said shaft, a pair of tractor tread sprockets, a tread or track on the last mentioned sprockets, a hub on one of the last mentioned sprockets, a sprocket on said hub, and a chain on the first and last mentioned sprockets.

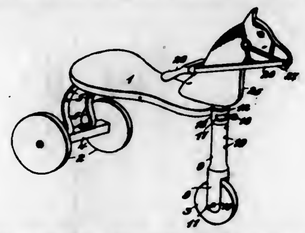


1,389,852. PROCESS AND APPARATUS FOR THE CONTINUOUS TREATMENT OF FUSEL-OIL. EMILE AUGUSTIN BARBET, Paris, France. Original application filed Mar. 6, 1914, Serial No. 822,953. Divided and this application filed June 10, 1918. Serial No. 239,314. 14 Claims. (Cl. 195—15.)

1. A process for the continuous treatment of fusel oil recovered in the distillation of alcohol, which consists in causing said oils coming from the fractioning column to be levitated, by the production in a column of the oil of bubbles of vapor, to a cooling vessel at a higher level than that of the washing apparatus, so that the oil may rise through the said washing apparatus to a low level of which it is led, passing a constant stream of water into said washing apparatus at a high level thereof, withdrawing the washed fusel oil at a higher point of the washing apparatus than that of the entry of the washing water

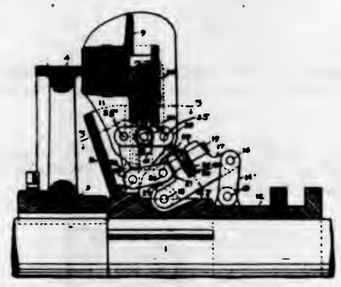
and withdrawing the washings at a lower point of the washing apparatus than that of the entry of the fusel oil.

1,389,853. WASHING-MACHINE. GEORGE S. BLAKESLEE, Chicago, Ill. Filed Apr. 20, 1916. Serial No. 92,387. 7 Claims. (Cl. 141—7.)



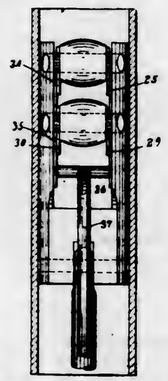
2. The combination of a tank adapted to contain water, a slideway extending longitudinally thereof, means for throwing water across and upon said slideway, a second slideway located above said first-named slideway, curved guides adapted to control the movement of an article to be cleaned from said first-named slideway to said second slideway, heating means adjacent to said second slideway adapted to dry the articles supported by said second slideway, and means for forwarding an article to be cleaned along said first-named slideway, along said curved guiding means into position upon said second slideway, and thence along said second slideway.

1,389,854. ADJUSTABLE CAR FOR CHILDREN. CHATTIN BRADWAY, New York, N. Y. Filed Sept. 13, 1917. Serial No. 191,123. 4 Claims. (Cl. 208—165.)



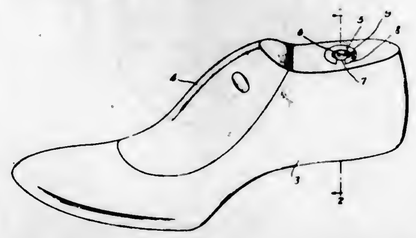
1. A child's car including a seat, an axle, wheels on the axle, a plurality of springs connected with the axle,

and means for adjustably connecting the springs to the seat for varying the distance between the axle and seat,



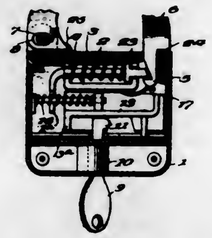
said means comprising apertures spaced apart longitudinally of each spring, and fasteners on the seat engaging in the apertures.

1,389,855. FRICTION-CLUTCH. JULIEN A. BRIED, Oakland, Calif., assignor to Meese & Gottfried Company, a Corporation of California. Filed Feb. 20, 1919. Serial No. 278,131. 5 Claims. (Cl. 192—73.)



1. In a friction clutch, a friction ring, inner and outer shanked jaws adapted to grip said ring, a carrier, said inner jaw being guided by said carrier, a guide plate removably secured to the carrier and serving as a guide for said outer jaw, said carrier and inner jaw being arranged to permit of the bodily removal of the inner jaw in an axial direction upon the removal of the guide plate and means of connection between the jaws which means is fulcrumed directly upon the carrier.

1,389,856. PIPE-BENDING. LOUIS H. BRINKMAN, Glenridge, N. J. Filed May 23, 1919. Serial No. 299,175. 13 Claims. (Cl. 153—40.)



1. In pipe bending apparatus, the combination with means for bending the pipe, of means for supporting the pipe on its interior comprising rotating bodies bearing upon each other and against the pipe walls and a frame supporting said bodies in proper relative positions longitudinally of the pipe, but having clearances permitting said bodies to adjust themselves transversely of the pipe whereby the pressure is taken up between the bodies without imposing undue strain on said frame.

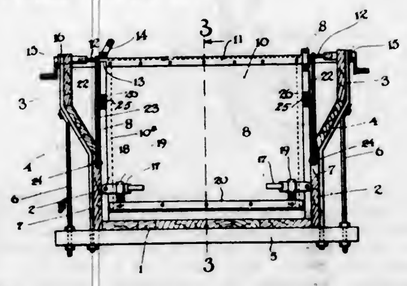
1,389,857. LAST-MARKER. JOSEPH BURGER, Richmond Hill, N. Y. Filed Mar. 2, 1921. Serial No. 449,119. 3 Claims. (Cl. 12—139.)

1. The combination with a shoe last, of a metallic thimble embedded therein and provided with a marker on the inner wall thereof adjacent the outer exposed end of the thimble and visible from the top of the last, said marker indicating the size of the last in which the thimble is seated and being protected from blows directed against the last or the thimble to thereby provide a permanent marking for the last and one which will be accessible even when a shoe is in position or in process of manufacture on the last.

1,389,858. PADLOCK. CARLOS CAMPANILE, Ensenada, Argentina. Filed Apr. 28, 1921. Serial No. 465,109. 10 Claims. (Cl. 70—97.)

6. In a seal lock, the combination of a shackle; a bolt for locking the shackle; means for operating the bolt; means for carrying a seal; means for defacing the seal incidental to the movement of the bolt operating means; a cover having a sight-opening covered by transparent material for rendering the seal inaccessible from the exterior of the lock while permitting inspection of the seal; a lug carried by the cover and adapted to be engaged by the shackle when the latter is in closed position to lock the cover closed; and a hinged guard to protect the transparent material of the sight opening against damage.

1,389,859. TAPER GRAB. FRANK LESLIE CHRONISTER, Edmond, Okla. Filed Nov. 5, 1920. Serial No. 421,985. 1 Claim. (Cl. 24—126.)



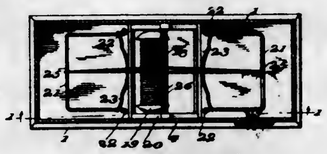
A taper grab comprising a body of tapering form, said body being elongated and of circular cross section, one end being flattened and provided with an aperture therein, a ring held in said aperture and adapted for attachment to a pull cable, said body having a smooth external surface

and provided with a groove extending throughout the length thereof at one of the sides of the flattened portion, a split ring mounted on the body and having a groove

transversely at the inside thereof to register with the groove of the body, and a connecting member between the ends of the ring.

1,389,860. SCOOP-BOARD. WILLIAM JAMES COMBS, Otterbein, Ind. Filed Mar. 17, 1920. Serial No. 366,473. 2 Claims. (Cl. 296—59.)

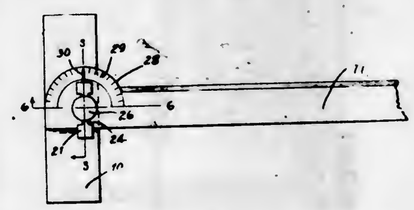
1. In combination with a bed having flaring side walls, of a scoop board for closing the rear thereof, plates secured in vertical position at the rear end of the body, the scoop board being arranged between the plates, said board having at its top a transverse bar provided at each end with a threaded stem, the plates having notches for permitting the passage of the stems, and having latch plates for preventing disengagement of the stems, sockets having cranks journaled in the sides of the bed and movable longitudinally toward and from the stem and internally threaded to engage the stems, latches pivoted to the plates at each side of the lower end of the scoop board, the board having keepers for engagement by the latches, and folding arms arranged between the threaded stems and the plate for supporting said scoop board in horizontal position, said board having a stop for engaging the end of the bed when it is lowered to limit the inward movement of the board.



1,389,861. MANUFACTURE OF POTASSIUM SULFATE. PAUL COMMENT, Mülhausen, Alsace, France, assignor to Société Fabriques de Produits Chimiques de Thann et de Mulhouse, Rue de la Merzeau, Mülhausen, Alsace, France. Filed Dec. 20, 1919. Serial No. 346,318. 7 Claims. (Cl. 23—13.)

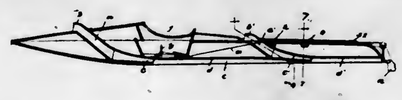
1. A process of making potassium sulfate of high degree of purity, from potassium bisulfate and potassium chlorid, which process consists in finely grinding the two compounds, making a homogenous mixture of the powders and heating the mixture.

1,389,862. MANUFACTURE OF POTASSIUM SULFATE. PAUL COMMENT, Mülhausen, Alsace, France, assignor to Société Fabriques de Produits Chimiques de Thann et de Mulhouse, Rue de la Merzeau, Mülhausen, Alsace, France. Filed Dec. 20, 1919. Serial No. 346,319. 4 Claims. (Cl. 23—13.)



1. A process for making potassium sulfate (free from chlorid) and hydrochloric acid, which process consists in mixing finely pulverized potassium chlorid with sulfuric acid in such proportion that the moist mixture remains as pulverulent as possible and heating the mixture.

1,389,863. TWINE-HOLDER. WESLEY CRABTREE and WALTER ALLEN CRABTREE, Portsmouth, Ohio. Filed May 21, 1918. Serial No. 235,794. 2 Claims. (Cl. 242—146.)



2. In a device of the character specified, a twine holder comprising a reel, a support for the reel, substantially U-shaped members hinged to the end of the support, each having an eye at the end remote from the support through which the twine is adapted to pass, and a pair of rods above the reel arranged approximately parallel with the axis thereof in spaced and parallel relation between which the twine passes.

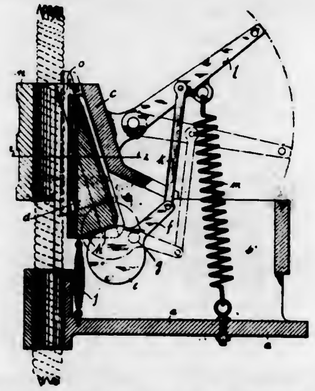
1,389,864. T-SQUARE. EUSTACE D. EFSTRATIADES, Newark, N. J. Filed Aug. 10, 1920. Serial No. 402,515. 2 Claims. (Cl. 33—100.)

1. A T-square including a head and a leg pivotally connected thereto, of a protractor scale mounted on the leg and extending over the head, a clamping arm for holding the leg in adjusted positions, and a needle point carried by the arm and arranged to traverse the protractor scale.

1,389,865. BOAT. FREDERICK L. FOX, Washington, D. C., assignor of one-fourth to Henry I. Meader, one-fourth to Donald B. Phillips, and one-fourth to Charles D. Davis, Washington, D. C. Filed Apr. 17, 1916, Serial No. 91,650. Renewed May 25, 1921. Serial No. 472,577. 9 Claims. (Cl. 114—66.5.)

1. A boat having a channel or cavity formed on its bottom and provided with a flue extending through its hull and communicating at its lower end with the forward end of said cavity, this flue being provided at its upper forward end with an air-gathering funnel, said lower discharge end of the flue being restricted in area as compared with the intake end of the flue to thereby compress the air before it is delivered under the boat.

1,389,866. FURRING-STRIP. FRANKLIN T. GEORGESON, CLARENCE E. TABOR, and LEONARD B. POTFAIRE, Eureka, Calif. Filed Aug. 30, 1920. Serial No. 406,999. 3 Claims. (Cl. 72—120.)



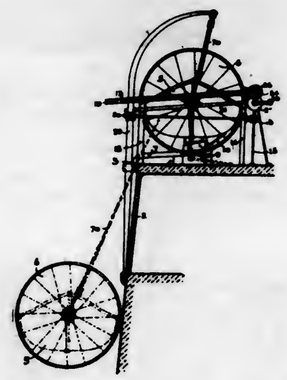
2. In a furring strip, the combination of an elongated piece of wire forming a body, said wire having eyes

formed therein in pairs at longitudinally spaced points, and oppositely disposed prongs secured in the eyes for

attaching the strip to its supporting structure and a fabric to the strip respectively.

1,389,867. SAFETY DEVICE FOR MINE-CAGES, LIFTS, AND THE LIKE. WILLIAM GRIFFIN, Wilnecote, near Tamworth, England. Filed May 2, 1919. Serial No. 294,276. 5 Claims. (Cl. 187—81.)

1. A safety device for mine cages having in combination, an attachment plate for securing on the top of the cage, a pocket part rigid with said plate and sliding on the cage guide as the cage travels, an inclined wall to said pocket, a loose wedge in said pocket with a face toward the guide, an eccentric below said wedge for operating same, independent means for withdrawing said wedge, and means connected to the supporting means for the cage for operating said eccentric, all of said parts being carried on said attachment plate.

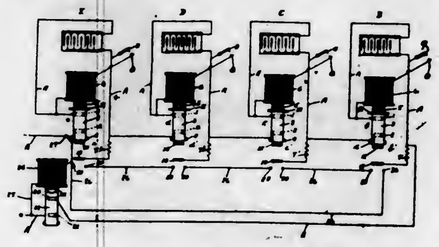


1,389,868. PIPE-COVER. WILLIAM LAFAYETTE GUY, Seward, Alaska. Filed Jan. 15, 1920. Serial No. 351,531. 4 Claims. (Cl. 131—12.)

Serial No. 351,531. 4 Claims. (Cl. 131—12.)

1. In combination with a pipe, of a ring secured to the open top of the bowl with its inner face approximately flush with the inner surface of the bowl, and a dome shaped cover having a draft tube, said cover and ring having interengageable means for holding the cover in place, and a draft tube leading outwardly from the dome and thence longitudinally of the axis of the bowl to near the bottom of the bowl.

1,389,869. LAUNCHING DEVICE FOR LIFEBOATS. GEORGE FREDERIC HALL, Providence, R. I. Filed Dec. 23, 1918. Serial No. 268,080. 8 Claims. (Cl. 9—22.)



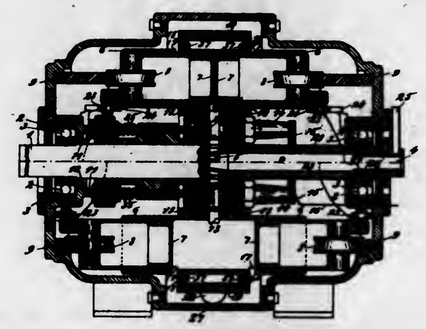
1. In a launching device for lifeboats the combination of a part of the side and a part of the deck of a ship intersecting at a gunwale, two parallel rails above said deck extending at right angles to said side and inclining downwardly in the same plane and curving over and terminating outwardly of said gunwale, uprights upon said deck supporting two other rails paralleling each other and said first named rails, a traveler movable along each said second named rails, mechanism including rotatable means adapted to move said travelers in unison forward and backward along said second named rails, a lifeboat equipped with a trunnion positioned at the middle of the bow and another at the middle of the stern on the level axial line of the lifeboat, each trunnion engaging one of said travelers, said lifeboat equipped with detachable fenders, radially curving from said axial line, fitted to support it from and adapt it for lateral travel along said first named rails to a position overhanging said gunwale, means adapted to actuate the traveler mechanism to move said equipped lifeboat laterally of its length to said position of overhang, means adapted to limit endwise movement of the lifeboat throughout its lateral progress and the whole so assembled and adapted that said lifeboat is fended from contact with said deck or gunwale or side of the ship during such progress.

1,389,870. TIRE-CHAIN. MONROE LYLE HENDERSON, Moore, Mont. Filed June 15, 1920. Serial No. 389,059. 1 Claim. (Cl. 152—14.)

A non-skid device comprising a pair of spaced parallel longitudinally curved attaching plates adapted to be arranged transversely of a tire, a pair of spaced parallel traction bars secured intermediate their ends to the outer side of one of said attaching plates, and a V-shaped traction device inclusive of a pair of diverging branches secured to the other of said attaching plates, the ends of said parallel traction bars being beveled and secured to the intermediate portions of said branches for bracing said V-shaped traction device.

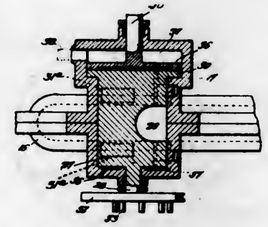
1,389,871. APPARATUS FOR CHARGING STORAGE BATTERIES. WILLIAM R. HERSH, Dayton, Ohio. Filed Apr. 12, 1920. Serial No. 373,120. 3 Claims. (Cl. 171—314.)

1. In an apparatus of the character described, a main circuit having means for connecting a plurality of storage batteries therein in series, a resistance circuit for each storage battery, and means controlled by the respective storage batteries and operating automatically to disconnect said storage batteries individually from said main circuit when each storage battery has received a predetermined charge, to connect the corresponding resistance circuits with said main circuit as the respective storage batteries are disconnected therefrom, to maintain the current uniform at the storage batteries which have not been disconnected, and to interrupt said main circuit after the last storage battery has been disconnected therefrom.



1,389,872. BOOKKEEPING APPARATUS AND THE LIKE. FERDINAND M. HOLMES, Everett, Mass. Filed Apr. 27, 1916. Serial No. 94,062. Renewed Feb. 2, 1921. Serial No. 441,993. 11 Claims. (Cl. 283—1.)

1. An entry indicator for an account sheet, comprising an accounting device which is adapted to be extended across the face of a sheet of account that has sundry kinds of entries, distinguished from each other by occupying different combinations of columns, the said indicator being characterized by the fact that it indicates a particular selection of the various columns on the sheet, the columns so selected being the particular columns occupied by the parts of an entry of the kind to which the indicator relates, and also indicating one or more columns to be avoided in making an entry of said kind.

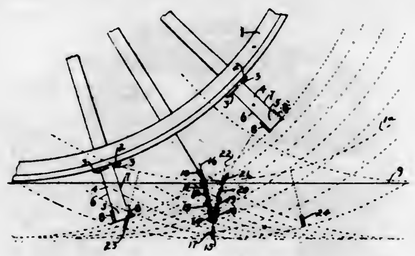


1,389,873. FOUR-CYCLE INTERNAL-COMBUSTION ENGINE. CARL ALRIK HULT, Stockholm, Sweden. Filed Sept. 9, 1919. Serial No. 322,754. 2 Claims. (Cl. 123—43.)

1. In a four cycle internal combustion engine in combination, a plurality o. cylinders placed symmetrically around and parallel to the engine shaft and open at both ends, two pistons in each cylinder, working to and from each other at the same time and at equidistance from the transversal center of the cylinder, each piston being provided with a roller or the like, two annular tracks placed concentrically around the engine shaft against which the piston and rollers work, the rollers running on the annular tracks and coöperating with curves so shaped as to actuate and guide the in and outward movements of each piston into one long stroke of expansion, one still longer stroke of exhaust, one short stroke of suction, one still shorter stroke of compression and one slight movement at the time of ignition, during at least one turn of the engine shaft, openings (17) for the exhaust gases, so placed in the cylinders as to be automatically uncovered by the pistons near the end of the expansion stroke, valves (10) coöperating with said openings, leaving a free passage for the air to sweep through the cylinders during a part of the expansion- and exhaust-strokes, a cam track (9) actuating the valves (10) by means of the rollers (8), a guide or cam track (12) guiding the outward stroke of

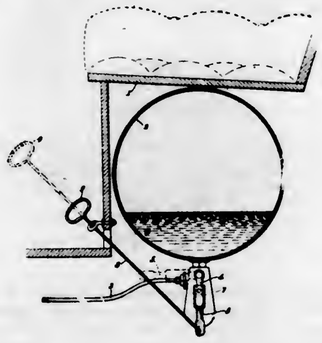
suction, by means of the rollers (23), an inlet pipe (4) for the gas mixture with an opening (5), channels (13) leading from the inlet pipe to the cylinders, spark plugs situated in said channels, a ring (15) composed of electrically non-conducting material and uniting the spark plugs, and an electric cable (16) sliding on said ring.

1,389,874. ROTARY STEAM-ENGINE. ALBERT C. JOHNSON, Stillwater, Minn. Filed Aug. 20, 1920. Serial No. 404,749. 2 Claims. (Cl. 121—71.)



1. A rotary engine comprising a cylinder formed at diametrically opposite sides with extensions constituting valve cages and formed at diametrically opposite points with intake ports leading into the end portions of said extensions, inlet pipes leading into said extensions, said cylinder also being provided with outlet ports, a shaft journaled through the cylinder, a rotor on said shaft and provided with diametrically opposite pistons, a rotary valve within each extension and having a cut-way portion for the passage of said pistons at certain predetermined points in the relative rotation of the rotor and valve, each valve being provided with a port adapted to register with the associated intake port of the cylinder, a disk within each extension having a port with which the port in said valve is adapted to register, means for rotating said valves simultaneously, said means comprising toothed wheels carried by said valves and mounted eccentrically thereon, and an elliptical toothed wheel carried by the shaft and meshing with said toothed wheels.

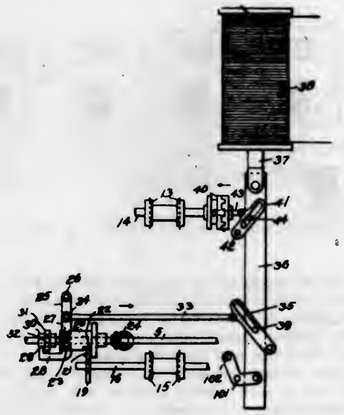
1,389,875. TRACTOR-WHEEL. ALFRED C. JOHNSON, Winters, Calif. Filed June 18, 1919. Serial No. 304,991. 8 Claims. (Cl. 301—41.)



1. A traction element adapted to be mounted upon the periphery of a tractor wheel and including laterally extending terminal blades of greater width than thickness

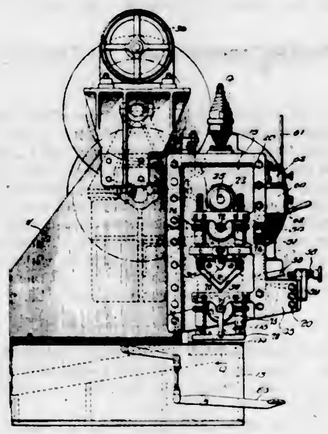
spaced a distance from the periphery of the wheel greater than the width of said blades, said blades being arranged

edgewise with relation to the axis of the wheel, and substantially parallel therewith.



1,389,876. AUTOMOBILE GASOLENE-SHUT-OFF APPARATUS. ALBERT C. KEPPLER, Newburgh, N. Y., assignor to Sunderman Corporation, Newburgh, N. Y., a Corporation of New York. Filed Apr. 4, 1918. Serial No. 226,631. 4 Claims. (Cl. 137—139.)

1. In an automobile having a seat, the combination of a gasolene tank beneath the seat, a conduit leading from said tank, a stop cock and its lever for said conduit, adapted to shut off the flow of gasolene through said conduit, with a member detachably secured to said stop cock lever and a link pivotally secured to said member and extending upwardly to a point adjacent said seat whereby the same may be conveniently operated by the operator from the said seat to open and close said stop cock and adapted to operate said stopcock when pulled or pushed in a direction longitudinally of the link.

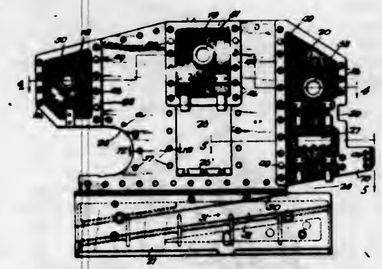


1,389,877. MOTION-PICTURE AND TARGET APPARATUS. GEORGE A. KERESTES, Pittsburgh, Pa., assignor to Novelty Amusement Co., Pittsburgh, Pa., a Corporation of Delaware. Filed May 20, 1919. Serial No. 298,406. Renewed Dec. 1, 1920. Serial No. 427,657. 13 Claims. (Cl. 124—15.)

1. In apparatus of the class described, a motion picture machine having a shutter and a film feed mechanism, a target, and means actuated by the impact of a bullet on the target and coacting with the film feed mechanism for

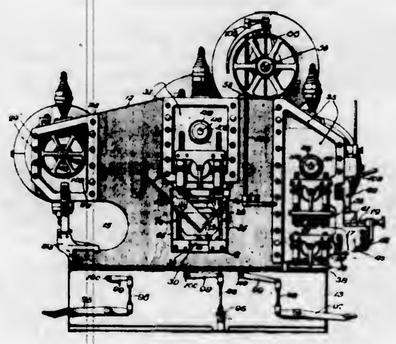
arresting the movement of the film without stopping the shutter.

1,389,878. COMBINATION COPING AND NOTCHING MACHINE. HANS B. KRAUT, Chicago, Ill. Filed Mar. 4, 1919. Serial No. 280,612. 10 Claims. (Cl. 164—15.)



1. In a machine for the purpose set forth, a frame embracing side plates that overlap rearwardly on the frame and are provided with overhanging integral extensions to constitute a bolster support for a coping and notching mechanism, a reciprocating slide in said frame carrying an overhanging coping and notching blade holder, cooperating with said mechanism, an operating shaft for said slide, and bearings on said plates for said shaft.

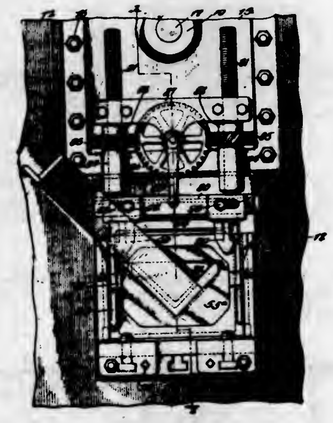
1,389,879. FRAME FOR METAL-CUTTING MACHINES. HANS B. KRAUT, Chicago, Ill. Filed Mar. 4, 1919. Serial No. 280,613. 21 Claims. (Cl. 164—15.)



1. A machine frame comprising an intermediate cast metal member flanged to provide ways that open at one

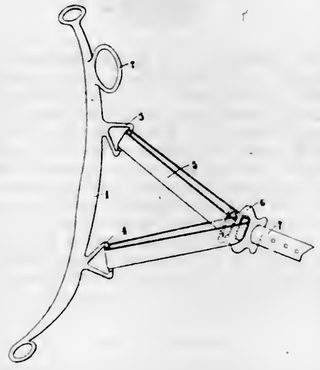
side thereof, plates attached to said intermediate member, the plate on the side of the member toward which the

ways open being interrupted at said ways, and removable cover plates over said ways.



1,389,880. COMBINED PUNCHING, SHEARING, SECTION-CUTTER, BAR-CUTTER, AND COPING AND NOTCHING MACHINE. HANS B. KRAUT, Chicago, Ill. Filed Mar. 4, 1919. Serial No. 280,615. 9 Claims. (Cl. 164—15.)

1. A combined punching, section cutting and shearing machine embracing a frame having transverse clearance openings opening at one side of and extending through the frame of the machine, coöperating tools at said openings and tool operating gear mechanism and supporting brackets therefor located wholly at and supported on the other side of the machine frame above said clearance openings.

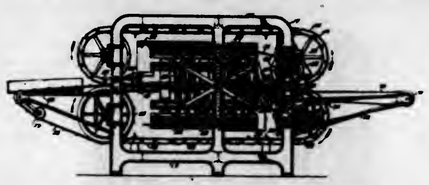


1,389,881. METAL-SECTION CUTTER. HANS B. KRAUT, Chicago, Ill. Filed Mar. 4, 1919. Serial No. 280,616. 17 Claims. (Cl. 164—52.)

1. In a section cutting machine, the combination with a fixed blade and a movable blade having side contact with each other throughout the throw of the movable blade, of holder means to lock said blades in place, embracing seats in said holder means with which said blades interlock, pressure elements acting flatwise on the blades and

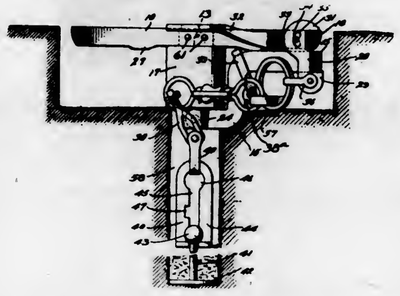
wedge means acting between the pressure elements and holder means to press the blades together.

1,389,882. HARNESS. MARGARET CAROLINE THURLOW LAMB, Bowdon, England. Filed July 24, 1919. Serial No. 313,128. 2 Claims. (Cl. 54—1.)



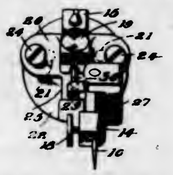
1. A harness comprising a hame provided with a pair of spaced eyes having runners therein, the lowermost of said eyes being positioned at a point located at a substantial distance below the usual point of draft, a trace provided on its ends with a member, said member being provided with a pair of eyes having runners therein, and an endless band extending from one of said eyes on the hame to one of said eyes on the member of the trace; back to the other of said eyes on said hame; then through the other eye of said member and finally back to the first mentioned eye of said hame.

1,389,883. FIBER-EXTRACTING MACHINE. WILLIAM OREN LAMBERT and GEORGE HERBERT POUND, El Paso, Tex. Filed Mar. 18, 1920. Serial No. 366,742. 26 Claims. (Cl. 13—18.)



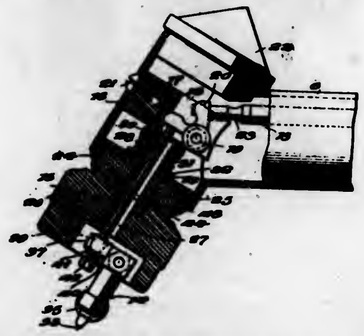
2. In a machine of the character specified, reversely driven alined shredding members, a feeder at one side of

the shredding members adapted to grip the butts of the articles and move the latter through the machine and



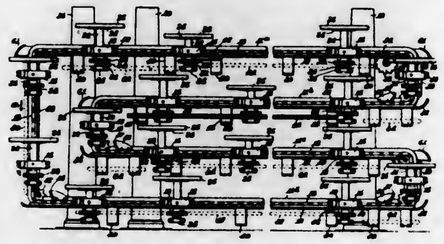
from one to the other of the shredding members, and cutting means disposed adjacent the inner side of the feeder to sever the shredded body of the article from the butt.

1,389,884. TRAP. WILLIAM R. LAZENBY, Hardin, Mont. Filed Feb. 3, 1920. Serial No. 356,098. 7 Claims. (Cl. 43—92.)



7. A trap including a pair of links bifurcated at their opposite ends, a pair of jaws having one terminal of each respectively pivoted within one of the bifurcations of one link and within one of the bifurcations of the other link, co-acting means provided on the pivoted end of each jaw serving to limit the opening of the jaws, a bail having its terminals pivoted within the remaining bifurcated portion of each link, housings including cylindrical telescopic sections each provided with a closed end having an opening therethrough, the bifurcated portions of the links adapted to extend through the openings in said housing sections, means for effecting relative separation of said sections, and a trigger controlled retaining device adapted to co-act with the bail and one of the jaws to hold the trap in open set position.

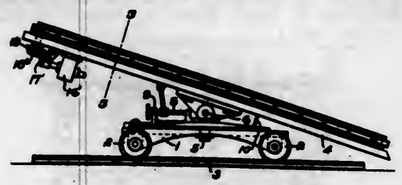
1,389,885. STYLUS-HOLDER FOR TALKING-MACHINES. FRANK D. LEWIS, West Orange, N. J., assignor to Pathe Freres Phonograph Company, Brooklyn, N. Y., a Corporation of Delaware. Filed June 7, 1920. Serial No. 387,030. 6 Claims. (Cl. 274—28.)



4. In a talking machine, the combination of an axially vibratory transmission element; and a duplex stylus-holding attachment comprising a pair of separate stylus-holding members, one mounted to vibrate vertically and the other to vibrate laterally, one of said members being connected immediately to the transmission element to directly effect its prescribed axial vibrations, and means interposed between the transmission element and the other member for transforming the vibrations of the latter into axial vibrations of said element.

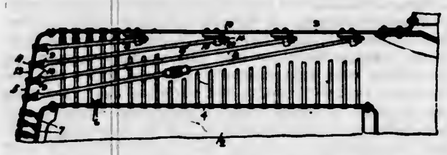
1,389,886. STYLUS-HOLDERS FOR TALKING-MACHINES. FRANK D. LEWIS, West Orange, N. J., and GUSTAVE NEMNICH, New York, N. Y., assignors to Pathe Freres Phonograph Company, Brooklyn, N. Y., a Corporation of Delaware. Filed June 7, 1920. Serial No. 387,031. 11 Claims. (Cl. 274—28.)

1. The combination of a non-rotatable arm movable over a record; a diaphragm and a stylus holder mounted on opposite ends of said arms; and vibration transmission means connecting the diaphragm and holder, said holder being adjustable between playing position for vertical-cut records and playing position for lateral-cut records.



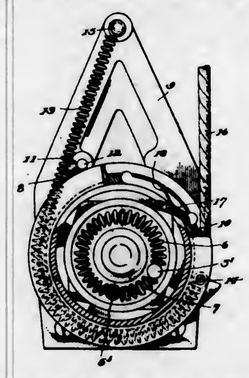
1,389,887. MACHINE FOR COOLING CHOCOLATES AND THE LIKE. FREDERICK W. LEYLAND, Cambridge, and EDWARD P. BROCK, Boston, Mass. Filed Feb. 9, 1920. Serial No. 357,361. 30 Claims. (Cl. 34—12.)

30. In a device of the class described, a traveling carriage having a vertical slot in one end thereof; parallel horizontal tracks for said carriage, the lower of said tracks having a curved upward extension; a vertical guide above said lower track adapted to coact with said slot; a roller on the top of said vertical guide; rollers on the front side of said carriage coacting with said curved extension; rollers on the rear side of said carriage; and curved tracks with which said rear rollers coact.



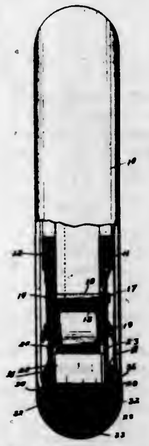
1,389,888. MATERIAL-HANDLING APPARATUS. EDWARD MCGOWAN, Mulberry, Kans., and PRESTON UPHAM, Boston, Mass.; said Upham assignor of his entire right to Sullivan Machinery Company, Claremont, N. H., a Corporation of Massachusetts. Filed Feb. 24, 1916. Serial No. 80,275. 14 Claims. (Cl. 193—8.)

1. Loading apparatus for use in loading coal in mines comprising, in combination, an inclined plate providing at its lower end a scraping edge, a support on and with which said plate may be advanced into the work as a unit, and a pair of relatively adjustable scraper conveyer units



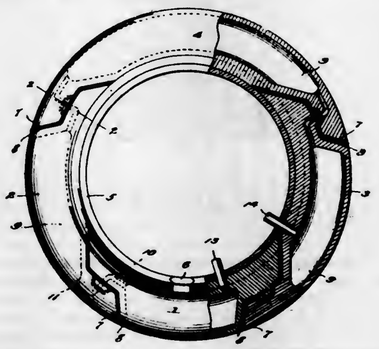
operatively mounted on said plate and providing two adjacent runs of chain having projecting scrapers moving in the same general direction for scraping the coal up said inclined plate, and over the top thereof into a mine car.

1,389,889. BOILER-BRACE. ROBERT J. MCKAY and FREDERICK R. COOPER, Pittsburgh, Pa., assignors to The Breakless Staybolt Company, McKees Rocks, Pa., a Corporation of Delaware. Filed July 29, 1916. Serial No. 112,019. 3 Claims. (Cl. 122—493.)



1. The combination of a bracket secured to the inner wall of the top boiler or roof-sheet, a diagonal stay-rod loosely and detachably fastened to said bracket, a plug in the boiler-head flexibly connected to the rod, said stay-rod and flexible connection being sufficiently small to pass through the plug opening in the back boiler-head, whereby the rod and its flexible connection may be inserted through the plug opening and the parts connected, though slightly out of alinement.

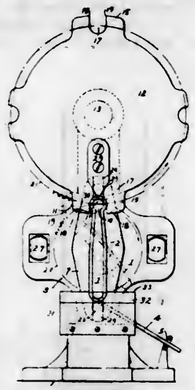
1,389,890. STARTING MECHANISM FOR MAGNETOS. SAMUEL CHRISTOPHER MCKEOWN, Newark, N. J., assignor to Splitdorf Electrical Company, Newark, N. J., a Corporation of New Jersey. Filed July 11, 1917. Serial No. 179,848. 9 Claims. (Cl. 123—149.)



1. An ignition apparatus including a magneto having a flux shifting member, means for rotating said flux shifting member including a spring for pressing said flux shifting member in the direction of its normal rotation, a manually operated member movable in a path concentric to the axis of rotation of said flux shifting member, devices acting automatically for connecting said manually shiftable member with the flux shifting member for turning said flux shifting member in a direction opposed to the spring, means for automatically releasing said flux shifting member from said devices to permit the flux shifting member to be operated by the spring for producing a current for starting ignition, and means for preventing said devices from making connection with the flux shifting member until again manually operated for moving the flux shifting member.

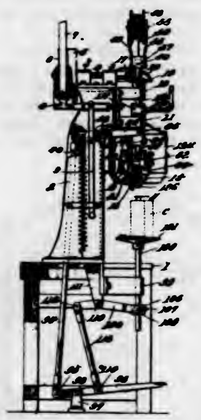
1,389,891. VEHICLE-WHEELS. SAMUEL J. MARDIS, Johnstown, Pa. Filed Jan. 3, 1921. Serial No. 434,755. 4 Claims. (Cl. 152—29.)

3. A vehicle wheel including a pair of disk members, an annular supporting member included between said disk members, a cushion surrounding said supporting member, a series of thrust members arranged radially between said disks and beyond said cushion, a tire member positioned between the disks so as to engage said thrust members and extending beyond the sides of the disks, projections on the tire extending between the thrust members and a casing shoe positioned over said tire member and engaging the sides of the disks.



1,389,892. COLLAPSIBLE CORE. THOMAS MIDGLEY, Sr., Hampden, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Mar. 19, 1919. Serial No. 283,534. Renewed Feb. 2, 1921. Serial No. 441,929. 7 Claims. (Cl. 18—45.)

1. In a collapsible core, a plurality of core sections shaped to form an annulus, means whereby said sections



may be heated including a connection for the heating medium adapted to be established through the abutting ends of the sections when the latter are assembled, and means for holding the sections in assembled relation.

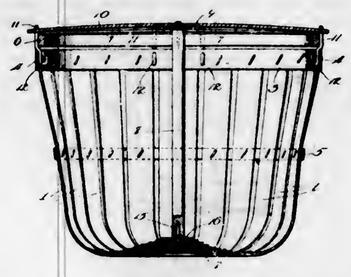
1,389,893. MACHINE FOR MAKING WIRE CLOTHES-PINS. JOHN MUCK, Milwaukee, Wis. Filed Nov. 4, 1918. Serial No. 260,981. 9 Claims. (Cl. 140—83.)

2. A machine for forming clothes pins from wire, including the combination of a rotary bobbin having loop forming marginal portions, and an intermediate portion parallel with the axis about which the bobbin rotates into which the wire may be pressed from the sides of the adjacent marginal portion to form a head, a relatively constricted neck, and a rotary die for pressing the wire against the bobbin and into the neck forming portion thereof.

1,389,894. SOLDERING-MACHINE. THOMAS MYHRUM, Chicago, Ill., assignor to Continental Can Company, Inc., Syracuse, N. Y., a Corporation of New York. Filed Mar. 1, 1920. Serial No. 362,614. 22 Claims. (Cl. 113—87.)

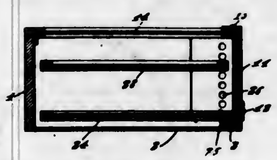
1. A soldering machine including in combination, a rotating head, a soldering iron carried thereby and located at one side of the axis of the head, a chuck for centering the article to be soldered relative to the head, a support for the articles to be soldered, means for yieldingly mounting the chuck so that it may move lengthwise of the axis of the head, and means for raising the support and the chuck to bring the seam into range of the soldering iron.

1,389,895. ELECTRICAL SIGNALING AND INDICATING DEVICE FOR SHIPS AND OTHER VESSELS. RODOLPH STUART O'NEIL, London, England, assignor to O'Neil's Recorder Syndicate Limited, London, England. Filed Oct. 27, 1920. Serial No. 419,845. 5 Claims. (Cl. 177—327.)



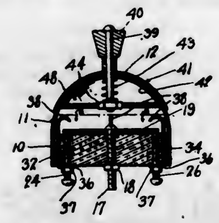
1. An indicator case for electrical signaling on ships and other vessels; comprising an inclosing case, a dial fitted to said case, said dial having a principal aperture the illumination of which serves to indicate general direction, and said dial having a plurality of subsidiary apertures the illumination of each of which serves to indicate some specific particular, a reflector chamber structure located within said case beneath said principal dial aperture, said structure having a transparent top and having a plurality of lateral windows each glazed with transparent material of differing colors, a cellular structure within said case having cells adjacent to said reflector chamber structure said cells having openings communicating with said windows of said reflector chamber structure, electric lamps in said cells the light rays from one or other of which pass through said windows into said reflector chamber structure and by reflection illuminate the principal aperture of said dial in accordance with the color of said window through which said light rays pass, said cellular structure having a closed cell located beneath each subsidiary aperture of said dial, each of said cells having an aperture immediately beneath said subsidiary apertures of said dial, a glass plate of a desired color to close said aperture of each cell beneath said subsidiary aperture of said dial, and an electric lamp in each cell beneath each subsidiary aperture of said dial the light rays from said electric lamps passing through the colored glass plates and illuminating the subsidiary apertures aforesaid, whereby general direction is indicated by reflection through said principal aperture of said dial and particular direction is indicated by light rays passing through one or other of said subsidiary apertures of said dial.

1,389,896. VENTILATOR. ARNOLD PFAU, Milwaukee, Wis. Filed June 12, 1916. Serial No. 103,062. 3 Claims. (Cl. 4—21.)



1. In combination, a water closet bowl, conduit means having a constriction formed by gradually converging and diverging communicating portions, a water supply communicating with said gradually converging conduit portion, and gas conduit means connecting said bowl with said gradually diverging conduit portion beyond said constriction.

1,389,897. SHIPPING-BASKET. WILLIAM L. PITTS, Marshall, Tex. Filed May 3, 1919. Serial No. 294,468. 3 Claims. (Cl. 217—124.)

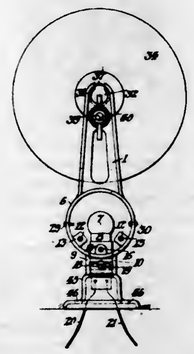


1. A basket having two pairs of diametrically opposed loops secured to its rim and projecting upwardly therefrom, a cover fitting within said loops, two fastener slats secured to said cover at right angles to each other and having projecting ends engaging said loops, and a center post secured to the bottom of the basket and adapted to support the central portion of the cover and maintain said fastener slats in snug engagement with said loops, substantially as described.

1,389,898. SHOWCASE OR SCREEN. WILLIAM B. PRATTOR, Mount Pleasant, Tex. Filed Sept. 1, 1920. Serial No. 407,290. 2 Claims. (Cl. 40—102.)

1. In a device of the class described, a cabinet comprising a back, a fixed side, a top and a bottom; a movable side hinged to the back and provided with outstanding top and bottom plates; a leaf mounted to swing in the top and bottom plates, the top and the bottom of the cabinet being cut away to give access to the leaf, and the top and bottom plates constituting closures for the cut away portions of the top and the bottom; and a door hinged to the movable side.

1,389,899. SWITCH. FLETCHER S. RIGGS, Marshall, Tex. Filed Aug. 9, 1920. Serial No. 402,154. 3 Claims. (Cl. 200—5.)

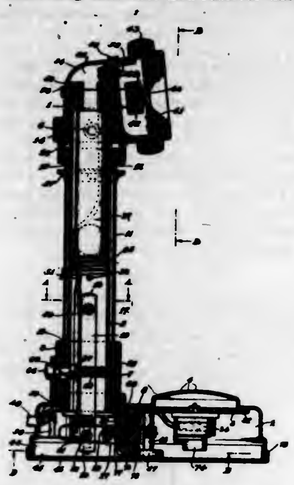


1. A switch comprising a base, formed as a disk of insulating material, a central contact extending through and secured with respect to said base, a plurality of equally spaced outer contacts extending through and secured with respect to said base, upwardly extending contact members secured to said second named contacts and terminating in considerable spaced relation to the base, a metallic shell secured externally upon said base and of hemispherical shape, said shell being provided in its top with a substantially cruciform opening having arms corresponding in number to the number of said second named contacts, an outer shell of partially spherical formation slidable externally upon said first named shell, a post provided with a handle and secured through said second named shell and extending through said opening, an inner shell of partially spherical shape conformingly engaging against the inner periphery of said first named shell and mounted on said post, a spider member carried by said last named shell, said shell being connected with said first named contact, and said post being movable into any arm of said opening in order to bring said spider member into contact with the upper end of either one of said last named contacts.

1,389,900. METHOD OF HERMETICALLY ATTACHING CAN-ENDS TO CAN-BODIES. DANIEL P. ROBINSON, Baltimore, Md., assignor to Continental Can Company, Inc., Syracuse, N. Y., a Corporation of New York. Filed Oct. 3, 1918. Serial No. 256,733. 2 Claims. (Cl. 113—112.)

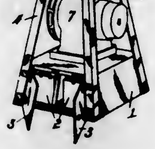
1. The method of hermetically attaching can ends to can bodies, comprising forming a flange on the can body, applying solder to the flange for closing all slits near the edge thereof, placing a non-metallic sealing material between the can end and the flange on the can body, subsequently forming the flange on the can body and the edge of the can end into a double seam.

1,389,901. AUTOMOBILE ACCESSORY. EDWIN M. ROSENBLUTH, Wallingford, Pa. Filed Dec. 18, 1919. Serial No. 345,860. 24 Claims. (Cl. 240—7.)



23. The combination with a bracket including two oppositely counterpart members having at one end supporting means arranged to detachably connect them with a vehicle; and forming a lamp casing; of screw means inside said casing, arranged to clamp said bracket members together; and a lamp in said casing.

1,389,902. TELEPHONE INSTRUMENT OR THE LIKE. OSCAR A. ROSS, New York, N. Y. Filed Apr. 26, 1918. Serial No. 230,963. 8 Claims. (Cl. 179—167.)



6. In a portable telephone instrument, a base normally adapted to support said instrument, a transmitter unit

contained within said base, a receiver unit, a body portion rigidly connecting said base and receiver unit, means

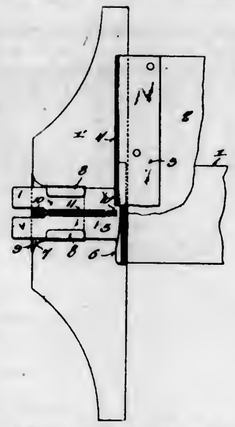
for holding said instrument when in service, said means by relative movement with said body portion controlling the circuits of said instrument.

1,389,903. PORTABLE CARRYING MEANS FOR ELECTRIC GENERATOR-SETS. CHARLES E. ROWLAND, Toledo, Ohio. Filed July 19, 1920. Serial No. 397,382. 3 Claims. (Cl. 294—15.)

1. An electric generator set carrying means, comprising a hollow base member for receiving storage batteries and supporting a motor generator unit, and frame bars rising from the base member at spaced intervals around the same and united at their upper ends.

1,389,904. T-SQUARE GUIDE. HERBERT F. RUDOLPH, Milwaukee, Wis. Filed Feb. 16, 1920. Serial No. 358,854. 1 Claim. (Cl. 33—76.)

The combination with a drawing board having a grooved rail, of a T-square attaching means comprising a rectangular attaching plate provided with folded longitudinal edges constituting guides and an upturned rear edge for securement to the head of a T-square, an integral centrally disposed tongue upset from the plate body, a one-piece sheet metal shoe in telescopic union with an attaching plate, the shoe comprising a shank-plate portion having a centrally disposed end slot engageable with the attaching plate tongue, the shank-plate portion being extended beyond the width of the plate body at its inner end and upturned to form a rail engaging toe, the surface of which toe is cut away intermediate of its ends to form two points of contact with the rail at a distance apart, approximately equal to the width of a T-square blade, whereby friction is reduced and the tendency of the T-square blade to wabble is resisted, a tongue upset from the shank-plate portion near its inner end, and a spring connecting the shank-plate tongue and attaching



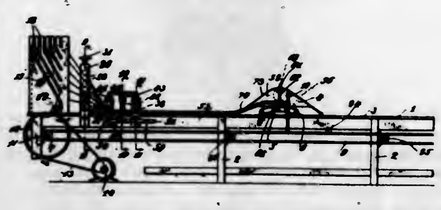


plate tongue, adapted to draw the telescopic plates together, whereby the working edge of the T-square head is yieldingly held to the surface of the board.

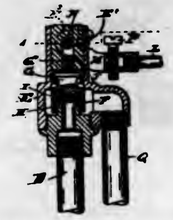
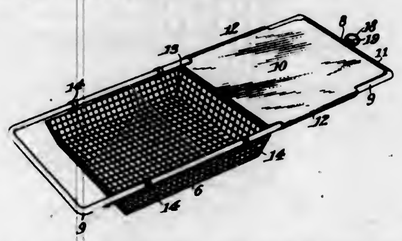
1,389,905. MANUFACTURING HEADS OF PUPPETS, DOLLS, AND LIKE ARTICLES. ENRICO SCAVINI, Turin, Italy. Filed Sept. 10, 1919. Serial No. 322,846. 10 Claims. (Cl. 18—19.)

1. The herein-described method of manufacturing heads of puppets, dolls and the like, which consists in hot pressing in a matrix a piece of sized felt with a piece of thoroughly starched, hot, wet fabric arranged on the surface of the felt and intended to form the interior surface of the finished article.



1,389,906. FABRIC-LAYING APPARATUS. ISAAC SEGAL, New York, N. Y. Filed July 12, 1919. Serial No. 310,415. 7 Claims. (Cl. 270—30.)

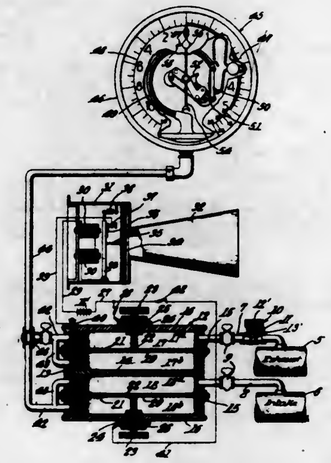
1. In a cloth folding machine, the combination with a carrier, of a table adapted to run thereon, means located



upon said carrier for grasping the cloth so that the carrier will pull the same over said table, a plurality of presser rolls carried by the table adapted to engage the cloth being piled thereon, and means upon said carrier for lifting said presser rolls from the cloth as the carrier passes thereby.

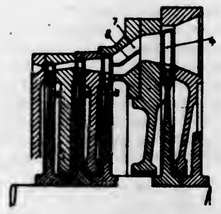
1,389,907. WATER-INLET VALVE FOR TANKS. WILLIAM SHERWOOD, Detroit, Mich. Filed Oct. 30, 1920. Serial No. 420,766. 5 Claims. (Cl. 137—104.)

5. In a device of the character described, a water inlet pipe for a flushing tank, a valve chamber fitted to the end of said pipe having a discharge pipe leading from said valve chamber into the flushing tank, a divided plunger valve fitted to the valve chamber, adapted to seat against the flow of water into the latter, a cup-washer located between the divided portions of the plunger, a valve disk, a collar screwed to the lower end of said plunger adapted to support the valve disk and to loosely encircle the valve seat, a float lever, a hook-shaped bifurcated fitting secured to the end of the float lever fulcrumed on trunnions integral with the valve chamber, a transverse pin connecting the bifurcated fitting with the plunger valve, an adjustable screw supported in the end of said bifurcated fitting to limit the tilting action of the float lever, and an after-fill pipe leading from the valve chamber and adapted to discharge into an overflow pipe.



1,389,908. DISH-DRAINER. HARRY SHULTS and CALVIN R. DUNN, Gloversville, N. Y. Filed Aug. 27, 1920. Serial No. 406,343. 2 Claims. (Cl. 141—11.)

1. A dish draining device, comprising a frame consisting of wire bent into a rectangular form, adapted to rest on a sink, a platform secured to one end of the frame and portions of its sides and a dish draining receptacle secured to the frame and occupying the space at its other end so as to depend in the sink.

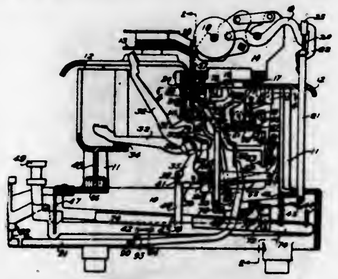


1,389,909. INDICATOR. RALPH L. SKINNER, Sacramento, Calif. Filed Sept. 18, 1919. Serial No. 324,424. 2 Claims. (Cl. 116—117.)

1. The combination with the intake and exhaust manifolds of an internal combustion engine, of a signal having a pair of hands adapted to be moved simultaneously in a given direction, means for communicating pressure from said exhaust manifold to said signal whereby said hands are moved simultaneously in a clockwise direction, means for communicating pressure from said intake manifold whereby said hands are moved in an anticlockwise direction, means for severing connection between the exhaust

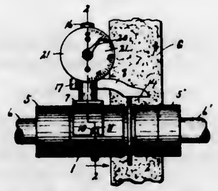
manifold and the signal and simultaneously establishing communication between the intake manifold and signal.

1,389,910. MULTISTAGE AXIAL-FLOW STEAM OR GAS TURBINE. PAUL SPIESS, Zürich, Switzerland. Filed Mar. 31, 1921. Serial No. 457,343. 3 Claims. (Cl. 253—69.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



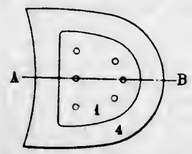
1. In a multistage axial flow steam or gas turbine having a guide channel S-shaped in longitudinal axial section for conveying the driving medium from one rotor wheel to a similar one of considerably different diameter; a partition or guide wall arranged within this channel, said partition having a form corresponding to the sectional shape of the channel, the rotor wheels being of the usual type having blades that extend without obstruction from the rotor disk periphery to the bounding rings, whereby the total quantity of steam or gas working on the blades of one wheel is guided over to the blades of the next following rotor wheel.

1,389,911. TYPEWRITER. CHARLES SPIRO, New York, N. Y., assignor to Federal Adding Machine Corporation, New York, N. Y., a Corporation of New Jersey. Filed Mar. 1, 1920. Serial No. 362,248. 14 Claims. (Cl. 197—28.)



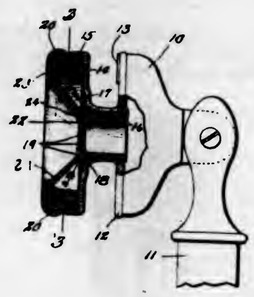
1. In a typewriter, a frame, a key lever pivoted at the rear thereof, a typebar action unit comprising a detachable fulcrum bar secured upon said frame above and intermediate the ends of said key lever, a segment supported

from said bar, a sublever pivoted upon said bar, a link pivotd to said sublever and connected to the key lever by



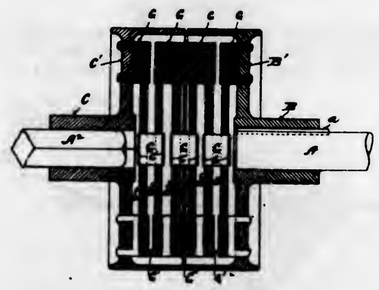
an inserted pivot, and a typebar upon said segment connected to said sublever.

1,389,912. DEVICE FOR POSITIONING AND MEASURING OPTICAL AXES OF LENSES IN EDGE-GRINDING MACHINES. ERNEST STEAD, Binghamton, N. Y. Filed Mar. 31, 1916. Serial No. 87,979. 3 Claims. (Cl. 33—172.)



1. The combination with a rotary lens-holder and a lens-pattern in fixed relation to the holder and coaxial therewith, the lens being adjusted rotarily and radially in the holder to bring its optical axes into alinement with the corresponding axes of the pattern, of means for determining the angular position of the axes of the lens relatively to those of the pattern comprising a saddle resting on the periphery of the holder and provided with a feeler in proximity to the lens in the holder and alined with one of the optical axes of the lens pattern, and means for holding the saddle against turning relatively to the lens holder.

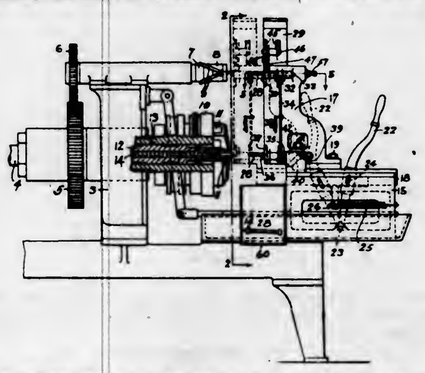
1,389,913. HEEL OF BOOTS AND SHOES. WILLIAM D. STERNBERG, London, England. Filed Dec. 17, 1920. Serial No. 431,515. 3 Claims. (Cl. 36—36.)



1. A two-part resilient heel for boots and shoes comprising a carrier member, and an outer wearing member having a line of juncture extending to the tread surface, an integral projection or projections on one of the members and a coöperating part or parts on the other serving to hold the members in position when the carrier is attached to the shoe, both members having substantially the same resiliency, the wearing member being sufficiently elastic when stretched to pass over the carrier and force the projection or projections into closely locked relation with the coöperating part or parts whereby dirt and grit cannot enter between the two members when the boot or shoe is in use.

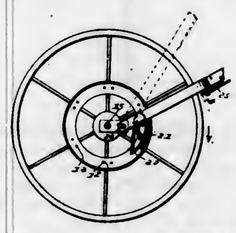
1,389,914. ANTISEPTIC MOUTHPIECE FOR TELEPHONES. FRANK C. TABLER, St. Louis, Mo., assignor to The Anti-Bacilli Company, St. Louis, Mo., a Corporation of Missouri. Filed Nov. 17, 1919. Serial No. 338,658. 3 Claims. (Cl. 179—185.)

1. An antiseptic mouthpiece for telephone transmitters comprising a housing formed in two sections, the rear section being provided with a tubular extension adapted to be secured in the transmitter, the front section being provided with an inwardly extending conical wall, said two sections having threaded engagement with each other, a chamber being thus formed between the conical wall and rear section, and an antiseptic material in said chamber, which is held in position by and between said two sections.



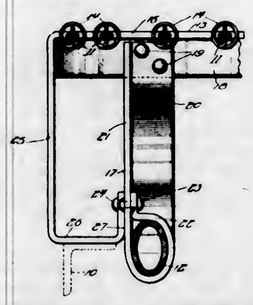
1,389,915. UNIVERSAL JOINT. GEORGE H. THOMAS, Westfield, N. Y., assignor to Flexible Couplings Company, Westfield, N. Y., a Corporation of New York. Filed May 6, 1918, Serial No. 232,819. Renewed Jan. 7, 1921. Serial No. 435,759. 5 Claims. (Cl. 64—96.)

5. In a flexible coupling for shafts, in combination, a laminated metal annulus constituting a torque transmitting member, said annulus having a pair of radially opposed notches on its inner and outer edges, and a common means to bind together the laminations of said annulus and to transmit drive thereto including a flanged block having a relatively heavy wall lying against said annulus and having right angled projecting walls snugly fitting said notches and having means to press said annulus against said first mentioned wall.



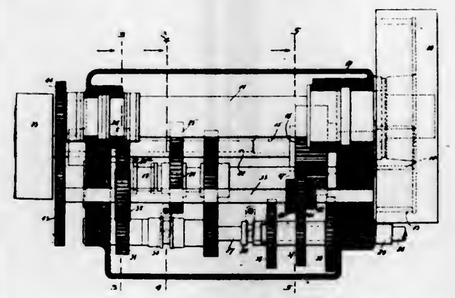
1,389,916. FEEDING MECHANISM FOR BOLT-MACHINES. HANSON THOMAS, Pittsburgh, Pa. Filed Dec. 16, 1919. Serial No. 345,283. 17 Claims. (Cl. 10—162.)

1. In bolt feeding mechanism, the combination with a plurality of bolt finishing mechanisms, of a frame movable toward and from said mechanisms, means for supporting the bolts in position on said frame, and means



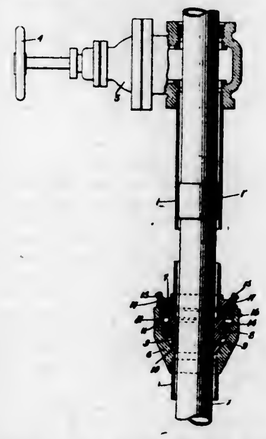
for delivering a bolt by gravity from one mechanism to the other.

1,389,917. BRAKE MECHANISM FOR TRUCKS. CARL LEWIS THOMPSON, New Lisbon, Wis., assignor of one-half to Charles A. Leicht, Sr., New Lisbon, Wis. Filed Aug. 31, 1920. Serial No. 407,258. 4 Claims. (Cl. 188—119.)



1. In a brake for baggage trucks, drums secured to the front wheels of the truck, a tongue mounted to oscillate with relation to the drums, a brake beam mounted on the tongue structure near its inner end, shoe carried by the brake beam engaging the said drums, and means for holding the tongue at different positions of adjustment.

1,389,918. MATTRESS-FRAME. DON CARLOS TRAVIS, Kenosha, Wis., assignor to Simmons Company, Kenosha, Wis., a Corporation of Delaware. Filed June 9, 1919. Serial No. 302,653. 8 Claims. (Cl. 5—63.)

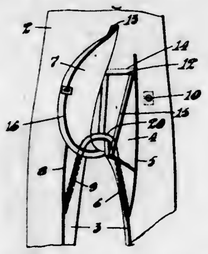


1. In bedstead construction, the combination of a supporting side rail, a flexible fabric, an angle iron crosspiece to which one end of the fabric is connected, a stretcher tube at a lower elevation than the fabric, an angle iron riser connecting the end of the stretcher tube with the cross-piece and having its lower end looped to embrace the tube, an outrigger engaging the side rail, and a tie member uniting together the loop ends and the inner end of the outrigger.

1,389,919. HEADSTOCK MECHANISM OF LATHES. WALLACE E. WARD, Rochester, N. Y., assignor to Arthur H. Ingle, Rochester, N. Y. Filed Aug. 25, 1919. Serial No. 319,639. 6 Claims. (Cl. 82—29.)

1. Headstock mechanism of lathes, comprising a high speed drive shaft, a work spindle, change speed gearing connecting said shaft with said spindle including a pair of spaced apart constantly driven gears, a feed shaft having an extension axially alined therewith, connections for driving said shaft extension in either direction from said constantly driven gears including a disconnecting clutch, and feed mechanism connected to be driven from said spindle including a set of feed change gears loosely mounted on said feed shaft extension and including a disconnecting clutch.

1,389,920. WELL. PAUL WEAVER, Tampico, and HOMER C. CRAIG, Potrero del Llamo Camp, Mexico, assignors of one-half to Whitehall Petroleum Corporation, Limited, London, England, a Corporation of Great Britain and Ireland. Filed May 5, 1920. Serial No. 378,971. 22 Claims. (Cl. 166—1.)



1. Apparatus for use with wells comprising an inner casing and an outer casing, said apparatus comprising a device adapted to be secured to the outer casing and including means slidable at an angle to the axis of said casings to close or open the space between the casings.

1,389,921. APPARATUS FOR SPINNING, DOUBLING, AND TWISTING YARNS OR THREADS OF FIBROUS SUBSTANCES. THOMAS WHITEHEAD, Blackpool, England. Filed Feb. 17, 1919. Serial No. 277,559. 5 Claims. (Cl. 118—60.)

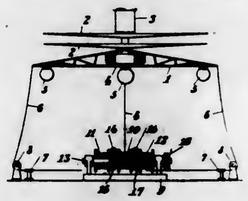
1. The combination with a spindle and means for rotating it, of an independently driven ring carrier constituting a bearing for the spindle, and a self adjusting bearing for the carrier.

1,389,922. UNION-SUIT. CHARLES N. WINSHIP, Wakefield, Mass., assignor to Winship, Bolt & Co., a Copartnership consisting of Charles N. Winship and Elizabeth E. Bolt, Wakefield, Mass. Filed May 8, 1919. Serial No. 295,606. 5 Claims. (Cl. 2—144.)

1. A union suit of the closed crotch type provided with a posterior opening having an upper edge extending transversely of the body of the garment, a flap for covering said opening and extending for a substantial distance above the upper edge of said opening, one edge of said flap being secured to the body of said garment and the opposite edge being free, the body portion of said garment and said flap having coöperating means to fasten the flap in its closed position, and the body of said garment having a structurally integral part thereof extending underneath the upper portion of said flap with the lower edge of said part forming said transverse upper edge of said posterior opening.

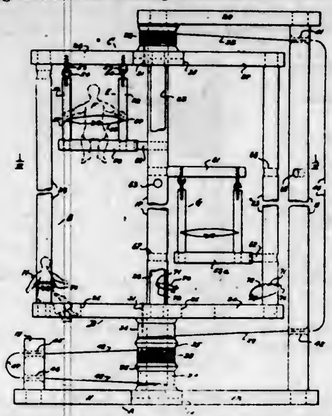
1,389,923. CONTAINER. PHILIP ZALKIND, New York, N. Y. Filed Apr. 23, 1918. Serial No. 230,204. 7 Claims. (Cl. 229—7.)

6. In a container having walls adapted to lie flat and to be folded to position in setting up the container for use, means whereby the contents of the container are removable therefrom, and a measuring device associated with the walls of the container and the aforesaid means and adapted to be collapsed when the walls of the container lie flat against one another and to be opened for use when the walls of the container are set up to position for use.



1,389,924. HAIRPIN. ISAIAH N. ZELLER, Chicago, Ill. Filed Apr. 29, 1919. Serial No. 293,455. 3 Claims. (Cl. 132—50.)

3. A hair pin comprising prongs extending adjacent one another, resilient means pressing said prongs toward one another and adapted for manual operation to separate said prongs, said prongs being adapted to maintain their fixed angular relation to each other irrespective of the distance to which they are separated.

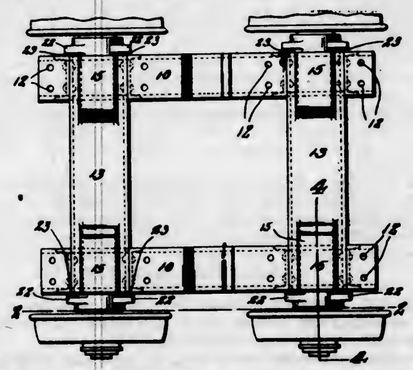


1,389,925. CAPTIVE FLYING-MACHINE OF THE HELICOPTER TYPE. WILHELM ZUROVEC, Fischamend, near Vienna, German Austria. Filed Mar. 9, 1920. Serial No. 364,606. 3 Claims. (Cl. 244—19.)

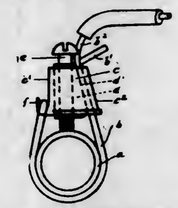
1. A captive flying machine of the helicopter type comprising in combination a frame having three arms arranged at angles of 120°, ropes arranged in the form of a trapeze, and means for securing the upper ends of the ropes to the ends of the said arms, as set forth.

1,389,926. TOY CAROUSEL. WALBORG AHLMGREN, New York, N. Y., assignor of one-third to Henry C. Karlson, Hasbrouck Heights, N. J., and one-third to Charles A. Bursell, New York, N. Y. Filed July 31, 1920. Serial No. 400,471. 12 Claims. (Cl. 46—27.)

1. A device of the character described including a rotatable member, a fixed member extending parallel therewith, positive means for imparting motion to the former, an oscillatable element carried by said member, and abutting means for causing oscillation of said element when the first member is rotated relatively to the second member.

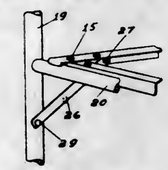


1,389,927. LOCK-NUT. AUGUSTUS A. BALL, Lynn, Mass. Filed July 15, 1918. Serial No. 244,870. 3 Claims. (Cl. 151—21.)



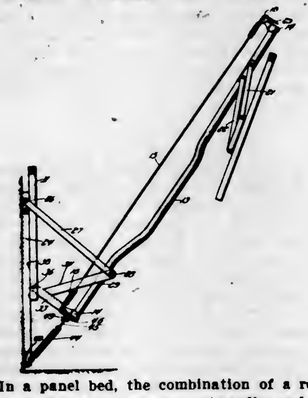
1. A lock nut having a plurality of extensions each connected with the body of the nut by a reduced section formed by an exterior groove adjacent the base and extending throughout the width of each extension and continuously about the nut, whereby bending of the extensions is facilitated.

1,389,928. TRUCK-FRAME FOR MINE-CARS. FRANK S. BARKS, St. Louis, Mo., assignor to Lincoln Steel and Forge Company, St. Louis, Mo., a Corporation of Missouri. Filed Feb. 4, 1921. Serial No. 442,402. 19 Claims. (Cl. 295—42.)



14. In a mine car truck, a journal box, and a frame member having a depressed portion to accommodate said journal box and having a floor supporting surface below the top surface of said journal box.

1,389,929. GROUND-WIRE CONNECTION. CHARLES J. BARROW, Hull, Mass. Filed Oct. 21, 1918. Serial No. 259,097. 9 Claims. (Cl. 287—54.)



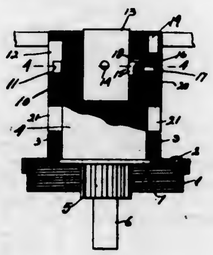
3. A connector comprising coöperating clamp members and a take-up element engaged with one of said clamp members and adapted to apply thrust to one of the connected things, said clamp members having complemental opposed gripping surfaces inclined to the line of thrust of said take-up device at one side thereof and adapted to grip a wire between them, and the connector having also provisions to hold the wire at the opposite side of the take-up device from said gripping surfaces.

1,389,930. BED-SPRING-FRAME. MATTHEW F. BAYER, Kenosha, Wis., assignor to Simmons Company, Kenosha, Wis., a Corporation of Delaware. Filed Mar. 31, 1919. Serial No. 286,513. 1 Claim. (Cl. 5—4.)

In an article of furniture, the combination of a post having a support extending laterally therefrom, a horizontal frame having an angle iron side member with a horizontal flange extended beyond the end of the frame and bent downwardly to engage the support, and a brace detachably connecting the angle iron and post at a distance from the intersection of the frame, and support for locking the downturned end of the angle iron flange against removal from the support.

1,389,931. PANEL-BED. MATTHEW F. BAYER, Kenosha, Wis., assignor to Simmons Company, Kenosha, Wis., a Corporation of Delaware. Filed Feb. 6, 1920. Serial No. 356,680. 2 Claims. (Cl. 5—54.)

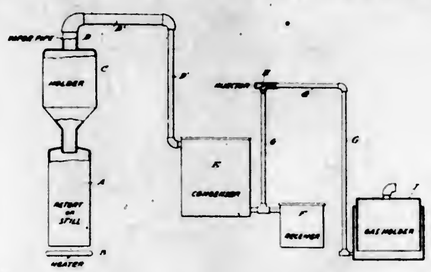
1. In a panel bed, the combination of a relatively stationary vertical support, an outwardly and downwardly



inclined link having its upper end pivotally connected to said support, a bed frame swingingly mounted relative to said support and having an intermediate point in its length pivotally connected to the lower end of said link, whereby the end of said bed-frame is forced toward said support, a supplemental head frame vertically slidable on said support, vertically spaced anti-friction rollers interposed between said support and said supplemental frame and means pivotally connecting said bed frame with the supplemental frame intermediate said rollers.

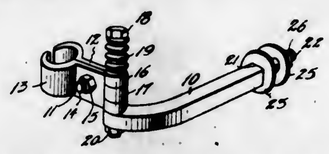
1,389,932. TREE-LIMB SUPPORT. GEORGE BOSMAJIAN, Fresno, Calif. Filed Aug. 23, 1920. Serial No. 405,319. 2 Claims. (Cl. 47—31.)

1. In a device for supporting the limbs of a tree, the combination of two hooks having extensions thereto, and means for clamping said extensions together at any selective place between the ends of said extensions.



1,389,933. AUTOMOBILE-LOCK. FLETCHER O. BOSWELL, Philadelphia, Pa., assignor to American Wheel Company, Philadelphia, Pa., a Corporation of Delaware. Filed Oct. 11, 1920. Serial No. 416,107. 3 Claims. (Cl. 70—129.)

1. In a device of the character described, a stationary cap having clutch teeth formed thereon, a secondary steering post fitted to turn in said cap, said post having formed therewith a flange and a pinion, a steering wheel hub fitted to slide upon said post, clutch teeth formed with the lower edge of said hub for engagement with the first named clutch teeth, a stop screw partially threaded into the post and projecting into a slot formed in the hub, a lock secured within a central bore formed in the post, and two keeper recesses formed in the inner wall of the hub for the reception of the bolt of the lock to secure said hub in either of two positions.



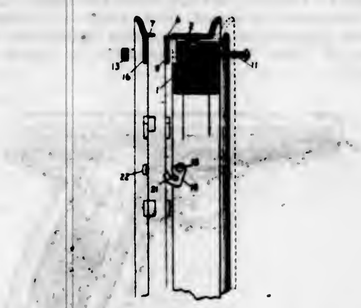
1,389,934. PROCESS OF REFINING HYDROCARBONS. CHARLES RUSSELL BURKE, Tulsa, Okla., assignor to Lulu Peters Burke, Washington, D. C. Filed Apr. 11, 1916. Serial No. 90,509. 4 Claims. (Cl. 196—25.)

1. The herein described process of refining hydrocarbons in a still operatively connected with a condenser, consisting in first distilling and cracking the oil in the still at substantially atmospheric pressure by the application of heat thereto, passing the resulting vapor into a holder arranged above the still capable of holding at one time the greater portion of the contents of the still within which holder is maintained a cushion of condensed vapors into which the vapor from the cracked oil finds its way and through which a portion of the same passes to the condenser, while the remaining portion is arrested

by the condensate in the holder and returns to the still to be revaporized.

1,389,935. WIND-GUARD. M. W. CARROLL, Jr., Dallas, Tex., assignor to Automotive Supply Manufacturing Company, Dallas, Tex., a Partnership composed of Lester L. Henderson, Ira V. Wilson, and John E. Owens. Filed Mar. 31, 1920. Serial No. 370,326. 1 Claim. (Cl. 296—84.)

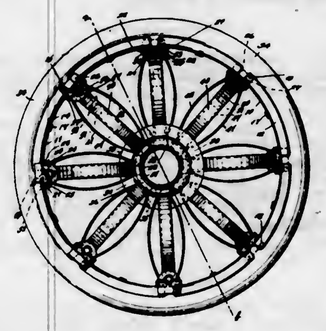
In a wind guard, the combination with the post of a wind shield, of a horizontally swinging guard plate provided with transverse apertures spaced a substantial distance from the inner edge of the guard plate, arms extending through the apertures and clamped to the guard plate and disposed at a right angle to the guard plate, the inner end portions of the arms being longitudinally curved and extending inwardly, said arms being provided at their inner ends with transverse apertures and free from corrugations adjacent said apertures, upstanding bolts passing through the apertures of the arms, a pair of clamp members for each bolt, said clamp members being provided at their inner ends with a pair of jaws to engage the wind-shield post, means arranged near the jaws to draw the clamping members together, apertured knuckles carried by the outer ends of the clamp members and pivoted upon the bolt and serving to permanently secure the clamp members upon the bolt when the clamp members are opened, and a heavy coil spring surrounding the upper portion of the bolt and engaging the apertured knuckles.



1,389,936. METHOD OF MAKING PAPER AND FIBER BOARD. ALBERT L. CLAPP, Danvers, Mass. Filed June 23, 1920. Serial No. 391,162. 6 Claims. (Cl. 92—14.)

2. A process which comprises digesting cellulosic material and beet pulp with heat and pressure in the presence of sodium carbonate, and then precipitating dissolved constituents of the beet pulp in and on the cellulose fibers.

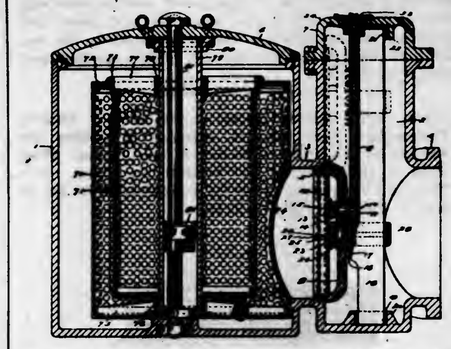
1,389,937. VEHICLE-WHEEL RIM. JAMES H. COCKRILL, Oakland, Calif. Filed Nov. 30, 1917. Serial No. 204,612. 1 Claim. (Cl. 301—35.)



A demountable rim comprising two annular members adapted to be joined together, each member having a

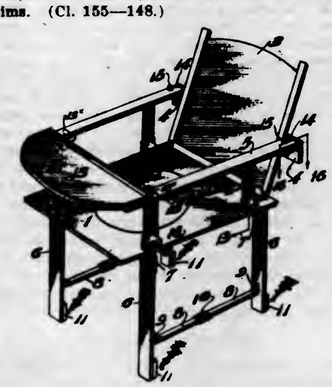
plurality of inwardly radially projecting registering lugs with holes in said lugs for engagement of bolts, said annular members being provided with means for interlocking engagement comprising a plurality of studs, on one member, forming axes for keeper plates having serrated edges

and circular grooves for engagement with lugs on the opposed annular member, said lugs being coaxial with said studs.



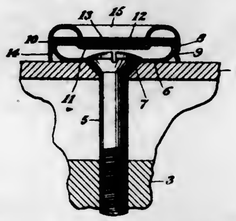
1,389,938. VEHICLE-WHEEL. JOSEPH L. COHEN, New York, N. Y. Filed Mar. 22, 1919. Serial No. 284,362. 9 Claims. (Cl. 152—29.)

4. In a wheel, a hub, a resilient rim provided with side flanges, a tire disposed upon said rim between said side flanges, and spoke members disposed between said hub and said rim, each comprising spring means and means connecting said hub and rim, said last named means being non-extensible from its normal position to prevent radial expansion of said rim and adapted to be contracted from its normal position, said flanges of said rim being provided with cut-out portions in alinement with the axes of said spoke members and adapted to permit said rim to be deflected locally contiguous to said spoke members as they are contracted.



1,389,939. VALVE MECHANISM FOR LIQUID STRAINING OR FILTERING APPARATUS. PHILIP J. DARLINGTON, Greenfield, Mass. Original application filed Mar. 26, 1919, Serial No. 285,155. Divided and this application filed Mar. 10, 1920. Serial No. 364,646. 19 Claims. (Cl. 251—56.)

1. In a liquid straining apparatus, a box containing a valve chamber having an intake opening and an outlet opening and containing a sliding valve arranged to move over and close said outlet opening, a removable stationary guide bar slidingly supporting said valve and having an inclined surface acting with a corresponding inclined surface carried by said valve to clamp the valve against



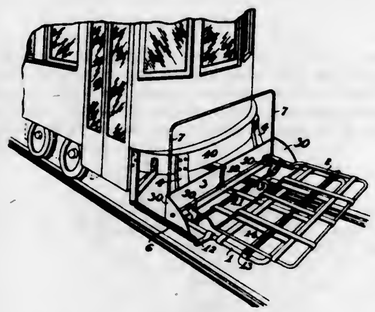
its seat when opposite said outlet opening, and means for sliding said valve.

1,389,940. CONVERTIBLE CHAIR. LISA E. ERBEAU, Camden, N. J. Filed Sept. 18, 1920. Serial No. 411,228. 4 Claims. (Cl. 155—148.)

1. A chair of the character stated, comprising a seat, a back hinged thereto, a supplemental back fixed to the rear of said seat, side arms hinged to the sides of the seat, and means connecting the rear ends of said arms with the ends of the top member of the last-named back.

1,389,941. SELF-LUMINOUS MARKER FOR WALL-SWITCHES AND LIKE OBJECTS. REINER W. EADLE, Weehawken, N. J., assignor to The Cold Light Manufacturing Company, a Corporation of Colorado. Filed May 25, 1918. Serial No. 236,556. 3 Claims. (Cl. 240—1.)

1. In combination in a luminous marker, a separable clamping shell having a seat thereon for the reception of

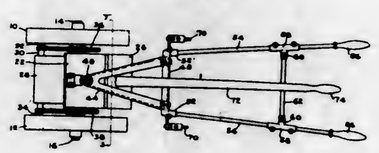


means for securing it to an object to be marked, an independent disk carrying thereon a luminous material, said disk fitting on said shell, a translucent covering over said luminous material and a cap fitting over said cover, disk and shell, thereby securing the parts together, the cap having an opening therein through which the luminous material is visible.

1,389,942. REINFORCED CONCRETE. EUGÈNE FREYSSINET, Paris, France, assignor to Societe des Navires en Ciment Armé, Paris, (Seine,) France. Filed June 6, 1918. Serial No. 238,579. 1 Claim. (Cl. 72—110.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

Metallic reinforcements for concrete consisting of sheets or layers each formed of wires conforming in shape to the surface of the finished structure and extending from end to end of the finished structure whereby the tenacity of the metal itself of which the wires are formed comes into play immediately upon any stress being imparted to said wires, bonds connecting the said wires at suitable distances along their length so as to form a trellis, the said sheets being superimposed so that the wires of each sheet form an angle with those of contiguous sheets, connections between the superimposed sheets, curved metal wires arranged in a direction generally normal to the surface of the finished structure and presenting equivalent elements on two lines equidistant from the surfaces and parallel to their general direction, the said elements being inserted in the interspaces of the said wires extending from end to end of the structure and adapted to exert in the neighborhood of the internal and external surfaces an equal and uniform resistance to lateral expansion of the concrete for the purpose of increasing greatly its capacity for deformation without rupture.

1,389,943. CAR-FENDER. WILLIAM BURDETT GARRARD, Victoria, British Columbia, Canada, assignor, by direct and mesne assignments, of one-fourth to Alfred C. Blackall and one-fourth to Thomas F. Adams, Seattle, Wash. Filed Oct. 21, 1920. Serial No. 418,433. 7 Claims. (Cl. 293—37.)



1. A safety car fender comprising a catch frame, a trip frame above and extending forwardly of the catch frame, both said frames being pivoted at their rear to swing vertically and separately, a spring acting to throw the catch frame down when released to contact its forward edge with the pavement, and supporting means for said frames releasable by backward movement of the trip frame.

1,389,944. SAFETY DEVICE FOR FIREARMS. GEORGE H. GARRISON, Bridgeport, Conn., assignor to Remington Arms Company, Inc., a Corporation of Delaware. Filed Jan. 28, 1920. Serial No. 354,537. 13 Claims. (Cl. 42—3.)

1. In a firearm of the type having firing mechanism, a frame and a removable magazine in the frame; a trigger for operating said firing mechanism, safety means carried by said trigger engageable with a stationary abutment on the frame for locking the trigger against actuation and means operable by the insertion of the magazine for withdrawing said safety means from said abutment for permitting actuation of the trigger.

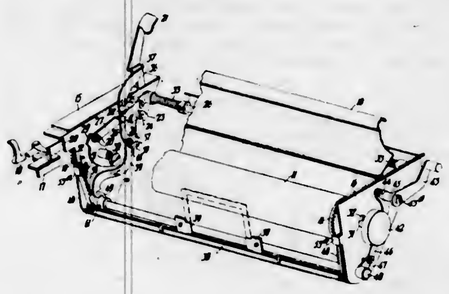
1,389,945. GARDEN-TRACTOR. GEORGE E. GUNTHER, St. Paul, Minn. Filed Dec. 27, 1919. Serial No. 347,750. 3 Claims. (Cl. 180—19.)

1. A garden tractor comprising a support, a motor mounted thereon, a pair of driving wheels upon which said support is mounted, driving connections between said motor and said driving wheels, an implement frame to which said support is pivoted at its top and bottom so as to be capable of swinging horizontally with relation to said implement frame, and a handle member rigidly attached to said support and extending rearwardly whereby the operator may guide the tractor.

1,389,946. PROTRACTOR-SCALE. PAUL JONES HARRIMAN, Akron, Ohio. Filed Sept. 20, 1920. Serial No. 411,484. 4 Claims. (Cl. 33—111.)

3. A protractor scale having a graduated straight line in which the graduations are consecutively numbered from 0 to 90 and in which the distance from the 0 to the 60 point indicates the unit on which the scale is based and the other graduations indicate, on the basis of the unit, distances from the zero point hereto which are equal to the sines of angles of one-half the number of degrees indicated by the numeral of the corresponding graduation.

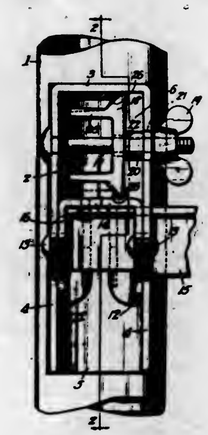
1,389,947. ART OF COMPOUNDING FATS AND OILS. VALENTINE HISCHLER, Chicago, Ill., assignor to Wilson & Co., Inc., Chicago, Ill., a Corporation of New York. Filed Aug. 25, 1919. Serial No. 319,542. 5 Claims. (Cl. 99—13.)



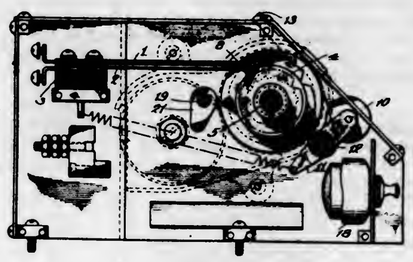
1. In the process of compounding fats, oils, etc., slowly cooling a liquid mixture of stearin and oil from a temperature slightly above the melting point of the stearin to a temperature slightly below its crystallising point in the presence of a small amount of substantially congealed mixture of stearin and oil and stirring the mixture during the cooling.

1,389,948. APPAREL-BUCKLE. ALLEN H. KERNGOOD, Baltimore, Md., assignor to Alma Manufacturing Company of Baltimore City, Baltimore, Md., a Corporation of Maryland. Filed June 30, 1920. Serial No. 392,960. 5 Claims. (Cl. 24—188.)

1. An apparel buckle, having a frame provided with a tongue, a cross bar on which the tongue is mounted, and lugs projecting in opposite directions from the cross bar and adapted to be folded over the tongue and having interlocking means to secure the tongue on said cross bar.



1,389,949. TYPEWRITING-MACHINE. ALFRED G. F. KUROWSKI, Brooklyn, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 1, 1919. Serial No. 327,732. 9 Claims. (Cl. 197—135.)

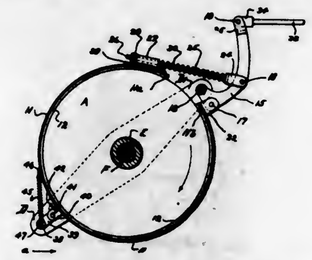


1. In a front-strike typewriting machine, the combination with a revoluble platen and a platen frame having ends, of a device for withdrawing said platen rearwardly in said frame, a card-holding device at the front of the platen and normally disconnecting therefrom, a finger-piece for connecting the card-holding device to the platen, and means for locking the withdrawing device by making the finger-piece effective.

1,389,950. CORNER-FASTENING. FRANK KUSTERLE, Kenosha, Wis., assignor to Simmons Company, Kenosha, Wis., a Corporation of Delaware. Filed Mar. 26, 1920. Serial No. 369,052. 10 Claims. (Cl. 5—55.)

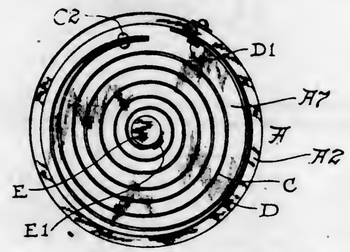
1. In a device of the class described, the combination with an angle iron having a pair of angularly related flanges, of an end fastening therefor comprising a pair of abutments, and a locking member engaging against the edge of one flange and the face of the other flange for clamping both flanges against their respective abutments.

1,389,951. ATTACHMENT FOR CARD-SORTING MACHINES. CLAIR DENNISON LAKE, Binghamton, N. Y., assignor to The Tabulating Machine Company, a Corporation of New Jersey. Filed Sept. 24, 1920. Serial No. 412,571. 6 Claims. (Cl. 83—92.)



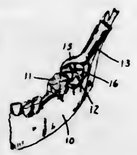
1. In an attachment for and driven by a card-sorting machine, the combination with normally separated contacts adapted to be connected up in the circuit of the sorting magnet, a cam and index wheel with divisions corresponding to the horizontal lines for punched holes in a card, and means for adjusting said cam and index wheel to close the contacts at any given point in the cycle, whereby only such cards as have holes corresponding to such adjusted position will be sorted out.

1,389,952. BRAKE MECHANISM. HUGO LANTZ, New York, N. Y. Filed Dec. 4, 1919. Serial No. 342,432. 20 Claims. (Cl. 188—77.)



1. The combination with a rotatable drum and a brake band around the same, of an operating member for said band adapted to press one end thereof into a fixed posi-

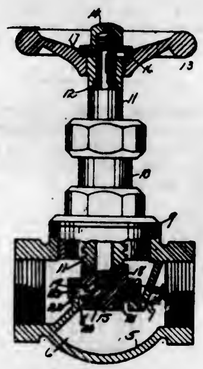
tion against said drum, and a connection between said member and the other end of the band serving to draw



the latter in a single direction coinciding with the forward rotation of the drum when applying the brake.

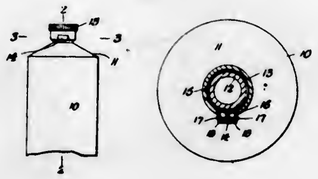
1,389,953. SPRING-MOTOR. ALBERT F. LOEBKER, Knoxville, Tenn. Filed Apr. 8, 1920. Serial No. 372,175. 2 Claims. (Cl. 185—45.)

1. In a spring motor, the combination of a relatively rotatable casing and shaft, a stud supported by the casing, a main spring located within the casing and surrounding the shaft and having one end secured to the shaft, and an auxiliary spring located between the main spring and the rim of the casing and having one end secured to the outer end of the main spring and having its other end notched and astride said stud, substantially as described.



1,389,954. DENTAL TOOL FOR EXTRACTING LOWER MOLARS. GEORGE F. MCCOMBS, Connersville, Ind. Filed Oct. 25, 1920. Serial No. 419,423. 3 Claims. (Cl. 32—34.)

1. An instrument for extracting lower teeth including a shaft having its operating end formed with a curved bone cutting member, and an oppositely curved prying-lever for engaging and embracing the tooth to be extracted, whereby the twisting of said tool will cause said tooth to be gripped and removed.

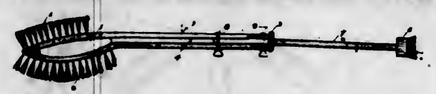


1,389,955. VALVE. GEORGE B. MCCRACKEN, Willimantic, Conn. Filed Apr. 28, 1920. Serial No. 377,214. 8 Claims. (Cl. 251—160.)

4. A valve structure comprising a valve body, a screw threaded sleeve extending into said body, a valve spindle located within said sleeve, a valve holder carried by said spindle, the back of said holder making contact with the end of said sleeve, a hand wheel secured to said sleeve and having a recess therein, a nut secured to said spindle, and a spring located in said recess and pressing against said nut thereby forcing the end of said sleeve and the back of said holder into close contact.

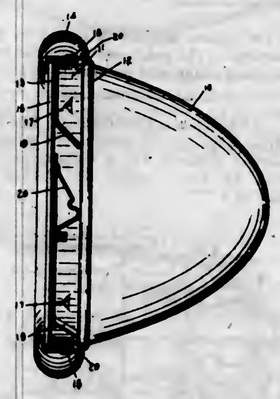
8. A valve structure including a supporting member, a valve spindle movably supported by said member, a valve holder carried by said spindle and having on one side a hub and on the opposite side a pocket for a valve with openings from the back of the holder and on opposite sides of said hub into said pocket, and a tool having branches with a space therebetween to receive said hub and pins on said branches to enter said openings, said tool bing adapted to be pressed between the back of said holder and the edge of said supporting member to force said pins into said recess to remove a packing therefrom.

1,389,956. RETAINER FOR THE CLOSURE-CAPS OF COLLAPSIBLE TUBES. DAVIS MARINSKY, New York, N. Y. Filed Nov. 8, 1920. Serial No. 422,414. 2 Claims. (Cl. 221—60.)



1. The combination with a receptacle provided with a threaded neck and a cap having an offset apertured portion, said cap being adapted to be mounted on said neck, of a retainer comprising a ring member, and an integral cap engaging part, said member being adapted to be threaded onto the neck of the receptacle and said part comprising laterally directed members adapted to be located between the cap and the neck of the receptacle and to be passed outwardly and loosely through the offset apertured portion of the cap for movably securing said cap in connection with said member.

1,389,957. RADIATOR-BRUSH. ELIZABETH M. MARTIN, Sterling, Ill. Filed Jan. 12, 1920. Serial No. 350,842. 1 Claim. (Cl. 15—30.)

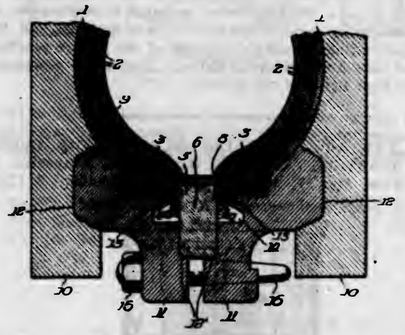


A device of the class described, comprising a head of narrow construction, embodying outwardly bowed portions

projected into a parallel, spaced-apart relation to form a handle; and bristles carried by said curved portions,

forming brushes on said head having a spread at the central portion thereof.

1,389,958. MEANS FOR SECURING LAMP-LENS CLOSURES. WILLIAM M. MATTEOLI, Connersville, Ind., assignor to Indiana Lamp Company, a Corporation of Indiana. Filed Oct. 21, 1919. Serial No. 332,198. 2 Claims. (Cl. 240—41.)

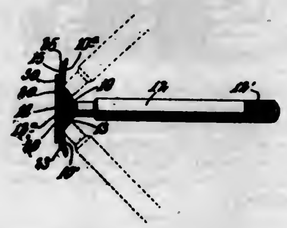


1. A lamp construction including a lamp casing having an outwardly projecting peripheral flange, a radially extending flange mounted adjacent the outer edge thereof, diagonally extending guide members formed on said flange and bending rearwardly from an opening formed therein, a plurality of springs secured to said casing adjacent the openings formed in said flange, a lens closure adapted to be mounted over said flange portion, and a plurality of spring engaging members on said lens closure arranged to pass through said openings and be guided by said members into locking engagement with said springs as the closure is rotated upon the casing in one direction, and be guided by said members out through said openings as the closure is rotated in the other direction.

1,389,959. FLYING-MACHINE. VIGILIO MATTIVI, Walsenburg, Colo., assignor of one-third to Joseph Brunelli and one-third to George Dick, Walsenburg, Colo. Filed Oct. 4, 1920. Serial No. 414,627. 9 Claims. (Cl. 244—20.)

1. A flying machine comprising a body, a pair of disk shaped wings carried by the opposite sides of the body, means for rocking the wings in relation to the body on centrally disposed shafts, and valves carried by said wings arranged to open when said wings are being moved upwardly and arranged to close when the wings are being moved downwardly.

1,389,960. PROCESS OF MANUFACTURING TIRES AND APPARATUS THEREFOR. TOD J. MELL, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Jan. 27, 1919. Serial No. 273,209. 16 Claims. (Cl. 154—14.)

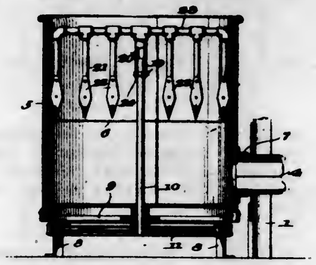


1. The process of manufacturing tire casings comprising the steps of forming the casing, leaving the untrimmed edges of the casing projecting below the beads, holding the untrimmed edges, and expanding the tire while the edges are held.

1,389,961. MANIFOLD-COVER. HERBERT TOM MELLING, Regina, Saskatchewan, Canada. Filed Dec. 30, 1918. Serial No. 268,908. 3 Claims. (Cl. 257—241.)

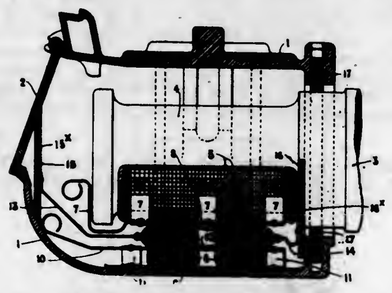
1. The combination, with an exhaust manifold and an intake manifold, of a cover therefor comprising an inner casing and an outer casing each consisting of a cup shaped metallic sheet portion, stirrups resting on the outer casing, stirrup pins passing through the stirrups and the inner and outer casings and securing the casings to the manifolds, heat conducting material between the two casings, and an outer removable insulating portion having means for securing the same to the manifold.

1,389,962. SAFETY-RAZOR. CARL L. MERZ, New York, N. Y. Filed Dec. 22, 1920. Serial No. 432,381. 4 Claims. (Cl. 30—12.)



1. In a safety razor, a blade holder comprising a plate presenting opposed diagonal and convexed guard edges, a block set into said plate centrally thereof and having its front face projecting slightly beyond the plate, said block and plate presenting a convexed rear portion having a series of angularly differentiated sockets adapted to receive a handle.

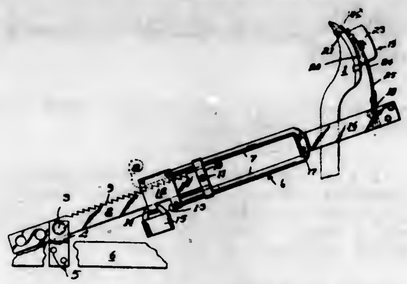
1,389,963. COLOR CINEMATOGRAPHY. FREDERIC E. MILLER, Brooklyn, N. Y., assignor, by direct and mesne assignments, to Art Color Motion Picture Co., New York, N. Y., a Corporation of Arizona. Filed Jan. 6, 1914, Serial No. 810,680. Renewed Feb. 8, 1921. Serial No. 443,496. 10 Claims. (Cl. 41—21.)



1. A transparency comprising a base of porous material having on a surface thereof a design in multi-color, said colors being combined with the base material and those representing the shaded portions of the picture pentrating the base for a different distance from those representing the high lights of the picture.

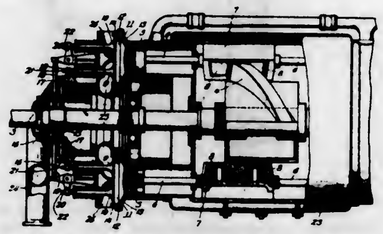
1,389,964. COOLING-RECEIVER FOR COFFEE-ROASTERS. HENRY H. MOENKHAUS, Evansville, Ind. Filed Mar. 7, 1921. Serial No. 450,455. 3 Claims. (Cl. 34—23.)

1. The combination with a coffee roaster, of a self-contained or unitary cooling receiver or bin having a screen for supporting the coffee, means whereby air may be drawn down through the coffee and through the screen, a stirrer for stirring the coffee, and driving means for the stirrer.



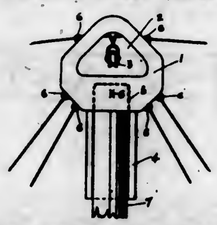
1,389,965. LUBRICATING DEVICE FOR RAILWAY-VEHICLE AXLE. ERNEST MOONEY, York, England. Filed Dec. 16, 1920. Serial No. 431,138. 3 Claims. (Cl. 64—35.)

1. In a lubricating device of the kind specified; the combination with an absorbent pad connected to or formed integral with capillary feeders and being supported on a spring frame or carrier constructed of flexible strip metal, of front and rear shields carried on flexible end members attached directly to the spring frame or carrier, substantially as described.



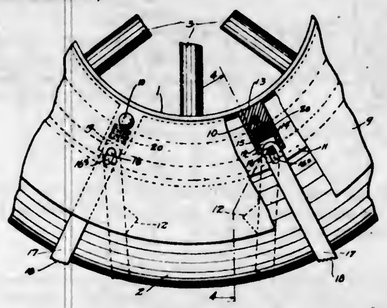
1,389,966. COMBINATION GEAR-CONTROL AND AUTO LOCK. EDWARD BISHOP MORRIS, Vallejo, Calif. Filed July 12, 1919. Serial No. 310,517. 7 Claims. (Cl. 70—128.)

1. In a device of the character disclosed, the combination with the gear control pedal of an automobile, of a rack bar fixed to the automobile, a locking member slidably connected with the rack bar, means for pivotally connecting said locking member with said rack bar, a tooth on the member adapted to engage in the teeth on the rack



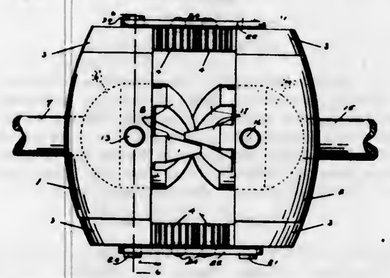
bar when the locking member is rocked on its pivot and means mounted on the pedal and connected with the locking member for rocking said member to lock and release it.

1,389,967. INTERNAL-COMBUSTION ENGINE. PETER W. MURPHY, Chicago, Ill., assignor to Murphy Engineering Company, Chicago, Ill., a Corporation of Michigan. Filed Feb. 10, 1919. Serial No. 276,193. 7 Claims. (Cl. 123—58.)



6. In an internal combustion engine, a main shaft, a series of cylinders and pistons disposed around the shaft and parallel thereto, an intake and exhaust valve for each cylinder having valve heads setting in the same plane and whose total diameter is greater than that of the piston, each pair of valve-heads being in the same plane parallel to the cylinder end and adjacent thereto, a cylinder head supporting the valves, valve chambers in the cylinder head each extending beyond the outer edges of each pair of valves, and an intermediate member disposed between the cylinder end and cylinder head and having converging walled chambers connecting the cylinder head valve chambers and cylinders.

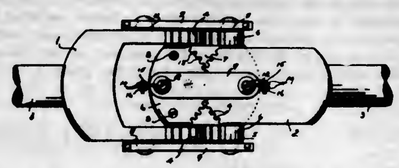
1,389,968. SPAR-TREE CAP. JOSEPH NADEAU, Port Alberni, British Columbia, Canada. Filed May 24, 1921. Serial No. 472,215. 2 Claims. (Cl. 254—189.)



1. A spar tree cap comprising a block recessed in its lower end to fit the upper end of the spar tree and having an aperture in its upper end, a sheave hung from the upper side of the aperture, and lugs on the block to which the ends of guy lines may be secured.

1,389,969. NON-SKID ATTACHMENT FOR VEHICLE-WHEELS. ANDREW NELSON, Chattanooga, Tenn. Filed Sept. 13, 1919. Serial No. 323,580. 4 Claims. (Cl. 301—51.)

4. As an attachment for vehicle wheels, an inverted trough-shaped shield, means for securing said shield fast and parallel to the wheel, projections arranged in said shield, and teeth pivotally and adjustably suspended from said projections and in one position projecting beyond the tread of the wheel tires.

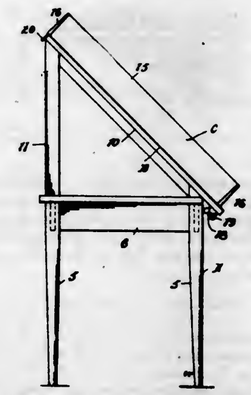


1,389,970. UNIVERSAL JOINT. ELI NOEL, Kansas City, Mo. Filed Aug. 30, 1920. Serial No. 407,045. 1 Claim. (Cl. 64—92.)

A universal joint, comprising paired trough shaped members having elongated longitudinal slotted apertures in the backs thereof, semi circular racks combined with the ends of said members and the respective end racks enmeshed, coupling bars pivotally mounted on said racks to hold the racks enmeshed and permit rocking of said members, and power receiving and power transmitting devices pivotally mounted in the sides of said members and having shafts traveling in the slotted apertures therein, said devices having enmeshed radially extending convexed cogs having concaved sides and concaved ends, the one of said devices being provided at the axial center thereof with a projecting center pin or stud having a convexed head and the other of the devices being provided at the axial center thereof with a concaved depression adapted for receiving the convexed end of the stud on said first mentioned device.

1,389,971. UNIVERSAL JOINT. ELI NOEL, Kansas City, Mo. Filed Sept. 20, 1920. Serial No. 411,387. 1 Claim. (Cl. 64—91.)

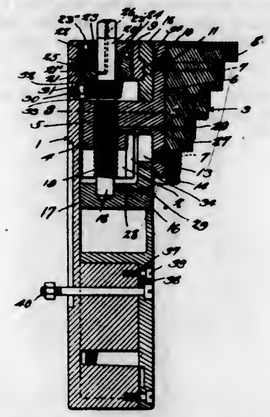
A universal joint, consisting of a centrally disposed body member having plane sides, toothed wheel segments mounted on alternate end portions of the sides of said body member, a knuckle joint member slidably bearing on the vertical sides of said body member and having toothed wheel segments enmeshed with toothed wheel segments thereon, a knuckle joint member slidably bearing on the horizontal sides of said body member and having toothed wheel segments enmeshed with toothed wheel segments thereon, coupling bars pivoting on the



axial centers of said toothed wheel segments on said body member and also pivoting on said knuckle joint members, and shafts combined with said knuckle joint members.

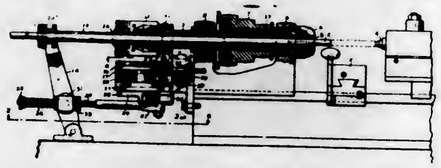
1,389,972. MOP. FRANK M. O'BRIEN, Greensboro, N. C. Filed Mar. 26, 1920. Serial No. 369,041. 5 Claims. (Cl. 15—56.)

1. A mop comprising endless members looped to form opposed laps and knotted at spaced points to secure the opposed laps thereof together.



1,389,973. STORE-FIXTURE. FRANK M. O'CONNOR, Mason City, Iowa. Filed Nov. 22, 1920. Serial No. 425,878. 4 Claims. (Cl. 211—14.)

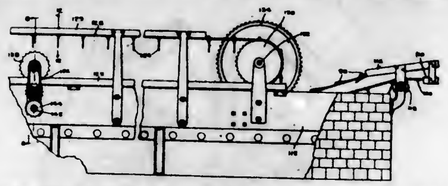
3. A store fixture comprising a supporting base, an inclined top plate having a longitudinally extending slot formed therein, a plurality of independent adjustable di-



vision plates arranged on the upper face of the top plate, depending studs carried by the terminals of the division plate, the studs on the front ends of division plates being arranged in the slot, thumb nuts threaded on said last mentioned studs for engagement with the lower surface of the top plate, the studs on the rear ends of the division plates engaging the rear edge of the top plate.

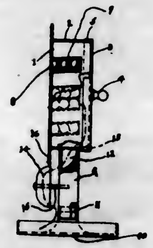
1,389,974. CHUCK. GUSTAF ADOLPHUS OLIN, Worcester, Mass. Filed Nov. 18, 1919. Serial No. 338,839. 2 Claims. (Cl. 279—113.)

1. In a chuck, a body, a face plate secured to the body, the body having a groove alined with a radial slot formed in the face plate; a chuck jaw slidably mounted in the groove; said jaw having a T-shaped head, one face of the head being in engagement with the face plate and entirely covering the radial slot, the said face of the T head being provided with a groove completely surrounding the radial slot, and packing carried by said groove whereby foreign matter is excluded from the radial slot.



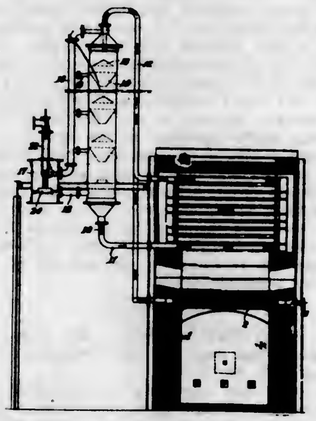
1,389,975. FEEDING MECHANISM FOR METAL-WORKING MACHINES. FREDERICK W. PARSONS, Cleveland, Ohio. Filed Feb. 28, 1919. Serial No. 279,804. 11 Claims. (Cl. 29—62.)

1. In a metal-working machine, a work-holding chuck having a reciprocal operating member, a reciprocal work feeding member, a rotary device adapted to impart a full reciprocal movement to said chuck operating member, and means adapted to operate said work-feeding member and said rotary device conjointly.



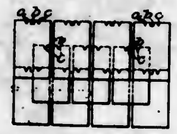
1,389,976. DOUGHNUT-MACHINE. NATHANIEL R. PATTEN, Minneapolis, Minn. Filed Nov. 5, 1920. Serial No. 421,883. 5 Claims. (Cl. 53—7.)

1. A doughnut machine comprising means for forming raw doughnuts, an endless conveyer adapted to run underneath said forming means and receive the doughnuts, a tank for containing a cooking medium, means for heating said tank, means for causing the delivery end of said conveyer to run beneath the surface of the cooking medium in said tank, means for moving the doughnuts



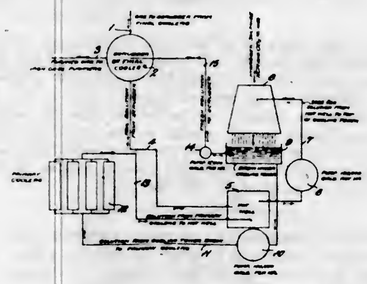
from the forward end of said tank to the rear thereof, and means interposed between the ends of said tank for turning over the doughnuts.

1,389,977. TARGET. FREDERICK J. PETERS, Milwaukee, Wis. Filed Apr. 6, 1921. Serial No. 459,080. 5 Claims. (Cl. 124—15.)



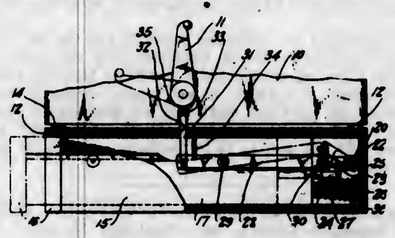
1. A target comprising a front member provided with a series of apertures, a series of counters positioned immediately behind said apertures and adapted to be dislodged by a successfully placed bullet, a gong positioned beneath said front member, and means for guiding dislodged counters downwardly against said gong whereby said gong is sounded for each successful shot.

1,389,978. OIL-STILL. JOHN PRIMROSE, New York, N. Y. Filed June 5, 1920. Serial No. 386,733. 3 Claims. (Cl. 196—14.)



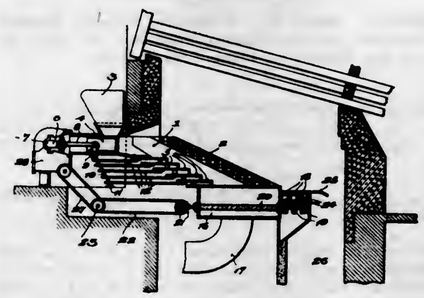
1. In an oil still comprising a plurality of heating surfaces in which the oil is subjected to varying effects of the furnace temperature, the combination of liquid and vapor separators with and intermediate to adjacent heating surfaces, and a control device connected with the vapor outlet of each of said separators and means therein for closing such outlet, when the oil backing up therein by reason of a stoppage in its flow reaches a predetermined level.

1,389,979. PREPARED ROOFING-SHINGLE. CHESTER E. RAHR, Brookline, Mass., and CALVIN RUSSELL, Penn Yan, N. Y. Filed July 3, 1916. Serial No. 107,241. 4 Claims. (Cl. 108—8.)



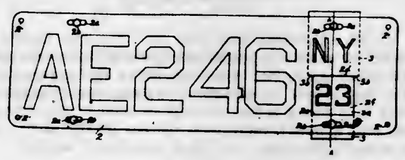
1. A prepared roofing shingle consisting of a waterproofed fibrous quadrilateral rectangular sheet of uniform thickness, and having an adherent colored crushed mineral facing, said shingle having one end marked so that it can be located in the same relative position as other like shingles, and thus present the like shades or tint.

1,389,980. APPARATUS AND PROCESS FOR PURIFYING GASES. CHARLES J. RAMSBURG, Pittsburgh, Pa., assignor to The Koppers Company, a Corporation of Pennsylvania. Filed Oct. 7, 1920. Serial No. 415,230. 12 Claims. (Cl. 23—10.)



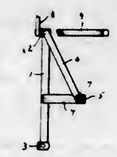
7. Apparatus for effecting purification of fuel gas, comprising, in combination: circulating means for a gas purifying liquid, including a gas purification means, heating means, and aeration means, the heating means having means for effecting heating of the purifying liquid and the aeration means having means for effecting aeration of the thus heated foul purifying liquid from the gas purification means; substantially as specified.

1,389,981. AUTOMATIC CASH-DRAWER. CLIFFORD R. RANDALL, Council Bluffs, Iowa. Filed June 25, 1920. Serial No. 391,771. 2 Claims. (Cl. 235—22.)



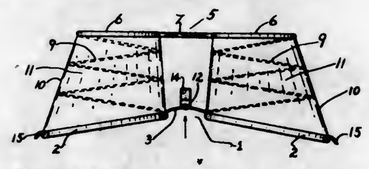
1. In a device of the class described, the combination with a hand operated calculating mechanism having a rotatable handle, a casing on which the base of said mechanism rests and a money drawer operable in said casing, a bar journaled transversely in said casing rearward of the end of said drawer, a hook fixed on said bar, a detent on said drawer engageable by said hook, an arm fixed on the bar, a lever pivoted in said casing, said lever having a part engaging said arm, means for holding said lever in operative position, a plunger carried at the opposite end of said lever and a cam fixed on said handle adapted to depress said plunger and release said drawer co-incident with its operation.

1,389,982. AUTOMATIC STOKER OF THE UNDERFEED TYPE. MAURICE RATEL, New York, N. Y. Original application filed Mar. 30, 1914, Serial No. 828,423. Divided and this application filed Oct. 5, 1920. Serial No. 414,836. 27 Claims. (Cl. 110—44.)



1. In an automatic underfeed stoker, a series of alternating twyers and fuel retorts or troughs providing an inclined fuel bed whereby the fuel and solid products of combustion are fed downwardly with the aid of gravity, and means for feeding fuel through said retorts to said fuel bed comprising a main fuel-feeding member and a plurality of secondary fuel-feeding members disposed substantially throughout the length of each retort, the successive members in each retort having progressively decreasing capacity in the direction of inclination of the fuel bed and substantially parallel movement to feed progressively smaller quantities of fuel to the fuel bed in substantially parallel directions.

1,389,983. LICENSE-NUMBER PLATE FOR AUTOMOBILES. GLENN S. RAVEN, Watertown, N. Y. Filed Feb. 17, 1921. Serial No. 445,687. 4 Claims. (Cl. 40—63.)



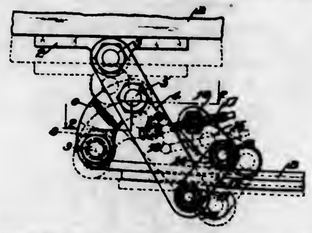
1. The combination with the main license plate having spaced horizontal slits near one end, of a detachable year-plate which bears a year number, said year-plate having its lower end portion reduced in breadth corresponding to the length of said slits, and the upper end portion thereof being broader than said slits and provided with shoulders which aline with the uppermost slit in the main plate, the said shoulders resting upon the metal of the main plate lying between said slits.

1,389,984. RACK FOR GLASS GLOBES. EVAN L. REED, Sterling, Ill. Filed July 18, 1919. Serial No. 311,705. 2 Claims. (Cl. 211—14.)

1. A device of the class described, comprising a frame; a bar foldably connected with said frame, adapted to hold a plurality of globes; braces foldably connected with said frame and detachably connected with said bar; and means for removably embracing the necks of said globes.

1,389,985. GOGGLES. FREDERICK GEORGE RIDGERS, Hamilton, Ontario, Canada. Filed Jan. 24, 1921. Serial No. 439,586. 1 Claim. (Cl. 2—149.)

A pair of goggles comprising a rear frame provided with eye openings therein, a front frame in spaced relationship to the rear frame, and provided with lens openings therein, separate sight tubes communicating between each lens opening and the corresponding eye opening in the rear frame, a coil spring within each sight tube having one end connected to the rear frame and the other to the front frame, the front frame adapted to be moved toward the rear frame against the pressure of the aforesaid springs whereby the sight tubes are telescoped and a clamp carried by the rear frame and adapted to engage the front frame for securing the tubes in the telescoped position.

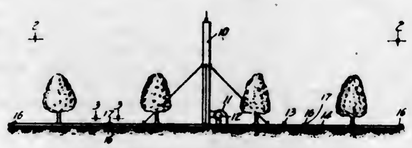


1,389,986. ADJUSTABLE TRAY. CHESTER H. RISTENPART, Thousand Oaks, Calif. Substitute for application Serial No. 291,336, filed Apr. 19, 1919. This application filed June 12, 1919. Serial No. 303,611. 6 Claims. (Cl. 45—7.)

1. In an adjustable telescopic tray, sections having a plurality of parallel longitudinal depressions therein, side walls substantially the same height as the upper walls of the depressions on said inner section extending downwardly to a plane below the bottom level of the depressions, and a larger companion section of the same contour slidably receiving said first mentioned section.

1,389,987. SHOCK-ABSORBER. CHARLES F. RODIN, San Francisco, Calif., assignor of one-half to John Erikson, San Francisco, Calif. Filed Apr. 20, 1921. Serial No. 462,941. 7 Claims. (Cl. 267—20.)

4. The combination with a vehicle frame, of an axle supporting spring secured at one end to the frame, a pair of links pivotally attached to the frame adjacent the opposite end of the spring, a shackle link pivotally mounted between said links and connected with the spring, a pin connecting the lower ends of the links, a roller journaled thereon and engageable with one side of the spring, a second pair of links pivotally mounted on said pin, a pin connecting the opposite ends of said second named links,

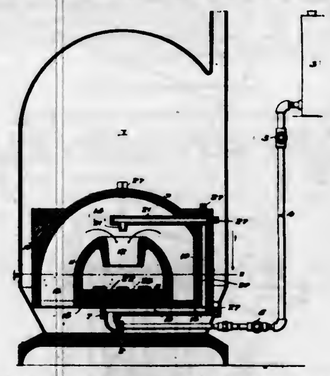


a roller journaled on said last named pin, and means for exerting a pressure on said second named links which will cause the rollers to frictionally clamp the springs during rebound movement of the spring and vehicle frame.

1,389,988. OAR. WILLIAM A. ROSS, Peekskill, N. Y. Filed Mar. 31, 1921. Serial No. 457,266. 2 Claims. (Cl. 9—24.)

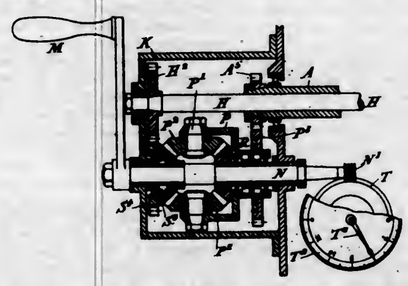
1. A stop clamp on an oar comprising layers of leather wound around the oar, one upon another and secured by tacks at the butting ends of the strips, and a clamp in parts adapted to be secured together, the united parts constituting a tubular section to fit upon the oar, and cupping flanges on the tubular section forming chamber walls to inclose one side and the periphery of the leather layers, and screws through the tubular section to secure the clamp in position on the oar.

1,389,989. FROST-PREVENTING DEVICE FOR ORCHARDS. WILLIAM L. ROSS, Porterville, Calif. Filed Jan. 10, 1920. Serial No. 350,679. 2 Claims. (Cl. 47—36.)



1. A process of protecting orchards and the like, embodying drawing warm air from the upper strata above the vegetation and displacing the colder lower strata of air near the ground below the vegetation with such warm air.

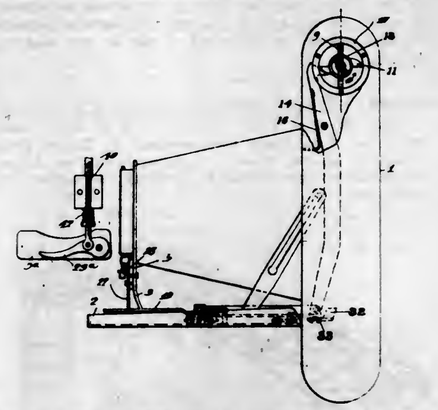
2. Apparatus for protecting orchards and the like comprising in combination, a relatively long vertically extending stack whose upper end stands in high air strata which serves as a source of air supply, means to move air down the stack and stationary air distributing means communicating with the stack at the lower end and spread over the field so as to discharge air over the surface thereof.



1,389,990. BURNER FOR HEATING-STOVES. OLIVER J. ROSSELOT, Kokomo, Ind. Filed Mar. 30, 1920. Serial No. 369,877. 4 Claims. (Cl. 158—66.)

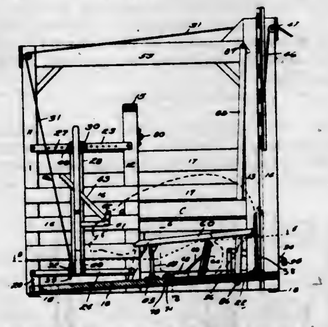
3. A burner for heating stoves comprising a single casting formed with an extended circular base member, an upper arched member with hollow side walls forming an arch-shaped air chamber within the casting, a horizontal feed duct formed within the base member, a vertical fuel feed duct formed in one of the side walls, an upper horizontal fuel feed duct within the casting, said ducts communicating with each other, a flame spreader plate re-

cessed within its lower face and having a plurality of orifices therethrough, a convolute asbestos wick arranged within the recessed portion of said plate and filling the said orifices, and an outlet formed in the center of the arch for the discharge of the commingled air and fuel against said spreader plate.



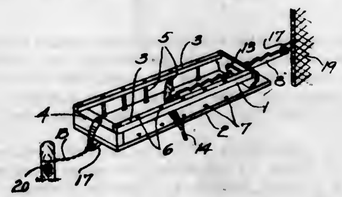
1,389,991. AIRSCREW HAVING ADJUSTABLE BLADES. WILLIAM COLIN RUSSELL, East Sheen, England. Filed May 15, 1920. Serial No. 381,675. 5 Claims. (Cl. 170—163.)

1. In means for propelling aircraft, the combination with the propeller shaft of rotative means concentric with said shaft, mechanism in positive connection with said means for varying the angular adjustment of the propeller blades, and means on the aircraft for transmitting motion to said concentric rotative means comprising a main driving member adapted to normally transmit balanced drive to a pair of driven members which have the capacity of over-running one another, a member adapted to be held stationary and mounted on the same axis as the driven member adapted to drive the concentric rotative means, and means for rotating said stationary member to accelerate or retard the movement of said rotative concentric means and thereby proportionally operate the blade setting and adjusting mechanism and effect the setting and adjustment of the propeller blades.



1,389,992. PHOTOGRAPHIC CAMERA. MORTON P. SAFFATY, New York, N. Y. Filed Mar. 15, 1915, Serial No. 14,862. Renewed Feb. 11, 1921. Serial No. 444,265. 7 Claims. (Cl. 95—82.)

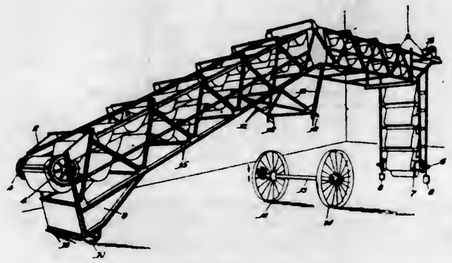
1. In a folding camera having a lens plate adjustable to different positions, a shutter operating mechanism thereon, a latch for said shutter mechanism also supported by said lens plate, a film winding spindle, and a trip for said latch operated by movement of said spindle,



said trip being mounted on the camera case and having a part engaging said latch in different positions of adjustment of said lens plate but disconnected therefrom.

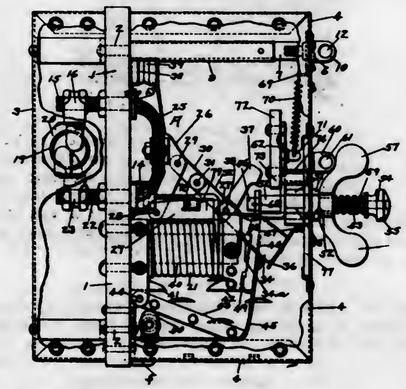
1,389,993. BREEDING-CRATE. JOHN C. SCHULZ, Stockport, Iowa. Filed Oct. 11, 1920. Serial No. 416,023. 10 Claims. (Cl. 119—98.)

1. A breeding crate including a floor pivoted at one end and capable of being locked in any of its pivoted positions, a door at either end of said crate, one of said doors having a head rest pivoted thereto for engaging the head of a hog, means for locking said head rest in any of its positions, a belly supporting member on said floor, and means for engaging the sides of a hog for preventing any side movement of the hog.



1,389,994. FENCE-STRETCHER. CHARLES F. SCHUMAKER, St. Louis, Mo. Filed Oct. 28, 1920. Serial No. 419,031. 2 Claims. (Cl. 254—88.)

1. A fence stretcher, comprising a frame; a row of fulcrum pins in the frame; a lever adapted to successively

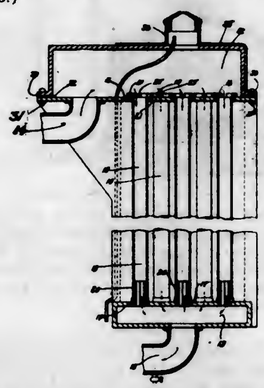


engage the pins as a lever fulcrum; a ratchet toothed stretcher bar adapted to travel through the frame; a pawl for locking said bar against retrograde movement; and means at one end of the stretcher bar for engaging the fence and at the other end of the bar for engaging the lever.

1,389,995. LOADING DEVICE. RICHARD R. SCHUTT, deceased, San Jose, Costa Rica, by John M. Keith, executor, San Jose, Costa Rica, assignor to United Fruit Company, Boston, Mass., a Corporation of New Jersey. Filed Feb. 1, 1921. Serial No. 441,693. 5 Claims. (Cl. 198—233.)

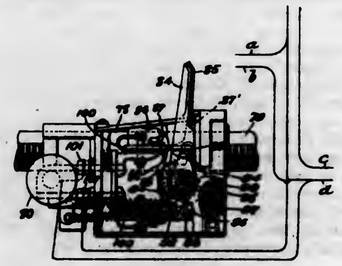
1. A load handling machine of the type described comprising a frame constructed and arranged to extend from a point on a ship to a point outside the ship, a conveyer carried by the frame for transferring material between said two points, means including a universal motion element for supporting one end of the frame on the ship and means for movably supporting the other end of the frame outside the ship.

1,389,996. SWITCHING APPARATUS. WILLIAM M. SCOTT, Tredyffrin township, Chester county, Pa. Filed Dec. 24, 1919. Serial No. 347,182. 45 Claims. (Cl. 200—107.)



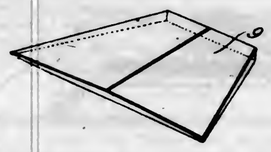
1. The combination with the movable contact member of a switch, of overtraveling toggle structure for moving the same to normal position and for locking the same therein, and a member partaking of rotative and rectilinear movements for respectively actuating and tripping said toggle structure.

32. The combination with the movable member of a switch, of means for restraining the same in normal position, a tripping magnet, an armature therefor, and a member disposed in the path of said armature movable along and guided by a pole of said magnet for actuating said restraining means to free said movable switch member.



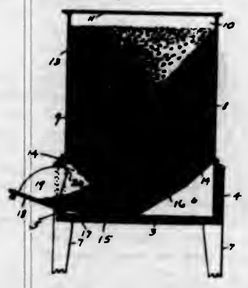
36. The combination with automatic circuit breaker mechanism comprising independently movable switch members and automatic tripping mechanism therefor, of movable housing structure, and resetting mechanism detached from said switch members for resetting them successively carried by said housing structure and movable therewith to and away from operative relation with respect to said switch members.

1,389,997. FLUID-CONDUCTING STRUCTURE. STANLEY W. SEDGWICK, Edmonton, Alberta, Canada. Filed Mar. 3, 1920. Serial No. 363,062. 7 Claims. (Cl. 285—25.)



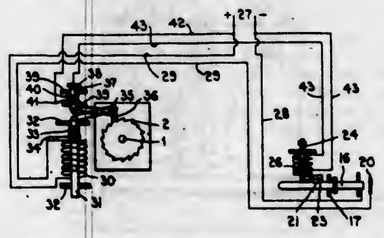
1. A fluid-conducting structure including two spaced apart tube sheets each provided with tapped orifices, the screw-threads of which have the same direction and pitch, and a plurality of sheet-connecting tubes, each having fixed collars at its opposite ends externally threaded and adapted to simultaneously engage the threads of two alined tube sheet orifices, said collars being formed to be simultaneously engaged by turning members on an elongated wrench rod, whereby the collars and tube may be simultaneously rotated without strain on the tube.

1,389,998. CIRCUIT-CLOSER FOR SHEET-TRIPS. CHARLES R. SEYMOUR, OTTO M. HOCH, and THOMAS W. ADAMS, Rochester, N. Y., assignors to M. D. Knowlton Company, Rochester, N. Y., a Corporation of New York. Filed Dec. 20, 1915. Serial No. 67,818. 7 Claims. (Cl. 200—52.)



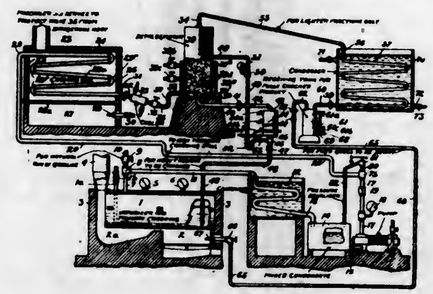
1. A circuit closer for sheet tripe adapted to be operated by a sheet of material, comprising a rotary circuit closing member, and means having detachable connection with said circuit closing member and having a sheet engaging portion whereby it will be actuated by the sheet of material to rotate said circuit closing member.

1,389,999. AMPLIFIER FOR SOUND-REPRODUCING MACHINE. FRANKLIN T. SHACKLEFORD, Minneapolis, Minn. Filed Dec. 1, 1919. Serial No. 341,575. 8 Claims. (Cl. 181—27.)



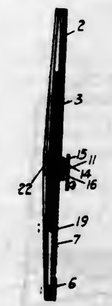
1. A horn or amplifier for sound reproducing machines including a plurality of walls, the inner faces of which are beveled from opposite edges toward their middle portions, being also beveled from one of their ends to the opposite ends.

1,390,000. SANITARY DISPLAY-CASE. ALBERT G. STEPHENS, Indianapolis, Ind. Filed Jan. 19, 1920. Serial No. 352,439. 1 Claim. (Cl. 211—11.)



A case for displaying granular commodities comprising an inverted truncated pyramidal hopper, a glass superstructure mounted on the hopper, a trough into which the hopper discharges having an open end, said opening being above the lowest bottom of the trough and said lowest bottom sloping up to the opening, said trough having an oblique end connecting it with the hopper and less steep than the hopper side with which it joints opposite said open end, a door hinged at its lower edge to the bottom of the opening, said door having side members to prevent wasteful discharge, and means to arrest the door approximately in the plane of the adjacent side of the trough before it reaches a horizontal open position.

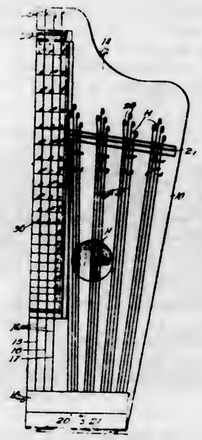
1,390,001. SIGNALING OR INDICATING APPARATUS. PAUL HENRY WALLER, Camberwell, London, England. Filed Dec. 10, 1919. Serial No. 343,968. 3 Claims. (Cl. 40—59.)



1. In a signal apparatus, the combination, with a pivoted lever adapted to be operated by contact with an obstacle, of a longitudinally slidable circuit closer operated in one direction by the said lever, a spring for moving the circuit closer in the reverse direction, a driving shaft, a ratchet toothed wheel and a pawl for revolving the said shaft step by step, a solenoid operatively connected with the said pawl, an electric circuit adapted to energize the solenoid and provided with a contact piece arranged in the path of the said circuit closer, and a locking device which holds the said circuit closed while the ratchet wheel and pawl are being actuated by the solenoid.

1,390,002. METHOD OF REFINING LIQUID HYDROCARBONS. FRANK E. WELLMAN, Kansas City, Kans., assignor to The Kansas City Gasoline Company, Kansas City, Kans., a Corporation of Kansas. Filed Nov. 27, 1917. Serial No. 204,228. 1 Claim. (Cl. 196—25.)

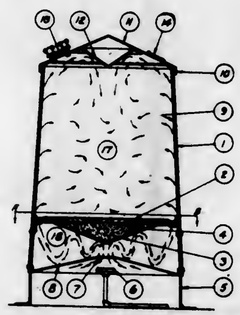
The process of refining oil which consists in first distilling all the oil at low or atmospheric pressure, retaining all products of distillation without separate condensation, then condensing all condensable products, then placing the entire liquid so condensed in totality and without separation of any friction, under high pressure and high temperature so as to crack in the liquid phase, then separating out the heavier products and returning them to be again distilled and cracked, and finally condensing the light resultant product.



1,390,003. SASH-LIFTING DEVICE FOR AUTOMOBILES. OLIVER W. WHITEHEAD, near Dayton, Ohio. Filed Oct. 25, 1920. Serial No. 419,339. 6 Claims. (Cl. 268—4.)

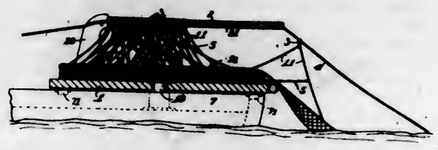
1. In a device of the type described, the combination with a frame, of a sash vertically movable in said frame, a spirally coiled element pivotally secured in the bottom rail of said sash, a transverse member secured in the middle portion of said frame, a bearing for the upper end of said coiled element, a flange on said projection, adapted to engage the inner surface of said coiled element secured to said transverse member, a projection on the bottom

rail of said sash, that enters the spiral groove in said coiled element, and handle means secured to said transverse member, operatively connected with said worm, for turning the latter to raise and lower said sash.



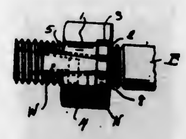
1,390,004. STRINGED MUSICAL INSTRUMENT. FRITZ WINQUIST, Chicago, and JOSEPH SORAVIA, Oak Park, Ill. Filed Feb. 9, 1920. Serial No. 357,462. 12 Claims. (Cl. 84—285.)

4. A musical instrument having, in combination, a body, a plurality of sets of closely spaced chord strings, said sets being closely spaced at one end of the instrument and diverging toward the other end.



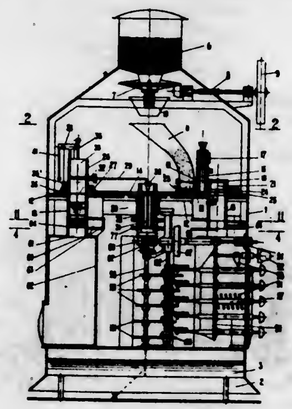
6. A musical instrument having, in combination, a string arranged to be played with a steel bar for determining the pitch, a set of adjacent strings tuned to produce a chord, and a single resonant body supporting all said strings, and underlying said chord strings throughout their length.

1,390,005. METHOD AND APPARATUS FOR VULCANIZING. JOHN CRESWELL YOUNG, Washington, D. C. Filed Jan. 17, 1921. Serial No. 437,975. 12 Claims. (Cl. 18—6.)



1. A method of vulcanising which comprises confining the article to be vulcanised in a vulcanising chamber and causing a current of air mixed with the hot gaseous products of combustion to pass into said chamber and contact with the article to effect the vulcanisation thereof

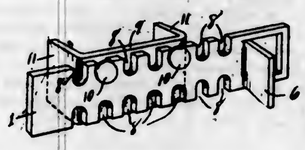
1,390,006. APPARATUS FOR HANDLING PURSE-SEINES. SALEMON AKAR, Seattle, Wash. Filed Oct. 25, 1920. Serial No. 419,348. 5 Claims. (Cl. 43—8.)



1. A device for threading purse lines into purse seines comprising a tubular finger supported from one end and adapted to receive the pursing rings thereon and the purse line therein.

1,390,007. NUT-LOCK. CHARLES EDGER ALLEN, Williamson, Pa. Filed Feb. 9, 1921. Serial No. 443,580. 8 Claims. (Cl. 151—28.)

1. In combination with a nut having a tapered groove in its outer face disposed in the same general direction as the bore of the nut and having a rabbet in said face in angular relation to the groove, said rabbet providing a shoulder, a wedge member insertible within the groove and provided at one end with a head to engage the shank to which the nut is applied, the opposite end portion of the wedge member being provided with an extension to co-act with the shoulder to hold the wedge member against outward movement when applied within the groove.



1,390,008. MACHINE FOR MAKING COFFEE AND LIKE INFUSIONS. PIER TERESIO ARDUINO, Turin, Italy. Filed Feb. 3, 1921. Serial No. 442,168. 19 Claims. (Cl. 53—3.)

1. An automatic machine for making infusions, comprising a stationary receptacle for receiving the liquid

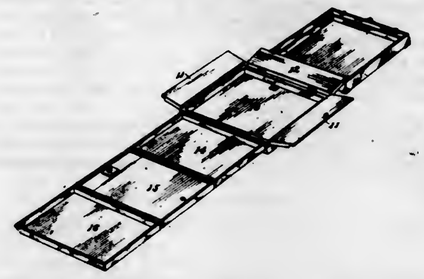
and the material of which the infusion is to be made, said receptacle having its axis disposed vertically; means for feeding the ground material and the liquid, said feeding means being adapted to coöperate in succession with said receptacle; means for exerting a pressure in said receptacle to discharge the infusion therefrom; removable means at the bottom of said receptacle for alternately closing and opening the same; and means for operating the movable parts of the machine.

1,390,009. DETACHABLE INSIDE DOOR-LOCK. ELBERT H. ARLEDGE, Fort Worth, Tex., assignor of one-half to Harry Hamilton, Fort Worth, Tex. Filed June 9, 1920. Serial No. 387,618. 1 Claim. (Cl. 292—297.)

A detachable inside door lock comprising a body member for projecting between the edge of the door and its abutment, a stop on said body prejecting laterally therefrom to engage a part of the abutment of the door, said body having a plurality of notches in the upper and in the lower edges thereof, a reversible U-shaped locking member either leg of which may form a stop to engage a door, and studs rigid with said locking member and adapted to engage a pair of said notches.

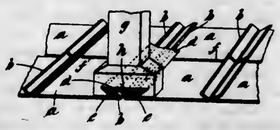
1,390,010. COVERALLS. FRED BERONIO, San Francisco, Calif., assignor to Levi Strauss & Co., a Corporation of California. Filed Dec. 4, 1919. Serial No. 342,415. 2 Claims. (Cl. 2—144.)

1. In a garment of the character described, the combination with two front members normally stitched together vertically by a double seam, of a semi-circular supplemental flap member having the straight edge fixed parallel and contiguous to the vertical seam, and the curved edge extending across and beyond said seam, and transverse stitching securing the upper and lower ends of the curved edge across the main vertical seam, to allow the intervening length of seam after being ripped open to be shielded.



1,390,011. GREASE-GUN. BERTRAND C. BLIVEN, San Francisco, Calif. Filed Sept. 24, 1919. Serial No. 326,049. 1 Claim. (Cl. 221—78.)

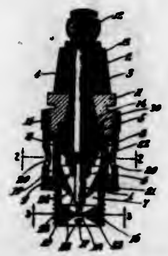
A grease gun comprising a cylinder, a plunger in said cylinder, heads at the ends of the cylinder, a spout attached to one of said heads and an apertured boss attached to another head, said cylinder having the end remote from said boss enlarged circumferentially inter-



iorly to permit air to escape around the plunger and out through the spout when all the grease has been expelled.

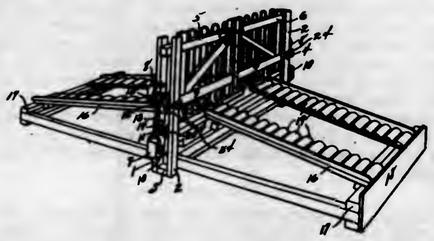
1,390,012. SAMPLE-CASE. HENRY J. BORGERDING and JOSEPH F. BORGERDING, Oakland, Calif. Filed Aug. 18, 1920. Serial No. 404,326. 3 Claims. (Cl. 190—16.)

1. A folding sample case constituting when extended a series of shallow trays lying side by side and extending in a straight line and comprising a bottom member, back and end walls in place thereon, a top member constituting also a tray and hingedly connected to said back wall, a plurality of trays hinged together and foldable one on the other within the case, the innermost tray being hinged to the bottom member along the front edge of the latter, and a front wall removably received in place between the top and bottom members when the latter are folded.



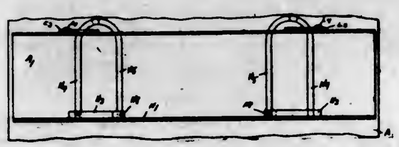
1,390,013. CONSTRUCTION OF SHIPS, TANKS, AND THE LIKE. ALEXANDER MORRISON BOURKE, London, England. Filed Oct. 4, 1920. Serial No. 414,644. 5 Claims. (Cl. 114—79.)

1. In a sheet metal structure for ships, the combination of stem and stern posts having inclined recesses formed



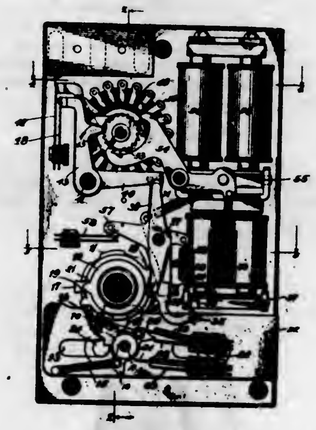
therein, plates having hook-shaped ends, one end of each end plate of the structure being adapted to engage an inclined recess of one of said posts, and ribs having hook-shaped ends for engaging the adjacent hook-shaped ends of intermediate plates whereby said posts, plates and ribs may be readily formed into a unitary structure by sliding said inclined ends and recess into interlocking engagement.

1,390,014. SPARK-PLUG. CHARLES W. BREWSTER, New York, N. Y., assignor to The Brewster-Goldsmith Corporation, Inc., a Corporation of New York. Filed June 9, 1919. Serial No. 302,734. 17 Claims. (Cl. 123—169.)



1. In a spark plug the combination of an electrode, a chamber surrounding the electrode near its end, having surfaces comprising its roof, floor and walls, inclined to one another and adapted to receive blast from the explosion and deflect it inwardly and downwardly against the end of the electrode and through the spark gap, and ports through the floor of the chamber connecting the latter with the cylinder when the spark plug is in position, and inclined so as to admit the blast from the explosion in the cylinder into the chamber and to direct it against a portion of the said inclined surfaces of the chamber, whereby blast from the explosion will be admitted into the chamber and be deflected inwardly and downwardly against the end of the electrode and through the spark gap.

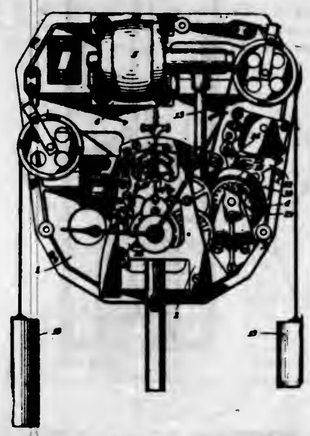
1,390,015. AUTOMATICALLY-OPERATED GATE AND DOOR. GEORGE W. BROWN, Fort Worth, Tex., assignor of one-fourth to H. M. Coleman, Indianapolis, Ind. Filed Apr. 9, 1921. Serial No. 459,950. 3 Claims. (Cl. 39—18.)



1. An automatically operated gate comprising fixed uprights on each side of the passage-way, a pair of swinging gate members provided with fulcrum bolts supported in said uprights, a depressible bar, link bars pivotally connected to said depressible bar and provided with roller bearings at their upper ends, curved levers attached to said gate members and engaged by said link bars through said roller bearings, and approaches to said gate members pivotally supported at their outer ends resting on said depressible bar and adapted to press said bar downwardly for opening said gate members.

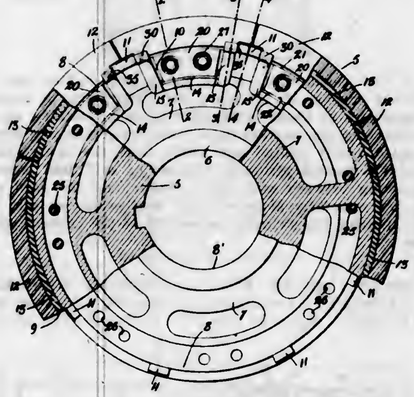
1,390,016. LOOSE-LEAF BINDER. JORDAN T. BRUMFIELD, deceased, Portland, Oreg., by Frances D. Brumfield, executrix, Portland, Oreg. Filed Oct. 23, 1919. Serial No. 332,690. 2 Claims. (Cl. 129—1.)

1. A loose leaf binder consisting of a base plate mounted on a hinge inside of a book back, a pair of wire arches mounted on said base plate, said arches adapted to be separated in a maanner to admit perforated sheets, a slotted cover plate also hinged to said book back adapted to fit over said arches sufficiently far to allow a portion of same to project through said cover plate, and hinged hooks mounted on said cover plate in a manner to permit the tip of said hooks to pass between said arches and said cover plate when moving away from said cover plate hinge.



1,390,017. RECORDING-LOCK SYSTEM. JAMES W. BAYCE, Binghamton, N. Y. Filed July 16, 1919. Serial No. 311,120. 16 Claims. (Cl. 234—1.5.)

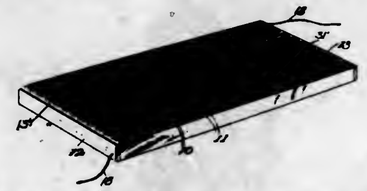
1. In a recording lock the combination with the lock-controlling tumblers of a plurality of circuit-controlling tumblers adapted to be set in position by a key inserted in the lock to establish by permutations and combinations of conducting paths made and broken thereby any one of a number of circuits greater than the number of the tumblers and each corresponding to a given key.



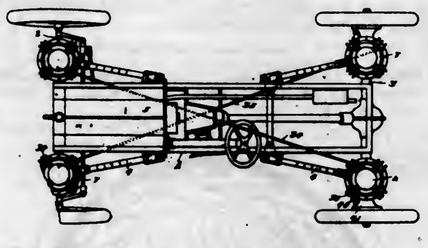
13. In a lock recording system the combination of a lock, a line circuit and a recorder, a device in the lock in the nature of a commutator with insulated segments and a contact arm sweeping over the same, a magnet for operating the arm and means for connecting to line such of the segments as correspond to the particular key used in the lock, the direction of its insertion and rotation and the like, of a magneto in the recorder adapted to be operated when a key is inserted and turned in the lock to send impulses to line, and means controlled thereby for directing the impulses of one direction over the line and through the contact arm controlling magnet and impulses of the opposite direction to the live segments of the commutator.

1,390,018. MASTER-CLOCK. JAMES W. BAYCE, Binghamton, N. Y., assignor to The International Time Recording Company of New York, a Corporation of New York. Filed Aug. 24, 1920. Serial No. 405,607. 7 Claims. (Cl. 58—41.)

1. The combination with the bed plate, a winding motor having supporting cross-plates, posts set in the bed plate passing through holes in said cross-plates, springs bearing on said cross-plates to hold the motor in position, winding mechanism on the bed plate and a flexible connection between the same and the motor shaft.



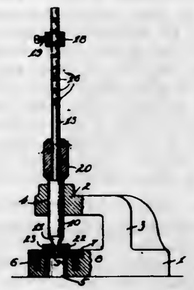
1,390,019. CRUSHER-ROLL. CHARLES G. BUCHANAN, Newark, N. J. Filed Aug. 14, 1919. Serial No. 317,455. 11 Claims. (Cl. 83—12.)



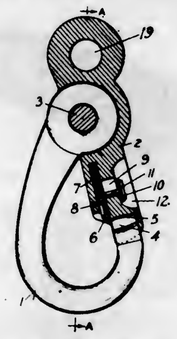
1. In a crusher roll comprising a central rotatable member and a series of segmental facing plates, means for holding said plates in place on said member comprising projecting shoulders on the ends of said plates, abutments on said member engaged by said shoulders, and fastening means drawing radially inward on said plate projections.

1,390,020. INTENSIFIER. FRED DE WITT CHENEY, Gypsum, Kans. Filed Nov. 7, 1917. Serial No. 200,796. 4 Claims. (Cl. 250—41.)

1. An intensifier including opposite binding straps having spaced lugs extending toward each other, a plurality of strips of insulating and conducting material arranged side by side in contact with each other and extending between said binding straps, one end of every other strip of conducting material being seated between two of the lugs on one of the binding straps and the other end of each of said strips of conducting material alining with and being spaced from the adjacent lug on the other binding strap, whereby the strips of conducting material are in parallel staggered relation.

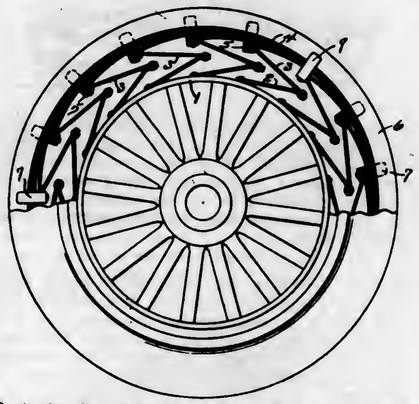


1,390,021. CUSHIONING DEVICE AND SUPPORT FOR VEHICLE-FRAMES. LEONARD E. CLAWSON, San Francisco, Calif. Filed Apr. 12, 1920. Serial No. 373,180. 12 Claims. (Cl. 267—30.)



3. In a motor driven vehicle a main frame, a pair of axles supporting the same, a pair of springs interposed between each axle and the frame, a resilient non-metallic member interposed between each spring and each axle, means securing each spring to each resilient member, and other means securing each resilient member to their respective axles.

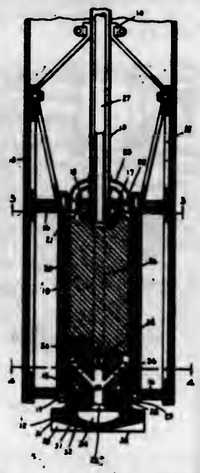
1,390,022. METHOD OF FORMING VALVE-SEATS. WILLIAM E. COAKLEY, Cleveland, Ohio, assignor to The Ohio Body & Blower Company, Cleveland, Ohio, a Corporation of Ohio. Original application filed Dec. 7, 1917, Serial No. 206,093. Divided and this application filed May 1, 1920. Serial No. 378,150. 2 Claims. (Cl. 29—157.)



1. The method of producing valve seats in apertured members which consists in swaging the material surrounding the aperture to form the seat.

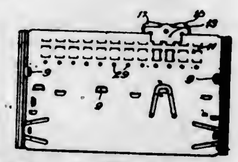
1,390,023. SAFETY-HOOK. AUSTIN L. COON, Aurora, Oreg. Filed June 11, 1921. Serial No. 476,785. 3 Claims. (Cl. 24—241.)

1. In a device of the character described, the combination of a hook, an eye at the end of the hook and a T-shaped tenon at the point of the hook, with a locking block fulcrumed in the eye of the hook, means in the locking block to firmly engage said T-shaped tenon and an eye at the opposite end of the locking block adapted to be attached to a hoisting chain.



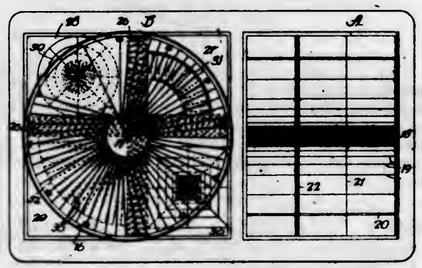
1,390,024. SPRING-TIRE. EVAN M. CURRY, Altus, Okla. Filed June 16, 1921. Serial No. 478,013. 4 Claims. (Cl. 152—8.)

3. A tire for vehicles having a series of units, each consisting of an inner spring attached at one end to the wheel rim, an intermediate spring attached at one end to the other end of said inner spring, an outer spring attached at one end to the other end of said intermediate spring, the other end of said outer spring forming a part of the tread for the wheel, each outer spring lapping on at least two of said units, and a U-shaped brace for each unit attached to said intermediate and outer springs at the juncture and projecting radially outward to hold said units in circular alinement.



1,390,025. WELL-DRILLING APPARATUS. ELMER C. DRAKE, Indianapolis, Ind., assignor of one-half to Jacob P. Teter, Indianapolis, Ind. Filed Feb. 24, 1920. Serial No. 360,648. 10 Claims. (Cl. 255—4.)

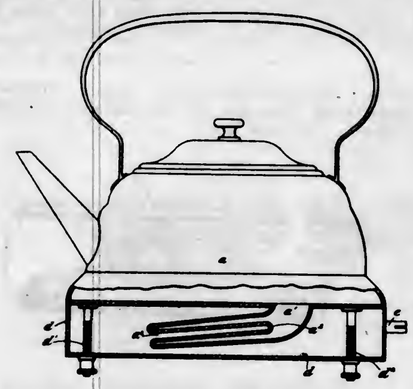
1. In a well drilling apparatus, the combination with a well casing, drilling means positioned within said casing means spacing said drilling means from said casing to form a discharge channel therebetween, means supplying pressure fluid to said drilling means for rotating the same, and means supplying scouring fluid to said drilling



means, said pressure fluid after rotating said drilling means coöperating with said scouring fluid for scouring purposes.

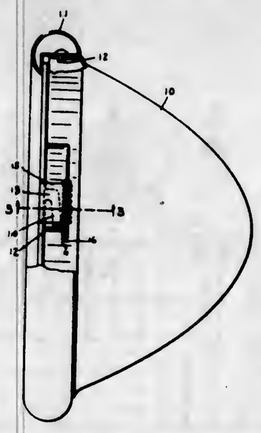
1,390,026. INDEX-TAB. JOSEPH S. DUNCAN, Chicago, Ill. Filed Feb. 3, 1921. Serial No. 442,152. 8 Claims. (Cl. 40—23.)

7. The combination of an index card having tab retaining means, of an index tab comprising a member adapted to be fixedly engaged with said retaining means and having that portion thereof above the retaining means located partly behind and offset from the card, and a movable member pivotally mounted on said fixed member to swing between said fixed member and the card and having angularly disposed arms, and means on said tab for limiting the swinging movement of the movable member.



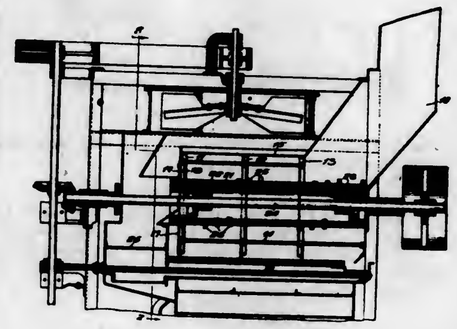
1,390,027. MEANS FOR CLASSIFYING BIFORMED ALPHABET. GEORGE FABYAN, Geneva, Ill. Filed May 10, 1917. Serial No. 167,738. 9 Claims. (Cl. 33—1.)

1. A templet for classifying bi-formed alphabet comprising a ruled transparent base and a transparent disk



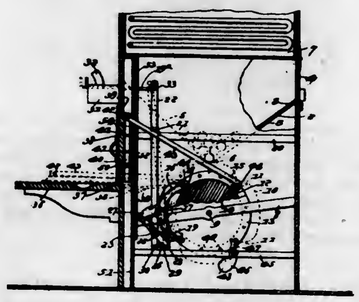
superposed over and rotatively mounted on said base and provided with a series of lines extending from its circumference inwardly and non-radial to the center of the disk.

1,390,028. ELECTRIC KETTLE AND THE LIKE. ALLEN SAMUEL FORD, Taunton, England. Filed Mar. 24, 1920. Serial No. 368,321. 8 Claims. (Cl. 219—43.)



1. An electrically heated utensil of the class described, having a well formed in one wall thereof, and electrical heating means arranged to transmit heat to the well.

1,390,029. FASTENING MEANS FOR LAMP-LENSES. HARRY C. FOSTER and WILLIAM F. THOMS, Connersville, Ind., assignors to Indiana Lamp Company, a Corporation of Indiana. Filed Oct. 11, 1919. Serial No. 329,955. 3 Claims. (Cl. 292—302.)

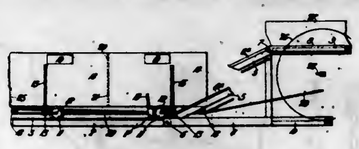


1. A fastening means for the lens rim of a lamp, including a casing having a slot therein with an opening at one end thereof, a rim adapted to fit on said casing, a lug mounted on said rim in position to enter said opening and pass into said slot when the rim is turned in locking position, a sliding member mounted on said casing so as to normally close said opening, and in position to engage said projection, and yielding means to cause said member to normally hold said projection in said slot and permit its removal therefrom.

1,390,030. CORN-SHELLER. ALBERT E. GILMAN, Ottawa, Ill., assignor to King & Hamilton Company, Ottawa, Ill., a Corporation of Illinois. Filed May 12, 1921. Serial No. 468,864. 3 Claims. (Cl. 130—6.)

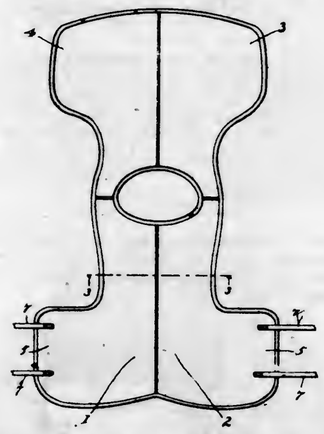
1. In a corn sheller, the combination with a shelling concave, closed at one end except for a feed opening and at the other end except for a circular aperture with an adjacent discharge aperture connected thereto, of a shelling cylinder concentrically journaled in the concave and having its discharge end extended through the circular aperture for the purpose described, and means for rotating the cylinder.

1,390,031. VENDING-MACHINE FOR GROCERY COMMODITIES AND THE LIKE. WILTON J. GOUDEAU, Grider, Ark. Filed Apr. 9, 1921. Serial No. 459,879. 9 Claims. (Cl. 211—8.)



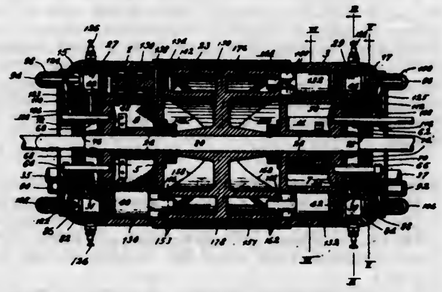
1. In a machine for the purpose indicated, a housing having a commodity receiving bin provided with a discharge opening, a revoluble intermittent movable delivery drum mounted in the housing at a point immediately below the discharge opening, said housing having an opening, a door controlling said opening, and means connecting the door coöperatively with the drum for imparting an intermittent motion thereto when the door is opened.

1,390,032. APPARATUS FOR HANDLING OF GRAIN IN BULK. ANDREW E. HEATH, Footscray, Melbourne, Victoria, Australia. Filed Dec. 4, 1919. Serial No. 342,462. 7 Claims. (Cl. 214—104.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



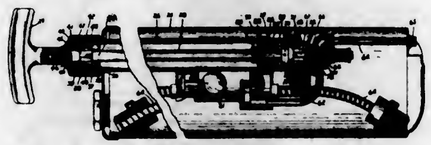
1. In grain-handling apparatus, the combination of a pair of horizontal rails and a ramp including a pair of inclined rails disposed in endwise alinement with the

horizontal rails and pivoted thereto at their lower ends, said horizontal rails and ramp being portable bodily as a unit; a truck; and a draw line connected to the truck



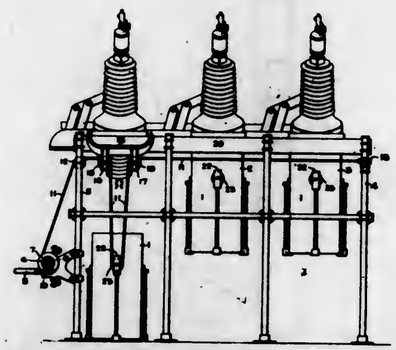
to haul it along the horizontal rails and then onto and upwardly along the ramp rails.

1,390,033. PAPER CHEST-PROTECTOR. EDWIN L. HENDERSON, Norwood, Ohio, assignor to The Kemper Thomas Company, Norwood, Ohio, a Corporation of Ohio. Filed May 26, 1919. Serial No. 299,819. 2 Claims. (Cl. 2—59.)



1. A garment for use as a vest, comprising a unitary front and back section, having means for securing the one section in position overlapping at the sides the other section, said garment being formed from elastic paper and a fabric lining loose from the paper and a binding strip for the edges of the garment for binding the free edges of the paper and fabric together.

1,390,034. INTERNAL-COMBUSTION ENGINE. WILLIAM C. HOWARD, Kansas City, Mo. Filed Jan. 9, 1919. Serial No. 270,281. 2 Claims. (Cl. 123—58.)



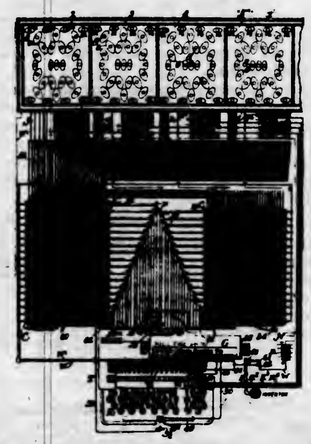
2. In an engine of the character described, a rotary shaft, two groups of alined cylinders paralleling said shaft and arranged about the same, pistons reciprocably mounted in said cylinders, self-closing inlet valves to said cylinders, self-closing exhaust valves to said cylinders, a cam wheel fixed on the rotary shaft between the two groups of cylinders and having a periphery with flanged margins which converge toward each other at certain points and diverge at other points, means operably connecting the pistons to said flanged margins, plungers for opening the exhaust valves, cams for actuating said plungers, cams for opening the inlet valves, shafts upon which the cams are fixedly-mounted, and timing gears driven by the first-mentioned shaft for driving the cam shafts.

1,390,035. FIRE-EXTINGUISHER. ROSCOE C. IDDINGS, Dayton, Ohio. Filed Apr. 10, 1919. Serial No. 288,933. 11 Claims. (Cl. 299—98.)

1. In a fire extinguisher, a pump having a valve seat in the end of the cylinder, a valve member carried by the piston and adapted to coöperate with said seat to close the end of the cylinder, and means for yieldingly holding said member on said seat, comprising: a stud projecting laterally from the piston rod, a cam which is engaged and displaced by said stud when the piston is rotated in the cylinder, and a spring whereby the cam is enabled to offer yielding resistance to said displacement.

1,390,036. ELECTRIC SWITCH. ERNEST H. JACOBS, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Oct. 20, 1916 Serial No. 126,775. 9 Claims. (Cl. 200—150.)

1. In a switch having a plurality of coöperating contacts, a support for the switch, a plurality of separate oil vessels for said contacts removably secured to said support and means for removing said vessels from said support including a flexible means carried by said support and adapted to form loops, means carried by each oil vessel for engaging said loops and means coöperating with said flexible means to enable the formation of said loops.

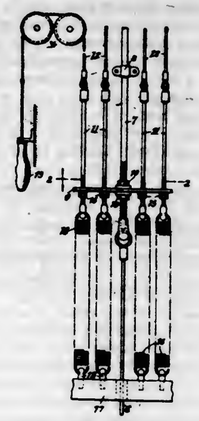


1,390,037. PROCESS FOR PURIFYING GASES. DAVID L. JACOBSON, Jersey City, N. J., assignor to The Koppers Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Oct. 22, 1920. Serial No. 418,810. 7 Claims. (Cl. 23—10.)

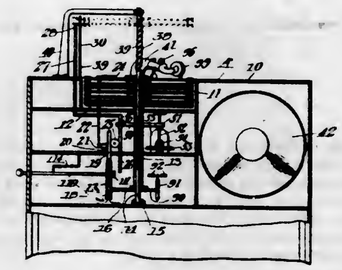
1. In a process of purifying fuel gas, the combination of steps that consists in: continuously passing the gas through an alkaline absorbent agent to absorb the hydrogen-sulfid impurities from the gas, continuously discharging the absorbent agent containing the absorbed impurities and subjecting it to aeration to remove the absorbed impurities, and continuously circulating the rejuvenated absorbent agent back to the gas purification step; substantially as specified.

1,390,038. MATERIAL FOR AND PROCESS OF FORMING BRICK, TILE, AND THE LIKE. LLEWELLYN JONES, Muncie, Ind., and CHARLES WESTLAKE, Jr., Youngstown, Ohio. Filed Sept. 4, 1919. Serial No. 321,551. 5 Claims. (Cl. 106—24.)

1. A material for dry pressing in the formation of brick, tile and the like, containing silica from 65 to 75%, lime from 20 to 30%, magnesia from 1½ to 3½% and sulfur from 1½ to 3½%.



1,390,039. ELECTRIC BULLETIN. RALPH ERNEST JONES, U. S. Army. Filed Aug. 8, 1918. Serial No. 248,930. 19 Claims. (Cl. 177—349.)



1. A bulletin comprising a bulletin board having a group of character forming units including lamps, a transmitter for operating the bulletin in electrical communication therewith, an electro-magnetically operated circuit closing switch for the lamp of each unit, means including a key-operated contact cylinder and contact bars, embodied in the transmitter for completing a primary discontinuous circuit through said switch to obtain the lighting of a set of said lamps to form a character, and self contained automatically operating means embodied in said switch for completing a secondary and continuous circuit therethrough to keep said set of lamps lighted.

1,390,040. MEANS FOR OPERATING SIGNALING DEVICES. JOHN A. KENNEY, Brooklyn, N. Y. Filed Sept. 30, 1920. Serial No. 413,943. 6 Claims. (Cl. 74—5.)

1. Means for operating signaling devices, comprising a controller secured to the main or lead line of the signaling device, a rigid operating element connected to each one of a number of operating or pull lines and adapted to act on the controller and so move the main or lead line when its pull line is manipulated and to remain stationary in inactive position when the main line is actuated by any of the other operating lines.

1,390,041. SOUND-REPRODUCING MACHINE. WALTER ROBERT KENNY, Ottawa, Ontario, Canada. Filed Sept. 2, 1919. Serial No. 321,196. 23 Claims. (Cl. 274—10.)

1. A sound reproducing machine having an elevated magazine, records mounted in the magazine, means for holding the records in position on the magazine, a vertical displaceable rod coacting with the last said means, an adjustable turn table, and means for actuating the rod to liberate the holding means and successively feed the records to the table and simultaneously lower the said table when receiving a new record.

3. A sound reproducing machine having a table adapted to successively receive records, a tone arm carrying a sound box and needle, means for rotating the tone arm in a horizontal plane comprising collector rings, coacting brushes and an electric motor and source of electrical supply, the said electrical means being inoperative while the needle is in engagement with a record.

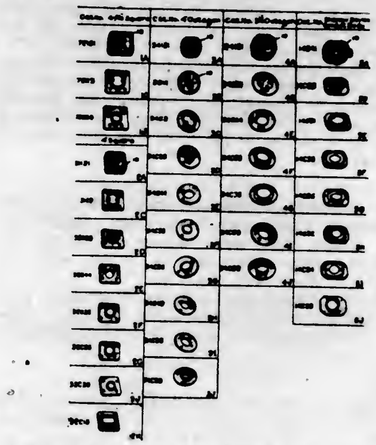
6. A sound reproducing machine, comprising an adjustable table designed to successively receive records to be played, a tone arm, a sound box on the tone arm, a lever connected to the sound box, an electro-magnet controlling the operation of the lever, and a dash pot coacting with the lever, and means for rotating the table, as and for the purpose specified.

11. A sound reproducing machine comprising in combination a record table, records having spaced conducting portions adapted to make electrical contact with the record table when engaged therewith, a tone arm having a record engaging contact movable over the records into engage-

ment with the conducting portions thereof, a collector ring carried by the tone arm composed wholly of conducting material, a second collector ring carried by the tone arm having a major sector thereof presenting a conducting surface and a minor sector thereof presenting a non-conducting surface, a third collector ring carried by the tone arm having a major sector thereof presenting a non-conducting surface and a minor sector presenting a conducting surface, a brush engaged with each ring, a motor operable to actuate the tone arm, a connection leading from the motor to the brush of the first ring, a magnet carried by the tone arm, a connection leading from the first ring to said magnet, a connection leading from the magnet to the record engaging contact, a source of current supply, a connection leading from one terminal of said source of current supply to the motor, and connection leading from the opposite terminal of the source of current supply to the record receiving table and to the brush of the second collector ring respectively, a connection leading from the second collector ring to the magnet, and a switch having one contact connected to the third collector ring and the other contact connected to the second collector ring.

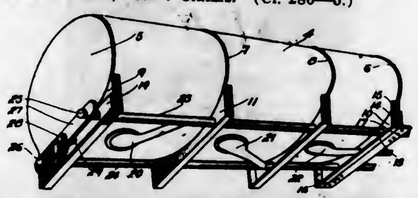
20. In a sound reproducing machine and in combination a record table means for successively feeding records on to said table, means for lowering said table a definite distance as each new record is deposited thereon, a prime mover for rotating said table, and means controlled by the lowering of the table to render the prime mover inoperative as the table reaches its lowermost position.

1,390,042. ROD-COUPLING. WILLIAM KIPPENHAN, Kewaskum, Wis. Filed Feb. 9, 1920. Serial No. 357,289. 3 Claims. (Cl. 287—98.)



1. The combination of two members to be connected, of a coupling means comprising a wire coil surrounding one of the members, one end of the coil being extended to form a resilient arm, said arm being offset and extended in a direction parallel to the axis of the coil and having an eye formed therein and engaging one of the members to urge it into contact with the other.

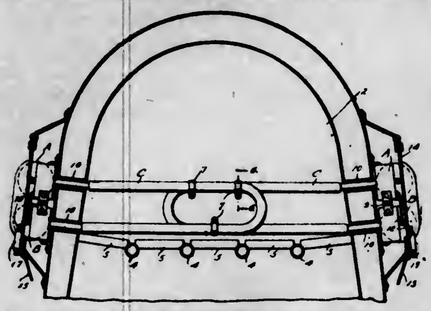
1,390,043. TIRE-RETAINING RIM FOR AUTOMOBILE-WHEELS. EMANUEL W. KNAPP, Nevada, Ohio. Filed Dec. 24, 1919. Serial No. 347,248. 2 Claims. (Cl. 152—21.)



2. The combination with a felly, of an endless felly band and an endless rim section permanently engaging and overlying the substantially complete side and cylindrical faces of the felly, rivets passing through the felly and through the radial flanges of the band and the rim section for securing the parts together, an outer endless rim section engaging the radial flange of the felly band and its cylindrical portion, means independently of the rivets for detachably securing the last named rim section in position, the cylindrical part of the felly band having a gradual laterally sloping portion extending outwardly to facilitate the fitting engagement of the cylindrical part of the last named rim section on the cylindrical part of the felly band.

1,390,044. CHART FOR SELECTING OUTLET-BOXES AND COVERS. HOMER G. KNODERER, Englewood, N. J., assignor to General Electric Company, a Corporation of New York. Filed Oct. 18, 1920. Serial No. 417,641. 3 Claims. (Cl 283—1.)

1. In a chart of the class described, the combination of a plurality of representations of articles having different physical characteristics and a plurality of representations of elements arranged to coöperate with said articles also having different physical characteristics, certain of the physical characteristics of said elements being designed to adapt them for use interchangeably with certain only of said articles, each of said article representations having a character adjacent thereto identifying certain characteristics of the article necessary to coöperate therewith and each of said article representations having a character adjacent thereto identical with the element designation identifying the article characterisics.

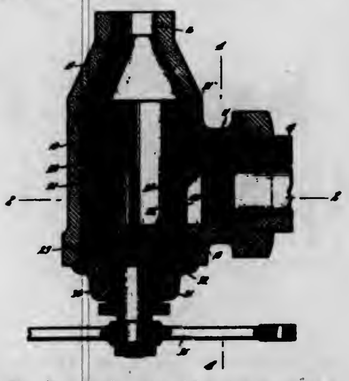


1,390,045. VEHICLE-TANK CONSTRUCTION. ANDREW A. KRAMER, Kansas Cly, Mo. Filed Dec. 23, 1920. Serial No. 432,809. 7 Claims. (Cl. 280—5.)

1. A wagon tank, bolsters supporting it, bracing and dispensing pipes connecting the bolsters, means for communicating the pipes with the tank so that the pipes serve as braces for the bolsters and also as dispensing conduits, the ends of the pipes projecting beyond the tank, a journal bearing-member support connecting the ends of the pipes at one end of the tank, a flexible frame beneath the bolsters, a stabilising connection between one end of the tank and one end of the flexible frame, a supporting bar on the frame having an opening alining with openings in the journal bearing member and in an end bolster, and a pivot journal passing through the openings to pivotally support the tank to the frame at the other end.

1,390,046. SUPERHEATER. WILLIAM GRINNELL LANDON, New York, N. Y. Filed Dec. 22, 1919. Serial No. 346,476. 5 Claims. (Cl. 122—481.)

5. The combination with a locomotive boiler having a fire box, of a superheater comprising two series of oppositely disposed return bent steam carrying elements, the elements of one series positioned between the elements of the other series, the ends of the elements of the respective series being projected through the walls of the fire box, a pair of headers on each side of the fire box communicating with the elements projecting through the wall adjacent thereto, said elements having walls of increased thick-

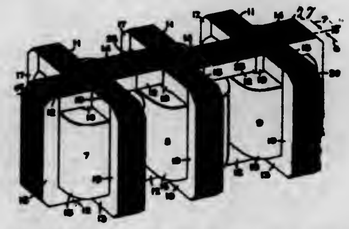


ness within the fire box, and the elements of one series having recesses receiving the elements of the other series therein, devices clamping the elements of one series to the elements of the other series, casings around the headers, and means for admitting a draft of air through the casings into the fire box.

1,390,047. SPRAYING-NOZZLE. WILLIAM LANGE, New York, N. Y. Filed Mar. 12, 1919. Serial No. 282,060. 2 Claims. (Cl. 299—105.)

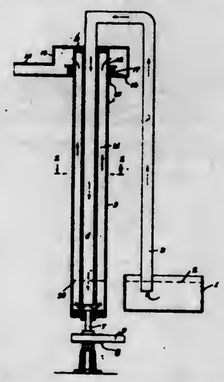
1. A spraying nozzle adapted to be interposed in a pipe line, comprising an interiorly and exteriorly threaded sleeve, said exterior threads being adapted to be secured in a threaded opening of the pipe line, a chamber having open upper end and a closed lower end and provided in one side at the closed end with a tangential inlet opening, said chamber having its upper end exteriorly threaded for engagement with the interior threads of the lower end of the sleeve, and a cap having an exteriorly threaded lower end screwing into the upper end of the sleeve, said cap being gradually reduced and having an outwardly flared outlet in its reduced top.

1,390,048. SPRAYING-NOZZLE. WILLIAM LANGE, New York, N. Y. Filed Apr. 2, 1920. Serial No. 370,762. 8 Claims. (Cl. 299—115.)



1. A spraying nozzle, comprising two concentric chambers forming an annular passage between them, means for delivering liquid approximately tangential to the said passage and the inner chamber to produce independent whirling actions of the liquids in the said passage and the said inner chamber, the outer chamber having a contracted outlet at the top and the said inner chamber discharging at its top into the outer chamber intermediate the said passage and the said outlet.

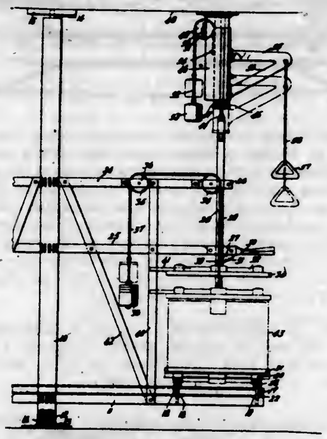
1,390,049. POCKETBOOK AND THE LIKE. LOUIS LANGLEE, New York, N. Y. Filed Sept. 9, 1919. Serial No. 322,663. 1 Claim. (Cl. 150—30.)



A pocket-book comprising connected front and back members of leather, a lining other than leather and having end portions with folds converging toward the bottom and forming pockets, said portion of the lining forming the pockets being integral with the converging end folds, and end members of leather and having folds corresponding with the folds of the end portions of the lining and on the outer face of the same, the outer edges and bottoms of the end members being stitched to the end edges and bottom of the front and back members.

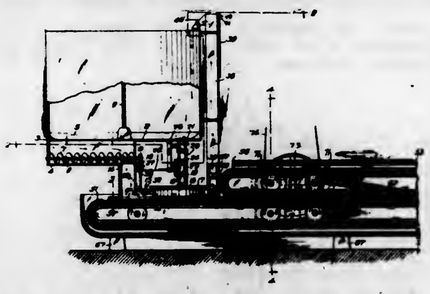
1,390,050. TRANSFORMER. CORLISS E. LEE, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Sept. 10, 1917. Serial No. 190,419. 7 Claims. (Cl. 175—356.)

7. A polyphase transformer comprising a plurality of distributed core type transformer elements and magnetic material uniting said elements arranged whereby said elements have a plurality of magnetic circuits in common.



1,390,051. PUMPING DEVICE. GEORGE K. LIGHT, Brooklyn, N. Y. Filed Apr. 24, 1920. Serial No. 376,393. 2 Claims. (Cl. 103—48.)

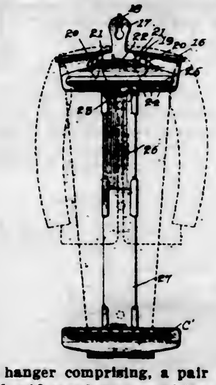
1. A pumping device comprising a vertically disposed rotatable receptacle, a plurality of radially extending



blades extending longitudinally within said receptacle, discharge openings at the upper end of said receptacle, and a siphon associated with said receptacle, the longer arm of said siphon extending into and disposed adjacent the bottom of said receptacle whereby when the normal level of the liquid within the receptacle is altered by the rotation of the receptacle the siphon will immediately supply more liquid to the receptacle.

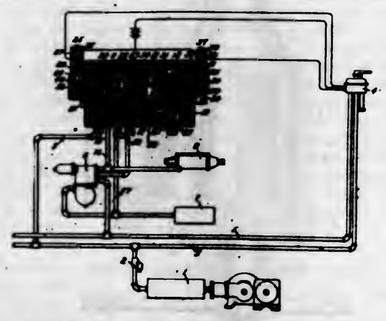
1,390,052. BOX-GLUING APPARATUS. ORLO A. LUCAS, Richwood, W. Va. Filed Aug. 20, 1920. Serial No. 404,813. 6 Claims. (Cl. 93—36.)

1. In an apparatus of the character described a supporting element provided with a plurality of box receiving members adapted to support the boxes having glued covers, each of said box supporting members having a resilient supporting platform, means for pressing the cover of said box until said glue is dry and a releasing mechanism arranged adjacent said rotatable supporting element, said releasing mechanism acting to release said pressing means from the box as the respective boxes pass the same.



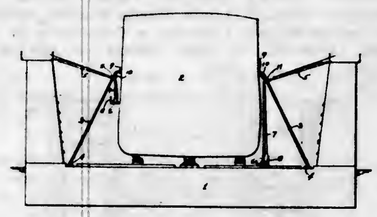
1,390,053. COTTON-SEED-MEAL PRESS. JAMES ROBERT MCCLUNG, Carter, Okla. Filed Oct. 1, 1920. Serial No. 414,038. 6 Claims. (Cl. 100—35.)

1. In a press, having two endless superposed belts, slightly spaced apart, one of said belts being slightly longitudinally inclined with reference to the other belt, so that the space between the two belts is of gradually decreasing depth, a hopper for cotton seed meal, a chute leading from said hopper for conveying said cotton seed meal from said hopper to said belts, a rotatable meal spreading member interposed between said chute and the point where the meal passes between said belts, said spreader comprising a spider wheel having a plurality of radial blades disposed slightly above the lower belt, a portion of the meal passing through said chute and beneath said wheel to the passage between said belts, and a portion of said meal being taken up by said wheel, the combination of means including an endless series of conveyer buckets for conveying back to the hopper the meal taken up by said wheel.



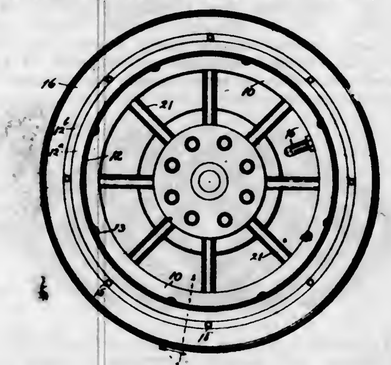
5. In a press, the combination of a casing, two endless superposed belts disposed in said casing and slightly spaced apart, one of said belts being longitudinally inclined with respect to the other belt, longitudinally extending ribs carried interiorly by said casing, the lower belt having longitudinally extending grooves engaged by said ribs.

1,390,054. CLOTHES HANGER AND PRESSER. MARION GERARD MCNEELY, Alpaugh, Calif. Filed Dec. 3, 1919. Serial No. 342,072. 1 Claim. (Cl. 223—19.)



A clothes hanger comprising, a pair of clamping members, each of said members comprising a stationary plate and a movable plate hinged to and urged toward the stationary plate, laterally extending flanges formed integrally with the stationary plate of one of the members and curved longitudinally and transversely to provide coat supporting elements, extensions formed on both of the stationary plates, lips carried by said extensions, and a frame comprising a pair of sections slidably and detachably associated with said extensions, lips carried by one of the sections to slidably and detachably receive the other section, and set screws carried by said extensions and one of said sections for locking the sections and extensions together.

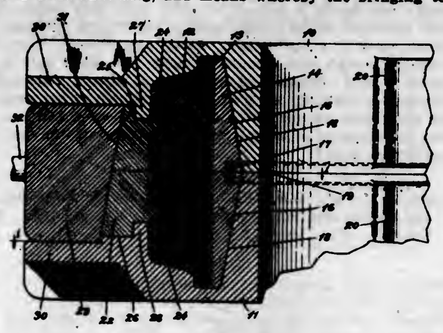
1,390,055. ELECTROPNEUMATIC BRAKE. GEORGE MACLOSKIE, Erie, Pa., assignor to General Electric Company, a Corporation of New York. Filed Jan. 17, 1921. Serial No. 437,654. 6 Claims. (Cl. 303—15.)



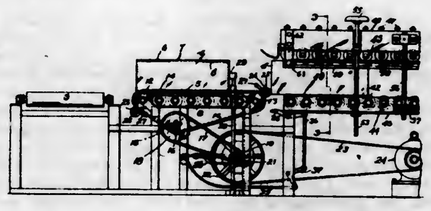
1. In an electropneumatic brake, the combination with a control pipe, brake pipe, auxiliary reservoir, brake cylinder and triple valve, of a piston subject to the opposing pressures of the control pipe and auxiliary reservoir, a valve operated by said piston controlling the exhaust port of said triple valve, and an electrically controlled valve for venting fluid from the control pipe side of said piston to effect the operation of said valve to cut off communication through the exhaust port of the triple valve.

1,390,056. DOCKING APPLIANCE. JOSEPH NIEBERDING, Baltimore, Md. Filed Sept. 14, 1920. Serial No. 410,133. 2 Claims. (Cl. 61—63.)

1. In a docking appliance, the combination of a member, means for pivoting one end of the said member to the floor of a dock, means operable from the top of the dock wall to adjust said member relative to a member being docked, a staging suspended from the upper end of said member and means operable from said staging for adjusting the vertical position thereof.



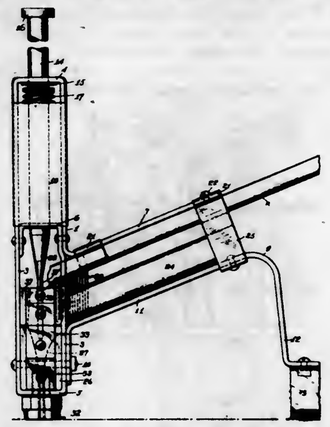
1,390,057. PNEUMATIC AND CUSHION TIRE. GEORGE W. OKEY, Des Moines, Iowa. Filed Mar. 20, 1920. Serial No. 367,379. 3 Claims. (Cl. 152—10.)



3. The combination with a wheel having a felly, of a rim formed in two members, one member of the rim extending across and fixed to and projecting laterally from opposite sides of the felly and having a peripheral flange integral with one margin and laterally spaced from the felly, the other member of the rim overlapping on the inner surface of the first member and detachably secured thereto, the second member of the rim also being formed with a peripheral flange integral with one margin and laterally spaced from the felly, said flanges being adapted to embrace a tire.

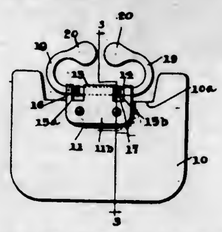
1,390,058. TIRE-MOLD. VICTOR A. PARKER, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Nov. 4, 1919. Serial No. 335,710. 8 Claims. (Cl. 18—42.)

1. A rubber-tire mold comprising two main molding rings and an interposing segmental tread-molding ring, inclosing between them an annular molding cavity, one of said main rings having a seat substantially parallel with the general plane of the mold on which the segments of the tread-molding ring are radially slidable to open and close said ring, and means whereby the bringing together of said main mold rings contracts said tread-molding ring upon the tire.



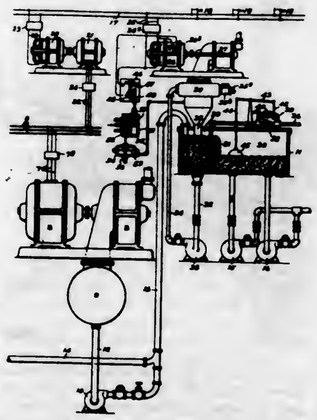
1,390,059. BOX-SEALING MACHINE. WILLIAM PEET, Kansas City, Mo. Filed May 21, 1919. Serial No. 298,708. 15 Claims. (Cl. 93—2.)

1. An apparatus for sealing boxes, comprising pressing means through which the boxes pass, mechanism for feeding boxes into the pressing means, and means operated by the box for throwing the feeding mechanism into operation.



1,390,060. NAIL DRIVING AND SETTING MACHINE. ADOLPH RIVER, Brooklyn, N. Y. Filed Feb. 11, 1921. Serial No. 444,149. 7 Claims. (Cl. 1—46.)

2. In a machine of the character described, a hollow standard, a pair of blocks fixed in the lower end of the standard and having opposed recesses therein forming a socket, spring plates having one end fixed to the outer faces of said blocks, a pair of jaws secured to the other

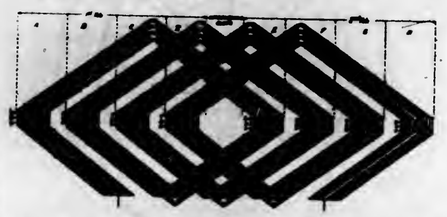


ends of the plates and coöperating to form an expansible socket, a gravity nail feeder, said expansible socket normally preventing a passage of nails from said feeder, a nail receiving channel communicating with said first-mentioned socket, a spring-held driver bar movable downwardly through said channel to drive and set a nail located in said channel and including a tapered shoulder engageable with the walls of said expansible socket upon its downward movement to operate the socket and permit the dropping of a nail from the feeder into the first-mentioned socket.

1,390,061. CALF-WEANER. FRANK SCHMIDT, Swanwick, Ill. Filed Sept. 18, 1920. Serial No. 411,154. 2 Claims. (Cl. 119—132.)

1. A device of the character described comprising a mouth plate recessed at its upper end, a bracket bearing disposed in the recess of said mouth plate and constructed of a single piece of resilient metal bent to form a pair of plates having portions embracing the adjacent portions of the mouth plate and portions defining the bearing, said portions defining the bearing being provided with spaced notches, means extending through the spaced plates and the mouth plate for securing the spaced plates to the mouth plate, a rotatable hanger shaft mounted in said bearing and consisting of two semi-cylindrical sections overlapped and having their plane surfaces abutting and having alined openings disposed in said notches, a cotter pin extending through each set of said alined openings for securing the sections together and preventing longitudinal displacement of the hanger shaft and hanger arms integrally formed with each end of their hanger shaft and having enlargements at their extremities adapted for engagement with the nostrils of the animal.

1,390,062. POWER PLANT. ARTHUR R. SMITH, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Dec. 15, 1920. Serial No. 430,861. 9 Claims. (Cl. 290—2.)

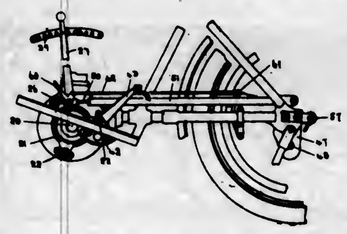


9. In a power plant, a main prime mover, a generator driven thereby, auxiliaries, motors for driving them, a second prime mover and a motor which is connected to said generator for supplying power to the motors of the auxiliaries, a condenser for the main prime mover, a condenser for the second prime mover which utilizes condensate from the first named prime mover as cooling liquid, and means for automatically dividing the load between the motor and second named turbine so as to maintain substantially constant vacuum in the second named condenser.

1,390,063. WINDING FOR DYNAMO-ELECTRIC MACHINES. HENRY WILLIAM TAYLOR, Bilton, and FREDERICK HORTON CLOUGH, Rugby, England, assignors to General Electric Company, a Corporation of New York. Filed Dec. 9, 1920. Serial No. 429,499. 3 Claims. (Cl. 171—206.)

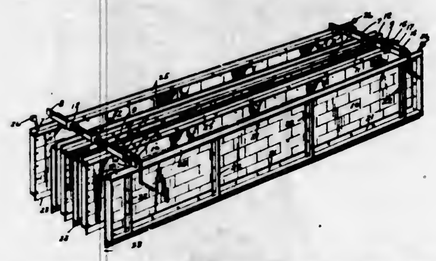
1. An armature provided with slots and a winding occupying two of said slots and formed of a conductor composed of a plurality of sections, said sections being insulated from each other throughout the winding and occupying through adjacent turns successive positions within the conductor, the sum of the constant flux elements linking the conductor being the same for each turn of the winding.

1,390,064. WINDING FOR DYNAMO-ELECTRIC MACHINES. HENRY WILLIAM TAYLOR, Bilton, and FREDERICK HORTON CLOUGH, Rugby, England, assignors to General Electric Company, a Corporation of New York. Filed Dec. 9, 1920. Serial No. 429,500. 2 Claims. (Cl. 171—206.)



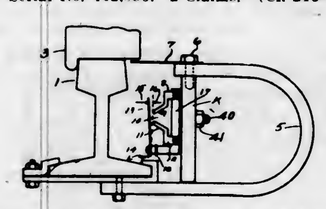
1. An armature provided with slots and a winding located therein, said winding comprising a plurality of sections, each of which is composed of a group of laminations, said sections and laminations being each insulated from one another throughout the winding and connected at their ends in multiple, each section from one end to the other of said winding occupying successively all positions within a slot and the order of the laminations within each section being reversed in certain of the half turns from their order in the remaining half turns of the section, whereby the total number of flux elements linking the laminations of each section in one direction is equal and opposite to the total number of flux elements linking the laminations of each section in the opposite direction.

1,390,065. COMBINED VARIABLE-SPEED, CLUTCH, AND FREE-WHEEL DEVICE FOR MOTORCYCLES. ALFRED HERMAN TRAEGER, Kensington Gardens, South Australia, Australia. Filed Mar. 16, 1920. Serial No. 366,226. 6 Claims. (Cl. 180—30.)



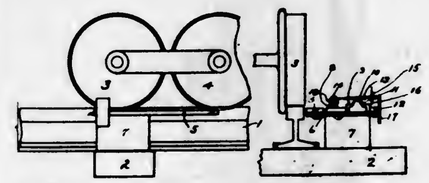
1. In a motor cycle having an expanding V pulley drive:—the means for mounting and moving the rear wheel consisting in mounting the axle in two plates as

47 pivoted at their lower end to the cycle frame and connected at their upper end by a forked adjustable con-



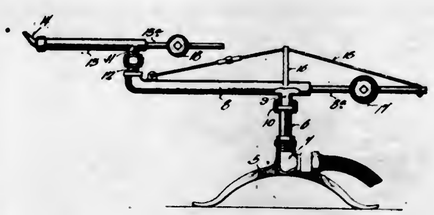
necting rod to a lug as 26 projecting from the governor ring whereby the V pulley is opened and closed, substantially as described.

1,390,066. FORM FOR CONCRETE WALLS. ERICK TROOLIN, Braham, Minn. Filed July 29, 1920. Serial No. 399,858. 2 Claims. (Cl. 25—131.)



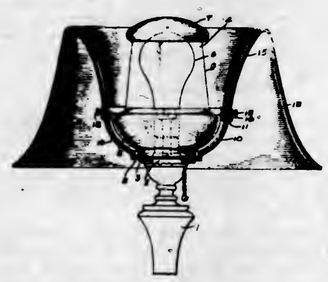
1. A form for concrete walls having in combination two rectangular bars disposed with their long sides vertical and contacting, and straps embracing and securing said bars together, a bearing secured at the end of one bar, a screw rod journaled in said bearing, a long collar at one side of said bearing and a short collar at the other side thereof, said collars being secured to said rod and a nut collar engaging said rod secured to the other bar, said long collar forming a stop for said nut collar and spaced plates depending from and alternately secured to said bars.

1,390,067. RAILWAY-CROSSING SIGNAL. THOMAS W. VARLEY and WILLIAM C. NEIN, New York, N. Y. Filed Sept. 18, 1916, Serial No. 119,881. Renewed Feb. 5, 1921. Serial No. 442,890. 2 Claims. (Cl. 246—63.)



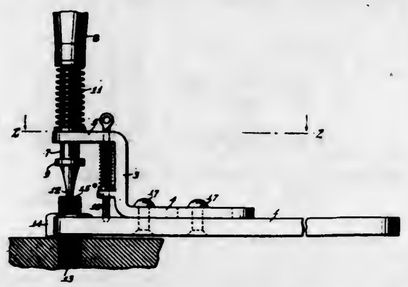
1. In a contact device, the combination with a railway track extending along a fixed right of way, of a U shaped magnet having one end in magnetic contact with one rail only of said track and its other end separated from said rail by an air gap, magnetic members, having a gap between them, extending between the poles of said magnet, a magnetic armature across said gap and contacts controlled by said armature, the first mentioned gap being adapted to have its flux varied by the passage of a wheel on said rail, to change the flux through the said magnetic members and armature to operate the last.

1,390,068. CROSSING-SIGNAL. THOMAS W. VARLEY and WILLIAM C. NEIN, New York, N. Y. Filed Mar. 28, 1916, Serial No. 86,145. Renewed Feb. 5, 1921. Serial No. 442,891. 7 Claims. (Cl. 246—63.)



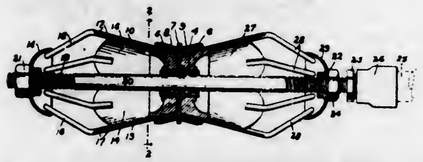
1. In a contact device, the combination with a railway track extending along a fixed right of way, of a magnet extending along a rail of said track, magnetic members, having a gap between them, extending at an angle from said magnet, a magnetic armature across said gap and contacts controlled by said armature.

1,390,069. SPRAY. JOHN VAUDREUIL, Milwaukee, Wis. Filed June 7, 1919. Serial No. 302,461. 5 Claims. (Cl. 299—69.)



1. A fluid distributing device including a vertical supply pipe, an imperforate supply tube mounted on the supply pipe or horizontal rotation and communicating with the supply pipe, a distributing tube swivelly mounted on the supply tube at a point remote from the axis of rotation of the supply tube and a discharge nozzle on the distributing tube directed laterally whereby to rotate the distributing tube and to impart differential rotation to the supply tube.

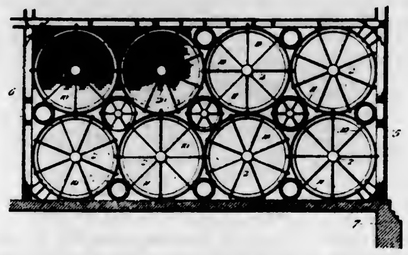
1,390,070. LAMP. GUSTAVE E. VILLARET, New York, N. Y. Filed Dec. 11, 1920. Serial No. 429,985. 6 Claims. (Cl. 240—81.)



1. A portable lamp, comprising a support, a globe on the support, a shade holder independent of the globe and connected to the support, and a shade located around the globe and having at its upper end a downwardly and inwardly projecting reflecting portion positioned around the globe and located upon said shade holder.

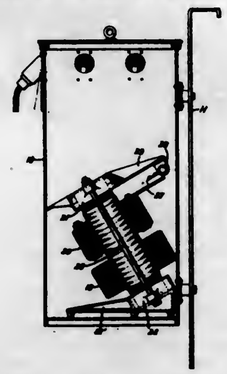
1,390,071. TOOL. HENRY AUGUST WETSTEIN, Brooklyn, N. Y. Filed Mar. 5, 1921. Serial No. 449,639. 4 Claims. (Cl. 81—8.)

1. A tool of the character described, including a bar having a nut receiving socket in one end, an angle bracket removably connected to the bar and including a perforated arm located over the socket, a spring held plunger rotatably supported by the arm, and means normally retaining the bar and the bracket in locked relationship.



1,390,072. FLUE-SCRAPER. EDGAR ABER, St. Joseph, Mich. Filed May 16, 1919. Serial No. 297,488. 6 Claims. (Cl. 83—64.)

1. In a flue scraper, the combination of a stem, a plurality of cup shaped caps mounted upon said stem and facing each other, a sleeve loose on the stem, between the caps, a pair of nuts encircling and in engagement with said sleeve and having outwardly inclined faces, bands encircling the nuts, a number of scraper blades arranged in two groups, each group of blades being secured upon one of said nuts by one of said bands, said blades having cutting edges so arranged that the cutting edges of the blades of one group extend in one direction and the cutting edges of the blades of the other group extend in the opposite direction, and a finger of spring material secured to each blade and standing at an obtuse angle thereto, there being two groups of spring fingers, one associated with each group of blades, the spring fingers of respective groups of spring fingers extending respectively into the different caps.



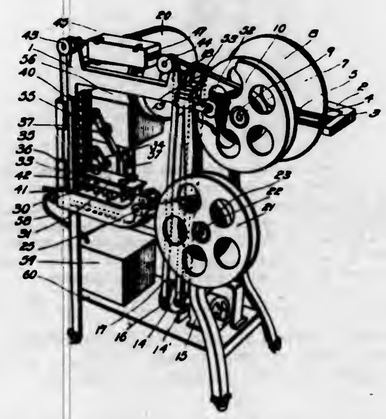
1,390,073. CONCRETE-REINFORCING METAL UNIT FOR THE WALLS, FLOORS, AND CEILINGS OF BUILDINGS AND FOR OTHER CONCRETE CONSTRUCTION WORK. OREEN ALLEN, Denver, Colo. Filed May 22, 1920. Serial No. 383,503. 3 Claims. (Cl. 72—110.)

1. In a concrete reinforcing unit, the combination of a hub base provided with a plurality of rods radiating from it at predetermined distances apart, and of any predetermined length, and a single circumscribing rim member surrounding said hub base at a predetermind distance from it and secured to the outer terminal ends of said rods, said rim member and the outer ends of said rods being so coöperatively arranged and connected as to secure said rim under a compressive tension against said hub base, a rod extending transversely through said hub base to the radial direction of the rim rods a predetermined distance, a hub base on the outer end of said transverse

rod, and rods secured at one end to the hub base on the end of said transverse rod, and extending to and secured under tension to said rim.

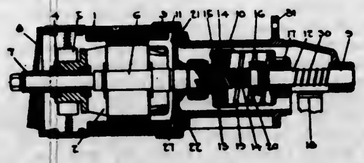
1,390,074. CONSTANT-CURRENT TRANSFORMER. LYMAN ARNOLD, Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed Mar. 14, 1918. Serial No. 222,292. 3 Claims. (Cl. 171—119.)

1. A constant current transformer, comprising a core having a substantially rectilinear winding leg, fixed and movable windings on said leg, and means for pivotally suspending the movable winding from the core on an axis perpendicular to said leg, said core being tilted to have its winding leg inclined to the vertical in a plane perpendicular to said axis of suspension.



1,390,075. HEEL WITH INTERCHANGEABLE TREAD. GUSTAV BECHER, Wald, Germany. Filed Nov. 13, 1919. Serial No. 337,890. 1 Claim. (Cl. 36—42.)

A heel comprising an upper fixed portion having a recess in its face, a plate covering said recess and having

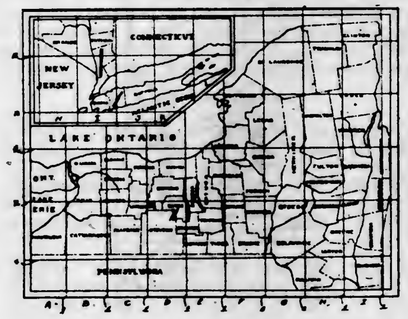


a rectangular opening and a circular opening, a detachable portion having a resilient metallic plate secured at its ends only laterally across the same and provided centrally thereof with a bolt having a rectangular head, and a second resilient plate secured at one of its ends to the rear of said detachable portion and extending longitudinally thereof and having near its free end a round pin, the construction and arrangement being such that the head of said bolt can pass through the rectangular opening in said first named plate to engage above said plate when the said detachable heel is turned and that the said pin engages in the said circular hole for the purpose of locking the detachable portion against rotation.

1,390,076. FILM-CLEANING DEVICE. GEORGE H. BENNETT, Kansas City, Mo. Filed Mar. 5, 1921. Serial No. 449,670. 3 Claims. (Cl. 15—8.)

1. In a film cleaning machine, film delivery and receiving members, a conduit between said members, paired racks in said conduit, between which a film may pass and each comprising separate wiping members inclined in the direction of travel of the film and terminating in flexible contact lips adapted for engaging a film, and an individual clamp for securing each wiping member to its rack.

1,390,077. DYNAMO CONSTRUCTION FOR MOTOR-VEHICLES. JOSEPH BIJUR, New York, N. Y., assignor, by mesne assignments, to Bijur Motor Appliance Company, a Corporation of Delaware. Filed Dec. 28, 1917. Serial No. 209,267. 11 Claims. (Cl. 74—7.)

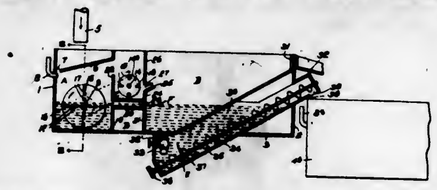


1. In a starting motor unit, in combination, a rotor having a shaft, a casing for said rotor carrying bearings for lodging the journals of said shaft, a driving member for an engine connected to be driven from said shaft, and mounted between said rotor and the journal nearest thereto on one side thereof, and a limiting member fixed between said rotor and said driving member, adjacent to but spaced from said shaft at all points, and adapted upon slight bending of said shaft to be contacted thereby for preventing excessive bending of said shaft.

1,390,078. GREASE-CUP. JOHN B. BLAIN, Rochester, N. Y. Filed June 13, 1919, Serial No. 303,971. Renewed July 19, 1921. Serial No. 485,850. 3 Claims. (Cl. 74—108.)

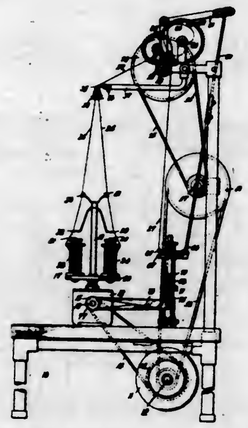
1. A cylinder and a piston therefor said piston having an annular seat, said piston being under cut on the inner side of said seat, a U-shaped packing on said seat engaging with the cylinder, said packing being held in place by the shape of the seat.

1,390,079. MAP. ARTHUR E. BLOOMFIELD, Rochester, N. Y. Filed Dec. 16, 1920. Serial No. 431,195. 2 Claims. (Cl. 283—34.)



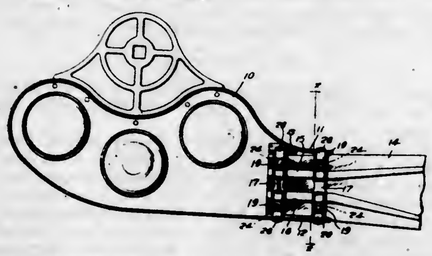
1. A book map having pages provided with matching sections of a map of a given geographical area, the sections being formed by divisions of the map area in two directions at right angles to each other providing parallel sets, each set having its members arranged on successive pages of the book in the order in which the members occur in the set from one side of the map area, each section being provided at those edges which match with the members of its set, with means which will indicate any position on its edge, on the matching edge of its matching member, the parallel sets of sections being arranged in the book in the order in which they occur from one side of the map and the sections also having their matching edges between the sets provided with indicating means by which any position on the edge of a member of one set may be found on the edge of a section of a matching set.

1,390,080. ORE-SEPARATOR. SAMUEL L. BOGGS, Ivanhoe, Va. Filed Oct. 16, 1919. Serial No. 331,014. 10 Claims. (Cl. 83—85.)



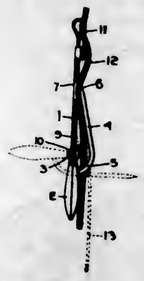
1. Apparatus for separating ore from gangue, comprising a container, means to feed a mixture to be separated to the container, an agitating device situated in a compartment beneath the feed device, a supplementary compartment adjacent to the first mentioned compartment extending across the tank and adapted to receive frothed material from the said agitating device and to discharge the frothed material into a main settlement chamber, an agitating device situated in the supplementary compart-

ment, a main settlement chamber beyond the supplementary compartment, the said main settlement chamber



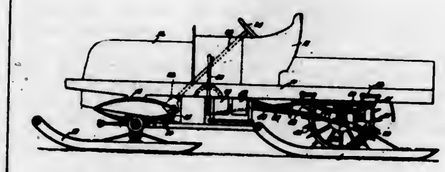
being connected to the first mentioned compartment by a passage beneath the supplementary agitation compartment.

1,390,081. SILK-THROWING MACHINE. PAUL HYDE BONNER, New York, N. Y., assignor to Stehli Silks Corporation, New York, N. Y., a Corporation of New York. Filed July 31, 1920. Serial No. 400,410. 5 Claims. (Cl. 28—34.)



1. A silk throwing machine comprising twisting means for twisting at least two silk ends together to form a low twist thread, take up rollers for taking up and imparting a traveling motion to said threads, means for operating the said rollers at considerably less speed than that of the said twisting means, twisting and winding means receiving the thread from the take up rollers and twisting it to form a high twist thread and winding it onto a spool, and means for operating the twisting and winding means at considerably greater speed than the low twisting means.

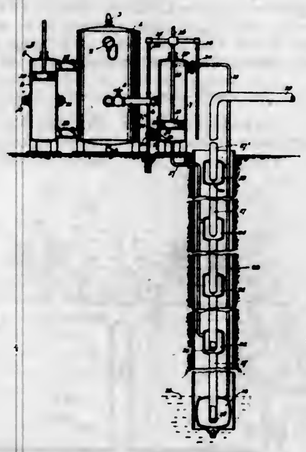
1,390,082. SEMAPHORE. WILLIAM F. BOSSERT, Utica, N. Y. Filed June 1, 1921. Serial No. 474,187. 8 Claims. (Cl. 246—482.)



1. The combination with a spectacle of usual and ordinary construction, of a semaphore blade having longitudinal corrugations therein, a clamping member conformed to engage the corrugations of the blade, and wedging members co-acting with the clamping member clamping such member into engagement with the blade and exerting stress upon the margins of the spectacle.

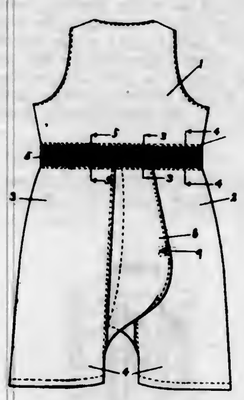
1,390,083. NAPKIN-HOLDER. PHILIP A. BOWEN, Lynn, Mass. Filed June 17, 1921. Serial No. 478,285. 3 Claims. (Cl. 24—7.)

1. A napkin holder comprising a body member adapted to be attached to a garment on the inside thereof, a pin-supporting member pivoted to the body member, a napkin-holding pin secured to the pin-supporting member and adapted to be inserted through the garment and placed in position to support a napkin by the swinging movement of the said pin-supporting member.



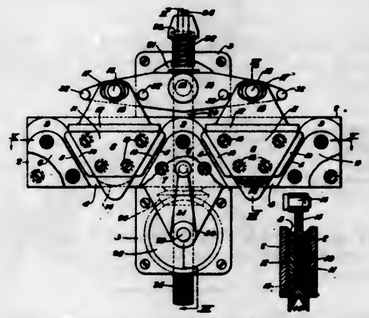
1,390,084. MOTOR-SLEIGH. GEORGE BROWNLEE, Victoria, British Columbia, Canada. Filed May 20, 1920. Serial No. 382,914. 3 Claims. (Cl. 180—6.)

1. In a motor sleigh, a body, bolsters secured thereto, supporting runners carried by the bolsters, means for connecting the runners to the bolsters to permit of independent relative movements of the same, a traction driving mechanism, means for effecting vertical adjustments of the same with respect to the body and the running gear, a supplemental swinging supporting connection between the driving mechanism and the rear bolster having limited swinging movement, said connection consisting of interengageable male and female members, the said means for effecting vertical adjustments of the driving mechanism comprising double bell crank levers having connection at one end with the traction elements, and a lever pivoted adjacent the driver's seat having connection with the opposite ends of said bell cranks.



1,390,085. DEEP-WELL PUMP. SALVATORE CASSISA, New York, N. Y. Filed May 26, 1920. Serial No. 384,489. 4 Claims. (Cl. 103—8.)

3. In a device of the character described the combination of a water elevator provided with a plurality of pipes, and means for using air alternately passing through said pipes, of a compressor for alternately forcing compressed air into said pipes, and a valve co-acting

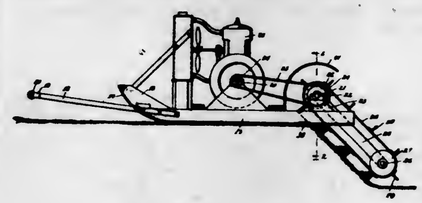


with each of said pipes for opening the device to the atmosphere and simultaneously opening the compressor to the atmosphere.

1,390,086. UNION-SUIT. CARL A. CLEMENTS, Grand Rapids, Mich. Filed Jan. 17, 1921. Serial No. 437,841. 3 Claims. (Cl. 2—144.)

1. A union suit comprising a back having an insert composed of superimposed strips of elastic material both extending from side to side across the garment separate at their lower edges and secured at their upper edges to the upper part of the garment, the garment having a rear opening extending upwardly from the crotch to the insert, the back portion below said insert comprising overlapping back members, the upper edge of the inner of said back members being secured to the lower edge of the inner of said insert strips only, and the upper edge of the outer of said back members being secured to the lower edge of the outer of said insert strips only with the edges of said back members normally in overlapping relation, whereby one of the insert strips may yield independently of the other.

1,390,087. CLAMP. WILLIAM F. CONKLIN, Tarentum, Pa. Filed Oct. 21, 1920. Serial No. 418,508. 10 Claims. (Cl. 24—136.)

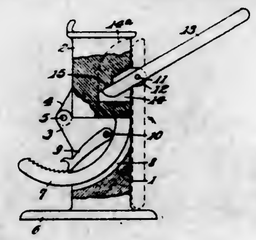


8. A clamping device for flexible members comprising a body having an undulating passageway therein through which a flexible member may be passed, movable clamping members co-acting with the undulating portions of the body, a lever pivoted between its ends and having one of said movable clamping members connected thereto at each side of its pivot point, and means for moving said lever relatively to the body to move said clamping members into or out of the undulating passageway.

1,390,088. INSECTICIDE. ANTONE CONSTANTIN, New York, N. Y. Filed Mar. 26, 1920. Serial No. 369,073. 1 Claim. (Cl. 167—6.)

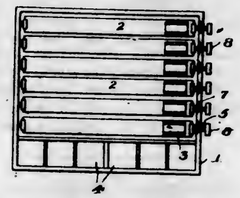
An insecticide, containing lard, soap, chromate of lead, ferric ferrocyanid, and barytes in about the proportions specified.

1,390,089. APPARATUS FOR TILLING THE SOIL. CARSON CAUGHEY COOK, Stockton, Calif. Filed May 15, 1920. Serial No. 381,716. 6 Claims. (Cl. 97—72.)



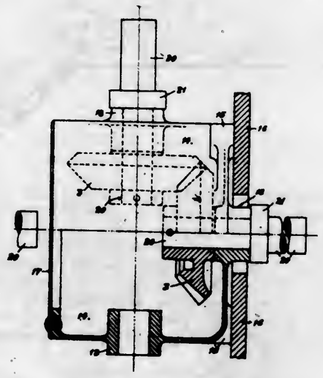
1. An apparatus for tilling the soil, a sled adapted to be dragged over the ground so as to bend the vegetable growth flat on the ground, power means on the sled, a knife secured to and extending transversely of the frame, and a movable cutting element mounted on the frame in rear of the knife and adjacent thereto, said cutting element coöperating with the knife to cut the vegetable growth into pieces and to dig a trench and to return the earth and pieces of vegetable growth back into the trench.

1,390,090. AUTOMOBILE-JACK. VAN V. CURTIS, Follansbee, W. Va. Filed Apr. 9, 1921. Serial No. 459,952. 4 Claims. (Cl. 254—101.)



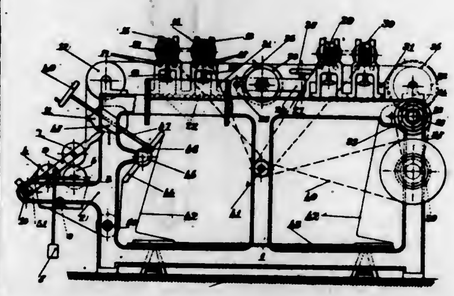
1. An automobile jack comprising a standard composed of hinged sections, the lower section having a passage

therein, a curved rack-bar carried by the upper section and movable through said passage with rocking movement



of said upper section, a pawl arranged to coöperate with said rack-bar, and an operating lever carried by said upper section.

1,390,091. LIST-RACK. IRVIN A. CARR, Waukegan, Ill. Filed July 3, 1920. Serial No. 393,794. 3 Claims. (Cl. 40—68.)

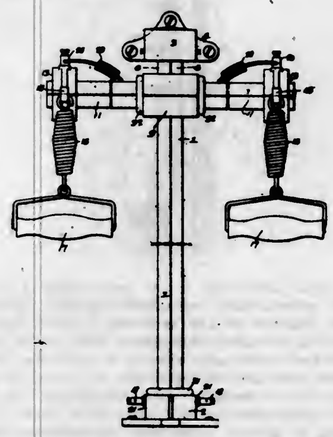


1. A list rack comprising a frame, a name plate, stub shafts for rotatably connecting the plate to the frame, one of such shafts being provided with a projection, a knob for turning one of the shafts, and a spring arranged to coöperate with said projection for snapping the plate into its displaying positions and holding same in such positions.

1,390,092. MOTION-TRANSMISSION SYSTEM. WILLIAM CHADBURN, Bournemouth, and WILLIAM ROY CHADBURN, Birkdale, England. Filed Apr. 10, 1918. Serial No. 227,742. 1 Claim. (Cl. 74—7.)

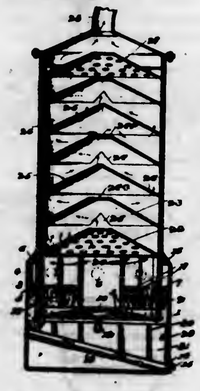
A gear unit comprising a casing having lugs at the back for securing the unit to a stationary part, a removable front cover plate for the casing, the casing having a plurality of inwardly extending bearing bosses, the axial lines of which meet at a common point, certain of the bosses having a common axial line, non-alined shafts to be passed through any two or more of the bosses, and gears having openings corresponding to the openings in the bosses, the gears having hubs adapted when in position to have a bearing contact with the ends of the bosses, said gears being adapted to be secured on the shafts within the casing and each being of a size to insure a driving mesh with any other gear so mounted.

1,390,093. APPARATUS FOR FINISHING VELVET AND OTHER NAP FABRICS. JOSEPH CUCUMEL, Lyon, France. Filed Apr. 8, 1920. Serial No. 372,292. 1 Claim. (Cl. 26—12.)



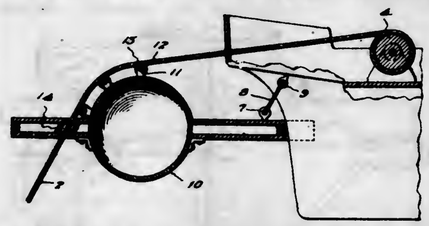
Apparatus for finishing velvet and nap fabrics comprising a frame, a table, a reservoir containing a liquid for the humidification of the fabric, rollers in the reservoir, a card comprising two cylinders provided with steel teeth, means for regulating the pressure of said cylinders, heating means for the nap rising mechanism, a calender arranged after the heating means and also heated thereby, means for regulating the height of said calender, a second card in rear of the calender and rotating in the opposite direction to the first card, a stretching frame above the table, means for regulating the inclination of said stretching frame, and means for guiding the fabric to the table where it is piled up, substantially as described.

1,390,094. AUTOMOBILE-SIGNAL. GEORGE E. DAVIS, Hamburg, N. Y. Filed Apr. 6, 1920. Serial No. 371,633. 1 Claim. (Cl. 177—329.)



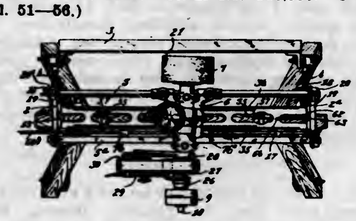
A signal of the class described comprising a casing having an opening in its front face and a door opening in its outer edge, a lens covering the opening in the front face, a door for closing the door opening, said door being hinged to the casing at its lower edge, a signal plate connected at one edge with the inner face of the door and extending at right angles to the door, a reflector carried by the plate, said plate and reflector having registering openings therein, an electric lamp supported by the reflector in alinement with the openings, and means for opening and closing the door, the lamp being in alinement with the opening in the front of the casing when the door is closed.

1,390,095. EXERCISING APPARATUS. MARTIN L. DETTINGER, JOHN A. WESPER, and CARROLL SHEWELL, Philadelphia, Pa. Filed Sept. 23, 1920. Serial No. 413,267. 6 Claims. (Cl. 46—69.)



The combination in an exercising apparatus, of a standard; electric wires thereon; an adjustable cross head mounted on the standard and having bars projecting therefrom; clam blocks adjustably mounted on the bars; a spring suspended from each clamp block; a handhold attached to each spring; contacts on the cross head adapted to bear upon the wires of the standard; and connections between the adjustable clamp blocks and the contacts so that when the handholds are grasped an electric current will pass through the body of the person exercising.

1,390,096. AIR-FILTER. VITO DI SANTE, Wichita, Kans. Filed Dec. 4, 1919. Serial No. 342,471. 4 Claims. (Cl. 183—24.)



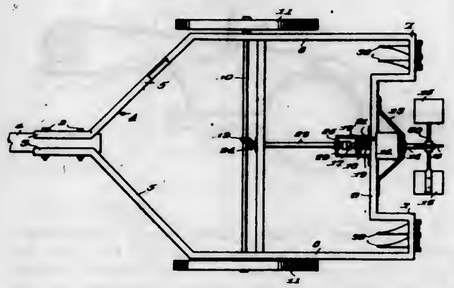
1. In an air filter, a water container, a collecting vessel within said container, said vessel having a concavo-convex bottom formed with perforations, and a cylindrical chamber above said bottom comprising concentric walls and radial partitions, the outer wall of said chamber being extended to rest upon the bottom of said vessel and maintain a space between the chamber and the bottom of the vessel.

1,390,097. CONSTRUCTION FOR RAISING SUNKEN VESSELS. PEDRO DONAIRE, Habana, Cuba. Filed Sept. 11, 1920. Serial No. 409,590. 5 Claims. (Cl. 114—51.)

1. In a means for raising sunken vessels, strong flexible elements secured to the sides at the bow and stern of a sunken vessel and directed at outward angles therefrom, buoyant members anchored at the front thereof in a line with the respective flexible elements, drums carried by said members, to which the respective elements are attached, means for simultaneously revolving the drums at the same rate of speed, and buoyant directing means for the elements hingedly connected to rear or stern portions of the respective buoyant members and having one of their ends in contact with the said stern portions of said buoyant members.

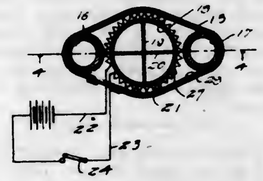
1,390,098. KNIFE-GRINDING MACHINE. JOSEPH DICK, Canton, Ohio, assignor to The Joseph Dick Manufacturing Company, Canton, Ohio, a Corporation of Ohio. Filed Dec. 22, 1919. Serial No. 346,520. 3 Claims. (Cl. 51—56.)

1. A grinding machine including a frame, a work holder at one side of the frame, a grinding head mounted on the frame for longitudinal movement parallel with the work holder, spaced connected facing racks mounted for transverse movement on the frame, grinding mechanism mounted on the head including a pinion between the racks, and means or bodily moving the racks transverse with the frame to engage either one of the racks with the pinion.



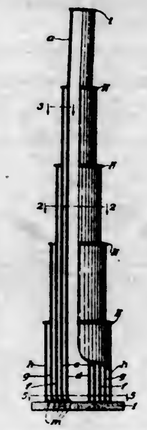
1,390,099. CARPET-SWEEPER. TOM DICKINSON, Accrington, England. Filed Jan. 23, 1920. Serial No. 353,462. 5 Claims. (Cl. 15—60.)

5. The combination with a carpet sweeper case and rotary brush, of means to engage the brush neck to



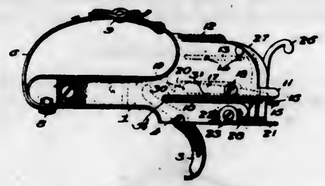
prevent the wrapping of hairs or threads around the brush neck in combination with means to engage the extreme end tufts of the brush to cut and remove threads and hairs therefrom substantially as described.

1,390,100. COTTON-CHOPPER. JOHN LESLIE DOSS, Albany, Ala. Filed Dec. 13, 1920. Serial No. 430,297. 1 Claim. (Cl. 97—46.)



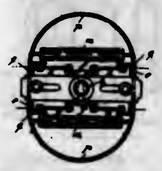
An agricultural apparatus comprising a tongue, a channel frame bar having its channel innermost and also having forward parallel terminal portions between which the tongue is received and secured, rearwardly divergent forward portions, side portions, inner loops at the rear ends of the side portions and a transverse portion interposed between and joining the inner ends of the loops, a transverse bar interposed between and fixed to the side portions of said frame bar, a shaft journaled in the side portions of said frame bar and having ground wheels exterior of the frame and also having a miter gear, a longitudinal shaft having a miter gear intermeshed with said miter gear of the transverse shaft and also having a clutch member, and an additional longitudinal shaft journaled in the said interposed rear portion of the frame bar and having a complementary clutch member, yielding means on the last-mentioned shaft to retain the clutch member thereon in engagement with the first-named clutch member, and means to adjust the third shaft rearwardly and adjustably fix the same.

1,390,101. FUEL-HEATING APPARATUS FOR INTAKE-MANIFOLDS. JOHN W. DURHAM, Wichita, Kans. Filed Oct. 2, 1920. Serial No. 414,198. 3 Claims. (Cl. 219—38.)



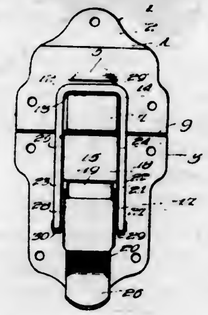
1. A heating attachment to be disposed in the connection between the carbureter and intake manifold of an internal combustion engine, the same comprising an elongated flat casing widened at a middle point and having a relatively large middle opening for the passage of the fuel and relatively small end openings to receive the fastenings to retain the attachment in operative position, and a resistance element within the casing and surrounding the middle opening thereof and included in an electric circuit.

1,390,102. TOWER. ROBERT P. DURHAM, Chicago, Ill. Filed Jan. 5, 1920. Serial No. 349,436. 6 Claims. (Cl. 72—1.)



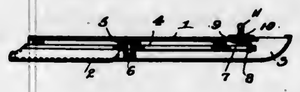
1. A tower comprising in its construction a base, a series of substantially concentric upright continuous walls, all mounted on and extending upward from said base and spaced apart throughout their entire length vertically from said base upward to the tops thereof, said series comprising an inner wall, an outer surrounding wall, an intermediate wall surrounding the inner wall and surrounded by the outer wall, each of said walls being of greater height than the adjacent wall by which it is surrounded, and connecting means forming a rigid connection between a plurality of said walls.

1,390,103. THREAD-KNOTTER. HUGH P. EANES, Ridgeway, Va., assignor to Automatic Machine Company, Inc., Ridgeway, Va., a Corporation of Virginia. Filed Mar. 22, 1919. Serial No. 284,331. 10 Claims. (Cl. 289—2.)



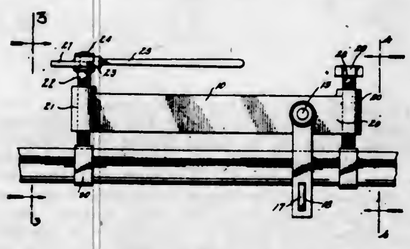
1. A thread-knotter comprising a fixed tying-bill, an edge of which forms a cutter, a hook having a cutting edge which coöperates therewith, and a stripper for removing the knot from the tying-bill and actuating said hook to cause the tying-bill and hook to cut a thread extending therebetween.

1,390,104. MOLD-CORE FOR CONCRETE BODIES. FRITZ EMMRICH, Freiberg, Germany. Filed Feb. 25, 1920. Serial No. 361,120. 1 Claim. (Cl. 25—128.)



In a mold core for concrete bodies, in combination, two rigid outer parts, conveying rollers therein, and a contractible center part consisting of two mold walls, a H-rail therein and connection-links between said rail and walls, substantially as and for the purpose set forth.

1,390,105. DRAWBOLT. BENJAMIN H. ERWIN, Mishawaka, Ind. Filed Jan. 21, 1921. Serial No. 438,901. 4 Claims. (Cl. 292—247.)

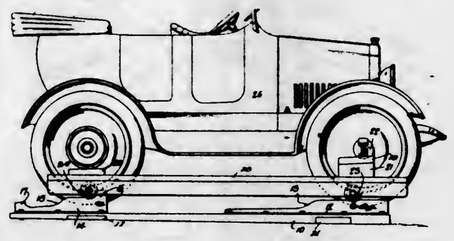


1. A draw bolt consisting of a bolt member and a socket member and means whereby said members may be forcibly drawn together, and means whereby said members may be forced apart, said first member including a pivoted strap, a cam member whereby said strap is actuated, said cam member being spring controlled, said second means consisting of a projection against which said first means may be actuated.

1,390,106. GUIDING DEVICE FOR SLEDS. WILLIAM H. EVANS, Joliet, Ill. Filed May 8, 1920. Serial No. 379,894. 1 Claim. (Cl. 280—16.)

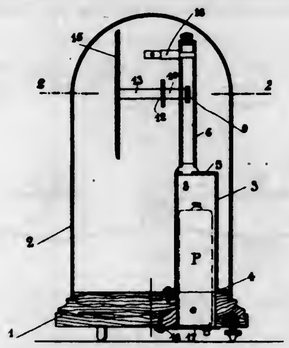
A guiding device for sleds comprising a lever, a bolt detachably and pivotally connecting the lever at a central point to the sled's body, a runner connected to one end of the lever, said lever having a slot formed in the other end, and an operating shaft journaled in the sled's body, and having a crank portion working in said slot.

1,390,107. TOOL. ROBERT FAGAN, Latimer Mines, Pa. Filed Feb. 3, 1920. Serial No. 356,092. 2 Claims. (Cl. 153—38.)



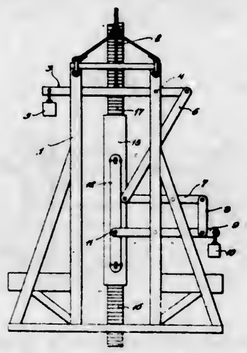
1. In a tool of the character described including a lever having vertically threaded bores in its opposite extremities, a ball pivotally secured to the lever adjacent one extremity thereof, and a jack screw operable in the threaded bore at the opposite extremity thereof, means adapted for interchangeable association with the bore of the first mentioned extremity to receive elements adapted to co-act with the article to which the tool is applied.

1,390,108. TIE AND RAIL-CLAMP. JAMES W. FALK, Little Falls, Minn. Filed Mar. 7, 1921. Serial No. 450,205. 2 Claims. (Cl. 238—31.)



1. A railroad tie comprising spaced reinforced concrete sections, means for detachably connecting the sections together, each section having recesses, a locking element for the rail fitted within the recess, a fixed jaw formed on each reinforcing element and projecting above its respective section, to engage the base of the rail at one side thereof, a movable jaw mounted upon the section and designed to engage the rail at the opposite side thereof, means for engaging the movable jaw within the tie section, and means carried by the reinforcing element for effecting an adjustment of the movable jaw.

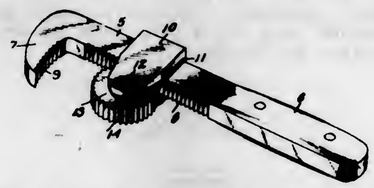
1,390,109. LIFT FOR MOTOR-VEHICLES. JOHN H. FANGMANN, Templeton, Iowa. Filed Mar. 6, 1920. Serial No. 363,651. 1 Claim. (Cl. 254—88.)



A lifting device comprising parallel longitudinal sills, connections between the sills whereby to maintain them in fixed parallel relation, front and rear track rails fixed longitudinally upon the sills and provided with downwardly and rearwardly extending inclines intermediate their ends and with supporting surfaces in advance of said inclines, upstanding stops on the rear rails at the forward extremities of said supporting surfaces, upstanding stops on said rails spaced rearwardly from the inclines thereon, a carriage having channeled side bars, rollers mounted between the side flanges of said channeled side bars to ride upon the track rails, the rollers and track rails being so spaced and so proportioned that when the forward rollers are respectively at the foot of the adjacent incline the rear rollers will be spaced rearwardly from the inclines on the rear rails and against the rear stops on said rails, cross bars connecting the channeled side bars adjacent the front and rear ends thereof and having downwardly and rearwardly inclined upper surfaces, and an abutment secured centrally upon the forward cross bar to be engaged by a traveling vehicle whereby the progress of the vehicle will cause the carriage to travel up the inclines on the track rails and lift the vehicle.

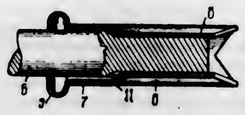
1,390,110. FRAME FOR ELECTROMAGNETIC CLOCKS. MAURICE PHILIPPE FAVRE-BULLE, Paris, France. Filed Sept. 23, 1920. Serial No. 412,339. 11 Claims. (Cl. 58—52.)

1. A frame for electro-magnetic clocks comprising a pedestal, a support fixed to said pedestal, a battery located within said support and a column on said support adapted to carry the pendulum and clock-work mechanism.



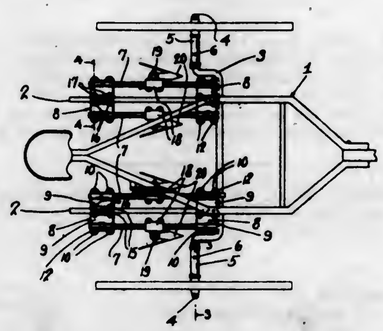
1,390,111. SAFETY DEVICE FOR ELEVATORS. ENOS JUTSAN FETTINGER, Fort Branch, Ind. Filed Sept. 24, 1919. Serial No. 325,992. 1 Claim. (Cl. 187—80.)

A safety device for elevators comprising in combination with a notched elevator guide, an elongated channel-shaped slide block embracing and slidable upon the guide, spaced notched catches located within the channel-shaped slide block and capable of independent sliding movement therein, notches formed in one face of the catches for engagement with the notches of the guide, means located upon the outside of the slide block and connecting the catches, means connecting the catch connecting means with the elevator rope for holding the catches against movement and out of engagement with the guide and cam surfaces located within the guide block in the path of movement of the catches when the latter is released by the breakage of the elevator rope to force said catches into engagement with the guide.



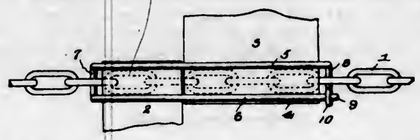
1,390,112. PIPE-WRENCH. JOHN FINDLEY, De Soto, Kans. Filed Apr. 15, 1921. Serial No. 461,466. 1 Claim. (Cl. 81—96.)

A wrench having a body, an enlarged handle thereon, an integral jaw projecting at an angle from the body and having a roughened face, a bracket slidably embracing the body provided with a flat face and rounded off ends and bearing against the back of the body, a rotary member carried by said bracket having a roughened face to



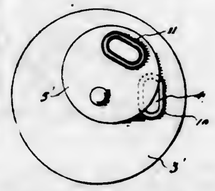
form the opposing jaw of the wrench, the roughened face of said member co-acting with the roughened face on the body of the wrench to lock the movable jaw in adjusted position, substantially as set forth.

1,390,113. CURTAIN-SUPPORT. KINGSTON FORBES, Flint, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Jan. 30, 1920. Serial No. 355,021. 4 Claims. (Cl. 296—139.)



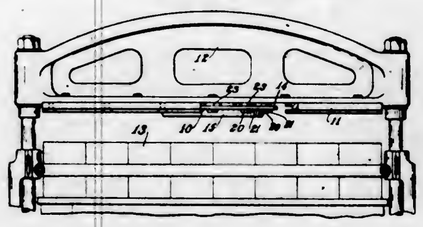
1. In a support the combination of a sheet metal socket member provided with one or more inwardly extending depressions forming internal longitudinal ribs and a rod member provided with one or more grooves in which said ribs are adapted to seat and with shoulders at the end of said grooves, said shoulders adapted to limit the entry of said rod member into said socket.

1,390,114. COTTON-BLOCKING MACHINE. BARNIE S. FORD, Coleman, Tex. Filed Oct. 19, 1920. Serial No. 417,890. 1 Claim. (Cl. 97—48.)



In a means for converting a cultivator into a cotton checking machine, the combination with such cultivator; of spaced clamps on the beams thereof, each clamp including two mating sections depressed at the confronting ends thereof to receive the cultivator beams, adjustable securing means for the sections, auxiliary beams supported at the outer ends of the clamp sections, binding means between the clamp sections and said auxiliary beams, a longitudinally adjustable clamp on each of the auxiliary beams, and a sweep plow having its shank adjustably secured on each of the last mentioned clamps.

1,390,115. BACK AND BELLY BAND HOLDER. JOHN H. FORWE, Delwood, Ill. Filed Aug. 13, 1920. Serial No. 403,337. 1 Claim. (Cl. 54—1.)



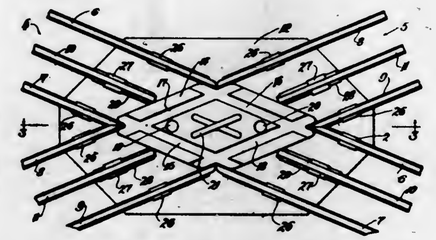
A back and belly band consisting of a single length of wire bent to provide parallel limbs for flat contact with the back and belly band and loops at the ends of the limbs for engagement with the links of a chain, one of the limbs having one end formed into a hook for snap engagement with a hook formed on one of the loops.

1,390,116. BOX. JOHN B. FOX, Chicago, Ill. Filed Oct. 18, 1920. Serial No. 417,564. 1 Claim. (Cl. 229—7.)

A box for containing and dispensing powders comprising a body open at each end, a bottom therefor comprising an annular flange frictionally gripping the outer surface of said body, a top comprising a disk and an annular flange formed thereabout frictionally gripping the outer surface of said body, said top having an opening therein, a closure disk for said opening, and a paper fastener pivotally connecting said closure disk and top, said top being outstruck about said opening, said closure disk being provided with outstruck portion for receiving the outstruck portion of said top.

1,390,117. CUTTING-DIE. WALTER B. FREEMAN, Cuyahoga Falls, Ohio, assignor to B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Mar. 22, 1920. Serial No. 367,606. 10 Claims. (Cl. 164—31.)

1. A die comprising a holder provided with a series of clamp guides, a series of clamps mounted on said guides and a cutter detachably mounted in said clamps and abutting said holder between said clamps.



1,390,118. INSULATOR. PETER CHRISTIAN CARL FRIDRICHAEN, Wheeling, W. Va. Filed June 16, 1919. Serial No. 304,521. 2 Claims. (Cl. 173—314.)

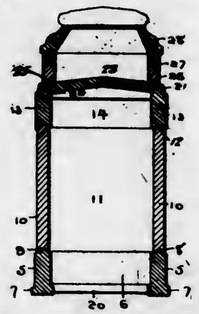
1. An insulator including cylindrical base and cap members, of uniform diameter throughout, said base member having wire receiving grooves therein, the upstanding portions of the base member lying outwardly of the grooves being of convex form, a projection defined between the grooves, said cap member having a central recess to accommodate said projection, a portion of said cap member lying outwardly of the recess forming an annular rib, said

rib being convex in cross section whereby to present a convex surface to the wire or wires disposed in the grooves and to the convex upstanding portions of the base member, and a series of radiating ribs formed by the annular rib and curved in conformity therewith to prevent longitudinal displacement of the wires disposed in the grooves.

1,390,119. CROSSOVER FOR TOY RAILWAYS. ALBIN FROHNE, Chicago, Ill., assignor to American Flyer Manufacturing Co., Chicago, Ill., a Corporation of Illinois. Filed May 31, 1921. Serial No. 473,742. 5 Claims. (Cl. 191—29.)

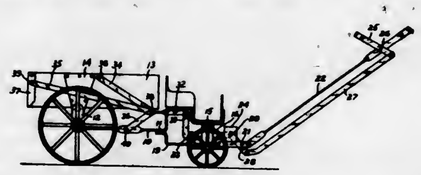
4. A cross-over for a toy electric railway including in combination a base plate, a pair of intersecting tracks having their end portions secured to said base plate, a block of insulating material in the shape of a parallelogram, recesses in the corners of said block and for the accommodation of the end portions of the respective track rails, means for securing said block to the base plate, there being grooves in the top surface of said block lying in substantial alinement with the inside edges of the respective track rails and for the accommodation of the wheel flanges of the car, third rail sections extending longitudinally of the respective track sections and having their inner ends lying adjacent to the block of insulating material and supported by and insulated from the base plate, a conducting section located in the central portion of the block and having its top surface exposed for contact by a third rail contactor, and suitable wires joining together the end portions of all of the third rail sections and said conducting section, substantially as described.

1,390,120. TROLLEY-CONTACTOR. ALBIN FROHNE, Chicago, Ill., assignor to American Flyer Manufacturing Co., Chicago, Ill., a Corporation of Illinois. Filed May 31, 1921. Serial No. 473,743. 4 Claims. (Cl. 191—49.)



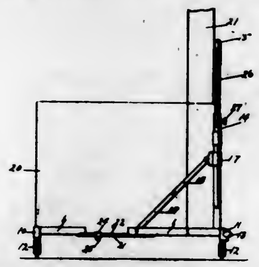
4. A trolley contactor for the purpose specified comprising a suitable support, a pair of outwardly extending separated lugs in conjunction therewith, a bifurcated member having a pair of longitudinally extending separated arms, a cross connecting bar, and a longitudinally extending shoe adapted to engage said support to thereby limit the swinging movement of said bifurcated member, a

pivotal connection between the bifurcations and the lugs aforesaid, a roller pivotally mounted between the ends of the arms of the bifurcated member, and a strip of resilient, electrically conducting material rigidly secured



to said support and having a finger spring pressed against the top surface of said roller, and tending to swing the bifurcated member to carry its shoe against said support, substantially as described.

1,390,121. BURIAL-VAULT. PETER I. FROST, Cedarhurst, N. Y. Filed May 15, 1919. Serial No. 297,382. 1 Claim. (Cl. 72—7.)



In a vault of the character described comprising a substantially rectangular base having vertical sides and end portions being enlarged at their lower edges, ribs formed on the top edges of the sides of the said base, vertical, side body walls having top ribs and bottom grooves interlocking with the ribs of the sides of said base, end walls having vertical ribs interlocking in grooves formed in the ends of the side body walls, each of the side body walls being formed of two complementary sections and having substantially Z-shaped, overlapping, interlocking meeting edges, intermediate of the wall, enlarged side and end members having bottom grooves therein superposed and interlocked with the top ribs of the body walls, said enlarged members having tapered, top ribs confining shoulders, a sectional, reinforced closure plate having spaced recesses along its sides and ends seated on said shoulders, supplemental top members having integrally formed lugs seated within the said recesses, and retaining the closure plate in position on said enlarged members, and a memorial top structure seated on and interlocked with the supplemental top members.

1,390,122. TOY DUMP CART OR WAGON. CHARLES E. GILBERT and ANDROV H. CARLSON, Bridgeport, Conn. Filed Apr. 8, 1920. Serial No. 372,140. 4 Claims. (Cl. 298—19.)

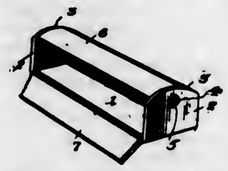
1. A toy dump cart or wagon, comprising a running gear having a body and a handle pivoted thereto, a tail gate pivoted to the body, a dumping lever pivoted to the handle, toggle arms, and means connecting the toggle arms with the dumping lever, said connecting means including bell crank levers adjacent arms of which are loosely connected so that said levers may have angular movement with respect to each other, whereby said dumping lever may be actuated to tilt said body and throw said tail gate on its pivot regardless of the relative angular positions of said bell crank levers.

1,390,123. TRUCK. LEON L. GILKEY, Detroit, Mich., and CHESTER H. BRASELTON, New York, N. Y. Filed June 26, 1916. Serial No. 105,932. Renewed Feb. 2, 1921. Serial No. 442,010. 9 Claims. (Cl. 280—61.)

1. In a device of the class described, the combination of a trunk supporting platform provided with upright flanges for positioning the trunk, two of said flanges being disposed a short distance in front of the rear corners of said platform, casters supporting said platform and mounted in the corners thereof, and a cover supporting frame pivotally connected to the rear corners of said platform.

1,390,124. PRESSING-PAD. CHARLES M. GOUGH, East St. Louis, Ill., assignor of one-half to John Kittinger, East St. Louis, Ill. Filed June 15, 1920. Serial No. 389,127. 1 Claim. (Cl. 68—9.)

A pressing pad composed of upper and lower layers of copper mesh wire with coiled brass springs between them and fixed thereto, laterally spaced reinforcing rods secured to and extending longitudinally of the bottom of the pad, a plurality of pliable metal attaching straps arranged transversely of said bottom under said rods with their ends projecting beyond the side edges of the pad and adapted to be bent around a steam chest, similar straps arranged longitudinally of the ends of the pad and secured to two of said transverse straps between said rods, a fabric covering arranged over said top, sides and ends of the pad, a layer of fibrous material interposed between it and the upper mesh wire, the bottom affording a substantially unobstructed passage for the steam to the interior of the pad.



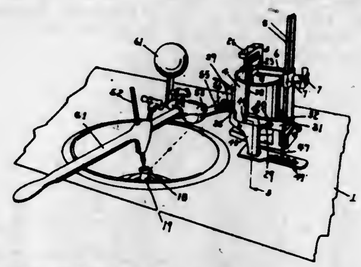
1,390,125. CIGAR-BOX-LID HOLDER AND DISPLAY-TICKET. CHARLES SMITH GUNTER, Spruce Pine, N. C. Filed Oct. 11, 1919. Serial No. 329,909. Renewed July 30, 1921. Serial No. 488,676. 1 Claim. (Cl. 40—7.)

A cigar box attachment comprising a substantially U-shaped member formed of resilient wire having arms of unequal length and slightly converging, said arms being engageable against the inner side of a cigar box wall and underside of the lid when the lid is swung entirely open into engagement with the box wall upon which it is

hinged, the bight portion of said member being disposed over the hinged edges of the box-wall and the lid, in combination with a tag disposable flat against said edges and provided with spaced holes for the passage of said arms.

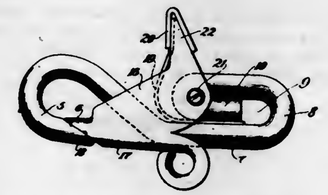
1,390,126. PUTTYING-TOOL. CHARLES HALASKA, Jr., Milwaukee, Wis. Filed Jan. 25, 1921. Serial No. 439,852. 4 Claims. (Cl. 18—3.5.)

1. As a new article of manufacture, a glazier's tool comprising a body having upturned ends, a handle secured to said upturned ends and a smoothing blade extending longitudinally along one edge of said body at an acute angle to the body.



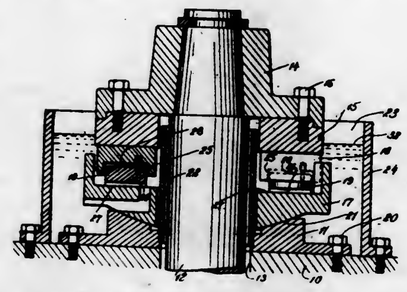
1,390,127. CLOCK AND CALL-BELL. EUGENE ISAAC HALSTEAD, Plainville, Wis. Filed Aug. 18, 1919. Serial No. 318,212. 1 Claim. (Cl. 116—155.)

A call attachment for alarm clocks, comprising a U-shaped member for insertion between an alarm clock and its bell to connect the bell to the clock, a tubular stud projecting from said member for insertion into the engaged bell, a ring carrying member engaging the stud to secure the bell on the member, a lever fulcrumed in the member and having an extension at its pivot end, said lever constituting a striker, and a plunger slidably mounted in the tubular stud and engaging the extension of the lever to operate said lever as a striker.



1,390,128. ABRADANT-SUPPLYING APPARATUS. WALTER G. HASTINGS, Battle Creek, Mich. Filed Apr. 12, 1920. Serial No. 373,119. 12 Claims. (Cl. 51—263.)

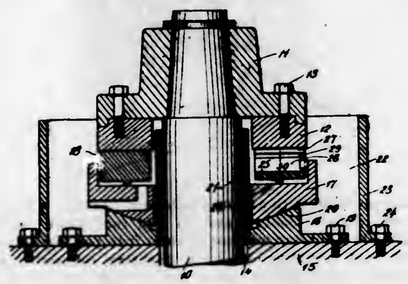
1. In a structure of the class described, the combination of a driving spindle provided with a head, a circular spiral inwardly beveled actuating cam on said spindle head, an abradant receptacle mounted on said head within said cam, a frame member depending into said receptacle, an agitator on said frame member, a pump mounted on said frame member, a pump actuating lever pivoted on said frame member, an actuating spring for said pump lever, a pivotally mounted actuating member beveled to coact with said actuating cam, a link connecting said actuating member to said pump lever, a plurality of timing cams, driving connections therefor to said driving spindle, a rock



shaft provided with an adjustable arm co-acting with said timing cams, a control arm on said rock shaft coacting with said actuating member to move it to position to coact with said actuating cam, and a spring connecting said actuating member and control arm so that when the actuating member is released from the actuating cam, it is returned to its inoperative position.

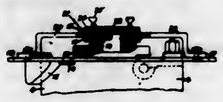
1,390,129. SNAP-HOOK. EMIL C. HESSE, Chicago, Ill. Filed June 13, 1921. Serial No. 477,123. 4 Claims. (Cl. 24—233.)

1. A hook of the kind described, comprising a body that is bent upon itself to provide two parallel sections, a spring clamped between said sections and held thereby, a rocker frame engaged by the spring and having spaced walls on either side of the hook body pivotally connected thereto, the hook body having at one end a hook adapted to be closed by the frame under the tension of the spring, substantially as described.



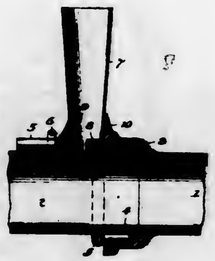
1,390,130. BEARING. HARRY A. S. HOWARTH, Pittsburgh, Pa., assignor to Albert Kingsbury, Pittsburgh, Pa. Filed Nov. 17, 1917. Serial No. 202,446. 28 Claims. (Cl. 64—25.)

1. A thrust bearing comprising a base, a bearing member, and an interposed pivot block constructed to permit



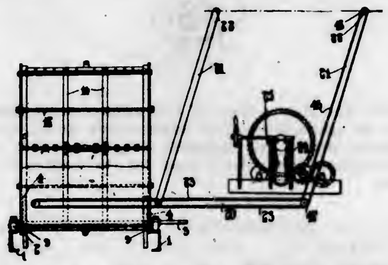
tilting movement in one plane between the base and the block and tilting movement in a cross plane between the block and the bearing member.

1,390,131. BEARING. HARRY A. S. HOWARTH, Pittsburgh, Pa., assignor to Albert Kingsbury, Pittsburgh, Pa. Filed Nov. 14, 1917. Serial No. 201,915. 29 Claims. (Cl. 64—25.)



1. A thrust bearing member having a thrust surface and a yielding portion adapted to establish an oil film on the thrust surface, and means for supporting said member to prevent tilting thereof circumferentially of the axis of the bearing.

1,390,132. CONTINUOUS WIRE-DRAWING MACHINERY. MARK HOWARTH, Padgate, Warrington, England. Filed July 14, 1920. Serial No. 396,053. 6 Claims. (Cl. 205—14.)

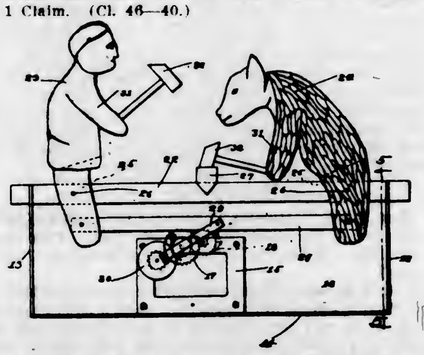


1. In wire drawing machinery, a drawing block, feeding off means in connection therewith capable of relative motion with same, and means for securing the feeding off means in adjustable frictional relation to the block, with said feeding off means adapted to be operated upon by the wire in passing from one block to another; substantially as set forth.

1,390,133. GATE FOR POURING PIPE-JOINTS. ROBERT B. HOWELL, Omaha, Nebr., and CHARLES A. HOWELL, Ann Arbor, Mich. Filed May 7, 1920. Serial No. 379,655. 7 Claims. (Cl. 25—127.)

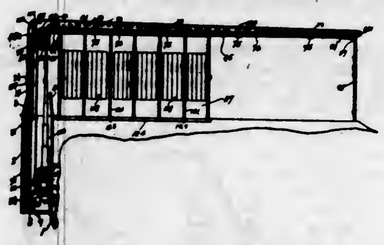
1. As a new article of manufacture, a gate for use in producing poured pipe joints, formed of paper and having its lower end cut away or removed at one side.

1,390,134. MOLDING OF CONCRETE PRODUCTS. WALTER REGINALD HUME, Adelaide, South Australia, Australia, assignor to Hume Pipe & Concrete Construction Company, Limited, London, England. Filed Feb. 12, 1920. Serial No. 358,204. 17 Claims. (Cl. 25—30.)



1. A concrete molding machine including a cylindrical molding casing adapted to contain a considerable body of concrete and comprising a plurality of sections, retaining rings situated at each end of the molding casing with recesses for receiving said sections and supporting rollers adapted to drive frictionally the cylindrical casing by contact with said retaining rings.

1,390,135. BATHING-SUIT. CARL C. JANTZEN, Portland, Oreg., assignor to Jantzen Knitting Mills, a Corporation of Oregon. Filed Nov. 12, 1920. Serial No. 423,587. 1 Claim. (Cl. 2—144.)



In a one piece bathing garment of the class described, a body, a trunk portion attached thereto, the rear waist line of said trunk portion being cut along a curved line and stitched to the body, whereby the rear of the trunk portion is longer than the front thereof, a substantially triangular gusset, twice the length at the rear of the garment than at the front thereof stitched to the trunk portion to allow for binding in the seat and back of the garment due to distortion of the body.

1,390,136. AUTOMATIC TOY. JOHN KING KAHL, St. Louis, Mo. Filed Nov. 10, 1919. Serial No. 336,842. 1 Claim. (Cl. 46—40.)

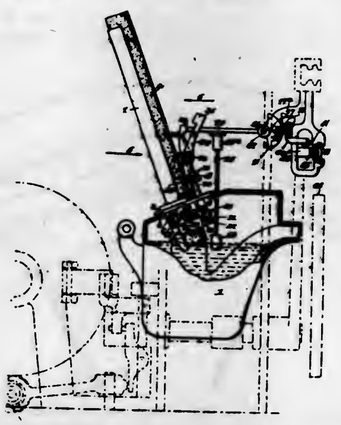
In a device of the character described, a casing, said casing including side walls, pivot pins connecting the side walls adjacent to the ends thereof, a cross bar, end walls forming a part of the casing and having connection with the cross bar, said pivot pins extending through the cross bar, figure members, said figure members having bifurcated portions adapted to embrace portions of the cross bar, said pivot pins passing through the bifurcated portions of the figure members, a rod connecting the lower extremities of the bifurcated portions adjacent to the lower ends thereof, a motor positioned within the casing, a connecting rod operated by the motor and connected to the rod for imparting reciprocating motion thereto, for operating the figure members.

1,390,137. AUTOMOBILE-COVER. PERCIVAL FAULKNER KING, Vancouver, British Columbia, Canada. Filed Dec. 28, 1918. Serial No. 268,729. 11 Claims. (Cl. 296—117.)

4. The combination with a vehicle, of a normally collapsed vertically extensible frame carried at the rear of the vehicle, a normally collapsed horizontally extensible frame carried by said first frame, a power shaft, means for extending said first frame operable from said power shaft, and means for extending said second frame arranged to be operated from said power shaft upon the full extension of said first frame.

1,390,138. BISCUIT AND DOUGHNUT CUTTER. GRACE E. KIRKPATRICK, Leadwood, Mo. Filed Mar. 1, 1920. Serial No. 362,314. 2 Claims. (Cl. 107—51.)

1. A convertible cutter of the type indicated consisting of a hollow trunco-conical tube of sheet material provided in its side wall adjacent to the reduced extremity thereof with a lateral opening, the tube being provided with cutting edges at both the large and small ends.

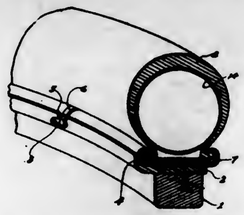


1,390,139. PRIMING-CUP. CHARLES H. KNOBBS, Philadelphia, Pa. Filed Sept. 19, 1919. Serial No. 324,837. 1 Claim. (Cl. 123—187.5.)

A priming cup comprising a casing formed at its bottom with a reduced extension threaded for engagement within a threaded hole in the cylinder head of an engine, said extension being formed with a bore leading into a valve seat at its juncture with the casing, a threaded extension at the top of the casing having a central threaded opening, and an inlet port and a small passage formed in said last named extension near the side thereof, a cap upon

said upper extension and having a handle whereby it may be rotated, said cap having a port and a passage adapted to register with the first named port and passage, a valve normally closing said seat and having a stem threaded through the threaded opening in the upper extension of the casing and passing revolubly through the cap, and a handle at the upper end of said stem.

1,390,140. METAL-FEEDER FOR LINOTYPE AND SIMILAR MACHINES. JOHN HENRY W. KNOOP, Highland Park, Pa., assignor to Knoop Metal Feeder Company, Wilmington, Del., a Corporation of Delaware. Filed Nov. 10, 1919. Serial No. 336,994. 11 Claims. (Cl. 22—80.)

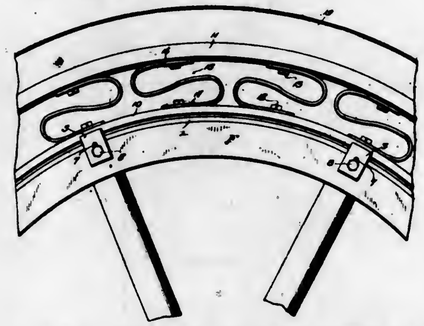


1. The combination in linotype and similar machines, of means for operating the driving mechanism; a lever for preventing the operation of the said mechanism and stopping the machine; a metal pot for molten metal; means for feeding pig metal into the pot; and a float in the pot, said float actuating the means for stopping the machine when the metal in the pot is above or below the normal level.

1,390,141. AUTOMOBILE-WHEEL RIM. AUGUST J. KOHANSKI, Chicago, Ill. Filed Oct. 23, 1920. Serial No. 419,014. 5 Claims. (Cl. 301—17.)

1. In a wheel rim structure, the combination of a wheel rim, a demountable tire carrying rim adapted to

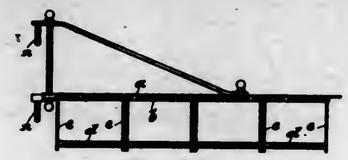
be moved laterally upon the wheel rim, lugs on the wheel rim, and straps carried by said demountable tire



carrying rim for engagement with said lugs to lock the rims against relative lateral movement.

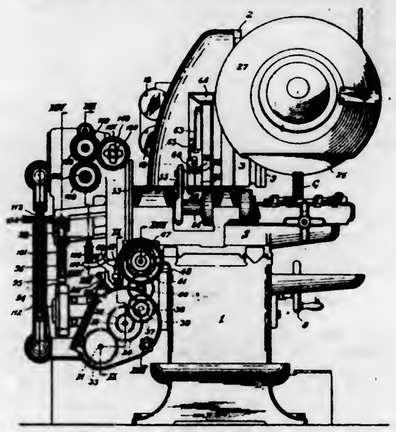
1,390,142. CANNING APPARATUS. EMIL W. B. KUGEL, Benedict, Nebr. Filed Mar. 18, 1921. Serial No. 453,506. 5 Claims. (Cl. 53—1.)

1. In a cooker of the class described, a vessel, a cellular structure mounted intermediate the top and bottom of said vessel, a metal strip carried by the bottom of the vessel and having an upstruck portion arranged below one of the cells of said structure to form a container support and spacer.



1,390,143. SPRING-TIRE. ARTHUR L. LASNIER, Bristol, Conn. Filed Jan. 29, 1921. Serial No. 441,041. 1 Claim. (Cl. 152—32.)

A resilient vehicle tire composed of radially spaced wheel rims connected by a series of springs, each spring being composed of a metal strip bent to form parallel ovate loops of uniform size, arranged to open in opposite directions with the terminals thereof bowed inwardly and provided at the crown of said bowed portions with fastener receiving apertures, whereby said ends operate as lock washers when forced into engagement with the rim.

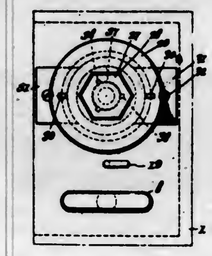


1,390,144. MEANS FOR SUPPORTING GARMENT-HANGERS. JOHN ALGERNON LAUNDER, Newcastle-upon-Tyne, England, assignor to J. A. Launder & Company Limited, Newcastle-upon-Tyne, England. Filed Sept. 29, 1919. Serial No. 327,212. 1 Claim. (Cl. 211—16.)

In means for supporting garment hangers, the combination of a supporting rail having an open-ended slot formed by inturned depending portions, and a plurality of interchangeable and removable sliding carriers each comprising a pair of end plates perpendicular to said rail

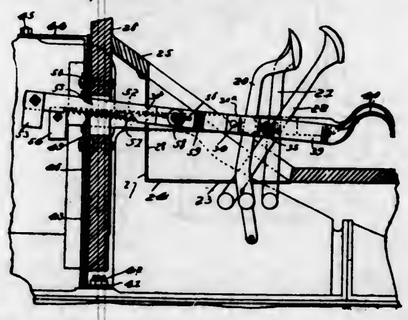
and having lateral recesses at the top to receive the inturned portions of said rail, and a rod extending between said end plates parallel with and directly below said rail for supporting the garment hangers.

1,390,145. GEAR-GRINDER. ERNEST J. LESS, Cleveland, Ohio, assignor to Hosea T. Bradner, Cleveland, Ohio. Filed Sept. 2, 1919. Serial No. 321,010. 34 Claims. (Cl. 51—52.)



1. In apparatus of the class described, the combination of a frame, a slide movable thereon, a spindle rotatably mounted upon said slide, means for rotating said spindle, a segment arranged to rotate with said spindle, and flexible means connecting said frame and segment and adapted to effect the bodily movement of said spindle.

1,390,146. IMPULSE-COUPLING. ALBION D. T. LIBBY, East Orange, N. J., assignor to Splitdorf Electrical Company, Newark, N. J. Filed Oct. 22, 1920. Serial No. 418,851. 6 Claims. (Cl. 123—149.)

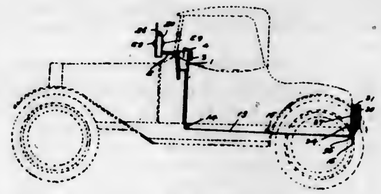


1. An impulse coupling comprising a driving and a driven member, a post in one of said members, a rod slidable in said post, heads on said rod, a bumper spring interposed between the post and one of said heads, a pin on said other member engaging said last mentioned head, and a compression spring abutting said pin and the other of said heads.

1,390,147. LOCK. JULES MACÉ, Grasse, France. Filed Nov. 4, 1920. Serial No. 421,751. 7 Claims. (Cl. 70—75.)

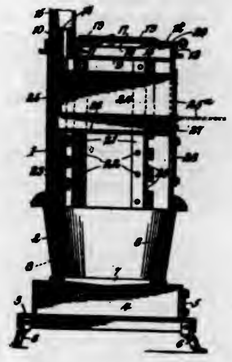
1. In combination, a movable locking bolt, a latch adapted to hold said bolt against movement, rotatable tumblers supported relatively to said latch whereby to prevent the latter from movement, said tumblers provided with slots therein adapted to be brought into alinement to receive a portion of the latch to permit movement thereof, said tumblers having cutaway central portions, a key fitted through the cutaway central portions of the tumblers, coöperating projections on the key and tumblers adapted to be brought into engagement, said projections on the tumblers being adjustable angularly with respect to the projections on the key, substantially as described.

1,390,148. CLUTCH CONTROL FOR AUTOMOBILES. FAYE S. MAYNARD, Ararat, Pa. Filed Sept. 25, 1919. Serial No. 326,147. 3 Claims. (Cl. 74—81.)



1. A locking device for the clutch pedal of an automobile having a latch bar pivotally mounted at an intermediate point upon said pedal and provided at one end with a heel plate within reach of the foot positioned on the pedal, said latch bar having ratchet teeth at its lower edge and a notch at its upper edge, and detents for engagement respectively by said teeth and said notch for the purpose specified.

1,390,149. SAFETY STARTING DEVICE FOR INTERNAL-COMBUSTION ENGINES. ROBERT A. MILLER-ARGUE, Essendon, Melbourne, Victoria, Australia. Filed Oct. 18, 1920. Serial No. 417,670. 5 Claims. (Cl. 123—185.)

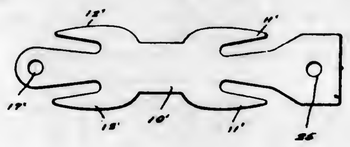


1. In a safety starting or cranking device for internal combustion engines, the combination of a starting handle, a clutch member carried thereby, an inclined cam face or faces carried by the starting handle or its clutch member and a declutching element comprising a hinged cavity actuated pawl provided with a step or shoulder having an inclined face adapted to coöperate with the inclined cam face of the starting handle to disengage said clutch member from the engine shaft when the latter is rotated in a reverse direction, for the purpose specified.

1,390,150. AUTOMOBILE-SIGNAL. LAWRENCE J. MILLER and WARREN W. CHRISTIAN, St. Louis, Mo. Filed May 20, 1920. Serial No. 382,855. 6 Claims. (Cl. 116—51.)

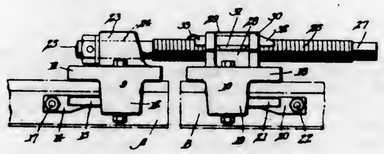
1. An automobile signal comprising a shaft journaled for rotation, said shaft having a squared end portion, a signal, and members carried by the signal and arranged in cruciform relation with respect to each other and spaced from each other thereby leaving a socket which receives the forward portion of the shaft.

1,390,151. STOVE. CARL J. MITISKA, Howell, Ind. Filed May 21, 1920. Serial No. 383,278. 3 Claims. (Cl. 126—58.)



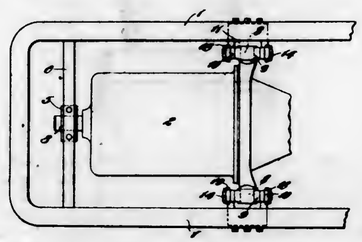
1. A stove comprising a fire pot, a drum mounted above the fire pot, an air chamber provided at the top of the drum, damper-controlled means connecting the air chamber with the exterior of the stove so as to supply said chamber with fresh air, and vertically disposed conduits arranged around the interior walls of the drum and communicating at their upper ends with the air chamber and at their lower ends with the fire pot, said conduits being provided with a plurality of air outlets in their side walls located at different points of the conduits.

1,390,152. LINE-HOLDER. NELSON B. MILTNER, Perth Amboy, N. J. Filed Apr. 11, 1921. Serial No. 460,325. 3 Claims. (Cl. 24—129.)



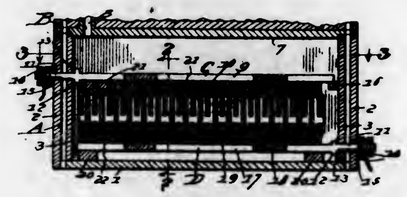
2. A line attachment comprising a plate adapted to be secured to one end of the line, one end of the plate being bifurcated defining separate portions, a spool journaled

between said separated portions and over which the line is adapted to be trained, and spaced fingers projecting



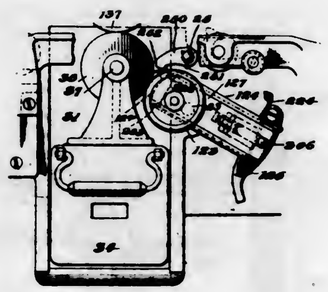
from the sides of the plate and about which the end of the line is adapted to be wrapped for the purpose specified.

1,390,153. RAIL-JOINT CLOSER. IRA NAYLOR and JAMES C. TUCKER, Braxton, W. Va. Filed Jan. 31, 1921. Serial No. 441,379. 4 Claims. (Cl. 254—43.)



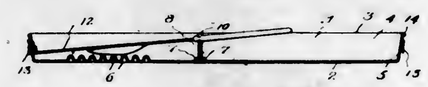
1. A device of the character described comprising a pair of members designed to be secured upon the end portions of meeting rails, a bracket on each member, one bracket being formed with a smooth bore and the other being formed with a split nut capable of being opened, and a screw having one end revolubly engaged through said smooth bore and having its other end portion threadedly engaged within said split nut.

1,390,154. MOTOR SUSPENSION. BOUDEWIJN B. NEUTEBOOM, Detroit, Mich., assignor to The Militor Corporation, New York, N. Y., a Corporation of New York. Filed Aug. 19, 1918. Serial No. 250,441. 6 Claims. (Cl. 180—64.)



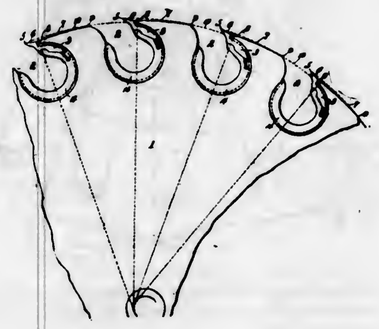
1. Means designed to yieldingly connect two elements, one consisting of a motor structure and the other a vehicle frame and comprising a bearing block having a transverse cylindrical bore within which is journaled a correspondingly shaped projection of one of said elements, said block having cylindrical recesses in its ends, and a member carried by the other element and having opposed branches between which the bearing block fits, and means extending through the branches into the recesses of the bearing block thereby to support it for oscillation on an axis substantially at right angles to that of the projection.

1,390,155. ELECTRIC ACCUMULATOR. ALBERT NODON, Bordeaux, France. Filed Nov. 9, 1918. Serial No. 261,900. 6 Claims. (Cl. 204—29.)



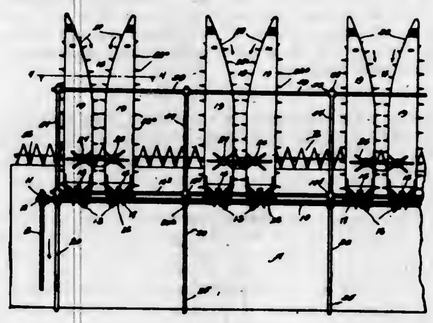
1. An electric accumulator embodying positive plates and a depolarizing oxid applied to but restricted to a definite area on the plates.

1,390,156. POSTAGE-METER AND MAIL-MARKING MACHINE. JACOB W. OGDEN, Stamford, Conn., assignor to Pitney-Bowes Export Corporation, Stamford, Conn., a Corporation of Delaware. Filed Nov. 22, 1920. Serial No. 425,776. 25 Claims. (Cl. 101—352.)



1. In a machine of the character specified, a removable printer; an inker; an adjustable support for said inker whereby it may be moved into position to contact with the printer or out of position to contact therewith; disconnectible means to hold the inker out of operative position; and means whereby the inker can not be moved into position to contact the printer until the printer is properly positioned in the machine; and means whereby removal of the printer from operative position is prevented until the inker is moved out of operative position.

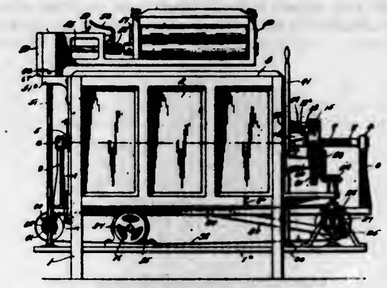
1,390,157. TRAY. GEORGE E. OHDE, Milwaukee, Wis. Filed Apr. 22, 1921. Serial No. 463,738. 2 Claims. (Cl. 65—65.)



1. A tray for supporting knives, forks and spoons stamped to provide a bottom provided with up standing ribs and up standing side walls, a supporting plate held in an upright position to support the handles of said knives, forks and spoons, and a flange secured to the tray to support the blade portion of the knives.

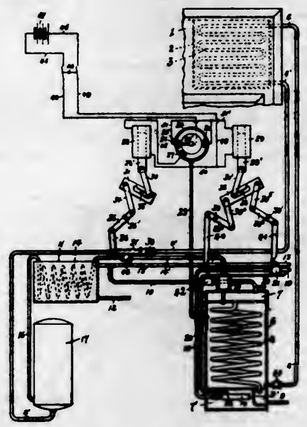
1,390,158. ICE-SAW. BYRON B. PHILLIPS, Hudson, N. Y., assignor to Gifford-Wood Co., Hudson, N. Y. Filed June 17, 1918. Serial No. 240,362. 4 Claims. (Cl. 262—33.)

1. A circular saw for cutting ice, provided with a circular series of cutting teeth each having a throat and an abutment back of and spaced from the tooth and projecting outwardly from the body of the saw and adapted to bear against the ice at the forward edge of the saw kerf.



1,390,159. ATTACHMENT FOR BROADCAST HEADERS. FILMORE M. PAICE, Floydada, Tex. Filed July 28, 1920. Serial No. 399,584. 5 Claims. (Cl. 56—106.)

1. The combination with a broad cast header, of a plurality of elevators detachably connected therewith and adjustable toward and from one another whereby to accommodate rows having varying distances between them, a shaft having operative connection with the driving mechanism of the header, and means adjustable longitudinally upon said shaft and operatively connected with the elevators whereby to drive the same.

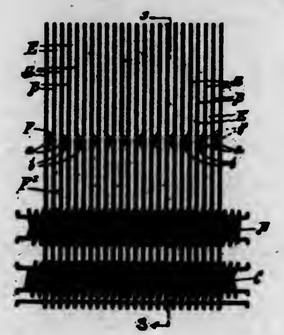


1,390,160. WASHING-MACHINE. LOUIS T. PRICE, Portland, Oreg. Filed Nov. 17, 1920. Serial No. 424,706. 4 Claims. (Cl. 68—18.)

1. In a washing machine, a supporting structure, a closed fluid receptacle mounted therein, a clothes container mounted in said receptacle, journals at the ends of said container extending through opposed walls of said receptacle, a carrier mounted to reciprocate longitudinally relatively to said receptacle and having connections between it and said journals whereby the actuation of said

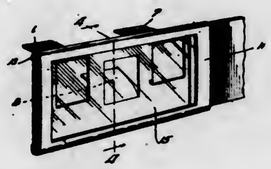
carrier operates to reciprocate said container, and means for simultaneously operating the carrier and rotating said container.

1,390,161. REFRIGERATING-MACHINE. WALTER C. RADDANT, Pittsburgh, Pa., assignor, by direct and mesne assignments, to Domestic Refrigerating Co., Coraopolis, Pa. Filed Apr. 4, 1918. Serial No. 226,620. 2 Claims. (Cl. 62—5.)



1. In a refrigerating apparatus, a container for a solution of calcium chlorid, a container for a solution of aqua ammonia and having a conductor coil extending therethrough, a condenser including a circulating coil communicating with the aqua ammonia container, a water conductor leading into and from the condenser, a branch between the water conductor and the container for the aqua ammonia externally of the solution therein, a controlling valve within said branch, means for supplying heat to the aqua ammonia container and having a controlling valve, a storage tank communicating with the condenser, a conductor medium extending into the calcium chlorid container, a delivery conductor between the storage tank and the conductor medium of the calcium chlorid container and having a controlling valve, a return conductor between the conductor of the calcium chlorid container and the aqua ammonia container, and means controlled by the pressure generated by heat in the aqua ammonia container for actuating the controlling valve.

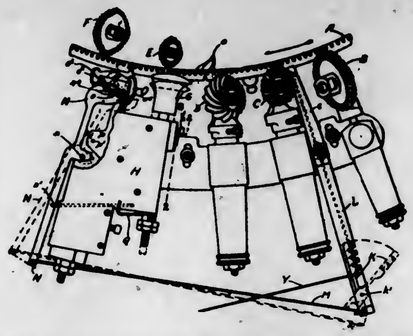
1,390,162. LEASE COMB AND REED. THOMAS K. REA, Charlotte, N. C. Filed Apr. 5, 1921. Serial No. 458,798. 4 Claims. (Cl. 28—30.)



1. In a lease comb or reed, the combination with a series of dents formed of resilient metal strips each hav-

ing their opposite sides bent inward intermediate of their length to form a groove with rounded lips on either side thereof, of a second series of dents each provided with a prong adapted to project into the groove of the opposite

dent, the said first and second series of dents being grouped in pairs with an unobstructed passage for the yarn between each of said pairs on the reverse side of the dents from said tongues and lips, respectively.



1,390,163. DISPLAY-CLIP. FRANK W. RICHEY, Chicago, Ill., assignor to Wilhelmina F. Richey, Chicago, Ill. Filed Feb. 7, 1921. Serial No. 443,064. 2 Claims. (Cl. 40—11.)

1. As a new article of manufacture, a display clip of the class described comprising a single rectangular piece of sheet metal having its upper and lower edges folded over adjacent to one face for the provision of card retaining grooves, and having two tongues struck rearwardly from the material of the clip adjacent to its upper edge, and a central tongue struck rearwardly from the material of the clip adjacent to its lower edge and at a point between the two tongues first mentioned, and a window slide having its upper and lower edges flanged rearwardly and toward each other and of a size to embrace the upper and lower portions of the clip between them, said window slide having a central perforation, and a suitable transparent window in the slide and behind the perforation, substantially as described.

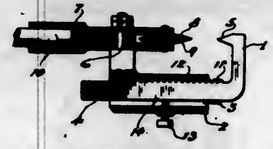
1,390,164. MULTIPLE-FEED CIRCULAR SPRING-NEEDLE KNITTING-MACHINE. ALFRED A. ROY, Lowell, Mass., and PETER J. LANDRY, Pelham, N. H. Filed Dec. 20, 1919. Serial No. 346,297. 2 Claims. (Cl. 66—7.)

1. In a circular knitting machine, in combination, a plurality of needles, a presser, means to hold said presser in position to close said needles successively, yarn controlled means effective to withdraw said presser to inoperative position, and controlling mechanism for said latter means, said mechanism comprising a latch to hold said presser in operative position, a cam wheel rotatable by engagement with a continuously moving part of the

machine, connections from said cam wheel to said latch, and yarn controlled means for advancing said cam wheel to engaging position.

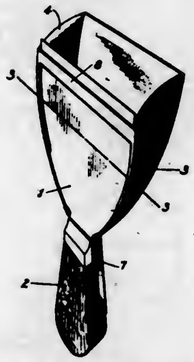
1,390,165. CALK-LOCK. EDWARD C. SADLER, Portland, Oreg., assignor to Theo. Bergmann, Portland, Oreg. Filed Jan. 25, 1921. Serial No. 439,714. 8 Claims. (Cl. 36—67.)

1. In combination, a shoe calk having an annular shoulder for determining its depth of penetration into the heel or sole of a boot or shoe, and locking means adapted to be secured in the under surface of the boot or shoe and engage the opposite sides of the annular shoulder of the calk for securing the latter from accidental displacement from normal position.



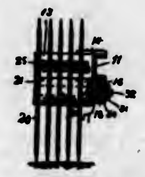
1,390,166. MEANS AND METHOD FOR MAKING SIGNS. CHARLES P. SALGER, Philadelphia, Pa. Filed Sept. 18, 1920. Serial No. 411,118. 1 Claim. (Cl. 101—127.)

A means for making signs comprising a cylindrical stencil member consisting of a pair of semi-circular elements having a plurality of openings formed therein, bands secured to the upper and lower ends of one of said elements, bolts carried by one end of said bands, bands secured to the upper and lower ends of the opposite element hingedly connected to the bands aforesaid and provided with flexible apertured extensions adapted to receive said bolts and winged nuts mounted on the other ends of said bolts and adapted to engage said extensions.



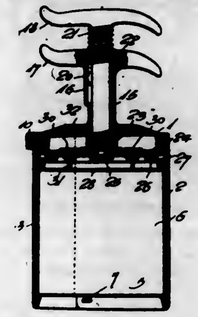
1,390,167. SPRING-LEAF SPREADER. HAROLD C. SCHUSTER, Oconomowoc, Wis. Filed Oct. 9, 1920. Serial No. 415,924. 1 Claim. (Cl. 81—3.)

A spring-leaf spreader comprising a jaw having a slot extending therethrough and provided with teeth on the upper inner wall of said slot throughout the entire length of the body, an adjustable jaw extending through said slot and provided with a plurality of teeth for interengagement with the first-named teeth, a stub shaft on said first-named jaw, a lever pivotally mounted upon said stub



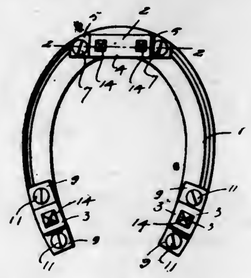
shaft, a spreading disk rotatably carried by said lever and provided with a wedge-shaped perimeter, said lever provided with a socket in its end remote from said spreading disk, and a rod inserted into said socket to increase the leverage of the lever.

1,390,168. SCRAPER ATTACHMENT. BERNARD SEELIG, New York, N. Y., assignor of one-half to Elias Roth. Filed Dec. 15, 1919. Serial No. 345,094. 2 Claims. (Cl. 72—137.)



1. An attachment for scrapers, having a blade and a handle therefor, embodying a casing provided with an open side and an open end, and flanges along the walls of the casing adjacent the open side thereof and adapted to resiliently engage with the lateral edges of the blade of the scraper to clamp said blade in position to close the open side of the casing and detachably mount the casing on the scraper, and a handle portion formed on the casing and positioned to underlie a portion of the handle of the scraper, so that the hand of an operator, grasping the scraper, will embrace the handle portion of the casing and maintain the casing against inadvertent disengagement from the scraper.

1,390,169. HARROW. CLARENCE KAST SEIFRIED, Grayville, Ill. Filed Sept. 17, 1920. Serial No. 410,912. 2 Claims. (Cl. 55—30.)

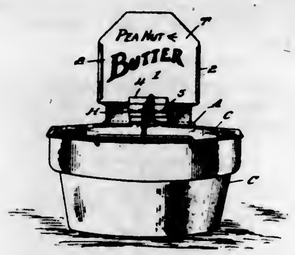


1. In a disk harrow, a supporting frame including forward and rearward members in spaced parallel relation, a shaft supported by said frame between said forward and rearward members, a plurality of disk cutters mounted upon said shaft in spaced relation, and a plurality of clearer blades extending respectively between said blades and mounted for oscillation in said forward and rearward frame members.

1,390,170. LARD AND BUTTER CUTTER. WILLIAM H. SHAFFER, Cumberland, Md. Filed Dec. 13, 1920. Serial No. 430,342. 18 Claims. (Cl. 226—19.)

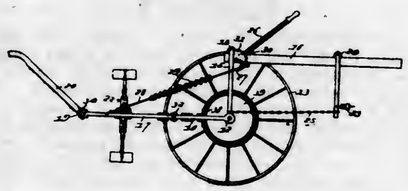
1. A receptacle holding and plastic cutting device comprising a tubular body open at one end and having a head at its second end, the wall portion of the body having a stationary section and a movable section pivotally connected with the stationary section, securing means for releasably holding the movable section in an operative position, and means carried by the securing means for moving the movable wall section toward an open position when the securing means is moved to release the movable wall section.

1,390,171. HORSESHOE. JASPER P. SLATER, Charleston, W. Va., assignor of one-half to J. M. Chase, Charleston, W. Va. Filed Mar. 20, 1918. Serial No. 223,654. 1 Claim. (Cl. 168—32.)



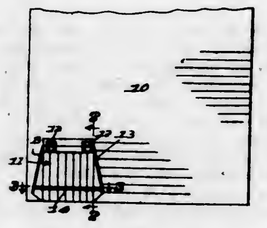
A horseshoe calk having ears for the passage of fastening means therethrough, a body joining said ears, said body having an opening therethrough and a relatively thin wall surrounding the opening, a calk for removable disposition in and projection beyond said opening, said body at said wall in the absence of said calk adapted to service directly as a calk or tread with its traction increased by the provision of said opening, and said ears being flattened above the tread surface of the body to prevent undue contact with the road and consequent wear of the fastening means passing through the ears.

1,390,172. PRICE-TAG OR CARD HOLDER. ERVIN H. SMITH, New London, Wis. Filed Oct. 5, 1920. Serial No. 414,799. 2 Claims. (Cl. 40—11.)



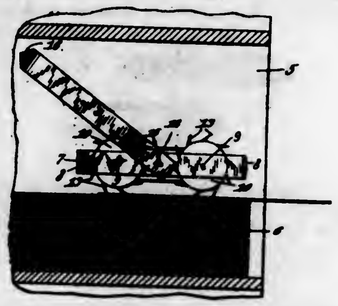
1. A device of the class described comprising a sheet metal plate provided with card retaining flanges, the lower

edge of said plate having an upturned inwardly extending spring slip for clampingly engaging a card to be held, and



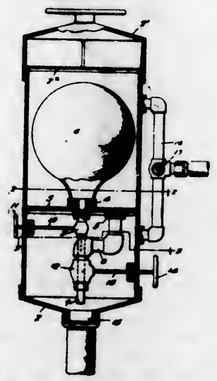
support engaging means carried by said plate comprising laterally rearward, downward and forwardly extending flanges.

1,390,173. CORN AND COTTON CHOPPER. JAMES C. SMITH, Havana, Ark. Filed Feb. 26, 1920. Serial No. 361,456. 3 Claims. (Cl. 97—46.)



2. A machine for the purpose indicated comprising a main frame having ground wheels, and a chopper frame disposed in trailing position with reference to the main frame, the said chopper frame comprising spaced side bars each universally connected at its forward end to the rear of the main frame, transverse forward and rear bars spanning the side bars of the chopper frame and pivotally connected to the latter, a chopper wheel, a chopper shaft rotatably mounted in bearings in the said side bars and composed of sections by means of which it becomes extensible, means for communicating motion from the ground wheels to the said shaft, and handles carried by the rear transverse bar of the chopper frame, whereby lateral movement may be imparted to the latter for the purpose specified.

1,390,174. AUTOMATIC DOOR. JOHN ERNEST SPECKER, Ree Heights, S. D. Filed May 7, 1920. Serial No. 379,551. 1 Claim. (Cl. 20—16.)



A closure for stock pens having a door hinged at its upper edge for outward swinging movement and provided at its side edges with outwardly divergent wings connected near the plane of the lower edge of the door by a horizontal outwardly projecting ledge.

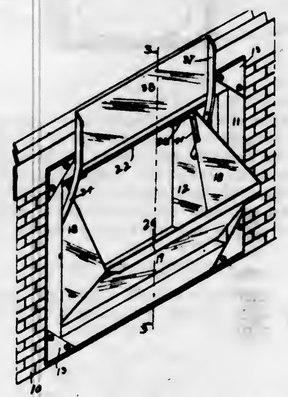
1,390,175. ENVELOP-EJECTOR. REUBEN STONE, Ogema, Wis. Filed Feb. 8, 1921. Serial No. 443,358. 3 Claims. (Cl. 211—8.)

1. In combination with the side walls of an envelop container, an ejecting device including a frame, pairs of rollers carried by the frame, means for connecting the pairs of rollers to cause movement of one pair of rollers when the opposite pair is moved, pins carried by the rollers, supporting arms pivotally connected with the frame and having their free ends extending outwardly and contacting with the side walls of the container to support the device within the container.

1,390,176. WASHING DEVICE. ALBERT H. STRUVE, Pocatello, Idaho. Filed Nov. 8, 1920. Serial No. 422,667. 2 Claims. (Cl. 299—84.)

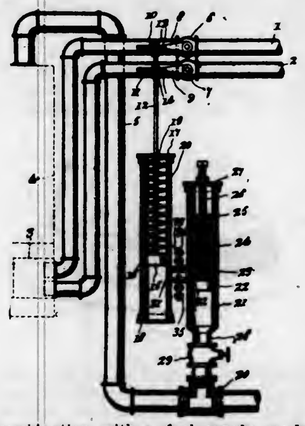
1. A device of the class described comprising a container, a partition in said container dividing the same into two chambers, a compressible receptacle in one chamber supported by the partition, means for introducing liquid into said chamber, an outlet pipe in the other chamber and in communication with said receptacle, an outlet nipple connected with the last mentioned chamber, a water pipe in said other chamber in communication with the upper chamber, valves in said pipes and means for controlling the valves from the exterior of the casing.

1,390,177. COMBINATION SEAT AND BED FOR AUTOMOBILES. LEVIN GRUBB TAYLOR, Tampa, Fla. Filed Nov. 10, 1920. Serial No. 423,107. 4 Claims. (Cl. 155—7.)



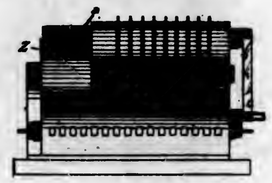
1. In a vehicle, a seat, a back therefor, fixtures secured to the back and seat and being pivotally connected together to admit of the swinging of the back, one fixture being slotted to slide on the pivot with respect to the other fixture and independently of the pivotal movement,

coöperating lugs on the fixtures adapted to abut together to hold the back elevated, one of the lugs having a cam



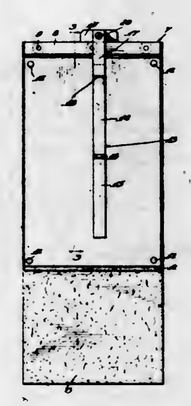
face to slide over the other lug, substantially as described.

1,390,178. WINDOW-FRAME AND CHUTE STRUCTURE. WILLIAM H. TAYLOR, Des Moines, Iowa. Filed Apr. 9, 1920. Serial No. 372,698. 4 Claims. (Cl. 193—33.)



1. In a device of the class described, the combination of a frame having rearwardly extending side flanges, a chute comprising side members and a bottom member, means for slidably and pivotally supporting the upper ends of said side members on said flanges, said means being adapted to permit the raising of said chute, and means at the bottom of said frame for engaging said chute and holding it when in position for use.

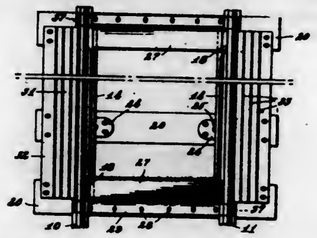
1,390,179. AUTOMATIC FUEL-SAVER. DAVIDSON KER TEXADA and JENS NIELSEN OKSENHOLT, Boyce, La. Filed Mar. 10, 1921. Serial No. 451,293. 5 Claims. (Cl. 236—8.)



1. In combination with a fuel supply conduit and a steam space, an actuating cylinder and a control cylinder, a piston in the actuating cylinder normally and yieldingly urged to an initial position therein, means whereby said piston is connected to control passage of the fuel through said conduit, a plunger in said control cylinder normally cutting off steam from the actuating cylinder, and means for adjustably placing said plunger under compression in opposition to the steam pressure, substantially as described.

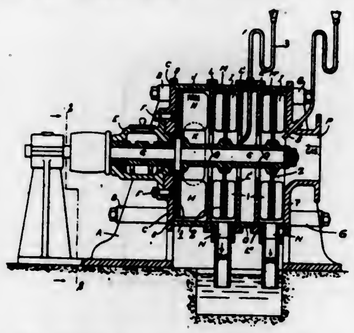
1,390,180. CALCULATING-MACHINE. FRANZ TRINKS, Brunswick, Germany. Filed Jan. 28, 1919. Serial No. 273,694. 2 Claims. (Cl. 281—1.)

1. In a device for use in combination with calculating machines and the like, a device for displaying dates and formulæ and consisting of a plurality of tablets compiled in the form of a book, the writing faces of one of said tablets consisting of a washable material, adapted to be written on.



1,390,181. PORTABLE DRAFTING OUTFIT. FRANK C. VAN ETTEN, Chicago, Ill. Filed Nov. 11, 1920. Serial No. 423,241. 3 Claims. (Cl. 45—131.)

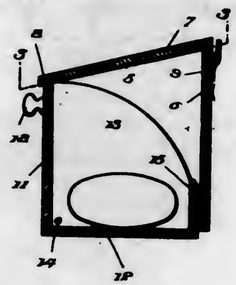
1. A portable drafting outfit comprising in combination a paper carrier including a sheet of flexible water proof backing material, a clamping bar removably secured to one edge thereof and extending the full dimension of said edge, a sheet of celluloid having one edge between said bar and the adjacent edge of the water proof backing sheet, a plurality of drafting sheets having their edges between the edge of the sheet of celluloid and said edge of the water proof backing sheet, means for clamping the bar and the water proof backing sheet together to thereby retain the edges of the sheet of celluloid and of the drafting sheets in position, and a foldable T-square in conjunction with said paper carrier and comprising a central bar, an end bar hinged to one end thereof, an offset member on the inner end of the central bar, and having a shoulder adjacent to the position of the end of the hinged bar when folded, and having another shoulder on its under side, a head pivoted to the under side of the offset member in position to clear the under shoulder, and of suitable dimensions to enable said head to seat against the outer edge of



the clamping bar of the paper carrier, said foldable T-square when folded having substantially the same length and width as said clamping bar, and means for locking the head of the T-square to said offset member, substantially as described.

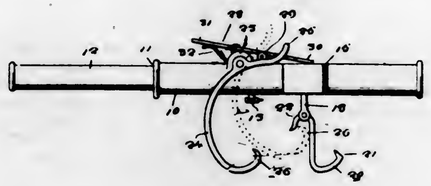
1,390,182. RAILROAD STREET AND ROAD CROSSING. WILLIAM P. WARE, Alderson, W. Va. Filed May 13, 1921. Serial No. 469,251. 4 Claims. (Cl. 238—8.)

1. In a railroad street crossing the combination with the main rails, guard rails arranged at the inner sides thereof, cross plates arranged between the main rails at opposite ends of the guard rails, and approach plates disposed at opposite sides of the crossing and at the outer sides of the main rails.



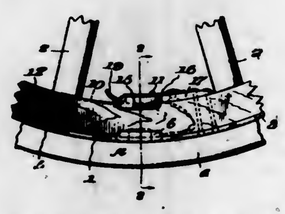
1,390,183. GAS-CLEANING APPARATUS. JOHN WELLS, Cairo, Egypt. Filed Sept. 30, 1919. Serial No. 327,442. 2 Claims. (Cl. 261—90.)

1. A gas cleaning apparatus comprising alternate rings and plates interlocking one with the other and forming compartments, end plates one of which serves as a closure while the other is formed with a central gas inlet, bolts passed through said end plates from one to the other and clamping together the assembled rings and plates, a horisontal shaft supported in the one end plate, and paddles mounted on said shaft and rotatable in said compartments and including imperforate plate portions alternating with said first plates to provide a sinuous passage through the apparatus and about the paddles.



1,390,184. SOAP-HOLDER. MARTIN WINDECKER, Ruddock, La. Filed Apr. 14, 1921. Serial No. 461,402. 1 Claim. (Cl. 45—28.)

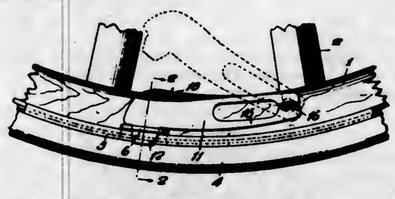
A holder of the kind described comprising a casing having sides, a bottom and a top; and a receptacle within the casing having front and bottom walls, side wings connected to and located between said walls, and a strip secured to the rear portions of said bottom wall and wings; said wings being hingedly connected adjacent to the corner between said bottom and front walls to said sides adjacent to the lower forward corners of said sides for the outward and inward swinging movement of said receptacle, the front wall having flanges projecting beyond said wings to bear against the front edges of said sides when the receptacle is swung inwardly to closed position, said flanges being movable around the lower forward corners of said sides to move under and bear upwardly against



the lower edges of said sides when the receptacle is swung outwardly to open position, the top of the casing projecting at its forward edge beyond the forward edges of the sides and the front wall being movable under said forward edge of the top when the receptacle is in closed position, and said strip being movable under the forward edge portion of the top when the receptacle is in open position.

1,390,185. CANT-HOOK AND CARRIER. CHARLES J. WOLD, Grantsburg, Wis. Filed Aug. 3, 1920. Serial No. 400,942. 5 Claims. (Cl. 294—17.)

1. A cant hook comprising a body member, a removable handle for said member, a pair of hooks pivotally mounted upon the body member and connected pivotally mounted hooks also carried by the body member for engagement with the first mentioned hooks for holding the latter in open position.

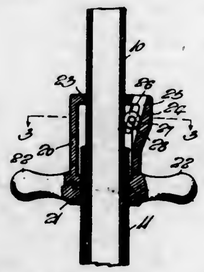


1,390,186. DEMOUNTABLE-RIM LOCK FOR VEHICLE-WHEELS. ROBERT M. BAIRD, Salt Lake City, Utah. Filed July 26, 1918. Serial No. 246,822. 9 Claims. (Cl. 301—11.)

1. The combination with a wheel felly having a plurality of axially extending openings therethrough, of a demountable rim having a plurality of retaining lugs extending axially through said openings, and of such length

as to project beyond the side face of said felly, and locking members permanently attached to said side face of the felly disposed to engage such projecting portions of said lugs.

1,390,187. DEMOUNTABLE-RIM LOCK. ROBERT M. BAIRD, Salt Lake City, Utah, assignor to Baird Demountable Rim Lock Company, Salt Lake City, Utah, a Corporation of Utah. Filed Mar. 20, 1919. Serial No. 283,816. Renewed July 9, 1921. Serial No. 483,608. 4 Claims. (Cl. 301—29.)



3. The combination with a wheeled felly having a transverse slot, of means for securing a demountable rim thereon, said means comprising a lug carried by the rim and constructed to pass through said slot and project beyond the face of the felly, a latch pivoted to the felly and adapted to engage the projecting end of said lug to lock the parts together, and spring means forming part of the latch itself for resiliently holding the latch in locking position.

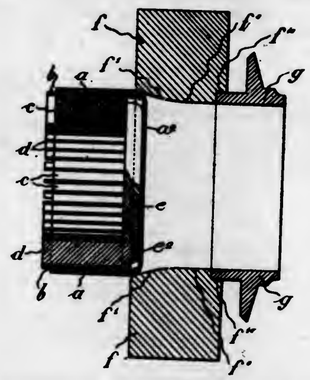
1,390,188. TATTING-SHUTTLE. ANGELINE M. BARHAM, Philadelphia, Miss. Filed Apr. 30, 1921. Serial No. 465,684. 1 Claim. (Cl. 66—10.)

A boat-shaped tatting shuttle having a bobbin chamber with bearings in its ends, a bobbin having journals for insertion in said bearings and a tension device for the thread fed from said bobbin, mounted on one side wall of the bobbin chamber and constructed in the form of a spring metal button, one face of which has yieldable engagement with the adjacent wall of the bobbin chamber, between which and said wall the thread from the bobbin is designed to pass and be yieldably held to prevent its being too rapidly unwound from the bobbin.

1,390,189. VISE-POST. JOHN F. BIXLER and JAMES A. LONG, Reading, Pa., assignors to Penn Engineering Company, Reading, Pa. Filed June 28, 1920. Serial No. 392,429. 6 Claims. (Cl. 81—41.)

1. A vise post comprising a lower tubular section, an upper section slidably fitting in the lower section, a clutch having a tubular body threaded upon the upper portion of the lower post section for adjustment thereon to impart longitudinal adjustment to said post, and gripping means carried by the clutch for releasably gripping the upper post section and permitting longitudinal adjustment of the post sections independent of adjustment of the clutch upon the lower post section.

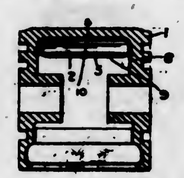
1,390,190. TIE. ERASTUS H. BENN, Watch Hill, R. I. Filed Apr. 19, 1921. Serial No. 462,639. 2 Claims. (Cl. 238—60.)



1. A tie of the character described comprising a body formed of several thicknesses of sheet metal with its side portions bent at right angles to its central portion to produce a laminated tie of channel shape in cross-section.

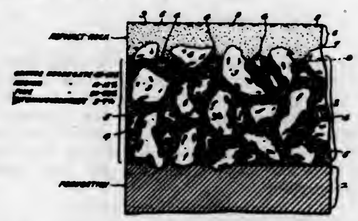
1,390,191. TAG SAFETY-PIN. LOREN C. BOND, Washington, D. C. Filed Jan. 25, 1921. Serial No. 439,731 4 Claims. (Cl. 40—24.)

1. As a new article of manufacture, a safety pin made of a single piece of wire bent upon itself to form a tongue and shank member, the wire being bent at the end of the shank member to form a tag retaining loop and a guard and retainer for the point of the tongue member, said guard comprising a plurality of transversely disposed loops and longitudinally disposed loops, subetantially as described.



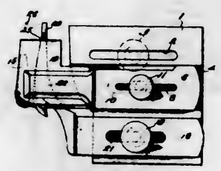
1,390,192. ELECTRIC COMMUTATOR. PIERRE BOSAU, Paris, France, assignor to Société Anonyme des Etablissements L. Blériot, Paris, France. Filed Nov. 14, 1917. Serial No. 201,939. 6 Claims. (Cl. 171—321.)

1. A commutator for electric machines, of the class wherein the current passes through an internal surface but not through the external surface of the commutator, said commutator comprising an annular series of segments, a ring of insulating material surrounding the segments on their outer cylindrical surface, a comparatively thin ring of metal having anti-friction properties and covering the said insulating ring, and a relatively strong outer binding



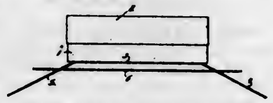
ring which exerts permanently a force on the said thin ring, which force is transmitted through the said thin ring to the insulating ring and in turn is transmitted through the insulating ring to the segments, whereby the latter are maintained under compression and in proper relation.

1,390,193. PISTON. GERSHON BOWMAN, Toronto, Ontario, Canada, assignor of one-half to William Edward Holder, Toronto, Ontario, Canada. Filed Dec. 24, 1920. Serial No. 433,007. 8 Claims. (Cl. 74—108.)



1. In a piston, a piston body having a hollow interior, and a vacuum chamber formed of non-porous metal secured within the piston body so as to cover the interior face of the head thereof.

1,390,194. ROAD STRUCTURE AND PROCESS OF MAKING. JEFFERSON S. BURDGE, Huntington Park, Calif. Filed Apr. 5, 1920. Serial No. 371,406. 10 Claims. (Cl. 94—23.)

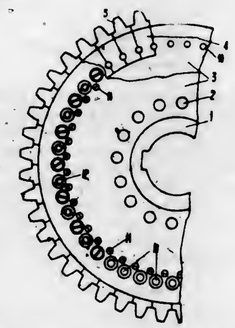


1. The improvement in road-building, which comprises the step of applying natural bituminous or asphaltic sand or rock in a granular condition in such amount as to leave a thin wear-resisting surfacing portion, composed essentially of such material to a manufactured bituminous or asphaltic concrete pavement structure, while the latter is still hot.

1,390,195. ADJUSTABLE BINDER. ALBERT H. DE VOE, Westfield, N. J., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Filed Feb. 1, 1919. Serial No. 274,461. 7 Claims. (Cl. 112—137.)

1. In a binder, a base adapted to be adjustably secured to a sewing machine clothplate, opposed binding guides having supports independently slidably adjustable with respect to said base, unitary means for securing said guides to said base in adjusted position, an independent guide and gage means adjustable toward and from said guides, and means for securing the latter, said means being separate from the means for securing the binding guides.

1,390,196. CONTAINER AND DISPLAY-CARTON. WILLIAM M. DOERING and CHARLES J. DOERING, Cincinnati, Ohio. Filed Feb. 27, 1919. Serial No. 279,483. 3 Claims. (Cl. 211—28.)



1. A display card and box support consisting of a cardboard box, a panel display member attached to one wall of the box, right and left hand display wing members hinged to the opposite edges of the panel member, and a top display member bridging and detachably engaging the wings in a plane in front of and parallel with the panel member.

1,390,197. SELF-LUBRICATING METAL BEARING AND THE LIKE. GEORGE G. DOWER, Worcester, Mass., assignor of one-half to George I. Alden, Worcester, Mass. Filed May 10, 1920. Serial No. 380,107. 1 Claim. (Cl. 64—19.)

An oilless bearing formed from bearing metal, and commercially pure graphite, mixed together while both are solid and in a fine state of subdivision and free from all foreign materials, the metal having been melted under pressure and cooled quickly, whereby the graphite particles are imprisoned therein while they are substantially in the position occupied by them before melting the metal.

1,390,198. GEAR-WHEEL. MARIO FORSATI, Turin, Italy. Filed Mar. 22, 1921. Serial No. 454,408. 1 Claim. (Cl. 74—28.)

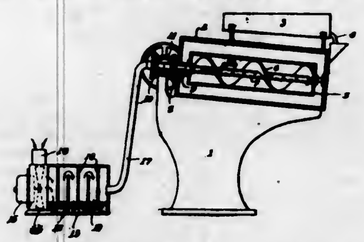
A toothed wheel comprising a hub, two flanges secured at the sides of said hub and providing an intermediate recess, teeth independent from each other and from said wheel body, each tooth comprising a root portion adapted to be engaged in said recess and provided with shoulders bearing on the edges of said flanges as well as with inclined surfaces provided with recesses and contacting with the similar recessed surfaces of the root portions of the adjacent teeth, the recesses of the adjacent inclined root surfaces coöperating to provide holes, said flanges having holes in register with the holes provided by the said recesses, and bolts inserted in said holes and recesses to removably clamp in position said teeth, said flanges having other holes in register with the bottom surface of the root portion of the teeth for the insertion of means for removing said teeth.

1,390,199. INDEX-CARD. LAURTON A. GALE, Belmont, Mass., assignor to Library Bureau, Cambridge, Mass., a Corporation of New Jersey. Filed Oct. 15, 1919. Serial No. 330,808. 4 Claims. (Cl. 129—16.8.)

3. An index card having a recess near an edge thereof, strengthening material secured to the card to close the sides of said recess to form a pocket, said material at one side of said pocket being transparent and provided

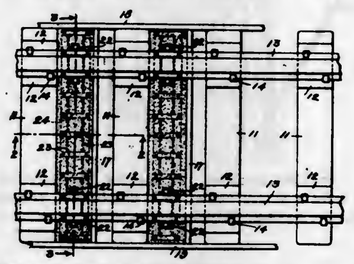
with a slot for the insertion of index tablets into said pocket.

1,390,200. PROCESS FOR MANUFACTURING NITROGEN-HYDROGEN MIXTURES. WILHELM GAUS and WILHELM WILD, Ludwigshafen-on-the-Rhine, Germany, assignors to Adolf Kuttroff, New York, N. Y. Filed July 9, 1920. Serial No. 395,123. 3 Claims. (Cl. 23—10.)



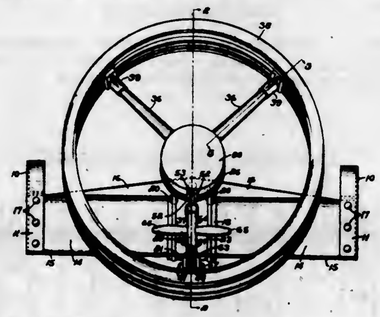
1. The process of manufacturing nitrogen-hydrogen mixtures suitable for the synthetic production of ammonia by subjecting to catalytic decomposition with steam a gas mixture containing nitrogen, carbon monoxid and hydrogen and having such a composition that by the subsequent removal of carbon dioxid and of impurities, a gas mixture of the composition required for the production of ammonia is obtained.

1,390,201. ELECTRIC-LIGHTING APPARATUS. JOHN H. GEORGE, Bridgeport, Conn., assignor to Ellsworth A. Hawthorne, Bridgeport, Conn. Filed Mar. 16, 1918. Serial No. 222,975. 6 Claims. (Cl. 173—355.)



5. In an electric switch and socket, the combination of a socket member, an insulating mounting therefor, a terminal, an insulating mounting for said terminal, a switch, an insulating mounting for said switch, said switch mounting being divided longitudinally of the axis of said socket member, means to secure said socket member mounting to said switch mounting, and means to secure said divided switch mounting together.

1,390,202. METHOD OF FREEZING ICE-CREAM. ALAN K. GILLESPIE, Richmond Heights, Mo. Filed Dec. 27, 1920. Serial No. 433,537. 2 Claims. (Cl. 99—14.)

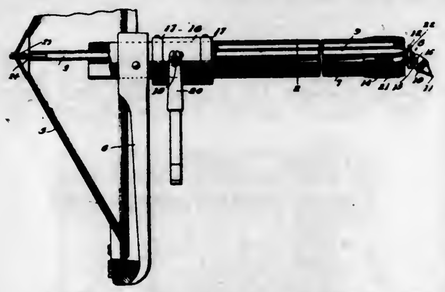


1. The process of freezing a mix to make ice cream, which consists in agitating the mix during the freezing operation and co-incident therewith continuously forcing through the body of the mix, and maintaining the same in contact with, as under pressure, to expedite the thorough incorporation thereof in the mix and thereby reduce the time of the freezing operation.

1,390,203. RAILROAD CONSTRUCTION. ALVIN R. GONSALEZ, Los Angeles, Calif., assignor of one-half to George F. Colton, Los Angeles, Calif. Filed Feb. 7, 1920. Serial No. 356,834. 2 Claims. (Cl. 238—2.)

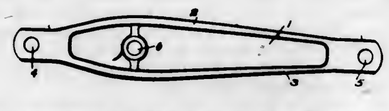
1. The method of progressively constructing a railway, which consists of first forming a road bed composed of broken stone and hot oil, then laying temporary ties and rails thereon to form a track over which the materials for forming advanced sections of the road may be hauled, then forming reinforced permanent concrete ties on said road bed between said temporary ties provided with suitable rail fastening devices, then removing said temporary ties and allowing said rails to rest upon said permanent ties, and then securing said rails to said permanent ties by means of said fastening devices.

1,390,204. TIRE-CARRIER. CARL GUSTAVE GRONQUIST, Bridgeport, Conn., assignor, by mesne assignments, to The Locomobile Company, Bridgeport, Conn., a Corporation of Delaware. Filed Oct. 9, 1918. Serial No. 257,428. 21 Claims. (Cl. 224—29.)



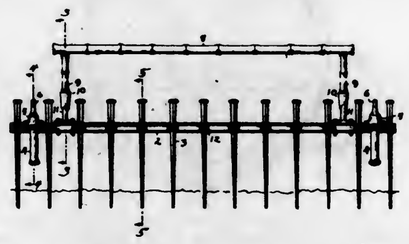
2. In a holder for annular bodies, the combination of a plurality of radiating arms having terminal abutments for engaging the internal circumferential surface of the annular body, one of said arms being pivoted and radially adjustable, and a link pivotally connected at one end to such arm and at its other end to a fixed support.

1,390,205. READILY-SOLUBLE TANNING AGENT. FRANZ HASSLER, Hamburg, Germany, assignor to Adolf Kuttroff, New York, N. Y. Filed July 9, 1920. Serial No. 395,125. 3 Claims. (Cl. 149—5.)



1. As a new article of manufacture, readily soluble tanning extracts, comprising a natural tan and a sulfonic acid of an at least tricyclic hydrocarbon.

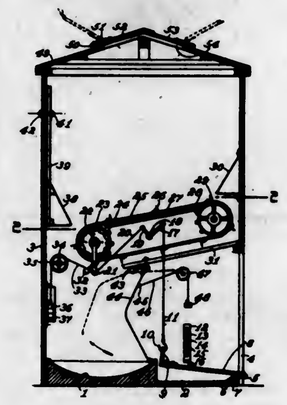
1,390,206. VIBRATION-TRANSMISSION CONNECTION FOR TALKING-MACHINES. MARCUS C. HOPKINS, Chevy Chase, D. C. Filed June 7, 1920. Serial No. 387,029. 5 Claims. (Cl. 274—1.)



1. A talking machine element for transmitting vibrations from a stylus holder to a diaphragm, comprising a metal tube having extremely thin walls.

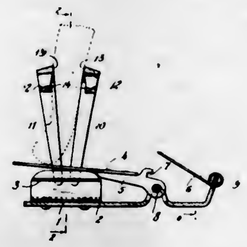
1,390,207. METHOD OF MANUFACTURING BRAKE-LEVERS. WILLIAM A. KERN, Ellwood City, Pa., assignor to Frederic Schaefer, Pittsburgh, Pa. Filed May 12, 1920. Serial No. 380,830. 3 Claims. (Cl. 29—164.)

1. The method of manufacturing a brake lever, which consists in first upsetting an elongate heated blank to form an enlarged intermediate portion, and in subsequently drop-forging the blank into a brake lever, the upset portion of the blank furnishing the metal for the widest portion of such lever.



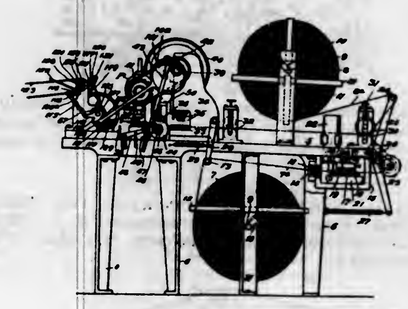
1,390,208. RICE RAKE OR HARROW. FREDERICK A. LEAS, Manila, Philippine Islands. Filed Feb. 7, 1920. Serial No. 356,906. 5 Claims. (Cl. 55—3.)

4. A rice rake or harrow, comprising a U-shaped beam of metal, a series of teeth and means adapted to clamp said teeth in a vertical position at the front side of said beam, an arched bracket at each end of said beam having a downwardly inclined socket adapted to receive a hitch member, and vertical sockets at opposite ends of said beam adapted to receive handle members.



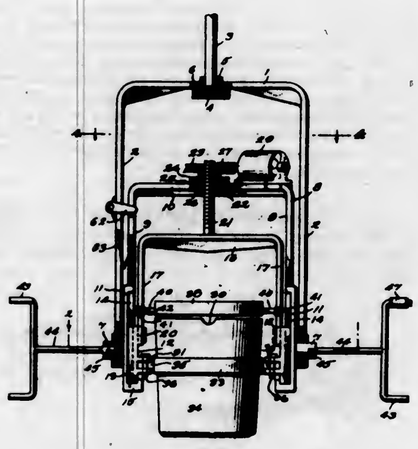
5. A rice rake or harrow, comprising a metal beam, a series of teeth and clamping members adapted to secure said teeth to said beam, arched socket brackets fixed to said beam between its ends adapted to receive hitch members, and socket brackets secured to said beam adapted to receive handle members.

1,390,209. ANIMAL-OPERATED FEEDING DEVICE. FINLEY MCARTHUR, Cedar Rapids, Iowa. Filed July 10, 1920. Serial No. 395,283. 5 Claims. (Cl. 119—55.)



1. An animal operated feeding device, comprising a housing having an entrance in a side wall and a receiving opening in its top provided with a closure, an imperforate plate supported across the interior of the housing midway of its height, the upper part of the housing thereabove serving as a hopper, an endless conveyer encompassing said plate including end sprocket-chains and spaced sprocket-wheels carrying same, a ratchet-wheel coaxially secured on one of said sprocket-wheels, a rock-arm pivotally mounted on the axis of the ratchet-wheel and carrying a weighted pawl which movably engages teeth of the ratchet-wheel, a medially pivoted bell-crank lever, a flexible connection between one arm of said lever and said rock-arm, a swinging platform, and a flexible connection between said platform and the other arm of said bell-crank lever.

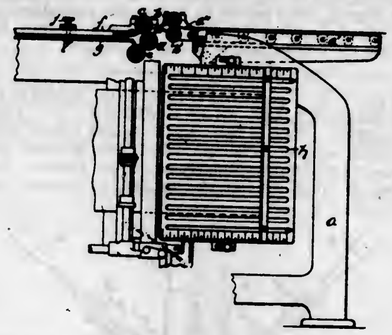
1,390,210. JAW-TRAP. ALLEN MCMULLEN, Kenwood, N. Y., assignor to Oneida Community, Limited, Oneida, N. Y., a Corporation of New York. Filed Oct. 22, 1919. Serial No. 332,478. 3 Claims. (Cl. 43—90.)



1. The jump trap comprising a jaw spring, a bottom spring, pivotally connected spring closed rigid trap jaws formed with wide flat gripping faces and connected secondary trap jaw members spaced apart inwardly from the main jaws and having wide flat gripping faces which are considerably offset as compared to the gripping faces of the main trap jaws to minimize injury or escape of an animal, the connections between said trap jaws and said secondary jaw members being offset more than said jaw members.

1,390,211. METHOD OF MAKING PAPER PACKAGE-FASTENERS. THEODORE H. KRUEGER, New York, N. Y. Original application filed May 31, 1919, Serial No. 301,057. Divided and this application filed Dec. 1, 1920. Serial No. 427,483. 19 Claims. (Cl. 93—1.)

1. The method of making paper package fasteners which includes reinforcing a strip of paper, and successively forming therefrom complemental fastener elements.



1,390,212. LADLE. WILLIAM BROOKS MURRAY, Danville, Ill., assignor of one-half to Clark D. Townsend, Ironton, Ohio. Filed Nov. 11, 1920. Serial No. 423,354. 9 Claims. (Cl. 22—82.)

1. A ladle construction comprising a main frame, an auxiliary frame pivotally mounted therein, and a ladle supported in said auxiliary frame and capable of vertical movement therein.

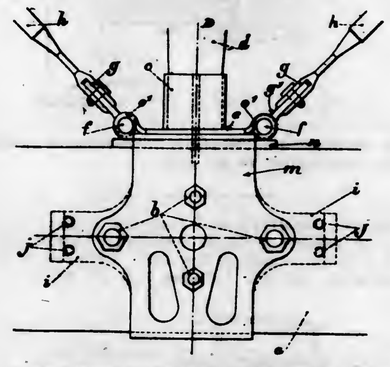
1,390,213. PAPER-FOLDING MACHINE. ANDREW OLSON, Cleveland, Ohio, assignor to The Cleveland Folding Machine Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 19, 1918. Serial No. 229,544. 14 Claims. (Cl. 270—68.)

1. In a folding machine, the combination with the buckling plate thereof, of buckling and folding rolls associated therewith in such relation that the axes of such

rolls are disposed in two planes, intersecting at an obtuse angle, substantially as set forth.

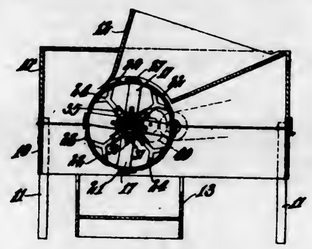
1,390,214. GAME-TRAP. JEREMIAH O'NEIL, Sherrill, N. Y., assignor to Oneida Community, Limited, Oneida, N. Y., a Corporation of New York. Filed Jan. 26, 1921. Serial No. 440,126. 7 Claims. (Cl. 43—88.)

1. The game trap comprising a frame having integral substantially rectangularly sectioned jaw posts projecting upwardly therefrom, trap jaws having pintle portions projecting outward in opposite directions through said jaw posts and a coöperating U-shaped trap spring of sheet metal formed at its upper end with a substantially circular bow to encircle the jaw post and adjacent parts of the jaws and having its lower end formed with a restricted spring slot having sides adapted to closely coöperate with the sides of the corresponding shouldered jaw post and having an upwardly projecting alining detent adjacent the upper side of said spring slot to prevent undesirable upward tilting of the U-bend of the trap spring and consequent engagement between the jaw pintles and spring bow when the trap is being set.



1,390,215. TRAP-JAW. JEREMIAH O'NEIL, Sherrill, N. Y., assignor to Oneida Community, Limited, Oneida, N. Y., a Corporation of New York. Filed Feb. 8, 1921. Serial No. 443,343. 4 Claims. (Cl. 43—90.)

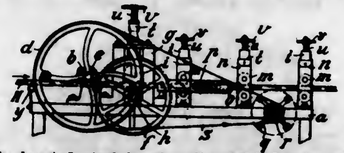
1. The rolled steel trap jaw formed adjacent the gripping face of the jaw with a relatively flat edge rib having



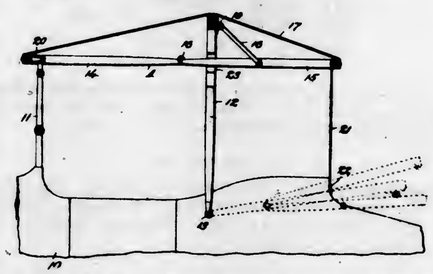
substantially the same width as the thickness of said gripping face and formed with a concavely beveled reduced thickness back portion extending away from said gripping face beyond said edge rib to stiffen and strengthen said gripping face, said edge rib portion being laterally bent to form the bearing pintles or lugs on the jaw.

1,390,216. METAL FITTING FOR ASSEMBLING LONGITUDINALS AND UPRIGHTS IN AEROPLANES. PIERRE JEAN RENÉ POSTEL-VINAY, Paris, France, assignor to Societe des Moteurs Salmson (Systeme Canton-Unne), Billancourt, Seine, France. Filed Dec. 19, 1918. Serial No. 267,546. 2 Claims. (Cl. 244—31.)

1. A metal fitting for assembling cell uprights with wing beams in aeroplanes comprising a sleeve member formed of a metal plate bent over and welded at the meeting edges and adapted to entirely surround the longitudinal and be bolted thereon, lugs integral with said sleeve folded over themselves and adapted to receive the stay wires and to form hinges for receiving the axle pins of tensioning members, and a socket member adapted to receive the end of an upright and secure at one end to said lugs.



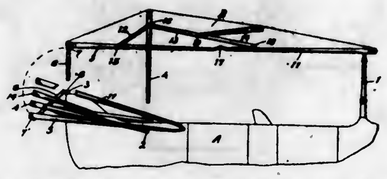
1,390,217. VEGETABLE SLICING AND CHOPPING MACHINE. MARTIN REJKOWSKI, Akron, Ohio. Filed June 7, 1921. Serial No. 475,577. 6 Claims. (Cl. 146—11.)



1. In a vegetable cutter, a drum, a series of knives carried thereby, plates mounted upon said drum adjacent said knives, and means for adjusting said plates circumferentially on said drum.

1,390,218. MACHINE FOR CLEANING BUILDERS' PLANKS FROM CEMENT. PETER SAUSET, Bonn, Germany. Filed May 1, 1920. Serial No. 378,240½. 2 Claims. (Cl. 15—8.)

1. A machine for cleaning builders' planks from cement, comprising, in combination, a pair of horizontally arranged rotary working rollers, a plurality of pairs of horizontally arranged working rollers behind said pair of rigid working rollers to serve at the same time as conveying rollers, a pair of yieldingly mounted and vertically arranged small ridged working rollers arranged behind said horizontally located pair of ridged working rollers, a horizontally located steel brush roller behind said vertically arranged pair of small ridged working rollers, and means to drive the machine, substantially as and for the purpose set forth.



1,390,219. COLLAPSIBLE TOP-FRAME FOR VEHICLES. GEORGE L. SMITH, Washington, D. C. Filed Jan. 12, 1920. Serial No. 350,964. 5 Claims. (Cl. 296—116.)

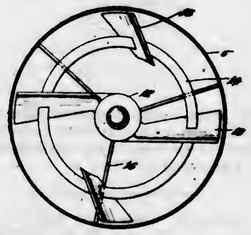
1. A vehicle top frame including a cover frame composed of forwardly and rearwardly extending bows pivotally connected together, supporting means pivotally connected to the rearwardly extending bow at a point spaced from the ends thereof, means connecting the forwardly extending bow to the vehicle body, and means connected to the rearwardly extending bow at a point to the rear of the pivotal connection of said supporting means and to the vehicle body, whereby downward tension of said means exerts a lifting action on the pivotal connection of the cover frame bows.

1,390,220. COLLAPSIBLE TOP-FRAME FOR VEHICLES. GEORGE L. SMITH, Washington, D. C. Filed June 15, 1920. Serial No. 389,070. 10 Claims. (Cl. 296—116.)

1. The combination with a vehicle body of a collapsible top frame pivotally connected thereto and means pivotally connected to the back of the vehicle body and to the top frame co-acting with the pivotal connection between the vehicle body and the top frame for supporting the latter in erected position and in a plurality of collapsed positions.

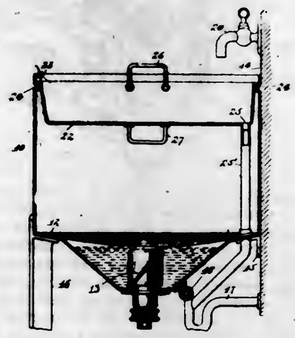
1,390,221. BACKREST FOR BATHTUBS. MITCHEL STERN, Philadelphia, Pa. Filed June 21, 1921. Serial No. 479,281. 1 Claim. (Cl. 4—2.)

The combination in a back rest for a bath tub, of a suspending device comprising a suspending bar having bent ends and short reinforcing return bars, each said return bar at its inner end merging into an angularly disposed curl to fit over the roll rim of the tub and a curved hook bar joining said curls, a pad of absorbent material



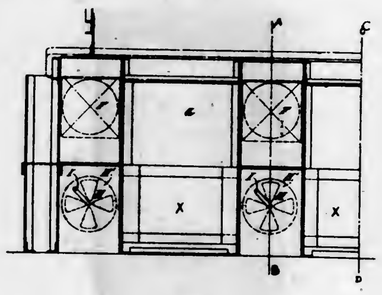
having a notched upper edge and overlapping said suspending bar and reinforcing bars, and snap fastening devices on said overlapping edge and pad for temporarily securing said pad to the suspending bar.

1,390,222. LOCK. SOLOMON WISE, Cincinnati, Ohio. Filed May 6, 1920. Serial No. 379,386. 3 Claims. (Cl. 70—108.)



2. In a padlock, the combination of a lock body, having a recess in one face thereof, a block slidable but non-rotatable in said recess, a shackle carried by said block and extending through a wall of said recess, and means for inclosing said recess, secured to the body, said block and body having sockets therein, spring-pressed concentric plungers arranged one within the other in the block socket, matching plungers in the body socket, and said body having an orifice for insertion of a key to aline the meeting edges of the plungers to permit the block to slide, said sockets in the body and the block comprising holes extending through them, whereby the plungers may be assembled readily and the spring set in place in the block, and the plungers set into the body through the recess therein prior to insertion of the block therein, in assembling the lock.

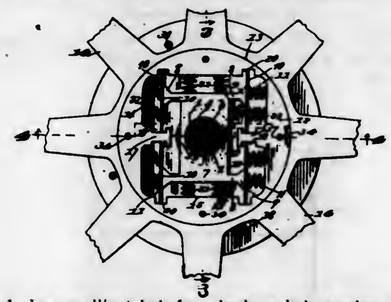
1,390,223. DISH-WASHING MACHINE. FRANK E. WOLCOTT, Hartford, Conn. Filed Apr. 9, 1919. Serial No. 288,734. 2 Claims. (Cl. 141—9.)



1. A dish washing machine comprising a closed receptacle, an openwork basket removably supported within the receptacle, a motor shaft passing through the bottom of the receptacle, a hollow hub fastened to the motor shaft within the receptacle, propeller blades extending on diametrically opposite sides from said hub outward to close proximity to the wall of the receptacle, a ring connecting said blades intermediate the hub and the wall of the receptacle, and propeller blades extending inward from close proximity to the wall of the receptacle but partway toward the hub and fastened to said ring intermediate the first mentioned blades, both sets of said blades being in substantially the same horizontal plane and having substantially the same pitch for throwing water upward from the lower part of the receptacle through the basket.

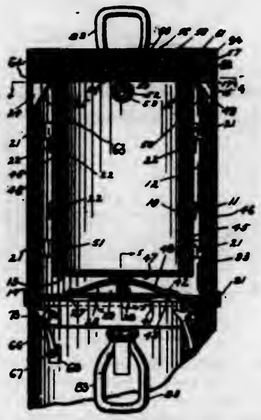
1,390,224. WASHING-MACHINE. FRANK E. WOLCOTT, Hartford, Conn. Filed Aug. 13, 1919. Serial No. 317,207. 2 Claims. (Cl. 141—9.)

1. A washing machine comprising a receptacle having a recess in its bottom, a rotatory impeller for water in said recess, a recessed cover for preventing the outflow of agitated water when the impeller is rotated, said cover being shaped to fit within the top of the receptacle, whereby the cover may be set in the receptacle and utilized as a sink or may be inverted and set on the receptacle to increase the capacity of the inclosed space, a drain outlet for the receptacle, a drain outlet for the cover and means for connecting said outlets.



1,390,225. BOILER-FURNACE. ARTHUR SPYER, London, England, assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Filed Dec. 22, 1920. Serial No. 432,590. 3 Claims. (Cl. 110—22.)

2. A boiler furnace adapted to burn either liquid or solid fuel, having a single front, said front having therein a solid fuel firing opening, an oil burner at one side of said firing opening and above the furnace grate with an air supply opening adjacent the burner, a solid fuel air supply opening below the grate and beneath the air sup-



ply opening for the oil burner, a vertical duct extending from the boiler room floor upward outside the furnace front and at one side of said firing opening and covering both air supply openings, and dampers in said duct, whereby air from the duct may be supplied to both said air supply openings or to either one alone.

1,390,226. RESILIENT HUB FOR WHEELS. THOMAS M. WRIGHT, Bertram, Tex. Filed June 9, 1920. Serial No. 387,597. 2 Claims. (Cl. 152—45.)

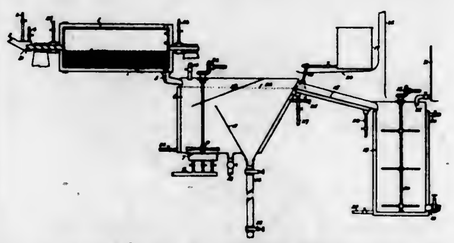
1. In a resilient hub for wheels, a hub member proper having an abutment plate at one end, a hub ring having a rectangular opening, a hub web in said opening and mounted on the hub member proper, spokes connected to the hub ring, means coöperating with the abutment plate for holding the hub web and the hub ring against axial movement relatively to each other, said hub web being movable radially relatively to the rectangular opening of the hub ring, diametrically opposite sides of the opening having inwardly projecting radial lugs, having guides, certain opposite walls of the opening at right angles to the lugs having guides, plates engaging said guides of the opening and the lugs, resilient means between said plates and certain walls of said opening, resilient means between the hub web and certain other walls of said opening, said plates constituting guides engaged by parts of the hub web, to permit the hub web to move yieldably radially relatively to the hub ring.

1,390,227. HEAT-INSULATED CONTAINER. GEORGE P. ALTENBERG, Cincinnati, Ohio, assignor to The Icy-Hot Bottle Company, Cincinnati, Ohio, a Corporation of West Virginia. Filed June 20, 1918. Serial No. 240,979. 10 Claims. (Cl. 220—9.)

1. A vacuum heat-insulated container comprising in combination a double-walled vessel having vacuum heat-insulating space between the walls of said vessel, a reinforcing ring in said space fixed at one of its sides to one of said walls and spaced from the other of said walls for reinforcing said first-named wall, and a coating received over all the other sides of said ring and said wall which aids in maintaining the vacuum.

1,390,228. FUEL AND METHOD OF PRODUCING SAME. LINDON WALLACE BATES, Mount Lebanon, N. Y. Filed Aug. 5, 1919. Serial No. 315,497. 22 Claims. (Cl. 44—8.)

10. A stable mobile fuel consisting essentially of a homogenized admixture of a relatively large quantity of pulverized solid carbonaceous substance and liquid hydrocarbon, and such a relatively smaller quantity of lime-rosin grease as will serve as a stabilizer.



1,390,229. METHOD OF RAISING THE SPECIFIC GRAVITY AND FLASH-POINTS OF LIQUIDS. LINDON WALLACE BATES, Mount Lebanon, N. Y. Filed Nov. 10, 1919. Serial No. 336,918. 8 Claims. (Cl. 44—8.)

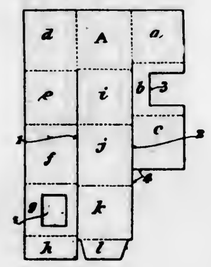
1. The method of increasing the safety against fire of a liquid combustible of relatively high freezing point by enabling it, for a brief period, to support a layer of water and to have a higher flash point, which consists in combining therewith such amount of solid carbonaceous substance in the form of particles as will raise the specific gravity above that of water and in such proportions as will produce a free flowing mixture.

1,390,230. METHOD OF TRANSPORTING CARBONACEOUS SUBSTANCE. LINDON WALLACE BATES, Mount Lebanon, N. Y. Filed Dec. 3, 1919. Serial No. 342,263. 4 Claims. (Cl. 44—8.)

1. That method of transporting carbonaceous substance, which consists in reducing the substance to the form of particles, combining the particles with liquid hydrocarbon as a carrier, treated with substance having stabilising qualities so as to carry the particles in stable suspense, passing the liquid composite through a pipe-line, and upon arrival at destination removing solid carbonaceous substance with associated liquid hydrocarbon from the carrier.

1,390,231. FUEL AND METHOD OF PRODUCING SAME. LINDON WALLACE BATES, Mount Lebanon, N. Y. Filed Mar. 23, 1920. Serial No. 368,136. 30 Claims. (Cl. 44—8.)

1. A stable mobile fuel consisting essentially of a homogenized admixture of a relatively large quantity of deashed, peptized, pulverized solid carbonaceous substance and liquid hydrocarbon.

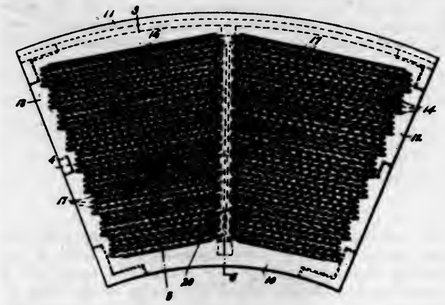


1,390,232. LIQUID FUEL AND METHOD OF MANUFACTURING IT. LINDON W. BATES, Mount Lebanon, N. Y. Filed Apr. 12, 1920. Serial No. 373,421. 8 Claims. (Cl. 44—8.)

1. That method of producing a liquid fuel, which consists in pulverizing solid carbonaceous substance in liquid hydrocarbon of low viscosity and subsequently blending therewith further liquid hydrocarbon of higher viscosity, employing such amounts that a liquid fuel of density greater than that of water is produced.

1,390,233. METHOD OF INCREASING THE SPECIFIC GRAVITY AND FLASH-POINT OF LIQUIDS. LINDON W. BATES, Mount Lebanon, N. Y. Original application filed Nov. 6, 1919, Serial No. 336,918. Divided and this application filed June 16, 1920. Serial No. 389,461. 3 Claims. (Cl. 44—8.)

1. That method of raising the specific gravity and flash point of liquid hydrocarbon so that a fluid composite is formed which will support a layer of water and will atomize at a temperature below its flash point, which consists in adding solid carbonaceous particles to liquid hydrocarbon in an amount which will give the mixture a specific gravity heavier than that of water and a flash point above the temperature of preheat necessary for proper atomization, uniting therewith coal distillate having qualities which will peptize the particles and stabilize them, and peptizing therein the particles to form a stable liquid fuel of such elevated flash point and gravity.

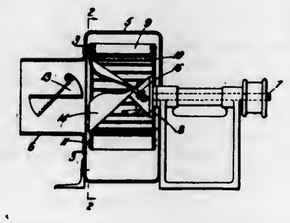


1,390,234. INCANDESCENT-GAS-MANTLE BOX. JOSEPH HANDFORD BARNES, Stockport, England. Filed Oct. 25, 1919. Serial No. 333,218. 1 Claim. (Cl. 206—68.)

A cardboard blank comprising in combination a broken corner at one end of the blank; two longitudinal cuts in said blank extending from said end of the blank to within a short distance of the opposite end thereof and dividing the blank into three parts connected together at said opposite end; a gap formed in one side of the blank; an aperture formed through one corner of the blank adapted when the blank is folded to be on the opposite side of the box to that containing said gap and to form a box top having an aperture for inspection of the interior of the box; a part on the blank adapted to cover the front of the box and said aperture when the blank is folded.

1,390,235. DRY PAN. DAVIS BROWN, Bucyrus, Ohio, assignor to Hadfield Penfield Steel Company, Bucyrus, Ohio, a Corporation of Ohio. Original application filed Dec. 14, 1917, Serial No. 207,043. Divided and this application filed Dec. 20, 1918. Serial No. 267,651. 3 Claims. (Cl. 83—56.)

1. A screen plate for dry pans, of the kind described, consisting in a framework of cast iron, steel grid bars being cast with the framework, said framework including a middle partition supporting the inner ends of the steel grid bars, said middle partition being composed of relatively thin cast iron members supporting and spacing the



inner ends of the bars and an interposed supporting, spacing and strengthening member.

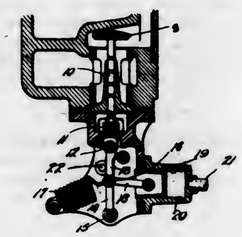
1,390,236. WATERPROOFING COMPOSITION AND PROCESS OF MAKING SAME. ANTONY DE CICILIANI, Los Angeles, Calif. Filed Jan. 24, 1921. Serial No. 439,666. 6 Claims. (Cl. 134—11.)

1. In the manufacture of waterproof material, the process of dissolving and heating castile soap in water and then adding calcium chlorid, potassium alum and hydrated lime in powdered form to a paste-like mass to be diluted with water at the time when it is to be used for coating.

1,390,237. BLOWER AND EXHAUSTER FOR MOVING AIR AND GAS. CHARLES MARKHAM CONDER, Camborne, England. Filed Mar. 26, 1921. Serial No. 455,951. 3 Claims. (Cl. 230—11.)

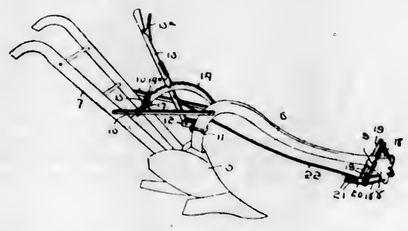
1. A centrifugal blower or pump including a rotary bladed impeller having a pair of rings between which the impeller-blades extend; a shaft which carries and turns the impeller; and other blades which are fastened, at one end to one of the rings and, at the other end, to the shaft, thereby tying the impeller thereto; said other blades lying disposed within the impeller-blades and extending thereacross, at an angle to the shaft and out of the plane thereof, and being spaced from the other ring and tapering in shape from the ring to which they are fastened at one end, toward the shaft and curved to give to the fluid a movement of a volute form in forcing the same outwardly toward the impeller-blades, whereby loss due to sudden change of direction of the fluid flow is avoided.

1,390,238. PHONOGRAPH-HORN. EDWARD C. OWEN, Grand Rapids, Mich., assignor to Sovilla Owen, Grand Rapids, Mich. Filed Mar. 30, 1920. Serial No. 369,968. 1 Claim. (Cl. 181—27.)



A phonograph horn comprising a horizontal bottom, a top curving upwardly toward the front, an outer side

comprising two portions lying substantially at right angles to each other and connected by a curved portion, an inner side of substantially U-shape, the outer portion of which is flared out at an acute angle with respect to the opposite side, a vertical partition disposed substantially midway between the sides of the horn and between the bot-

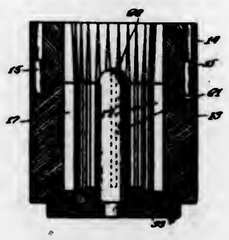


tom and top thereof, said partition extending from the rear end of the horn forwardly toward the front of the horn, a block closing the rear end of the horn, and a second block attached to the upper side of the horn at the rear end thereof, said second block and upper side of the horn having alined openings therein, substantially as described.

1,390,239. AUXILIARY-CLEARANCE VALVE. WOLFGANG TURNWALD, Syracuse, N. Y., assignor to Stumpf Una-Flow Engine Company, a Corporation of New York. Filed Jan. 22, 1916. Serial No. 73,507. 4 Claims. (Cl. 121—9.)

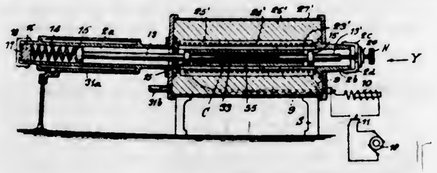
1. The combination with a steam engine cylinder, of a closed clearance chamber communicating therewith, a valve controlling the communication between the cylinder and the chamber, means operated by the vacuum in the exhaust to close said valve when sufficient vacuum exists and means automatically to open and rigidly lock said valve in the wide open position upon a predetermined drop in the vacuum pressure.

1,390,240. CLEVIS ATTACHMENT FOR PLOWS. FRED W. WOLTER, Cuero, Tex. Filed Feb. 13, 1920. Serial No. 358,320. 4 Claims. (Cl. 97—4.)



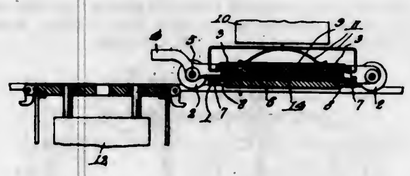
4. In a clevis attachment, a hand lever, means connecting the hand lever with the clevis, means for pivotally attaching the hand lever to a plow beam, companion brace rods attachable to the handle and beam of a plow, companion supporting plates provided with registering longitudinal slots, terminal fingers carried by the companion plates embracing the brace rods, said plates being capable of independent adjustment to compensate for variations in the angularity of the brace rods, a rack segment attachable at one terminal to a plow beam, means carried by the lever and coacting with the segment to maintain the lever in adjusted position, and means carried by the rack segment coacting with the slotted portions of the companion plates to maintain the segment in position and to secure the plates in adjusted position.

1,390,241. PROCESS FOR THE MANUFACTURE OF NAPHTHALENE SULFONIC ACIDS. JOSEPH A. AMBLER, Norwich, Conn., and HARRY D. GIBBS, San Francisco, Calif. Filed Jan. 26, 1918. Serial No. 213,978. 11 Claims. (Cl. 23—24.) (Filed under the act of Mar. 3, 1883; 22 Stat. L., 625.)



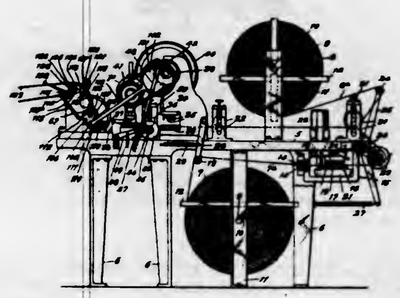
1. A continuous process for the manufacture of sulfonic acids of naphthalene by causing the vapors of naphthalene to come into contact with a descending current of sulfuric acid.

1,390,242. LAMINATED STRUCTURE AND METHOD OF MAKING SAME. VINCENT G. APPLE, Dayton, Ohio. Filed May 14, 1920. Serial No. 381,395. 8 Claims. (Cl. 154—2.)



1. The method of making laminated structures which consists in assembling a series of blanks differing in outline from the finished article and associating therewith a suitable adhesive material and folding back upon the blanks parts thereof to reinforce the overlaid parts; compacting the assembled material in a hollow die conforming in outline to the finished article thereby changing the outline of the blank to conform to the die; and heating the die and its contents to harden the material.

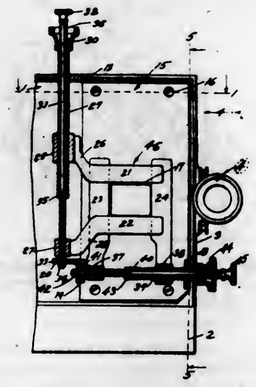
1,390,243. METHOD OF WELDING LOW-MELTING-POINT METALS AND ALLOYS TO HIGH-MELTING-POINT METALS. CLEMENS A. LAISE, Weehawken, N. J., assignor, by mesne assignments, to General Electric Company, Schenectady, N. Y., a Corporation of New York. Filed Sept. 15, 1919. Serial No. 323,957. 28 Claims. (Cl. 78—93.)



1. The herein described process which comprises compressing powdered material of low melting point against a plate of material of high melting point and subsequently heating the two.

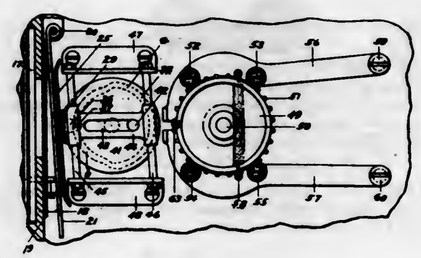
1,390,244. PROCESS OF PRODUCING ARTIFICIAL STONE. WILLEM JACOBUS DE BAS, The Hague, Netherlands. Filed Dec. 14, 1918. Serial No. 266,790. 3 Claims. (Cl. 18—48.8.)

1. A process for imitating the veinings, mottlings and other markings of natural stone, mosaic and tessellation in slabs and blocks from artificial stone, the said slabs or blocks being made of cement and sand with a surface layer, worked up in a pastry condition, and which consists in applying to the bottom of the mold an elastic yieldable fabric, impervious to water and air, and in applying to the said fabric a thin layer of cement, containing the colors of the veinings and mottlings to be produced, and which consists further in throwing or squirting a paste of cement containing the colors of the fundamental color, consisting further in applying another layer of cement, forming the back part of the slab or block, submitting the said mass to two or more pressing actions, removing after the first pressing action the said fabric.



1,390,245. MACHINE FOR MAKING PAPER PACKAGE-FASTENERS. THEODORE H. KRUEGER, New York, N. Y. Filed May 31, 1919. Serial No. 301,057. 41 Claims. (Cl. 93—1.)

1. A machine of the character described including a frame, supporting means thereon for rolled strips of sheet material, pressure rollers, guide means for directing the strips from the supply rolls to the pressure rollers, means for treating one of the strips to cause the strips to stick together after passing through the pressure rollers, means for advancing the strips, and means for cutting off successive lengths of the strips, and means for detachably uniting said successive lengths of the strips to form complemental fastener elements.

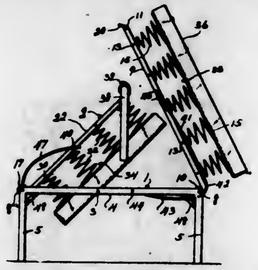


1,390,246. ADJUSTABLE CURTAIN FOR CAMERAS. JOHN E. LEONARD, Los Angeles, Calif., assignor, by mesne assignments, to Mitchell Camera Co., a Corporation. Filed Nov. 7, 1919. Serial No. 336,394. 20 Claims. (Cl. 95—65.)

1. A camera having a curtain structure between the photographing lens and the exposure aperture and which structure includes pairs of adjustable curtain members,

one pair of which is disposed substantially at right angles to the other pair.

1,390,247. FILM-MOVING MECHANISM FOR MOTION-PICTURE CAMERAS. JOHN E. LEONARD, Los Angeles, Calif., assignor, by mesne assignments, to Mitchell Camera Co., a Corporation. Substitute for application Serial No. 163,496, filed Apr. 20, 1917. This application filed Mar. 30, 1920. Serial No. 369,855. 5 Claims. (Cl. 88—18.4.)

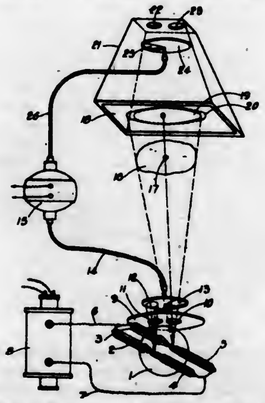


4. In a film moving mechanism for motion picture cameras, a hinge pin, a slide plate supported upon the hinge pin for oscillatory movement, a guard plate secured to the slide plate for oscillation therewith, feed fingers extending through said guard plate and engaging the perforations of a strip of film received between said guard plate and said slide plate, means for operating the feed fingers, locking pins extending through the slide plate and engaging the film perforations, and means for oscillating the slide plate to move the film into and out of engagement with the locking pins.

1,390,248. FOLDING COUCH-BED. HARRY H. MEGARY, New York, N. Y. Filed Apr. 2, 1921. Serial No. 458,107. 8 Claims. (Cl. 5—49.)

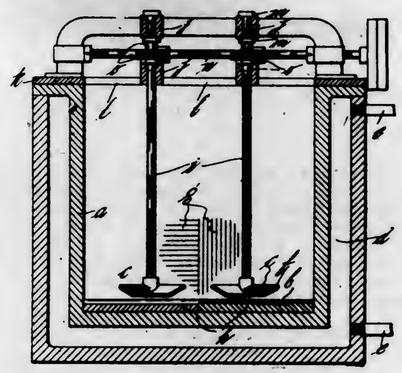
1. In a couch bed, a supporting frame having longitudinally extending tubular rods at its sides, an auxiliary couch bed section comprising transverse bars having eyes fulcrumed upon one of the longitudinally extending rods, relatively heavy wire rods connecting said bars, the free

ends of the traverse bars resting upon and engaging the opposite longitudinal tubular rod, and collars spaced



in pairs on said rods and engaging on opposite sides of the bars to hold them in place and prevent movement longitudinally of the frame.

1,390,249. PUNCTURE-CLOSING TREAD-STRIP. HENRY C. PRIVETT, Long Beach, Calif., assignor of one-half to Charles R. Privett, Burbank, Calif., three-sixteenths to Helen E. Privett and one-sixteenth to Hollis F. Privett, Long Beach, Calif. Filed Apr. 29, 1920. Serial No. 377,574. 5 Claims. (Cl. 152—13.)

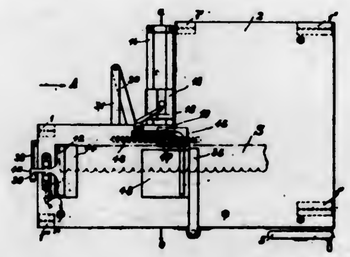


1. A tread strip adapted to be applied to an inner tube, said tread strip formed to be of even density throughout when the tube is deflated and be of unchanged density at its outer portion and of increased density at its inner portion when the tube is inflated.

1,390,250. X-RAY APPARATUS. MATIAS BALSERA RODRIGUEZ, London, England. Filed Sept. 18, 1919. Serial No. 324,697. 5 Claims. (Cl. 250—34.)

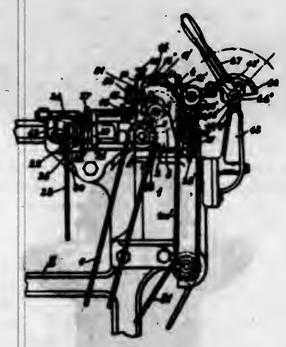
1. An X-ray apparatus for producing stereoscopic shadows of the object under examination directly upon a fluorescent screen wherein two rotating obturating disks are synchronously operated by a motor, substantially as described.

1,390,251. PROCESS AND APPARATUS FOR REFINING CHOCOLATE AND THE LIKE. WILLIAM CHRISTOPHER SCHÖPPNER, Astoria, N. Y. Filed July 2, 1920. Serial No. 393,630. 23 Claims. (Cl. 259—104.)



1. The method of refining chocolate and the like, which consists in rapidly and repeatedly driving the chocolate against roughened surfaces.

1,390,252. COLOR PHOTOGRAPHY. JOSEPH THOMAS SMITH, London, England. Filed May 15, 1918. Serial No. 234,753. 12 Claims. (Cl. 95—2.)

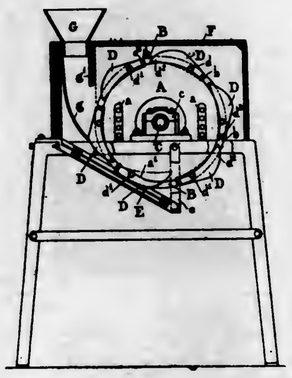


1. Process of forming a discriminative composite, color-screen suited to control a photographic monochrome, which process comprises laying colloid lines or areas with a fluid aqueous colored colloid on a base which is non-absorbent for aqueous preparations, but is generally adsorbent and absorbent for alcoholic and aromatic preparations, then after drying staining the base by a solution of a dye in a fluid which the base adsorbs; the color of the stain being broadly or generally antichromatic to the color in the aqueous colloid.

1,390,253. MACHINE FOR PILING FABRIC. ALOIS TSCHERNE, Rorschach, Switzerland. Filed June 22, 1920. Serial No. 390,971. 3 Claims. (Cl. 270—30.)

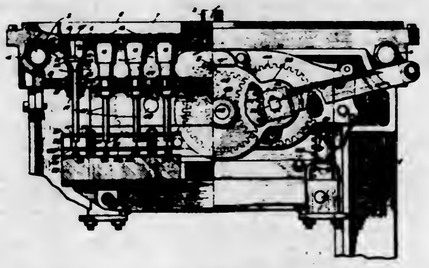
1. In a machine of the character set forth, in combination, a fabric supporter adapted to reciprocate in vertical direction and also in horizontal direction crosswise of the direction of fabric feed, a stationary fabric gripper, and a fabric looper adapted to reciprocate in horizontal direction lengthwise of the direction of fabric feed, and means for operating said parts in timed relation.

1,390,254. MACHINE FOR CUTTING EMBROIDERY. ALOIS TSCHERNE, Rorschach, Switzerland. Filed Oct. 16, 1920. Serial No. 417,435. 12 Claims. (Cl. 164—61.)



1. In a machine of the character described for cutting embroidery along its edge, in combination with the machine frame and a motor, circular cutting means adapted to be vertically rotated by said motor, gate members forming the intake for the fabric to be cut and located directly in front of said circular cutting means, a fold-preventing and fabric-feed facilitating nose on the lower one of said gate members, guide rolls, adapted to feed and guide the fabric to the circular cutter, two pairs of horizontally rotatable feed rollers, located in the rear of the circular cutter, the one of these roller pairs handling the waste fabric portion and the other the embroidered fabric and one roller of at least one of said roller pairs being swingingly arranged, controlling organs operatively connected to said guide rolls and adapted to be operated for controlling the fabric feed, a guide member for drawing away the cut-out embroidery portion from the said gate members and for lifting and twisting it, means for controlling the rotary speed of said feed rollers, and means in connection with the main drive coupling for instantaneously starting or stopping the machine.

1,390,255. CUFF-LINK, STUD, SOLITAIRE, TIE ORNAMENT, AND THE LIKE. WILFRED A. WILSON, London, England. Filed Mar. 19, 1921. Serial No. 453,589. 6 Claims. (Cl. 24—102.)

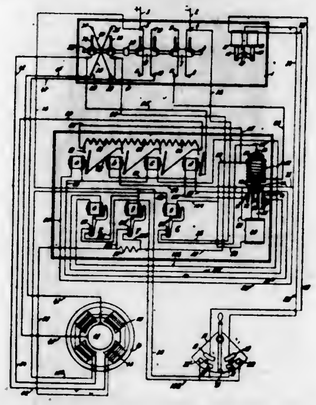


1. A device for use as a cuff link, stud, solitaire, tie ornament or similar fastening device formed in two parts adapted to be interlocked one with the other, both of said parts being connected together to form a cuff link and one of said parts being removable from the other to form part of a stud, and at least one of said parts having removably mounted thereon a carrier adapted to be attached to a tie to serve as a tie ornament.

1,390,256. MACHINE FOR GRANULATING MOIST MATERIAL. ERNEST WORSLEY, Blackley, England, assignor to G. F. Wilde Limited, Stockport, England, a Company of England. Filed Oct. 6, 1920. Serial No. 415,148. 3 Claims. (Cl. 83—14.)

1. In apparatus for granulating or mixing moist material the combination of two stationary rings of a disk rotating between them, a plurality of cups pivotally mounted on said disk to receive the material and means coöperating with the said disk to produce a granulating action.

1,390,257. CANDLE-MOLDING MACHINE. JOSEPH DILLMAN, Cincinnati, Ohio, assignor to Homan & Company, Cincinnati, Ohio, a Firm composed of Louis B. Homan and Joseph T. Homan. Filed Dec. 9, 1919. Serial No. 343,472. 10 Claims. (Cl. 18—27.)

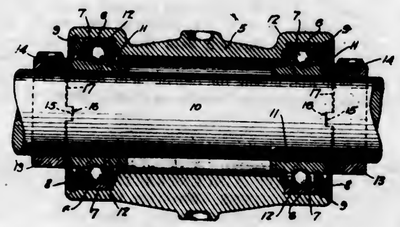


1. In a candle molding machine comprising a tubular mold member, a movable mold base adapted to seat within said mold member, a wick core and piercing needle concentrically engaging through said base and within said mold member, and unitary elevating means coöperating with said base and needle for independent needle elevating control and simultaneous needle and base elevating control.

1,390,258. STEPPED LENTICULAR SYSTEM FOR HEAT AND LIGHT CONCENTRATING TO BE USED ON FLYING-MACHINES. PHILIPPE GENESTE, Chateau de Chapeau Cornu, Vigneu, France. Filed June 8, 1920. Serial No. 387,505. 3 Claims. (Cl. 244—31.)

1. The combination with a plane of a flying machine, of a lenticular system having a focus beyond the plane applied thereto for forming a light and heat accumulator.

1,390,259. CONTROL FOR ELECTRIC MOTORS. OSCAR F. SHEPARD, Cincinnati, Ohio, assignor to The Warner Elevator Mfg. Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Mar. 2, 1917. Serial No. 151,889. 5 Claims. (Cl. 172—179.)



1. The combination of an electric motor, a motor field resistance, an electro-magnet operated switch device controlling said resistance, a motor starting switch having a movable switch element controlling the circuit to said electro-magnet switch device, and electro-magnetic means having its magnet windings in circuit with the motor for energizing said windings, thereby retarding the resistance reducing movement of said switch element.

1,390,260. SALTS OF AROMATIC HYDROXYL AMINS. NATHAN SULZBERGER, New York, N. Y. Filed Dec. 18, 1918. Serial No. 267,409. 4 Claims. (Cl. 23—24.)

1. As a new product, a salt of an aromatic hydroxylamin with an organic acid.

REISSUES.

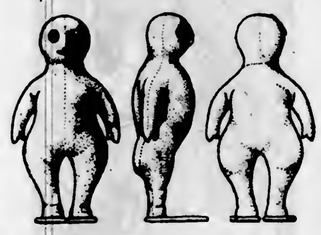
15,187. SHAFT-HANGER BEARING. HARRY R. REYNOLDS, New Britain, Conn., assignor to The Fafnir Bearing Company, New Britain, Conn., a Corporation of Connecticut. Filed Mar. 29, 1921. Serial No. 456,695. Original No. 1,326,892, dated Dec. 30, 1919, Serial No. 286,653, filed Apr. 1, 1919. 9 Claims. (Cl. 64—36.)

9. In a bearing box construction, a hollow tubular box having a cavity at one end for receiving a ball bearing, a unitary ball bearing comprising, two one-piece bearing rings having complementary raceways with balls therein holding said bearing rings in operative position, the outer bearing ring being of less width than the width of the recessed portion of the box, whereby a portion of the box will overstand and project beyond the same when the bearing is in place therein, the inner bearing ring having an extension at one side projecting beyond the outer bearing ring and on the same side as the overhanging portion of said box, a protector ring located between the overstanding part of the box and the projecting end of the inner bearing ring, and covering the space between said bearing rings, and means engageable with the extended portion of the inner bearing ring for rotating the same relatively to the outer bearing ring.

15,188. DESIGN FOR A DOLL. RUTH H. USHER, Brooklyn, N. Y. Filed Mar. 29, 1921. Serial No. 456,560. Term of patent 7 years. Original No. 57,025, dated Jan. 25, 1921, Serial No. 393,419, filed July 1, 1920, for 3½ years.

The ornamental design for a doll, substantially as shown.

15,189. RECORD AND REFERENCE BOOK. AUGUSTUS R. TOWERS, Richmond, Va. Filed July 19, 1921. Serial No. 485,965. Original No. 1,329,562, dated Feb. 3, 1920, Serial No. 301,587, filed June 3, 1919. 6 Claims. (Cl. 283—36.)



1. A record and reference book comprising 100 pairs of oppositely facing pages, each pair of pages being subdivided into ten groups of entry spaces and two groups of supplement or overflow entry spaces, the spaces on each page of a pair being arranged in five groups of original entry spaces and one group of supplement entry spaces, the entry spaces of all groups on a page being characterized by two like terminal digits, and the numbers distinguishing the original entry spaces on said page being

further characterized by the prefix of a digit which progresses numerically by groups from 0 to 9 for the groups on each pair of pages.

DESIGNS.

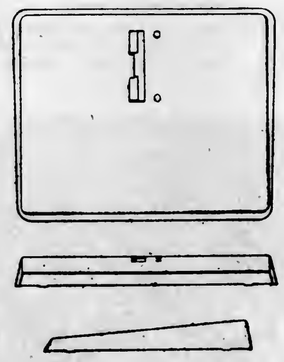
58,863. DOLL. LAURA E. ALEXANDER, Indianapolis, Ind. Filed Nov. 17, 1920. Serial No. 424,796. Term of patent 7 years.

The ornamental design for a doll as shown.

58,864. BOUDOIR-LAMP OR THE LIKE. JOSEPH S. APFEL, New York, N. Y. Filed Jan. 26, 1921. Serial No. 440,240. Term of patent 7 years.

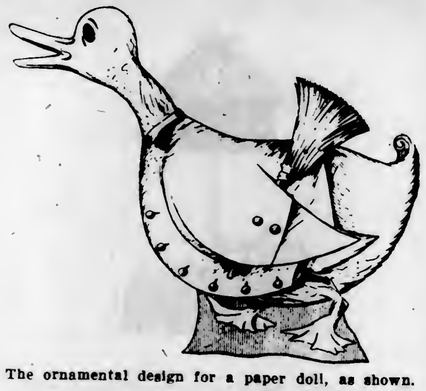
The ornamental design for a boudoir lamp or the like, as shown.

58,865. BOUDOIR-LAMP. JOSEPH S. APFEL, New York, N. Y. Filed Jan. 29, 1921. Serial No. 441,053. Term of patent 7 years.



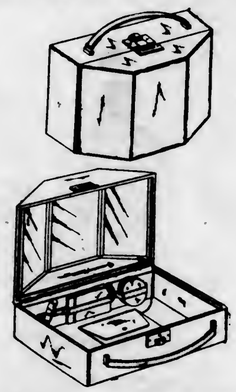
The ornamental design for a boudoir lamp, as shown.

58,866. SPINNING-TOP. SETRAK ABATURIAN, New York, N. Y. Filed May 11, 1920. Serial No. 380,668. Term of patent 7 years.



The ornamental design for a spinning top, as shown.

58,867. CALENDAR-STAND BASE. ROBERT H. BAXTER, Brooklyn, N. Y., assignor to Defiance Manufacturing Company, a Corporation of Massachusetts. Filed May 24, 1921. Serial No. 472,267. Term of patent 14 years.



The ornamental design for a calendar stand base, as shown.

58,868. PAPER DOLL. FLORA BENSON, Angleton, Tex. Filed June 30, 1920. Serial No. 393,189. Term of patent 14 years.

The ornamental design for a paper doll, as shown.

58,869. VANITY-CASE. MAX BERKOWITZ, Richmond Hill, N. Y. Filed Jan. 10, 1921. Serial No. 436,372. Term of patent 3½ years.

The ornamental design for a vanity case, substantially as shown.

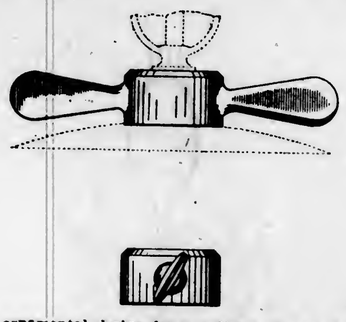
58,870. FABRIC USED IN UPHOLSTERING AND DECORATING. CHARLES LAURENT GAETAN BIANCHINI, Paris, France. Filed Jan. 29, 1921. Serial No. 441,048. Term of patent 7 years.

The ornamental design for fabric used in upholstering and decorating, as shown.

58,871. FABRIC USED IN UPHOLSTERING AND DECORATING. CHARLES LAURENT GAETAN BIANCHINI, Paris, France. Filed Jan. 29, 1921. Serial No. 441,049. Term of patent 7 years.

The ornamental design for fabric used in upholstering and decorating, as shown.

58,872. FABRIC USED IN UPHOLSTERING AND DECORATING. CHARLES LAURENT GAETAN BIANCHINI, Paris, France. Filed Jan. 29, 1921. Serial No. 441,050. Term of patent 7 years.

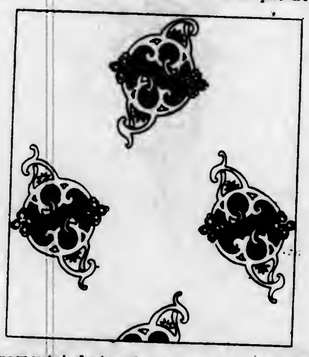


The ornamental design for fabric used in upholstering and decorating, as shown.

58,873. FABRIC USED IN UPHOLSTERING AND DECORATING. CHARLES LAURENT GAETAN BIANCHINI, Paris, France. Filed Jan. 29, 1921. Serial No. 441,051. Term of patent 7 years.

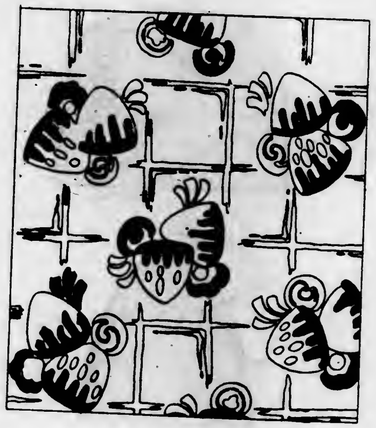
The ornamental design for fabric used in upholstering and decorating, as shown.

58,874. RADIATOR-CAP. OTTO E. BLACK, Dayton, Ohio, assignor to The Lucas-Miner Tool and Production Company, Dayton, Ohio, a Corporation of Ohio. Filed June 7, 1921. Serial No. 475,744. Term of patent 7 years.



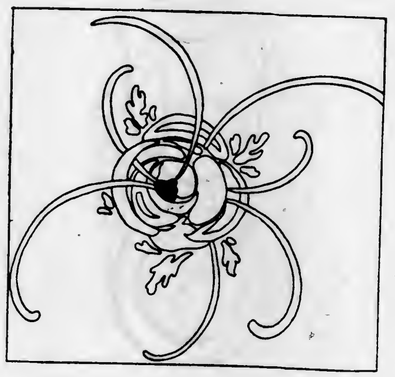
The ornamental design for a radiator cap as shown.

58,875. FINGER-RING. ERNEST E. BROSS, Detroit, Mich. Filed May 28, 1921. Serial No. 473,413. Term of patent 14 years.



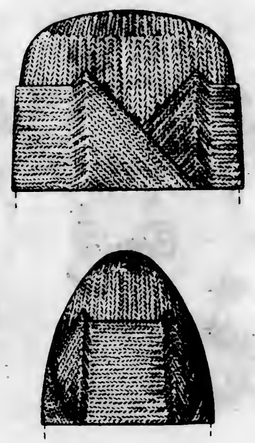
The ornamental design for a finger ring, as shown.

58,876. BROCADE FABRIC. JAMES H. BUNTING, New York, N. Y., assignor to Susquehanna Silk Mills, New York, N. Y., a Corporation of New York. Filed Apr. 20, 1921. Serial No. 463,045. Term of patent 3½ years.



The ornamental design for a brocade fabric, as shown.

58,877. TEXTILE FABRIC. JAMES H. BUNTING, New York, N. Y., assignor to Susquehanna Silk Mills, New York, N. Y., a Corporation of New York. Filed Apr. 20, 1921. Serial No. 463,046. Term of patent 3½ years.



The ornamental design for a textile fabric, as shown.

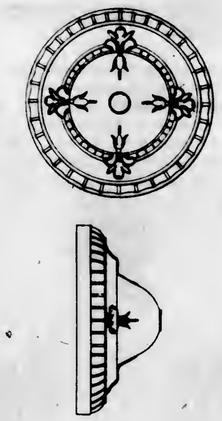
58,878. TEXTILE FABRIC. JAMES H. BUNTING, New York, N. Y., assignor to Susquehanna Silk Mills, New York, N. Y., a Corporation of New York. Filed Apr. 20, 1921. Serial No. 463,048. Term of patent 3½ years.

The ornamental design for a textile fabric, as shown.

58,879. KNITTED CAP. DANIEL F. BYRNES, Delavan, Wis., assignor to Bradley Knitting Company, Delavan, Wis., a Corporation of Wisconsin. Filed June 8, 1921. Serial No. 476,099. Term of patent 14 years.

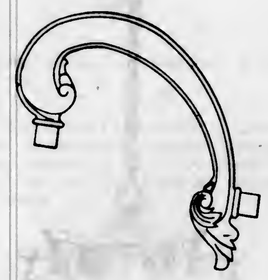
The ornamental design for a knitted cap, as shown.

58,880. LAMP-GLOBE. CHARLES A. CAMPBELL, New York, N. Y. Filed Apr. 3, 1920. Serial No. 371,161. Term of patent 7 years.



The ornamental design for a lamp globe, as shown.

58,881. COMBINED SPOON AND FORK. JOSEPH DOMINGO Y CARELLAS, Nice, France. Filed May 31, 1921. Serial No. 473,901. Term of patent 14 years.

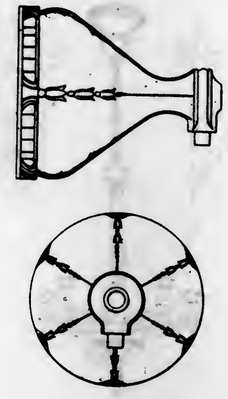


The ornamental design for a combined spoon and fork, as shown.

58,882. BACK PLATE OF A WALL-BRACKET FOR LIGHTING-FIXTURES. HARRY COHN, Brooklyn, N. Y., assignor to Hygrade Lighting Fixture Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Jan. 13, 1921. Serial No. 437,086. Term of patent 7 years.

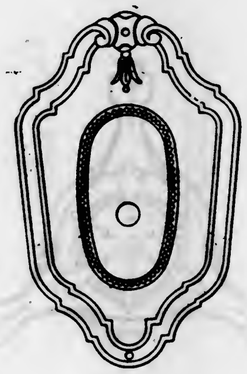
The ornamental design for a back plate of a wall bracket for lighting fixtures, as shown.

58,883. BRACKET-ARM FOR LIGHTING-FIXTURES. HARRY COHN, Brooklyn, N. Y., assignor to Hygrade Lighting Fixture Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Jan. 13, 1921. Serial No. 437,087. Term of patent 7 years.



The ornamental design for a bracket arm for lighting fixtures, as shown.

58,884. LIGHTING-FIXTURE UNIT. HARRY COHN, Brooklyn, N. Y., assignor to Hygrade Lighting Fixture Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Jan. 13, 1921. Serial No. 437,088. Term of patent 7 years.

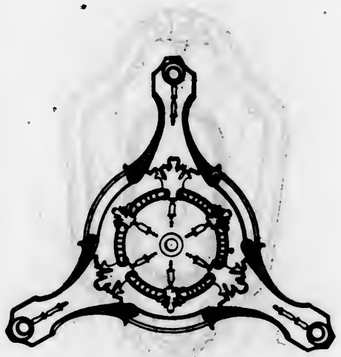


The ornamental design for a lighting fixture unit, as shown.

58,885. COMBINED WALL-BRACKET AND SOCKET-COVER FOR LIGHTING-FIXTURES. HARRY COHN, Brooklyn, N. Y., assignor to Hygrade Lighting Fixture Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Jan. 13, 1921. Serial No. 437,089. Term of patent 7 years.

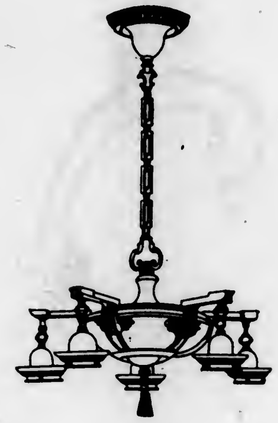
The ornamental design for a combined wall-bracket and socket cover for lighting fixtures, as shown.

58,886. BACK PLATE OF A WALL-BRACKET FOR LIGHTING-FIXTURES. HARRY COHN, Brooklyn, N. Y., assignor to Hygrade Lighting Fixture Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Jan. 13, 1921. Serial No. 437,090. Term of patent 7 years.



The ornamental design for a back plate of a wall bracket for lighting fixtures, as shown.

58,887. LIGHTING-FIXTURE UNIT. HARRY COHN, Brooklyn, N. Y., assignor to Hygrade Lighting Fixture Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Jan. 13, 1921. Serial No. 437,091. Term of patent 7 years.



The ornamental design for a lighting fixture unit, as shown.

58,888. THREE-WAY PLATE FOR LIGHTING-FIXTURES. HARRY COHN, Brooklyn, N. Y., assignor to Hygrade Lighting Fixture Corporation. Brooklyn, N. Y., a Corporation of New York. Filed Jan. 13, 1921. Serial No. 437,092. Term of patent 7 years.

The ornamental design for a three way plate for lighting fixtures, a. shown.

58,889. LIGHTING-FIXTURE UNIT. HARRY COHN, Brooklyn, N. Y., assignor to Hygrade Lighting Fixture Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Jan. 13, 1921. Serial No. 437,093. Term of patent 7 years.

The ornamental design for a lighting fixture unit, as shown.

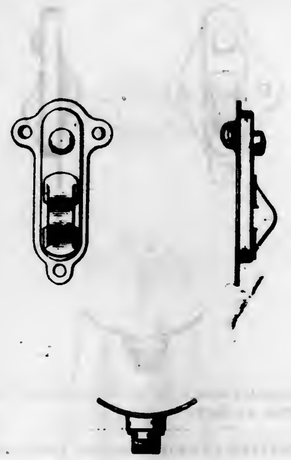
58,890. WALL-PLATE OF A BRACKET FOR A LIGHTING-FIXTURE. HARRY COHN, Brooklyn, N. Y., assignor to Hygrade Lighting Fixture Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Jan. 13, 1921. Serial No. 437,094. Term of patent 7 years.

The ornamental design for a wall plate of a bracket for a lighting fixture, as shown.

58,891. WALL-PLATE FOR A LIGHTING-FIXTURE. HARRY COHN, Brooklyn, N. Y., assignor to Hygrade Lighting Fixture Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Jan. 13, 1921. Serial No. 437,095. Term of patent 7 years.

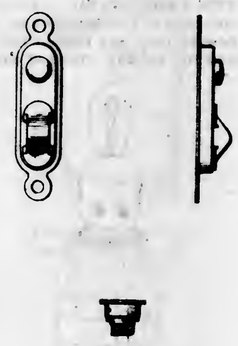
The ornamental design for a wall plate for a lighting fixture, as shown.

58,892. LIGHTING-FIXTURE UNIT. HARRY COHN, Brooklyn, N. Y., assignor to Hygrade Lighting Fixture Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Jan. 13, 1921. Serial No. 437,096. Term of patent 7 years.



The ornamental design for a lighting fixture unit, as shown.

58,893. ANKLET. REGINA T. DRAGER, Seattle, Wash., assignor of one-half to Charles A. Shuart, King county, Wash. Filed Feb. 15, 1921. Serial No. 445,268. Term of patent 3½ years.



The ornamental design for an anklet, as shown.

58,894. CONTACT DEVICE FOR PORTABLE ELECTRIC LIGHTS. JOHN T. DRUFVA, Long Meadow, Mass., assignor to Henry Hyman & Co., Inc., New York, N. Y., a Corporation of New York. Filed Jan. 14, 1920. Serial No. 351,481. Term of patent 14 years.

The ornamental design for a contact device for portable electric lights, as shown.

58,895. CONTACT DEVICE FOR PORTABLE ELECTRIC LIGHTS. JOHN T. DRUFVA, Long Meadow, Mass., assignor to Henry Hyman & Co. Inc., New York, N. Y., a Corporation of New York. Filed Jan. 14, 1920. Serial No. 351,482. Term of patent 14 years.

The ornamental design for a contact device for portable electric lights, as shown.

58,896. CONTACT DEVICE FOR PORTABLE ELECTRIC LIGHTS. JOHN T. DRUYVA, Long Meadow, Mass., assignor to Henry Hyman & Co. Inc., New York, N. Y., a Corporation of New York. Filed Jan. 14, 1920. Serial No. 351,483. Term of patent 14 years.

The ornamental design for a contact device for portable electric lights, as shown.

58,897. TEXTILE FABRIC. ADOLPHE EISELE, New York, N. Y., assignor to Susquehanna Silk Mills, New York, N. Y., a Corporation of New York. Filed Apr. 20, 1921. Serial No. 463,053. Term of patent 3½ years.

The ornamental design for a textile fabric, as shown.

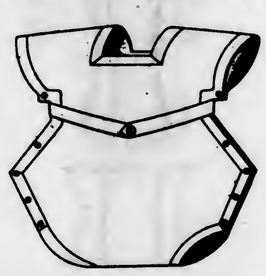
58,898. ELECTRIC-LAMP STAND. CLAIR H. ELLIOTT and ARTHUR SUPANSICK, San Diego, Calif., assignors of one-third to Edward Loos, San Diego, Calif. Filed Jan. 13, 1921. Serial No. 437,104. Term of patent 7 years.

The ornamental design for an electric lamp stand, as shown.

58,899. ORNAMENT FOR A RADIATOR-CAP. CLARENCE E. ELLIOTT and ORVILLE O. NICHOLS, Kansas City, Mo. Filed June 20, 1921. Serial No. 479,132. Term of patent 3½ years.

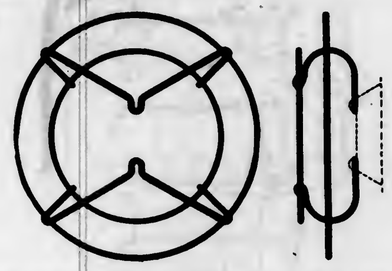
The ornamental design for an ornament for a radiator cap, as shown.

58,900. DOLL-WIG. OTTO FOLLENDER, East Islip, N. Y. Filed Nov. 19, 1920. Serial No. 425,285. Term of patent 3½ years.



The ornamental design for a doll-wig, as shown.

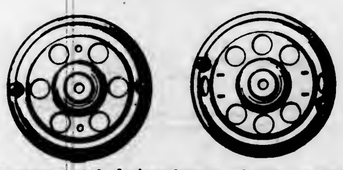
58,901. STATUETTE. FRANK J. GRISSLER, San Francisco, Calif. Filed Sept. 23, 1920. Serial No. 412,360. Term of patent 3½ years.



The ornamental design for a statuette, as shown.

58,902. ROMPERS. RUBY GILBERT, Etiwanda, Calif. Filed Oct. 5, 1920. Serial No. 414,877. Term of patent 7 years.

The ornamental design for a romper, as shown.



58,903. MOTOR-FAN GUARD. ALFRED C. GILBERT, New Haven, Conn., assignor to The A. C. Gilbert Company, New Haven, Conn., a Corporation of Connecticut. Filed Apr. 27, 1921. Serial No. 465,007. Term of patent 14 years.

The ornamental design for a motor fan guard, substantially as shown.

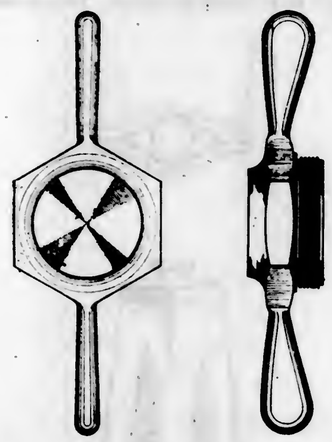
58,904. ELECTRIC-MOTOR CASING. ALFRED C. GILBERT, New Haven, Conn., assignor to The A. C. Gilbert Company, New Haven, Conn., a Corporation of Connecticut. Filed Apr. 27, 1921. Serial No. 465,008. Term of patent 14 years.

The ornamental design for an electric motor casing, substantially as shown.

58,905. POWDER-BOX. JOHN W. HARRINGTON, Houston, Tex. Filed June 14, 1920. Serial No. 389,027. Term of patent 14 years.

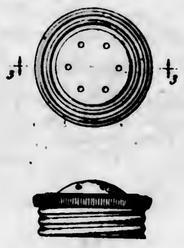
The ornamental design for a powder box as shown.

58,906. TALCUM-POWDER BOX. EDMUND HOFFMAN, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Jan. 17, 1921. Serial No. 438,021. Term of patent 14 years.



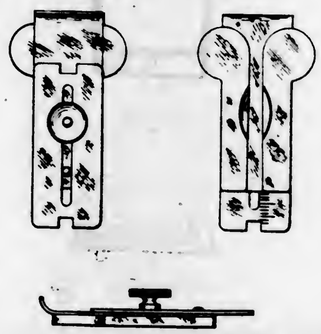
The ornamental design for a talcum powder box, as shown.

58,907. RADIATOR FOR AN AUTOMOBILE. ALBERT OWEN HOLTOM and JAMES B. CROCKETT, New York, N. Y. Filed Feb. 17, 1920. Serial No. 359,351. Term of patent 7 years.



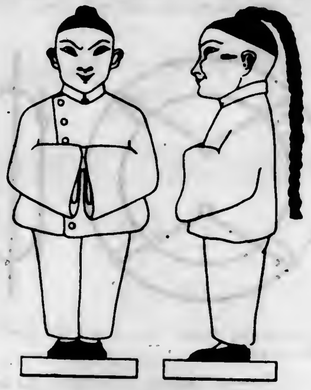
The ornamental design for a radiator for an automobile as shown and described.

58,908. RADIATOR-CAP. ROBERT H. HUMMERT, Dayton, Ohio. Filed May 16, 1921. Serial No. 470,015. Term of patent 14 years.



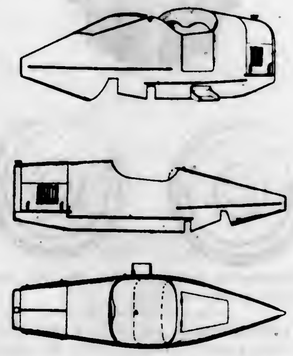
The ornamental design for a radiator cap, as shown.

58,909. POWDER-CONTAINER TOP. FRANK S. HYATT, Brooklyn, N. Y. Filed Feb. 8, 1921. Serial No. 443,476. Term of patent 3½ years.



The ornamental design for a powder container top, as shown.

58,910. TEMPLE-GAGE. WILLIAM A. JACKSON, Binghamton, N. Y. Filed Mar. 14, 1921. Serial No. 452,334. Term of patent 14 years.

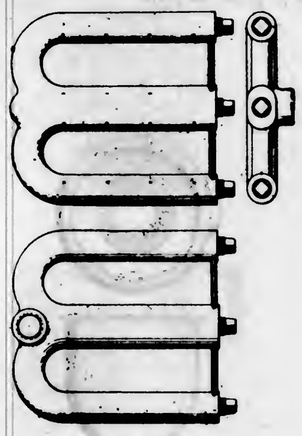


The ornamental design for a temple gage, as shown.

58,911. STATUE. EDWARD J. JEWELL, Chicago, Ill. Filed Feb. 23, 1921. Serial No. 447,328. Term of patent 3½ years.

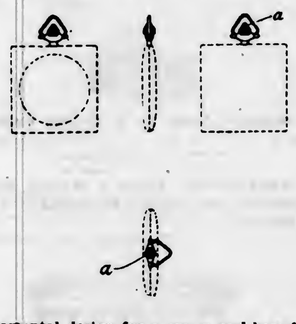
The ornamental design for a statue, as shown.

58,912. AUTOMOBILE-BODY. ALBERT R. ZWEBELL, Milwaukee, Wis., assignor to Bub Body Corporation, Milwaukee, Wis., a Corporation of Wisconsin. Filed Jan. 28, 1921. Serial No. 440,816. Term of patent 3½ years.



The ornamental design for an automobile body, as shown.

58,913. TEXTILE FABRIC. CLARA KATZ, New York, N. Y., assignor to Susquehanna Silk Mills, New York, N. Y., a Corporation of New York. Filed Apr. 20, 1921. Serial No. 463,057. Term of patent 3½ years.

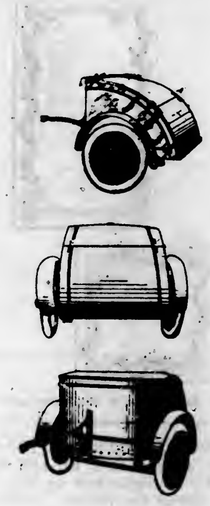


The ornamental design for a textile fabric as shown.

58,914. GAS-BURNER. HARRY E. KERR and WILLIAM J. BARBER, Cleveland, Ohio, assignors to Cleveland Gas Burner & Appliance Co., Cleveland, Ohio. Filed May 26, 1919. Serial No. 299,987. Term of patent 14 years.

The ornamenal design for a gas burner, as shown.

58,915. CROWN AND BOW FOR WATCHCASES. ISIDOR KOKET, New York, N. Y. Filed Aug. 25, 1920. Serial No. 406,027. Term of patent 3½ years.



The ornamental design for a crown and bow for watchcases as shown.

58,916. FRONT OF A SIGNAL-LENS. OSCAR KROEHLE, Lakewood, Ohio. Filed Jan. 17, 1921. Serial No. 438,010. Term of patent 14 years.

The ornamental design, substantially as shown, for the front of a signal-lens.

58,917. TRAILER FOR AUTOMOBILE VEHICLES. JEAN HENRI LABOURDETTE, Courbevoie, France. Filed July 30, 1920. Serial No. 400,239. Term of patent 14 years.

The ornamental design for a trailer for automobile vehicles, as shown.

58,918. TRAILER FOR AUTOMOBILE VEHICLES. JEAN HENRI LABOURDETTE, Courbevoie, France. Filed July 30, 1920. Serial No. 400,240. Term of patent 14 years.

The ornamental design for a trailer for automobile vehicles, as shown.

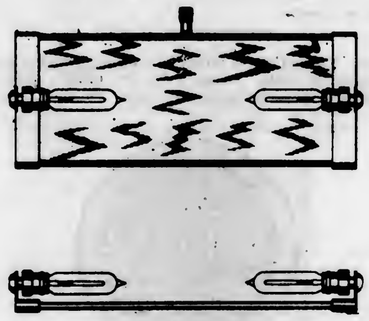
58,919. MEDICINE-CARTON. EDWARD ELSWORTH LEEPER, Council Bluffs, Iowa. Filed Jan. 3, 1921. Serial No. 434,812. Term of patent 3½ years.

The ornamental design for a medicine carton, as shown.

58,920. SHELL SPECTACLE-FRAME. THOMAS LEYTHAM, Rochester, N. Y., assignor to E. Kirstein Sons Company, Rochester, N. Y., a Corporation of New York. Filed Aug. 20, 1920. Serial No. 404,919. Term of patent 14 years.

The ornamenal design for a shell spectacle frame, as shown.

58,921. BUTTON. ARTHUR M. LIBBY, New York, N. Y. Filed Apr. 2, 1920. Serial No. 370,895. Term of patent 14 years.



The ornamental design for a button as shown.

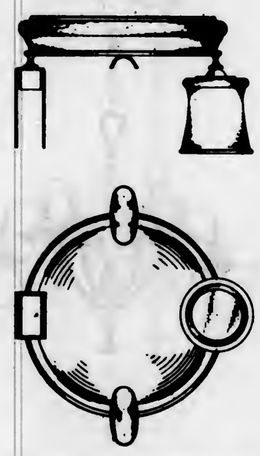
58,922. WASHING-MACHINE CASING. NATHANIEL LOMBARD, Worcester, Mass., assignor to Lombard, White Company, Worcester, Mass., a Corporation of Massachusetts. Filed Aug. 14, 1920. Serial No. 403,614. Term of patent 14 years.

The ornamental design for a washing machine casing, as shown.

58,923. REFLECTOR. JAMES S. MASSEY, Toledo, Ohio. Filed Apr. 18, 1921. Serial No. 462,442. Term of patent 7 years.

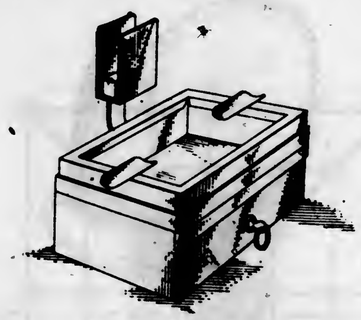
The ornamental design of a reflector as shown.

58,924. PHONOGRAPH-CABINET. WILLIAM EDGAR MIELDING, Sr., New Orleans, La. Filed Apr. 5, 1921. Serial No. 458,766. Term of patent 14 years.



The ornamental design for a phonograph cabinet, as shown.

58,925. ASH-TRAY. GUSTAVE M. MINTON, New York, N. Y. Filed Oct. 21, 1919. Serial No. 332,301. Term of patent 3½ years.



The ornamental design for an ash tray, as shown.

58,926. SMOKER'S TRAY. GUSTAVE M. MINTON, New York, N. Y. Filed Oct. 21, 1919. Serial No. 332,311. Term of patent 3½ years.

The ornamental design for a smoker's tray, as shown.

58,927. CIGARETTE-HOLDER AND ASH-TRAY. GUSTAVE M. MINTON, New York, N. Y. Filed Oct. 21, 1919. Serial No. 332,312. Term of patent 3½ years.

The ornamental design for a cigarette holder and ash tray, as shown.

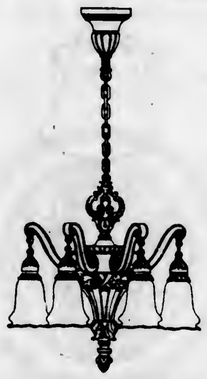
58,928. EMBLEM, BADGE, OR SIMILAR ARTICLE TO BE APPLIED TO TIES, SHIRTS, AND SIMILAR ARTICLES OF WEARING-APPAREL. WILLIAM H. MOORE, Jr., Little Rock, Ark. Filed Sept. 19, 1919. Serial No. 325,026. Term of patent 7 years.

The ornamental design for an emblem, badge, or similar article to be applied to ties, shirts, and similar articles of wearing apparel, as shown.

58,929. GARMENT. FLORENCE NESMITH, Tewksbury, Mass. Filed Jan. 14, 1921. Serial No. 437,365. Term of patent 3½ years.

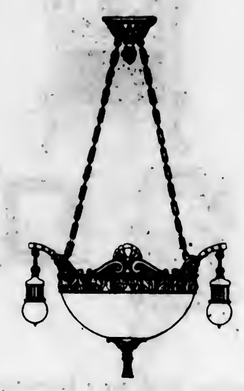
The ornamental design for a garment, as shown.

58,930. BATH-MITTEN. CONRAD NEUGEBAUER, Columbus, Ohio. Filed Jan. 8, 1921. Serial No. 435,994. Term of patent 14 years.



The ornamental design for a bath mitten, as shown.

58,931. CHANDELIER. ISIDOR NEWLAND, New York, N. Y., assignor to Eclipse Light Company, a Corporation of New York. Filed Dec. 24, 1920. Serial No. 433,066. Term of patent 3½ years.

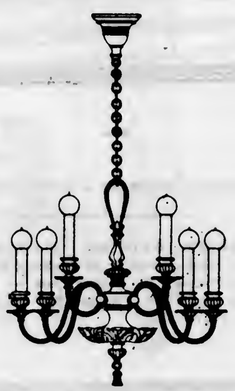


The ornamental design for a chandelier, as shown.

58,932. CHANDELIER. ISIDOR NEWLAND, New York, N. Y., assignor to Eclipse Light Company, a Corporation of New York. Filed Dec. 24, 1920. Serial No. 433,067. Term of patent 3½ years.

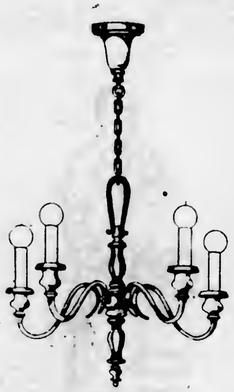
The ornamental design for a chandelier, as shown.

58,933. CHANDELIER. ISIDOR NEWLAND, New York, N. Y., assignor to Eclipse Light Company, a Corporation of New York. Filed Dec. 24, 1920. Serial No. 433,068. Term of patent 3½ years.



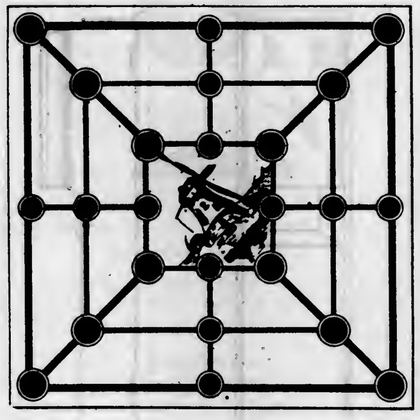
The ornamental design for a chandelier, as shown.

58,934. CHANDELIER. ISIDOR NEWLAND, New York, N. Y., assignor to Eclipse Light Company, a Corporation of New York. Filed Dec. 24, 1920. Serial No. 433,069. Term of patent 3½ years.



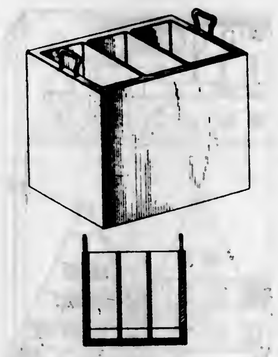
The ornamental design for a chandelier, as shown.

58,935. CHANDELIER. ISIDOR NEWLAND, New York, N. Y., assignor to Eclipse Light Company, a Corporation of New York. Filed Dec. 24, 1920. Serial No. 433,070. Term of patent 3½ years.



The ornamental design for a chandelier, as shown.

58,936. CHANDELIER. ISIDOR NEWLAND, New York, N. Y., assignor to Eclipse Light Company, a Corporation of New York. Filed Dec. 24, 1920. Serial No. 433,071. Term of patent 3½ years.

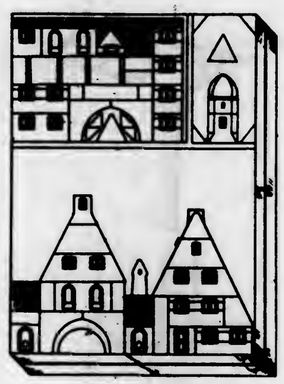


The ornamental design of a chandelier, as shown.

58,937. GAME-BOARD. ANDREW OEHMANN, Washington, D. C. Filed Oct. 25, 1920. Serial No. 419,545. Term of patent 7 years.

The ornamental design for a game board, as shown.

58,938. ELECTRIC-STORAGE-BATTERY CONTAINER. RICHARD B. OWEN, Washington, D. C. Filed Apr. 1, 1921. Serial No. 457,824. Term of patent 14 years.

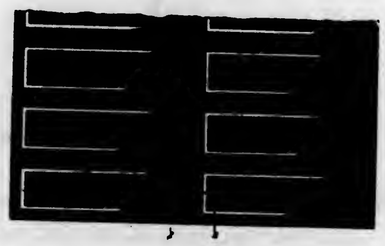


The ornamental design for an electric storage battery container substantially as shown.

58,939. PANEL FOR DENTAL APPLIANCES. OSCAR H. PIEPER and ALPHONSE F. PIEPER, Rochester, N. Y. Filed Oct. 22, 1920. Serial No. 418,834. Term of patent 14 years.

The ornamental design for a panel for dental appliances, as shown.

58,940. BOX FOR A SET OF BUILDING BLOCKS OR SIMILAR ARTICLES. BERNARD REICHENBACH, New York, N. Y. Filed Dec. 8, 1920. Serial No. 429,286. Term of patent 7 years.



The ornamental design for a box for a set of building blocks or similar article, as shown.

58,941. RUBBER MAT. THOMAS G. RICHARDS, Brookfield, Mass., assignor to Quabaug Rubber Company, Brookfield, Mass., a Corporation of Massachusetts. Filed Oct. 23, 1919. Serial No. 332,839. Term of patent 14 years.

The ornamental design for a rubber mat, as shown.

58,942. RUBBER MATTING. THOMAS G. RICHARDS, Brookfield, Mass., assignor to Quabaug Rubber Company, Brookfield, Mass., a Corporation of Massachusetts. Filed Oct. 23, 1919. Serial No. 332,840. Term of patent 14 years.

The ornamental design for rubber matting, as shown.

58,943. STATUETTE. ANNIE RIGOTTY, Los Angeles, Calif. Filed Jan. 10, 1921. Serial No. 436,370. Term of patent 3½ years.

The ornamental design for a statuette, as shown.

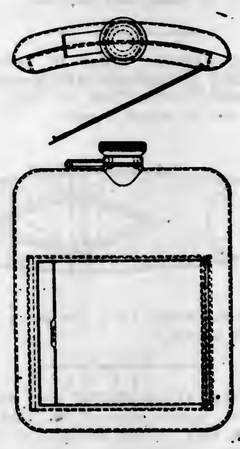
58,944. COMBINED HEAD AND NECK COVERING. SAMUEL ROSENBERG, Milwaukee, Wis., assignor to Reliable Knitting Works, Milwaukee, Wis., a Corporation of Wisconsin. Filed Feb. 2, 1920. Serial No. 355,760. Term of patent 3½ years.

The ornamental design for a combined head and neck covering, as shown.

58,945. BADGE, BUTTON, PIN, BROOCH, OR EMBLEM. LEE R. SCARBOROUGH, Seminary Hill, Tex., assignor to Lloyd C. Kelly, Pineville, Ky. Filed Aug. 21, 1920. Serial No. 405,206. Term of patent 7 years.

The ornamental design for a badge, button, pin, brooch, or emblem, as shown.

58,946. FOOTREST. THEODORE P. SCHOTT, Panama City, Fla. Filed June 5, 1920. Serial No. 386,819. Term of patent 14 years.

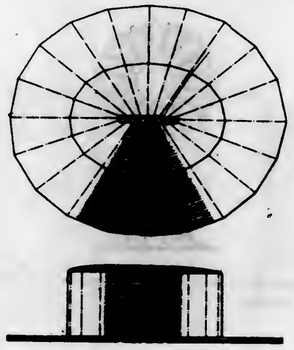


The ornamental design for a footrest as shown.

58,947. ROSETTE FOR LIGHTING-FIXTURES. JOHN WILLIAM SCHULZE, Providence, R. I., assignor to Alfred Vester Sons, Inc., Providence, R. I., a Corporation of Rhode Island. Filed Jan. 17, 1921. Serial No. 438,027. Term of patent 7 years.

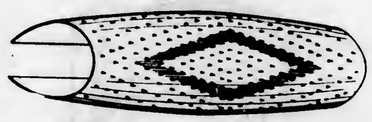
The ornamental design for a rosette for lighting fixtures, as shown.

58,948. MEDICINAL CONTAINER. HARRY D. SEBRING, New York, N. Y. Filed Jan. 17, 1921. Serial No. 438,034. Term of patent 3½ years.



The ornamental design for a medicinal container, as shown.

58,949. BUTTON, BADGE, OR ARTICLE OF SIMILAR NATURE. IGNATIUS SMITH, New York, N. Y., assignor to Bureau of The Holy Name Society, New York, N. Y. Filed June 19, 1920. Serial No. 390,257. Term of patent 14 years.



The ornamental design for a button, badge, or article of similar nature, as shown.

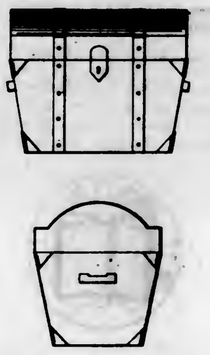
58,950. STRAW-WEAVE AS APPLIED TO A STRAW HAT. JACOB STEBE, Chicago, Ill. Filed Oct. 14, 1920. Serial No. 417,059. Term of patent 3½ years.

The ornamental design for a straw weave as applied to a straw hat, as shown and described.

58,951. TIRE-PATCH. EDGAR M. STEELL, Spokane, Wash., assignor to Porcupine Manufacturing Company, Spokane, Wash. Filed June 9, 1919. Serial No. 302,999. Term of patent 7 years.

The ornamental design for a tire patch, substantially as shown and described.

58,952. NIPPLE ATTACHMENT FOR AUTOMOBILE-RADIATORS. ROBERT STIRLING, Jr., East Chicago, Ind. Filed May 9, 1921. Serial No. 468,178. Term of patent 14 years.



The ornamental design for a nipple attachment for automobile radiators, as shown.

58,953. TABLE. JOHN ARVID SWANSON, Omaha, Nebr. Filed Feb. 2, 1921. Serial No. 442,005. Term of patent 7 years.

The ornamental design for a table, as shown.

58,954. CANDY-BOX. BASIL M. TAIT, Denver, Colo. Filed Jan. 11, 1921. Serial No. 436,575. Term of patent 14 years.

The ornamental design for a candy box as shown.

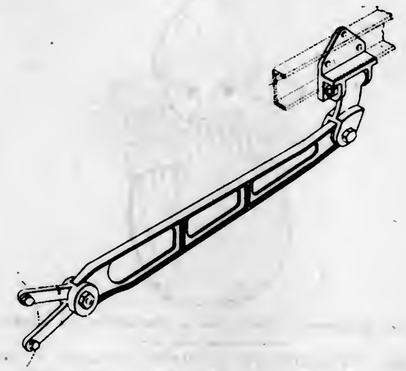
58,955. HUMIDOR FOR CIGARS. GEORGE TEASDALE, Kansas City, Mo., assignor to Louis Lachs, Kansas City, Mo. Filed Jan. 2, 1920. Serial No. 349,068. Term of patent 3½ years.

The ornamental design for a humidor for cigars, as shown.

58,956. WEDDING-RING. CHARLES LINCOLN TROUT, New York, N. Y. Filed Mar. 11, 1921. Serial No. 451,584. Term of patent 14 years.

The ornamental design for a wedding ring as shown.

58,957. KNITTED CAP. WALLACE B. TYRRELL, Delavan, Wis., assignor to Bradley Knitting Company, Delavan, Wis., a Corporation of Wisconsin. Filed June 8, 1921. Serial No. 476,098. Term of patent 14 years.

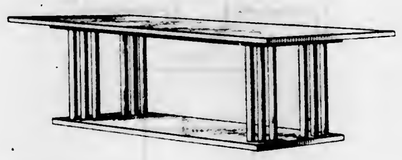


The ornamental design for a knitted cap, as shown.

58,958. FORM FOR BOW-TIES. SANDFORD R. WADDELL, Toronto, Ontario, Canada. Filed Feb. 28, 1921. Serial No. 448,614. Term of patent 14 years.

The ornamental design for a form for bow ties, as shown.

58,959. RADIUS-ROD FOR VEHICLES. LOUIS C. WENDLAND, Oakland, Calif. Filed Apr. 21, 1921. Serial No. 463,401. Term of patent 7 years.

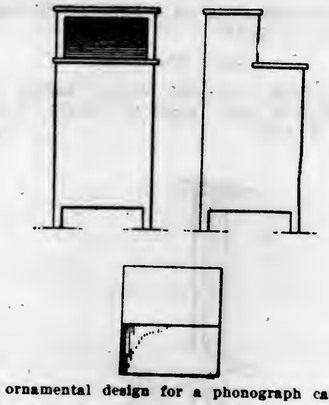


The ornamental design for a radius rod for vehicles, substantially as shown.

58,960. CHAIR. URQUHART WILCOX, Buffalo, N. Y. Filed Aug. 18, 1920. Serial No. 404,431. Term of patent 3½ years.

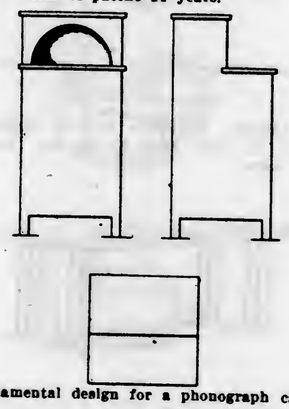
The ornamental design for a chair, as shown.

58,961. TABLE. URQUHART WILCOX, Buffalo, N. Y. Filed Aug. 18, 1920. Serial No. 404,433. Term of patent 3½ years.



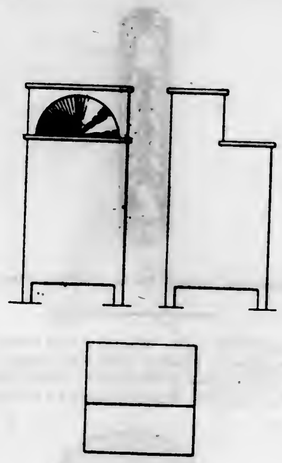
The ornamental design for a table, as shown.

58,962. PINCUSHION. MAX J. WILLMANN, Milwaukee, Wis. Filed Mar. 14, 1921. Serial No. 452,813. Term of patent 3½ years.



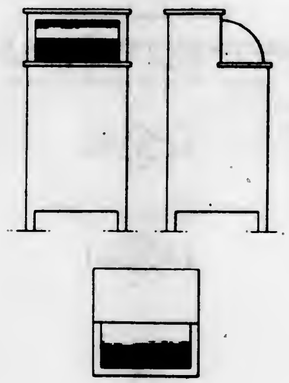
The ornamental design for a pincushion, as shown.

58,963. PHONOGRAPH - CABINET. CHARLES T. WITTSTEIN, Newark, N. J. Filed Apr. 1, 1921. Serial No. 457,816. Term of patent 14 years.



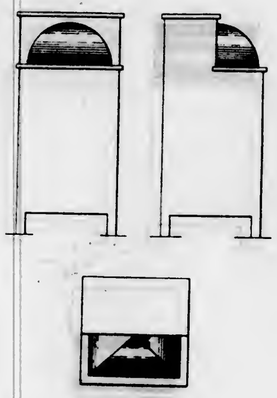
The ornamental design for a phonograph cabinet, as shown.

58,964. PHONOGRAPH - CABINET. CHARLES T. WITTSTEIN, Newark, N. J. Filed Apr. 1, 1921. Serial No. 457,817. Term of patent 14 years.



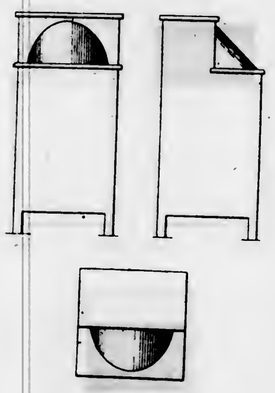
The ornamental design for a phonograph cabinet, as shown.

58,965. PHONOGRAPH - CABINET. CHARLES T. WITTSTEIN, Newark, N. J. Filed Apr. 1, 1921. Serial No. 457,818. Term of patent 14 years.



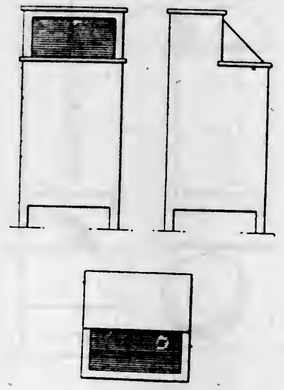
The ornamental design for a phonograph cabinet, as shown.

58,966. PHONOGRAPH - CABINET. CHARLES T. WITTSTEIN, Newark, N. J. Filed Apr. 1, 1921. Serial No. 457,819. Term of patent 14 years.



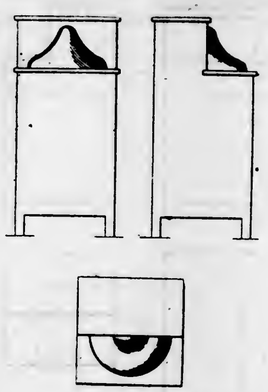
The ornamental design for a phonograph cabinet as shown.

58,967. PHONOGRAPH - CABINET. CHARLES T. WITTSTEIN, Newark, N. J. Filed Apr. 1, 1921. Serial No. 457,820. Term of patent 14 years.



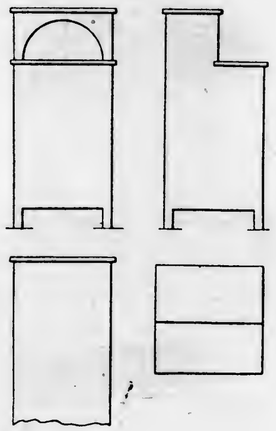
The ornamental design for a phonograph cabinet, as shown.

58,968. PHONOGRAPH - CABINET. CHARLES T. WITTSTEIN, Newark, N. J. Filed Apr. 1, 1921. Serial No. 457,821. Term of patent 14 years.



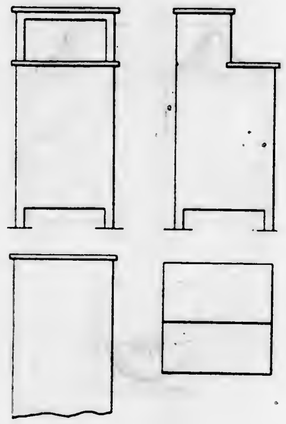
The ornamental design for a phonograph cabinet, as shown.

58,969. PHONOGRAPH - CABINET. CHARLES T. WITTSTEIN, Newark, N. J. Filed Apr. 1, 1921. Serial No. 457,822. Term of patent 14 years.



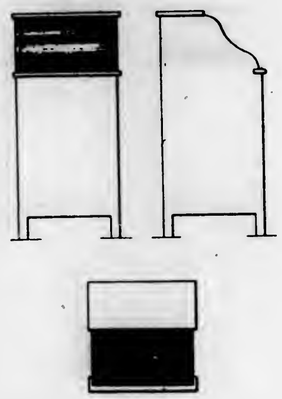
The ornamental design for a phonograph cabinet, as shown.

58,970. PHONOGRAPH - CABINET. CHARLES T. WITTSTEIN, Newark, N. J. Filed Apr. 1, 1921. Serial No. 457,823. Term of patent 14 years.



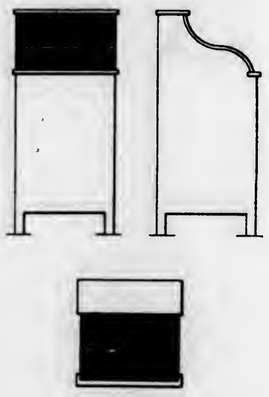
The ornamental design for a phonograph cabinet, as shown.

58,971. PHONOGRAPH - CABINET. CHARLES T. WITTSTEIN, Newark, N. J. Filed Apr. 4, 1921. Serial No. 458,542. Term of patent 14 years.



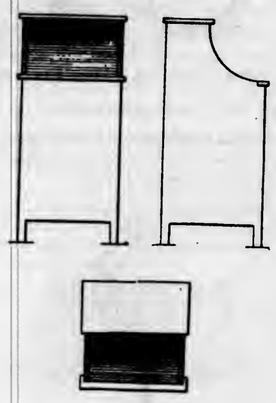
The ornamental design for a phonograph cabinet, shown.

58,972. PHONOGRAPH - CABINET. CHARLES T. WITTSTEIN, Newark, N. J. Filed Apr. 4, 1921. Serial No. 458,543. Term of patent 14 years.



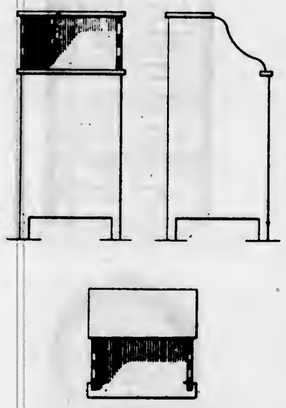
The ornamental design for a phonograph cabinet, as shown.

58,973. PHONOGRAPH - CABINET. CHARLES T. WITTSTEIN, Newark, N. J. Filed Apr. 6, 1921. Serial No. 459,148. Term of patent 14 years.



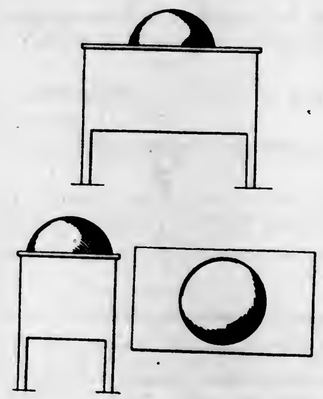
The ornamental design for a phonograph cabinet, as shown.

58,974. PHONOGRAPH - CABINET. CHARLES T. WITTSTEIN, Newark, N. J. Filed Apr. 6, 1921. Serial No. 459,149. Term of patent 14 years.



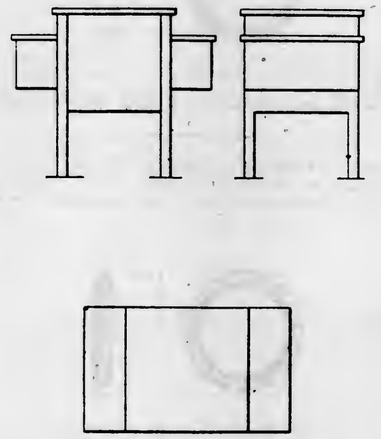
The ornamental design for a phonograph cabinet, as shown.

58,975. PHONOGRAPH - CABINET. CHARLES T. WITTSTEIN, Newark, N. J. Filed Apr. 6, 1921. Serial No. 459,150. Term of patent 14 years.



The ornamental design for a phonograph cabinet, as shown.

58,976. PHONOGRAPH - CABINET. CHARLES T. WITTSTEIN, Newark, N. J. Filed Apr. 6, 1921. Serial No. 459,151. Term of patent 14 years.



The ornamental design for a phonograph cabinet, as shown.

58,977. PHONOGRAPH-CABINET. CHARLES T. WITTSTEIN, Newark, N. J. Filed Apr. 6, 1921. Serial No. 459,152. Term of patent 14 years.

The ornamental design for a phonograph cabinet, as shown.

58,978. PHONOGRAPH - CABINET. CHARLES T. WITTSTEIN, Newark, N. J. Filed Apr. 6, 1921. Serial No. 459,153. Term of patent 14 years.

The ornamental design for a phonograph cabinet, as shown.

58,979. FINGER-RING. FRANCIS H. WITTSTEIN, Newark, N. J. Filed Jan. 6, 1921. Serial No. 435,522. Term of patent 7 years.

The ornamental design for a finger ring, as shown.

58,980. FINGER-RING. FRANCIS H. WITTSTEIN, Newark, N. J. Filed Jan. 6, 1921. Serial No. 435,523. Term of patent 7 years.

The ornamental design for a finger ring, as shown.

58,981. FINGER-RING, BRACELET, OR THE LIKE. FRANCIS H. WITTSTEIN, Newark, N. J. Filed Feb. 18, 1921. Serial No. 446,178. Term of patent 7 years.

The ornamental design for a finger ring, bracelet or the like, as shown.

58,982. FINGER-RING, BRACELET, OR THE LIKE. FRANCIS H. WITTSTEIN, Newark, N. J. Filed Feb. 18, 1921. Serial No. 446,179. Term of patent 7 years.

The ornamental design for a finger ring, bracelet, or the like, as shown.

58,983. DISPLAY-STAND. ANNIE WOOD, Winnipeg, Manitoba, Canada. Filed Nov. 19, 1920. Serial No. 425,274. Term of patent 7 years.

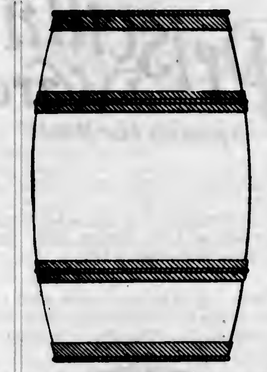
The ornamental design for a display stand as shown.

58,984. TIRE-TREAD. HELEN S. YOST, Batavia, N. Y., assignor to Batavia Rubber Company, Batavia, N. Y. Filed Oct. 16, 1920. Serial No. 417,496. Term of patent 7 years.

The ornamental design for a tire tread, substantially as shown.

TRADE-MARKS

OFFICIAL GAZETTE, SEPTEMBER 6, 1921.



[PUBLISHED SEPTEMBER 21, 1921.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 98,908. (CLASS 3. BAGGAGE, HORSE EQUIPMENTS, PORTFOLIOS, AND POCKET-BOOKS.) THE NEVERSLIP MANF. CO., New Brunswick, N. J. Filed Oct. 26, 1916.

The lining of the drawing indicates shading. No claim is made for the word "Carolina" apart from the mark shown.
Particular description of goods.—Self-Rising Wheat-Flour.
Claims use since Jan. 1, 1917.

Ser. No. 139,472. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NON-METALLIC TIRES.) LUCY PENROSE, Brooklyn, N. Y. Filed Nov. 10, 1920.

Particular description of goods.—Packing Made of Asbestos, Cotton, Duck, Flax, Hemp, Jute, and Rubber.
Claims use since Jan. 1, 1884.

Ser. No. 139,588. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) NATIONAL TRADING COMPANY, Chicago, Ill. Filed Nov. 12, 1920.

Duro-Belle

Particular description of goods.—Hair-Nets.
Claims use since Sept. 1, 1920.

Ser. No. 140,511. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) WARD BAKING COMPANY, New York, N. Y. Filed Dec. 1, 1920.

Four O'Clock

Particular description of goods.—Bread.
Claims use since Nov. 18, 1920.

Ser. No. 140,591. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) GULBRANSEN-DICKINSON COMPANY, Chicago, Ill. Filed Dec. 4, 1920.

SUBURBAN MODEL

No claim is made to the word "Model" apart from the mark shown in the drawing.
Particular description of goods.—Player-Pianos.
Claims use since Aug. 1, 1918.

Ser. No. 140,618. (CLASS 2. RECEPTACLES.) SHALITA BROS., New York, N. Y. Filed Dec. 4, 1920.

TRIPLTITE

Particular description of goods.—Sheet-Metal Cans and Pails.
Claims use since Nov. 28, 1916.

Ser. No. 140,622. (CLASS 19. VEHICLES, NOT INCLUDING ENGINES.) VULCAN MOTOR AXLE CORPORATION, Detroit, Mich. Filed Dec. 4, 1920.

VULCAN

Particular description of goods.—Axles for Pleasure-Automobiles and Automobile Trucks.
Claims use since July 28, 1920.

Ser. No. 140,646. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) HENRY F. HAYDEN, Washington, D. C. Filed Dec. 6, 1920.

Particular description of goods.—Vegetable Liquid Boiler Compound and Also Antifreezing Compound.
Claims use since Nov. 20, 1920.

Ser. No. 140,870. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) JOHN DUNN, SON & CO., New York, N. Y. Filed Dec. 10, 1920.

GUANACO

Consists of the word "Guanaco" and a picture of the animal.
Particular description of goods.—Painters' Materials—Namely, Ready-Mixed Paints and Varnish Paint Enamels.
Claims use since January, 1879.

Ser. No. 141,423. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) JONESEEZ MANUFACTURING CO., Berkeley, Calif. Filed Dec. 22, 1920.

JONESEEZ

Particular description of goods.—Flat Wood Toy Figures Depicting Human Beings and Animals.
Claims use since Dec. 8, 1920.

Ser. No. 141,806. (CLASS 12. CONSTRUCTION MATERIALS.) RAYMOND GRANITE COMPANY, San Francisco and Los Angeles, Calif. Filed Jan. 3, 1921. Under ten-year proviso.

RAYMOND

Particular description of goods.—Construction Materials—Namely, Interior and Exterior Building-Stone, Street-Curbing, and Cemetery-Coping.
Claims use since 1892.

Ser. No. 141,882. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) W. H. RICHARDSON, Baltimore, Md. Filed Jan. 5, 1921.

No claim is made to the words "Blood Remedy" apart from the mark shown.

Claims use since Jan. 27, 1920.

Ser. No. 142,004. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) BLARETTE MANUFACTURING CO., Los Angeles, Calif. Filed Jan. 10, 1921.

BLARETTE

Particular description of goods.—Electrical Devices Comprising Gasifiers Adapted to be Positioned Between Carbureters and Internal-Combustion Engines to Generate Hot Vapor and Deliver the Same into the Carbureted Vapor When Passing from the Said Carbureter to the Engine, and Spark-Plugs.
Claims use since Sept. 16, 1920.

Ser. No. 142,208. (CLASS 2. RECEPTACLES.) THE FAIRBANKS CO., New York, N. Y. Filed Jan. 13, 1921.

Consisting of the word "Fairbanks" in white upon an octagonal blue ground underscored by a white line and the letters "O K" upon a white octagonal panel outlined in blue and located in the blue octagonal panel behind the word "Fairbanks."

Particular description of goods.—Mill-Baskets, Oil-Cabinets, Tool-Chests, Hose-Reels, and Gasolene, Oil, and Storage Tanks.

Claims use since July 10, 1919.

Ser. No. 142,244. (CLASS 2. RECEPTACLES.) BEMIS BRO. BAG CO., St. Louis, Mo. Filed Jan. 14, 1921.

"ECONOMY"

Particular description of goods.—Parcel-Post Mailing-Envelops.

Claims use since about Jan. 1, 1911.

Ser. No. 142,250. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) THE FAIRBANKS CO., New York, N. Y. Filed Jan. 14, 1921.

Consisting of the word "Fairbanks" in white upon an octagonal blue ground underscored by a white line and the letters "O K" upon a white octagonal panel outlined in blue and located in the blue octagonal panel behind the word "Fairbanks."

Particular description of goods.—Detachable Link Belts, Detachable-Link-Belt Attachment-Links, Ley Bushed Chains, Riveted Drive Transfer-Chains, Fusible Boiler-Plugs, Screw-Anchors, Bibs, Cellar-Drainers, Dippers, Belt-Fasteners, Funnels; Gongs, (Not Electric;) Pipe-Hangers, Hinge-Hasps, Hinges, Jacketed Melting-Kettles, Metal Letters, Connecting-Links, Hose-Nozzles, Metal Pipe, Expansion-Bolt Shields, Drawer-Slides; Strainers, (Ordinary;) Box-Strapping, Steam-Traps, Metal Candy-Trays, Metal Tubing and Turnbuckles.

Claims use since July 10, 1919.

Ser. No. 142,381. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) ALINALL MFG. CO., Worcester, Mass. Filed Jan. 18, 1921.

CRAFTEX

Particular description of goods.—Interior Warm-Water or Oil Wall-Finish.

Claims use since Jan. 1, 1915.

Ser. No. 142,422. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) SAN ANTONIO DRUG CO., San Antonio, Tex. Filed Jan. 18, 1921.

Particular description of goods.—Baseballs.

Claims use since Aug. 1, 1919.

Ser. No. 142,446. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NON-METALLIC TIRES.) LEE TIRE & RUBBER CO., Whitemarsh township, Montgomery county, Pa. Filed Jan. 19, 1921.

Particular description of goods.—Pneumatic Rubber Tires.

Claims use since Jan. 1, 1921.

Ser. No. 142,536. (CLASS 2. RECEPTACLES.) THE STATE LEAF TOBACCO CO., New York, N. Y. Filed Jan. 20, 1921.

Particular description of goods.—Cigar-Boxes.

Claims use since Oct. 1, 1920.

Ser. No. 142,538. (CLASS 38. PRINTS AND PUBLICATIONS.) SHAPIRO, BERNSTEIN & CO., INC., New York, N. Y. Filed Jan. 20, 1921.

Particular description of goods.—Printed Musical Compositions.

Claims use since 1913.

Ser. No. 142,687. (CLASS 2. RECEPTACLES.) BLAKE, MCFALL COMPANY, Portland, Oreg. Filed Jan. 24, 1921.

BRONCHO

Particular description of goods.—Paper Bags.

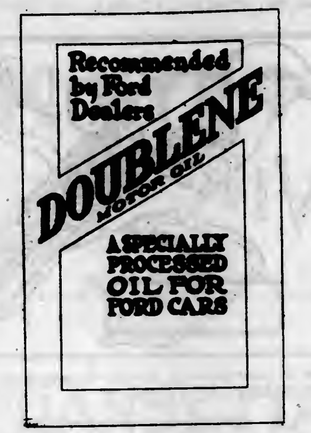
Claims use since June, 1909.

Ser. No. 142,695. (CLASS 2. RECEPTACLES.) CROWN WILLAMETTE PAPER COMPANY, San Francisco, Calif. Filed Jan. 24, 1921.

Particular description of goods.—Paper Bags.

Claims use since Dec. 21, 1908.

Ser. No. 143,512. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) CHARLES A. OWEN, Meadville, Pa. Filed Feb. 12, 1921.



No claim is made for the words: "Registered, Trade Mark."

Particular description of goods.—Malted Milk and Malted Milk Chocolate.

Claims use since Jan. 17, 1921.

Ser. No. 143,636. (CLASS 15. OILS AND GREASES.) DOUBLENE OIL CO., Chicago, Ill. Filed Feb. 16, 1921.

DECISIONS

OF THE

COMMISSIONER OF PATENTS

AND OF

UNITED STATES COURTS IN PATENT CASES.

DECISIONS OF THE U. S. COURTS.

U. S. Circuit Court of Appeals—Second Circuit.

A. BOURJOIS & CO., INC., *v.* KATZEL.

Decided June, 1921.

1. TRADE-MARKS—INFRINGEMENT—IMPORTED GOODS.
   Where B. has bought from a French manufacturer the business and good-will in the United States and sells goods manufactured by the French manufacturer, which goods bear the trade-marks used by said manufacturer, and where K. imports and sells the same goods bearing the same trade-marks, *Held* that K. does not infringe by such sale.
2. SAME—INTENDED TO PROTECT OWNER AND THE PUBLIC.
   Trade-marks are intended to show without any time limit the origin of the goods they mark so that the owner and the public may be protected against the sale of one man's goods as the goods of another man. If the goods sold are the genuine goods covered by the trade-mark the rights of the owner of the trade-mark are not infringed by such sale.
3. SAME—RIGHT TO CHANGE CHARACTER AND QUALITY OF GOODS.
   It is not doubted that an American citizen may buy the business of a foreigner in the United States, with its accompanying trade-marks and having done so may subsequently change the character and quality of the goods at pleasure.

Messrs. Briesen & Schrenk (*Mr. Hans V. Briesen* of counsel) for plaintiff-appellee.

Mr. John B. Doyle (*Mr. John R. Rafter* on the brief) for defendant-appellant.

Before WARD, HOUGH, and MANTON, Circuit Judges.

WARD, *Cir. J.*:

In July, 1913, the plaintiff, a corporation of the State of New York, bought the business and good will in the United States of A. Bourjois & Cie., E. Wertheimer & Cie., successeurs, a French firm which had since 1879 sold in the United States a face-powder manufactured by it in France described as "Java." The French firm registered in the United States Patent Office the trade-mark "Java" in 1888, the trade-mark "A. Bourjois & Cie." in 1908 and the word "Java" on the top and side of its box in 1912. The plaintiff in 1916, 1918 and 1919 registered three other trade-marks used by the French firm for face-powder. Under all these trade-marks the plaintiff imports in bulk the face-powder manufactured by the French firm and packs and sells it here in boxes.

The defendant conducts a retail pharmacy in New York city and sells in New York, New Jersey, and other States the same genuine face-powder manufactured by the French firm imported by her in its original boxes on which are printed its trade-marks and labels. The only difference between the trade-mark and labels of A. Bourjois & Co., Inc., and A. Bourjois & Cie., E. Wertheimer & Cie., successeurs, is that the powder sold by the defendant is called Poudre de Riz de Java, as the plaintiff called it until 1916, when it altered the name to Poudre Java, and that on the bottom of the plaintiff's boxes is printed "Trade Mark Reg. U. S. Pat. Off. Made in France. Packed in the U. S. A. by A. Bourjois & Co., Inc., of N. Y., succ'rs in the U. S. to A. Bourjois & Cie. and E. Wertheimer & Cie."

The plaintiff filed this bill on the ground of infringement of its registered trade-marks, praying that the defendant be enjoined both provisionally and finally from selling the French firm's face-powder under the trade-mark "Java" or the trade-mark "Bourjois," or under any of the plaintiff's registered trade-marks, and for an accounting.

The district judge granted the motion for a preliminary injunction and the defendant appeals from that order.

It is to be noticed in the first place that the residence and citizenship of both parties being in the State of New York no question of unfair competition is involved, and indeed there is no evidence of any such competition.

The assignment from A. Bourjois & Cie., A. Wertheimer & Cie., successeurs, to A. Bourjois & Co., Inc., is not produced, but we assume for the purposes of this case that the plaintiff is entitled to the French firm's trade-marks under *Menendez* v. *Holt* (128 U. S., 514) and *Wertheimer* v. *Batcheller*, (185 F. R., 850,) and that it would be a breach of the French firm's obligations to sell its face-powder in this country. (*Le Page* v. *Russia Cement Co.*, 51 F. R., 941.)

We set on one side all authorities cited by the plaintiff arising out of sales under the same trade-marks of two different competitive articles manufactured by different persons, such as *Hanover Milling Co.* v. *Metcalf*, (240 U. S., 403;) *Scandinavia Co.* v. *Asbestos Co.*, (257 F. R., 934,) because it is quite

clear that the defendant could not sell face-powder manufactured by her or by any other person than A. Bourjois & Cie. under these trade-marks. But the article sold by the plaintiff and covered by its registered trade-marks is the face-powder actually manufactured by the French firm, imported in bulk and packed here by the plaintiff, which is the precise article imported by the defendant in the French firm's original boxes and sold here. The question is whether the defendant has not the right to sell this article under the trade-marks which truly indicate its origin. We think she has. The question has been so decided in three cases in this circuit. (*Apollinaris Co.* v. *Scherer*, 27 F. R., 18; *Russian Cement Co.* v. *Frauenhar*, 133 F. R., 518, and *Gretsch* v. *Schoening*, 238 F. R., 780.)

In the Apollinaris case Saxlehner, owner of the Hunyadi Janos Spring in Hungary, gave to the Apollinaris Company the exclusive right to sell the water under the trade-mark "Hunyadi Janos" in Great Britain and the United States. The Apollinaris Company registered the name and the label as trade-marks in the United States Patent Office. Scherer applied to Saxlehner to sell him the water for importation into the United States, which Saxlehner refused to do, telling him of the Apollinaris Company's exclusive rights. Thereafter Scherer purchased the water from other parties in Germany, imported it into the United States and sold it under the name Hunyadi Janos and with the same label as the Apollinaris Company's, with one immaterial variation. Judge Wallace said:

> The complainant established an agency for the sale of the water in this country, but, as it now asserts, is unable to maintain its own prices for the article because the defendant purchases the water in Germany from persons to whom it has been sold by Saxlehner, imports it and sells it here at lower prices. It is shown that the defendant purchases the water in bottles under the label adopted by Saxlehner containing the cautionary notice, and that he does this after having applied to Saxlehner to sell him the water and been refused and informed by Saxlehner of the complainant's rights. The bill of complaint proceeds in part upon the theory that the defendant is infringing the complainant's trade mark in the name and label applied to the water, but all the averments in this behalf may be disregarded as irrelevant to the real question in the case. No doubt is entertained that the name when applied to the water is a valid trade mark and that the complainant should be protected against the unauthorized use of the trade mark by another. The complainant would be entitled to this protection entirely irrespective of the registration of its trade mark in the Patent Office. The same observations apply to the use of the label. The complainant has a common-law right to the name and the label as a trade mark by which its mineral waters are identified, and as the necessary diversity of citizenship exists between the parties to confer jurisdiction upon this court the only effect of registration is to afford and perpetuate the evidence of the complainant's title. But the defendant is selling the genuine water, and therefore the trade mark is not infringed. There is no exclusive right to the use of a name or symbol or emblematic device except to denote the authenticity of the article with which it has become identified by association. The name has no office except to vouch for the genuineness of the thing which it distinguishes from all counterfeits, and until it is sought to be used as a false token to denote that the product or commodity to which it is applied is the product or commodity which it properly authenticates, the law of trade mark cannot be invoked. The real question in the case is whether the defendant is unlawfully interfering with any exclusive right of the complainant to control the sale of the water in the territory ceded to the complainant for that purpose by Saxlehner. It is manifest that the acts of the defendant tend to deprive the complainant of the substantial advantages which it expected to obtain from the privilege transferred to it by Saxlehner. It can no longer maintain its own prices for the mineral water or hold out the inducements it formerly could to the agents it has selected to introduce the article to the patronage of the public and build up a trade. It can no longer protect itself as efficiently against the chances of a spurious article being palmed off upon the public as its own. It is therefore measurably deprived by the acts of the defendant of the profits and benefits which it contemplated when it purchased from Saxlehner the exclusive right of importing the water into this country and selling it here. If the complainant could acquire an exclusive right to sell the water here the case would be plain. If it could not it still remains to consider whether the defendant has violated any duty which the law recognises in his relations to the transaction. There would seem to be no doubt that the agreement between Saxlehner and the complainant was a valid one. He had the right to dispose of his property in the product of his spring as he saw fit, and it is not apparent how the transfer of a part of his exclusive right to vend the water, by which a territorial division in its enjoyment was created, can be deemed obnoxious to any principle of public policy as tending to create a monopoly or an unlawful restraint of trade. If Saxlehner were now endeavoring to compete with the complainant in the sale of the water in the ceded territory, his conduct would furnish a ground for equitable jurisdiction and the remedy of an injunction because of the inadequacy of a remedy at law. (Bisp. Eq., 465.) It is equally clear that if the defendant were coöperating with Saxlehner collusively to violate the complainant's right to the exclusive sale of the water he also would be restrained. In such a case the foundation of equitable redress would be the breach of covenant on the part of Saxlehner, and the defendant when acting in aid would be identified with Saxlehner and amenable to the remedy as though he were Saxlehner himself. But it is important to bear in mind that the case would be one for equitable cognisance and the remedy of an injunction merely upon the ground that the complainant's damages arising from the breach of covenant could not be reparably redressed at law.

In the Le Page case the defendant bought in bulk of third parties glue made and sold by the plaintiff under the trade name of Le Page's Glue and bottled and sold it under that name. We said:

> Counsel for complainant argues that defendants should be enjoined from applying the name "Le Page" to a glue made by complainant, which is inferior to the most expensive brands sold by complainant under that name, on the ground that this is a gross fraud and an imposition upon the public. How such conduct constitutes a fraud upon the public does not appear from the evidence. The labels on defendants' bottles contain no statement as to whether the glue put up by it is either of a superior or inferior quality, but merely that this glue is manufactured by complainant and is bottled by defendants, and that "this glue is known all over the world as the best for cementing wood, leather, glass," etc. If the public gets an inferior quality of glue when it purchases that bottled by defendants, it is because the complainant has seen fit to sell such glue under the same trade name as it had applied to a superior article and has chosen thus to reap the profit from the sale to the public of two qualities or grades of the same article under the same trade name. A court of equity will not enjoin a person from affixing to goods sold by him their true name and description in the absence of any evidence of an attempted fraud, such as by representing his goods as of a different origin or quality or manufacture from what they actually are. The case of *Gillott* v. *Kettle*, (3 Dser. 624,) cited by complainant as "very close in point," illustrates the rule and its application. There the defendant removed the labels from an inferior quality of pens manufactured by complainant and affixed other labels which imitated the labels on a superior quality of pens made by complainant. The court held that "by such a practice the defendant endeavors by a false representation to effect a dishonest purpose; commits a fraud upon the public and upon the manufacturer." But here there is no false representation by spurious label or false statement. The label tells the truth, and nothing but the truth. There is no fraud upon the public, for it gets the genuine, identical thing described by the label, (*Apollinaris Co.* v. *Scherer*, C. C., 27 Fed., 18;) there is no fraud upon the manufacturer, for its vendees resell its manufacture, to which it has applied its name, (*Vitascope Co.* v. *United States Phonograph Co.*, C. C., 83 Fed., 80,) coupled with the statement that it (the vendee) is responsible for the bottling of the manufacture.

In the Gretsch case the Gretsch Company had the exclusive agency for the United States of the sale of violin-strings made in Germany by Mueller under the name "Eternelle," and, with Mueller's approval, registered the name as the trade-mark in the United States Patent Office. Schoening purchased such strings in Germany and imported them into the United States. The case arose under section 27 of the Trade-Mark Act as to the importation of merchandise copying or simulating a trade-mark registered in the United States Patent Office. After referring to the two foregoing cases we said:

> The rationale of both decisions is that the defendant in each case was selling the genuine article identified by the trade mark, and the public was not misled, but was getting exactly what it paid for. These decisions, however, were made before the act in question was passed. Assuming that Congress could protect the owner of a registered trade mark against the importation by third parties of the genuine article under that trade mark, has it done so? We think not. The act prohibits the entry of imported merchandise which shall "copy or simulate a trade mark registered under it." The obvious purpose is to protect the public and to prevent anyone from importing goods identified by their registered trade mark which are not genuine. In this case, however, the imported goods were the genuine articles identified by the trade mark. We assume that Schoening has a valid trade mark, even if he does not manufacture the strings, (*Menendez* v. *Holt*, 128 U. S., 514,) applying to the whole of the United States and still are of opinion that it is not infringed by one who buys in Germany the genuine article identified by the trade mark, imports it into the United States and sells it so marked here.

The analogy between patents and trade-marks is not complete. A patent gives the patentee a monopoly to make, sell, and use and grant to others the right to make, sell, and use the subject patented in the United States for the term of the patent. Hence articles lawfully made, used, and sold in foreign countries cannot be sold in this country if they infringe the patent. Trade-marks, on the other hand, are intended to show, without any time limit, the origin of the goods they mark so that the owner and the public may be protected against the sale of one man's goods as the goods of another man. If the goods sold are the genuine goods covered by the trade-mark the rights of the owner of the trade-mark are not infringed.

The order is reversed.

MANTON, *J.*, concurs.

HOUGH, *Cir. J.*, (dissenting:)

The majority opinion states as the question in this case whether defendant—

> has not the right to sell this article under the trade marks which truly indicate its origin.

With this statement I agree, but disagree with the meaning given by the decision to the word "origin."

It is not yet settled whether a trade-mark is to be primarily regarded as protecting the trade-mark owner's business from a species of unfair competition or protecting the public from imitations.

The decision in this case seems to me to lean the wrong way, because in my opinion a trade-mark is primarily a protection to the owner's business. It is attached to the business, is a part of it, and cannot be detached therefrom, there being no such thing as the transfer of a trade-mark in gross. If this be true it makes no difference whether the plaintiff's business grew out of an agency for another, provided only that it be shown that it is an honest business and belongs to the person who attached and, perhaps, duly registered the trade-mark which describes the product of that business.

This plaintiff made a business in Java powder. It is an honest business, and whatever rights the French manufacturer had in the United States became the rights of the plaintiff. If, therefore, the primary function of the trade-mark is to protect this plaintiff's business in his own country, it makes no difference at all that the genuine French article is the thing offered by defendant. That genuine article has become an infringement because the business of dealing in that article within the United States is the plaintiff's business.

PETITION FOR REHEARING.

Mr. Hans V. Briesen and *Mr. William A. Redding* of counsel for petitioner; *L. E. Varney* as *amicus curiae*.

PER CURIAM:

We are asked to certify the question involved in this case to the Supreme Court on the ground of its supreme importance in view of the many businesses with their accompanying trade-marks of German citizens bought during the European war by citizens of this country from the custodian of alien property.

It is not doubted that an American citizen may buy the business of a foreigner in the United States, with its accompanying trade-marks, and having done so may subsequently change the character and quality of the goods at pleasure. But that is not this case. The owner of the trade-mark cannot change them and still assert that they are the actual goods manufactured by the foreigner and imported by him. Such a misrepresentation would deprive him of the protection of the law.

The precise question decided by us has been misapprehended. The trade-marks and labels complained of are those of the French house, and the plaintiff asserts that it is selling under them face-powder manufactured by the French house in France and imported by it in bulk and repacked here. It treats this repacking as a very material consideration.

The defendant says that this is precisely the product made by the French house in France and imported by her in the boxes of the French house with the same trade-marks and labels which she is selling here.

If in the case of *Menendez* v. *Holt*, Holt had asserted that he was selling the flour under the trade-mark Favorita, which had been made by a miller under that trade-mark, the case would be more like the one under consideration.

It is sought to distinguish the three cases decided in this circuit which we have followed upon what we think a misapprehension of their facts.

It is said that in the Apollinaris case that company was the mere agent of Saxlehner; this is not so. The company bought the genuine spring-water from Saxlehner, imported it into the United States and sold it here as the water of that spring. All that it owed Saxlehner was the price it agreed to pay; there was no relation whatever of agency. Judge Lacombe, in 91 Fed. Rep., 588, and Mr. Justice Brown, in 179 U. S., 19, both said that the company was not Saxlehner's agent.

In the Le Page case it was said that the plaintiff owner of the trade-mark sold the Le Page glue to

the defendant; this is not so. The plaintiff refused to sell to the defendant, who thereupon bought the glue from third parties in bulk and rebottled it.

So in the Gretsch case it is said that Schoening was merely the exclusive agent of Mueller for the sale of his violin-strings called "Eternelle" in the United States. The district judge found that there was an exclusive agency, though the evidence on the subject was very meager, and we, assuming that to be true and also that Schoening had a valid trade-mark, held, nevertheless, that Gretsch could lawfully import Mueller strings from Germany and sell them here.

The petition is denied.

Adjudicated Patent.

(U. S. C. C. A. Pa.) The Barkley patent, No. 1,202,646, for coupon bank deposit book, void for lack of invention. *Bankers' Service Corporation* v. *Landis Christmas Savings Club Co.*, 273 F. R., 722.

International Bureau at Habana—Protection of Trade-Marks.

(ORDER No. 2,685.)

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., August 6, 1921.

Under the convention adopted for the establishment of the International Bureau at Habana and regulations of such Bureau (280 O. G., 195) it is provided, to carry into effect the convention for the protection of trade-marks, that the legal representative of the administration of the country of origin shall communicate to the International Bureau (articles 2–1) the claim of the owner of the mark.

Hereafter no official abstract of title need be furnished by the applicant, but a fee of $5 must be paid the U. S. Patent Office, which will make the title search and perform the other work in connection with the certificate to the Habana Bureau.

Hereafter the applicant need not fill in the official form for such certificate, but in addition to paying the fee of $5 must provide the Office with (*a*) an international money order for $50 to the order of "Director of the International Bureau, Habana;" (*b*) an electrotype of the trade-mark, not larger than 10 centimeters in either dimension; (*c*) should the United States registration claim color as a distinctive element of the trade-mark he shall furnish thirty copies of the mark printed on paper, reproduced in color; (*d*) a statement including (1) the name of the owner of the mark; (2) the address of the owner of the mark; (3) the number and date of registration of the mark in the United States Patent Office, and (4) a translation into Spanish of the particular description of goods as stated in the certificate of registration.

THOMAS E. ROBERTSON,
Commissioner.

Fee for Recording Articles of Incorporation.

(ORDER No. 2,688.)

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., August 9, 1921.

For the present the Patent Office is recording the articles of incorporation of companies, so that their names may be available for trade-mark searches. This is done at the request of the attorneys and is not advocated by the Office. As long as this practice continues a charge will be made for such record of $1.00 for 300 words or less; $2.00 if over 300 words and under 1,000 words; $1.00 for each additional 1,000 words or portion thereof.

THOMAS E. ROBERTSON,
Commissioner.

Interference Notice.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., August 31, 1921.

The Premier Cabinet Company, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the applications of Polyphonwerke Aktiengesellschaft, 76 Markgrafenstrasse, Berlin, Germany, and Premier Grand Piano Corporation, 510–532 West Twenty-third street, New York, N. Y., for registrations of trade-marks and trade-mark registered December 19, 1916, No. 114,546, to The Premier Cabinet Company, 495–497 Hepburn street, Williamsport, Pa., and a notice of such declaration sent by registered mail to The Premier Cabinet Company at the said address having been returned by the post-office undeliverable, notice is hereby given that unless said The Premier Cabinet Company, its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING,
Acting Commissioner.

Patents Nos. 1,390,261 to 1,390,974.

THE OFFICIAL GAZETTE OF THE United States Patent Office.

Vol. 290—No. 2. TUESDAY, SEPTEMBER 13, 1921. Price—$5 per year.
[PUBLISHED SEPTEMBER 27, 1921.]

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.

Printed copies of patents are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

Interference Notice.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., August 31, 1921.

The Premier Cabinet Company, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the applications of Polyphonwerke Aktiengesellschaft, 76 Markgrafenstrasse, Berlin, Germany, and Premier Grand Piano Corporation, 510–532 West Twenty-third street, New York, N. Y., for registrations of trade-marks and trade-mark registered December 19, 1916, No. 114,546, to The Premier Cabinet Company, 495–497 Hepburn street, Williamsport, Pa., and a notice of such declaration sent by registered mail to The Premier Cabinet Company at the said address having been returned by the post-office undeliverable, notice is hereby given that unless said The Premier Cabinet Company, its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING,
Acting Commissioner.

Adverse Decisions in Interference.

PATENT No. 1,351,150.

On August 8, 1921, a decision was rendered that Richard Battle was not the first inventor of the subject-matter covered by claims 2, 3, and 5 of his Patent No. 1,351,150, subject, "Device for attaching electric-light fixtures to outlet-boxes," and no appeal having been taken within the time allowed such decision has become final.

PATENT No. 1,333,027.

On August 16, 1921, a decision was rendered that Alben E. Lundell was not the first inventor of the subject-matter covered by claims 2 and 3 of his Patent No. 1,333,027, subject "Telephone-switch-controlling system," and no appeal having been taken within the time allowed, such decision has become final.

PATENT No. 1,312,706.

On August 16, 1921, a decision was rendered that Michael Schwartz was not the first inventor of the subject-matter covered by claim 8 of his Patent No. 1,312,706, subject "Selective-ringing telephone system," and no appeal having been taken within the time allowed such decision has become final.

PATENT No. 1,324,430.

On August 6, 1921, a decision was rendered that Albert Henry Widgley was not the first inventor of the subject-matter covered by claim 1 of his Patent No. 1,324,430, subject "Ignition system for internal-combustion engines," and no appeal having been taken within the time allowed such decision has become final.

Interference Defined.

RULE 93. An interference is a proceeding instituted for the purpose of determining the question of priority of invention between two or more parties claiming substantially the same patentable invention. In order to ascertain whether any question of priority arises the Commissioner may call upon any junior applicant to state in writing the date when he conceived the invention under consideration. All statements filed in compliance with this rule will be returned to the parties filing them. In case the applicant makes no reply within the time specified, not less than ten days, the Commissioner will proceed upon the assumption that the said date is the date of the oath attached to the application. The fact that one of the parties has already obtained a patent will not prevent an interference, for, although the Commissioner has no power to cancel a patent, he may grant another patent for the same invention to a person who proves to be the prior inventor.

TRADE-MARK SECTION OF THE OFFICIAL GAZETTE.

In response to the public demand a section of the Official Gazette containing all matter relating to Trade-Marks may be procured separately beginning with volume 290, September 6, 1921.

The Trade-Mark section will include: Trade-Marks published under the act of 1905; Trade-Marks registered under the act of 1905 and under the act of 1920; Labels and Prints; the indexes, and decisions from time to time in Trade-Mark cases.

The cost will be five cents each number, or $2.50 for annual subscriptions, to which must be added $2.00 to cover postage to subscribers in foreign countries.

Condition of Applications Under Examination at Close of Business September 8, 1921.

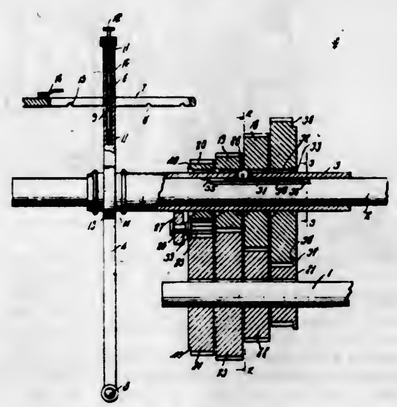
PATENTS

GRANTED SEPTEMBER 13, 1921.

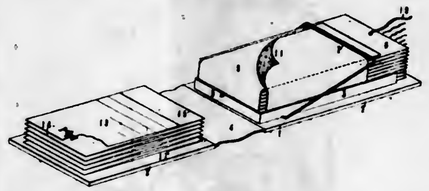
1,390,261. COMBINED BEET-HARVESTER. LAWRENCE ADAMS, Layton, Utah. Filed June 24, 1920. Serial No. 391,309. 10 Claims. (Cl. 55—108.)

1. A machine of the class described including a portable structure, an upwardly and rearwardly extending conveying belt, outwardly projecting beet engaging spikes upon the belt for entering the soil and actuating the belt, and means operated by said belt for gripping the elevated beets and removing them from the belt.



4. The combination with a movably supported structure, of an upwardly extending conveying belt, beet engaging spikes extending therefrom for entering the soil and actuating the belt during the movement of the machine, opposed belts for receiving elevated beets therebetwen, means for transmitting motion to said opposed belts from the conveying belt, topping means supported above said opposed belts, and means for transmitting motion to said topping means from the conveying belt.

6. The combination with a movable structure and beet engaging and elevating means operated by contact with the ground, of opposed gripping belts for engaging elevated beets and conducting them away from said elevating means, topping means above the gripping belts, and mechanism operated by the beet elevating means for driving the gripping belts and the topping means.

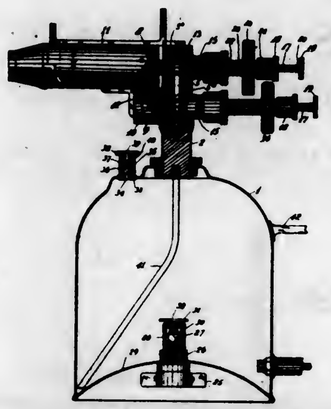


10. The combination with a portable structure and digging means carried thereby, of an upwardly extending endless conveyer, and beet engaging spikes projecting from the conveyer and movable successively by contact with the ground to engage and elevate beets loosened by the digging means.

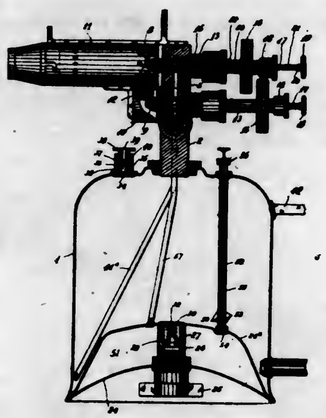
1,390,262. GEARING. BERT ANDERSON, Granger, Tex. Filed Feb. 12, 1918. Serial No. 216,801. 8 Claims. (Cl. 74—59.)

1. A variable speed transmission device comprising a driving shaft recessed longitudinally and transversely thereof, a plurality of driving gears mounted on the shaft and provided with key-ways coöperating with the said recesses, a plurality of driven gears in mesh with the driving gears, a key-wheel movable longitudinally of the shaft and within the recesses of the key-ways of the said gears and shaft for establishing a driving relation between the two, and means for shifting the said key wheel in progressive engagement with the driving gears.

1,390,263. MANIFOLDING DEVICE. JAMES W. ANDERSON, New York, N. Y. Filed Oct. 7, 1912, Serial No. 724,277. Renewed Feb. 3, 1921. Serial No. 442,326. 14 Claims. (Cl. 282—3.)



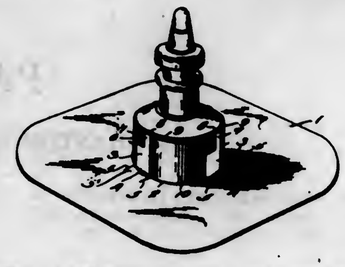
1. In a manifolding device, in combination, a support, a pile of tags of substantial material carried by said support, and a stack of original and duplicate manifolding leaves carried by said support, said tags and leaves being so arranged on said support as to permit the superposition of an original leaf, a duplicate leaf, and a tag on one another.



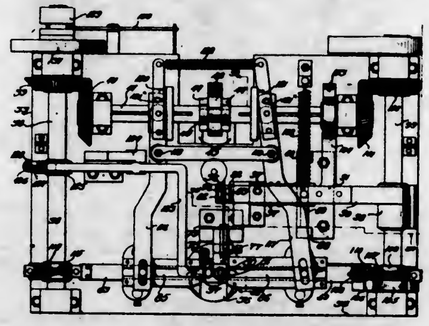
1,390,264. BURNER-CLEANING DEVICE FOR BLOW-TORCHES. CHARLES H. ALLEN and JAMES B. ANDERSON, Pittsburgh, Pa. Filed Aug. 5, 1920. Serial No. 401,347. 2 Claims. (Cl. 158—120.)

1. In a device of the character described, a burner, a valve for controlling the supply of fuel to the burner, said valve being of tubular construction, a tubular mem-

ber slidable in the valve, a disk having a stem detachably secured in the outer end of said tubular member and a thin flexible cleaning wire secured in said stem and disposed in alinement with the fuel opening of the burner so as to be insertible therethrough by slidably reciprocating said tubular member.



1,390,265. BLOWTORCH. CHARLES H. ALLEN and JAMES B. ANDERSON, Pittsburgh, Pa. Filed Aug. 5, 1920. Serial No. 401,348. 5 Claims. (Cl. 158—33.)

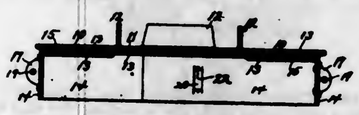


1. In a torch of the character described, a fuel tank provided with a double bottom; the fuel contained in said tank being in a liquid state in the upper chamber of said tank and in a gaseous state in the lower chamber comprised within said double bottom.

1,390,266. BOTTLE-HOLDER. LOTTIE L. ARMSTRONG, Washington, D. C. Filed Sept. 21, 1920. Serial No. 411,741. 6 Claims. (Cl. 248—65.)

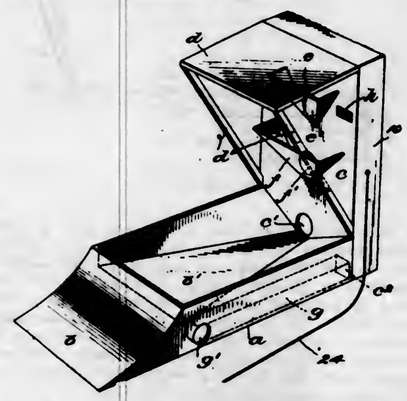
1. A bottle holder comprising a blank having a bottle receiving opening stamped therein and integral arms adjacent said opening, said arms being arranged at substantially a right angle to each other before being bent upwardly and sufficiently long to extend from their bases beyond the center of the opening.

1,390,267. MACHINE FOR MAKING AND APPLYING TUFTS. CLARENCE F. ARNOLD, Philadelphia, Pa., assignor to H. F. Walliser Company, Philadelphia, Pa. Filed Nov. 30, 1920. Serial No. 427,366. 15 Claims. (Cl. 28—13.)



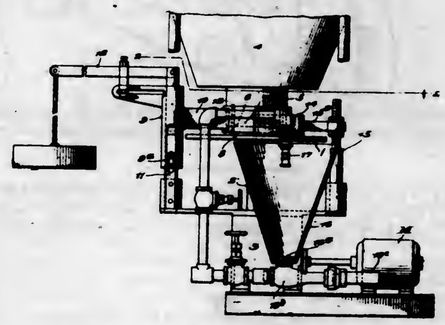
1. A machine of the character described including a head having prongs forming a notch; means for feeding tuft threads into said notch; and means for feeding a wire to embrace said tuft threads and to be bent by the inner wall of said notch around said tuft threads, one of said prongs having its outer surface concaved to permit finger room to allow a loop to be easily slipped over said prong so as to be bound by said wire to the tuft threads; substantially as described.

1,390,268. COMBINED FRUIT WASHER AND SCALDER. WILLIAM AUSTON BECKETT, Kingsville, Ontario, Canada. Filed Dec. 16, 1920. Serial No. 431,106. 3 Claims. (Cl. 146—14.)



1. An apparatus of the class described comprising a suitable receptacle adapted to receive and to discharge water; pulleys journaled respectively one at the intake end of said receptacle and the other at the discharge end thereof; a conveyer-belt mounted on said pulleys and adapted to be moved thereby; a washing chamber located at the intake end of said receptacle and provided with a controlled outlet; a shaft mounted within said receptacle and immediately below said washing chamber; blade-provided wheels mounted on said shaft, and spaced apart, the angular disposition of the blades being such that as said wheels are rotated opposing gyratory currents will be set-up within the water, and currents induced longitudinally of the receptacle, for the purpose set forth; an open sorting chamber disposed to receive the fruit as it passes from said washing chamber, and a scalding chamber through which said conveyer-belt passes in order to convey the washed fruit into and through said scalding chamber.

1,390,269. CHIMNEY-TOP. WALTER W. BICKEL and HALLEY E. BROWN, Des Moines, Iowa. Filed May 17, 1920. Serial No. 381,932. 5 Claims. (Cl. 72—88.)



5. A chimney top comprising a plate having flanges and embracing members adjustably engaging said flanges, said members being formed with walls overlapping at their ends, in combination with connecting means extending across the overlapping ends of the walls and adjustably connecting the same.

1,390,270. GAME APPARATUS. WILMUTH E. BLACKBURN, Summit, N. J. Filed Mar. 13, 1920. Serial No. 365,559. 11 Claims. (Cl. 235—98.)

1. In game apparatus wherein a target is provided with a plurality of openings for the passage of delivered elements, with the openings having different scoring values, means for indicating the scores of delivered elements with the scores of a succession of deliveries indicated by their accumulated values, said means including an indication-carrier movable relative to an exposure opening in one direction during the delivery period and in the opposite direction during the re-setting period, a movable device for each of said scoring openings, and adapted to become active in the movement of the carrier during the delivery period, each device being positioned in the path of travel of an element passing through the associated opening with the device movable by and in the presence of the element, means for operatively connecting one of said devices with the carrier to advance the latter, the length of carrier movement being dependent upon the extent of device movement, means made operative by the movement of a second device for moving the first device to an extent different from that provided in the normal movement of such first device, said means having the characteristics of a lost motion formation with respect to one of said device, and means for retaining the carrier in its advanced position during such delivery period.

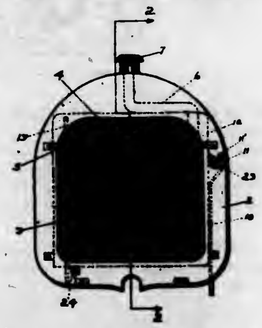
1,390,271. FEEDING DEVICE FOR DRY CHEMICALS. LEWIS M. BOOTH, Plainfield, N. J. Filed Aug. 7, 1920. Serial No. 401,957. 4 Claims. (Cl. 221—96.)

1. A device for feeding dry chemicals including a rotary measuring surface, a source of powdered chemical supply having a discharge orifice located at a predetermined distance above the said surface, and an adjustable element for varying the outlet for the material to the said rotating surface.

1,390,272. PUSH-ROD. MEREDITH D. BRADY, Indiana, Pa., assignor to M. Edith Stevings, Indiana, Pa. Filed May 14, 1920. Serial No. 381,609. 2 Claims. (Cl. 123—90.)

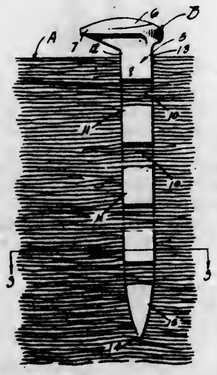
1. A push rod comprising a hollow cylindrical body carrying a roller at its lower end, a plug threaded within the upper end of the body and having a threaded hole, a coil spring within the body and connected with said plug whereby to hold the same against casual movement, and a screw threaded through said hole and having a head adapted to engage a valve stem to be operated, the other end of the spring being connected with said screw.

1,390,273. RECORDING-GAGE. RICHARD P. BROWN and FRITZ WAGNER, Philadelphia, Pa., assignors to The Brown Instrument Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 18, 1919. Serial No. 345,807. 10 Claims. (Cl. 73—109.)



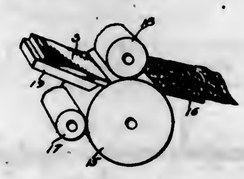
1. In an instrument of the character stated, the combination of a movable element having a part arranged in operative relation to a scale or chart, a rotatable staff

for supporting and turning said movable element, a pressure responsive device and means rotatable with and



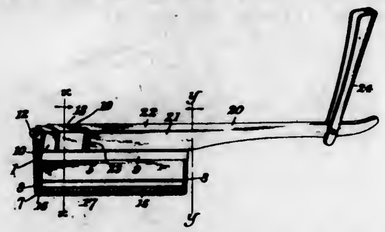
slidable axially of said staff for varying the working length of said responsive device for purposes of calibration.

1,390,274. RADIATOR FOR MOTOR-VEHICLES. CHARLES W. E. CLARKE, Newton, Mass. Filed Aug. 21, 1918. Serial No. 250,795. 8 Claims. (Cl. 257—125.)



1. A radiator for a motor vehicle, said radiator having an overflow leading from an intermediate point in the radiator serving to limit the height to which the radiator can be filled with water, whereby the part of the radiator above said point will serve as a condenser for the vapor rising from the body of water in the radiator, and a trap in said overflow.

1,390,275. SPIKE. HENRY A. CORNEL, Cochrane, Ontario, Canada. Filed Apr. 14, 1920. Serial No. 373,946. 3 Claims. (Cl. 85—21.)

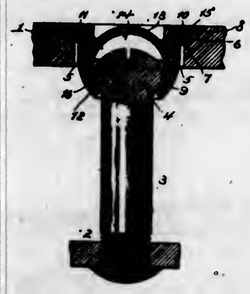


1. A rail spike comprising a polygonal shank, a head therefor projecting beyond a side of said shank to overlie the foot of a rail, said shank provided with flat indentations therein on the sides parallel with the longitudinal axis of the projecting head, and extending the entire width of the sides, and a bulge upon said sides projecting beyond the plane of said sides.

1,390,276. MANUFACTURE OF MOISTUREPROOF CREPED PAPER. ANDREW E. CURRIER, Millis, Mass., assignor to Safepack Mills, Boston, Mass., a Corporation of Massachusetts. Filed July 17, 1919. Serial No. 311,437. 5 Claims. (Cl. 92—69.)

1. The combination with paper craping apparatus comprising a moistening tank and a craping roll and doctor, of means for applying waterproofing substance to the paper consisting in a mounting for a wax block constructed and arranged to cause continuous contact of the wax block with the paper on said roll just prior to the craping thereof.

1,390,277. SAFETY-RAZOR. WILLIAM JOSEPH DAVIDSON, New York, N. Y. Filed Feb. 26, 1919. Serial No. 279,270. 5 Claims. (Cl. 30—12.)

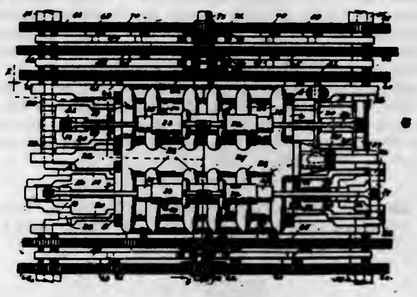


3. In a safety razor, the combination, with a guard member pivotally depending from the main body member which carries the blade and comprising end members respectively at opposite ends of the blade and side bars carried by said end members and operative as a stay against sides of the blade to limit the swinging movement of said guard member, of a roller member journaled in the lower ends of said respective pivotal end members of said swinging guard and extending longitudinally between the same beneath the cutting edge of the blade.

1,390,278. COMPUTING-MACHINE. GUSTAVE O. DEGENER, Hartford, Conn., assignor to Underwood Computing Machine Company, New York, N. Y., a Corporation of New York. Filed July 23, 1919. Serial No. 312,754. 6 Claims. (Cl. 235—60.)

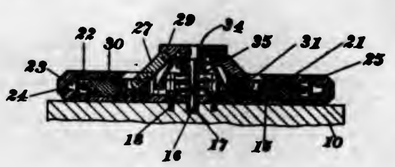
1. In a computing machine, the combination with a traveling carriage, of a series of denominational jacks, and a selector-dog mounted for movement with said carriage past said jacks to engage the same *seriatim*, said dog having a jack-actuating cam face and a rearwardly-extending drop shoulder so shaped that, when the carriage is carried slightly past the proper letter-space position before being brought to rest, a slight return movement of the selected jack will be permitted, insufficient to destroy the denomination-selecting effect but sufficient to prevent any material interference with the jack in the return movement of the latter when the carriage is letter-spaced to cause the dog to actuate the next jack.

1,390,279. STAYBOLT STRUCTURE. ETHAN I. DODDS, Pittsburgh, Pa., assignor to Flannery Bolt Company, Pittsburgh, Pa. Filed Jan. 20, 1920. Serial No. 352,694. 6 Claims. (Cl. 85—1.5.)



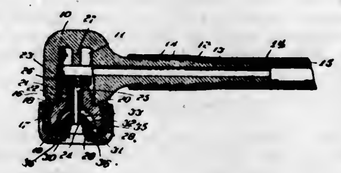
1. In a staybolt structure, the combination with a boiler sheet having an opening, and a staybolt having a head, of a bearing member having an exteriorly rounded inner end portion and a lateral flange at its outer end, said bearing member disposed coincident with the opening in the boiler sheet and having therein a seat for the head of the staybolt, a part at the outer end of the bearing member closing the latter over the head of the staybolt, a ring between said lateral flange and the boiler sheet, and means for securing said ring to the boiler sheet.

1,390,280. WATER-COOLER. GEORGE A. DOERR, Peoria, Ill. Filed Feb. 3, 1919. Serial No. 274,601. 8 Claims. (Cl. 261—113.)



1. A radiator for internal combustion engines including in its construction a series of separate water-receiving hopper-like trays each having a bottom of foraminous material, the trays being spaced one above another, their bottoms depending well down within adjacent trays, a structure for supporting the trays, a receptacle for water below the series of trays, a pumping device connected with the receptacle, and a conduit connected with the pump terminating above the series of trays for discharging water into the same.

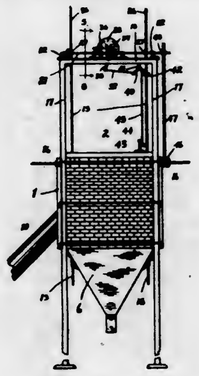
1,390,281. ENGINE. FRANCIS J. DOYLE, Chicago, Ill., assignor to N. V. Hayward. Filed Oct. 15, 1917. Serial No. 196,590. 3 Claims. (Cl. 123—50.)



3. In an engine, the combination with a pair of stationary cylinders, of a pair of movable cylinders reciprocating therein and operably connected at both ends with crank shafts, a piston for each movable cylinder provided with piston rods extending through both ends of the cylinders and having driving connections with said crank shafts, actuating mechanism whereby each piston and its corresponding cylinder move simultaneously in opposite directions, inlet and outlet ports in the cylinder registering with inlet and outlet ducts, said outlet ducts communicating with a common exhaust chamber, and means for feeding fresh fuel to the cylinders.

1,390,282. BARREL-HOOP MACHINE. ALBERT N. EATON, Omaha, Nebr. Filed Aug. 17, 1920. Serial No. 404,093. 4 Claims. (Cl. 153—35.)

3. A machine as described comprising an outer die ring, a base plate lying within the ring, radially-reciprocating die blocks on the plate to coöperate with the ring, complementary means between the plate and blocks to guide the movements of the latter, an anvil initially held in an upper position, connections between the anvil and die blocks, a weight plate resting on the die blocks, and means to guide the movement of the anvil.



1,390,283. AUTOMATIC HOSE-COUPLING. ERICH EDELMANN, Chicago, Ill. Filed Aug. 19, 1919. Serial No. 318,565. 3 Claims. (Cl. 284—19.)

1. A hose coupling of the class described comprising a chambered casing member open at the bottom and provided

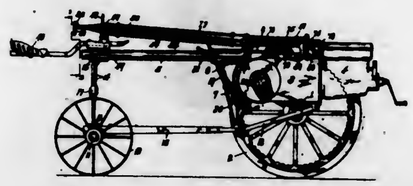
with a tubular nipple, a bushing member tightly fitted into the bottom of said casing and having a frusto-conical portion projecting upwardly to form a valve seat, a valve adapted to bear on the top of said seat, a hollow stem for said valve, a perforated cap adapted to engage one of said members, and a resilient washer interposed between said bushing and said cap, said valve stem projecting through the conical portion of said bushing and into the perforation in said washer and having a port through one side underneath the valve whereby said port will be uncovered when the valve is raised by the upward thrust of the tire nipple into the perforation in said washer, thereby establishing communication between the chamber in said casing and the tire nipple.

1,390,284. DUST-SEPARATOR. CHARLES H. FELTON, Michigan City, Ind. Filed Aug. 11, 1919. Serial No. 316,700. 5 Claims. (Cl. 183—44.)

1. A dust collector comprising a rectangular chamber having a porous wall, a frame within the chamber, a brush secured to the frame adapted to remove dust adhering to the surface of the wall, a pair of rack bars connected to the two ends of the frame, a pair of pinions engaging the rack bars for reciprocating the frame and a shaft on which both of said pinions are mounted.

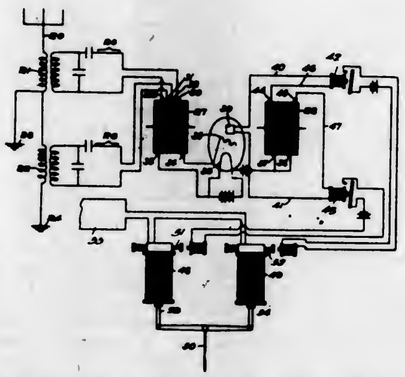
1,390,285. BUMPER FOR AUTOMOBILES. FRANK GAHM, Streator, Ill. Filed June 16, 1921. Serial No. 478,034. 10 Claims. (Cl. 293—55.)

9. A vehicle bumper comprising, in combination, a pair of spring bars arranged one in advance of the other and spaced apart intermediate of their ends and having their end portions in sliding contact and tied together, the bars being vertically bowed at their middle portions, the bow of one being upward and of the other downward, and means for securing the bars to a vehicle.



1,390,286. CARRYING DRUM OR REEL. WILLIAM F. GARLAND, New York, N. Y. Original application filed Dec. 31, 1912, Serial No. 739,463. Divided and this application filed Dec. 16, 1918. Serial No. 266,866. 5 Claims. (Cl. 242—110.)

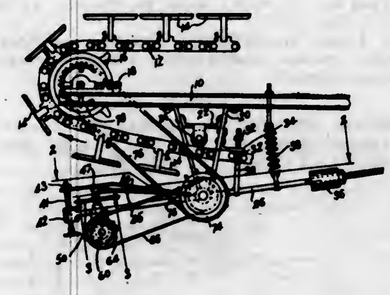
1. A carrier drum for supporting photographic films during development provided with one or more hinged longitudinal flanges, and means for turning the said



flanges upon their hinges so as to press outwardly against a film wound upon the drum.

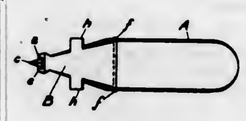
1,390,287. TRACTOR CONTROL. FRANK H. GERDEMAN, Findlay, Ohio. Filed Jan. 17, 1920. Serial No. 352,145. 26 Claims. (Cl. 180—12.)

1. In a tractor, a steering mechanism having a clutch member shiftable in one direction or another from neutral position to effect an operation of the mechanism to turn the truck in one direction or another, a rotatable control having a rocking cam wing, and means connecting said cam wing and clutch member to impart predetermined shifting movements to the latter when the wing is rocked in one direction or the other.



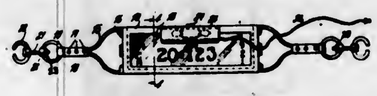
1,390,288. SYSTEM FOR CONTROLLING MOVING BODIES BY RADIO ENERGY. JOHN HAYS HAMMOND, Jr., Gloucester, Mass. Filed July 24, 1913, Serial No. 780,887. Renewed Jan. 24, 1921. Serial No. 439,688. 18 Claims. (Cl. 250—2.)

1. A receiving station having a plurality of circuits respectively responding to different wave frequencies, a



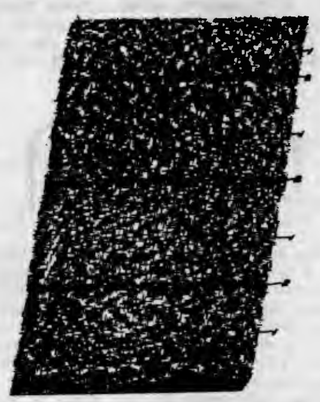
detector, means intermittently and automatically to connect said detector to any one of said receiving circuits, a plurality of subsidiary mechanisms, and means intermittently and automatically to connect said detector to any one of said subsidiary mechanisms.

1,390,289. BEET-TOPPING DEVICE. GEORGE B. HAYES and WALTER A. HAYES, Denver, Colo. Filed Jan. 22, 1919. Serial No. 272,452. 11 Claims. (Cl. 146—11.)



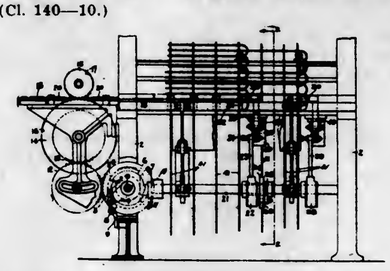
1. In a beet topping device, a support, a cutter frame mounted thereon, a cutter on the frame, beet guiding means coöperating with the cutter and comprising a spring plate and separable guiding fingers, and means to operate the cutter.

1,390,290. LETTERING-PEN ATTACHMENT. EARLE GRAY HENRY, Newberg, Oreg. Filed Feb. 10, 1919. Serial No. 276,002. 5 Claims. (Cl. 120—114.)



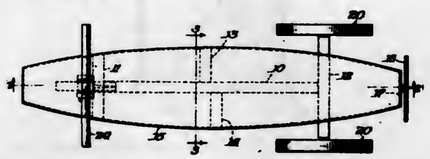
1. In combination with a pen having flexible nibs, of a lid having a bifurcated end, and pivotally mounted in said pen.

1,390,291. LICENSE-TAG HOLDER AND MEANS TO ILLUMINATE SAME. AMOS D. HILL, Lansing, Mich. Filed Mar. 30, 1921. Serial No. 457,126. 2 Claims. (Cl. 40—131.)



2. A license tag holder comprising a holder for the license tag, a reflector projected outwardly from the holder adjacent the upper edge thereof, a lamp socket on the under side of the reflector and provided with radially disposed light globes, one of which projects above the reflector to provide a tail light, and an electrical connecting member connected at one end to the said lamp socket and carrying a plug at its other end for connection to a suitable source of supply.

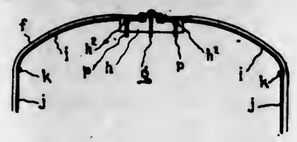
1,390,292. FABRIC FOR LININGS AND OTHER USES. HAROLD I. HUBY, Saylesville, R. I., assignor, by mesne assignments, to Sayles Finishing Plants, Inc., Saylesville, R. I., a Corporation of Rhode Island. Filed Mar. 15, 1919, Serial No. 282,934. Renewed July 7, 1921. Serial No. 483,087. 4 Claims. (Cl. 8—20.)



4. A fabric of uniform original texture, which has been made permanently stiff except at predetermined folding or cutting lines.

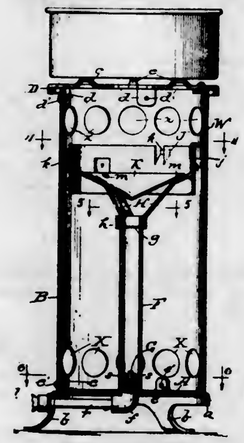
1,390,293. WIRE-FENCE MACHINE. AUGUST G. JOHNSON, Monessen, Pa., assignor to Pittsburgh Steel Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Oct. 24, 1918. Serial No. 259,572. 9 Claims. (Cl. 140—10.)

1. In a wire fence machine the combination with a suitable frame, of means for feeding the stay-wires transversely of the strand-wires, said stay-wires being fed the full height of said fence and to a distance less than the full height, alternately, means for arching the upper end of each of said stay-wires toward an adjacent stay-wire, and means for securing said stay-wires to said strand-wires.



1,390,294. VELOCIPEDE. JOSEPH F. JONES, La Grange, Ill. Filed Oct. 1, 1917. Serial No. 194,111. 7 Claims. (Cl. 208—165.)

1. In a velocipede, the combination with a centrally-disposed supporting member, of a plurality of bracing exten-

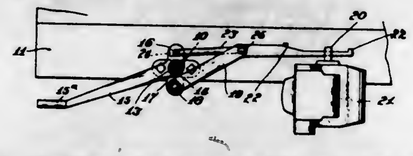


sions arranged at opposite faces thereof and spaced at intervals throughout the length of the supporting member, and a sheathing surrounding said member and braced with respect thereto by said extensions.

1,390,295. AUTOMOBILE-HOOD. PETER KERN, Montreal, Quebec, Canada, assignor of one-half to John R. Booth, Jr., Ottawa, Ontario, Canada. Filed Apr. 23, 1920. Serial No. 376,079. 1 Claim. (Cl. 180—69.)

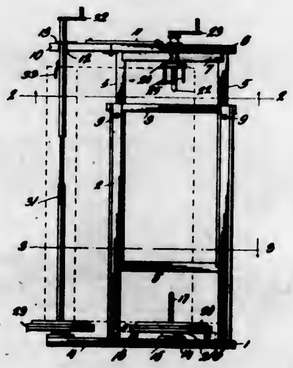
In a motor vehicle the combination with the body thereof having a flange and a radiator having a flange; of a T-bar extending between said body and radiator and adapted to connect the same together, a pair of brackets of angular cross-section located one at each end of said bar and positioned with one flange overlapping the flanges on the radiator and body respectively and with the other flange extending downwardly, means permanently fastening the flange overlapping the body flange to the latter and means detachably fastening the overlapping flange of the other bracket to the radiator flange, a pair of hood sections located on opposite sides of said bar with their adjacent edges extending beneath the horizontally disposed portions of the latter, means for reinforcing said edges and for hingedly mounting the hood sections in said brackets said last mentioned means consisting of a pair of angle-irons located one on each side of said T-bar and having trunnions at their opposite ends journaled in the downwardly extending flanges of said brackets each angle-iron in closed position being disposed with one flange secured to one of the hood sections and extending beneath the top of the T-bar and with the other flange perpendicular to said hood section.

1,390,296. GAS-HEATER. CHARLES A. KIRKWOOD, Chicago, Ill. Filed May 10, 1920. Serial No. 380,113. 5 Claims. (Cl. 126—85.)



1. In a gas-heater the combination with a base-plate, a casing having perforations near the top and bottom edge supported thereby, and a suitable perforate element fitted over the top of said casing, of a vertically disposed tubular mixing-chamber having perforations in its lower end portion, a nozzle discharging into said lower end, a mixing-plate in the bore of said chamber, a disked spreader supported above said mixing-chamber the center of which is in axial alinement with the axis of said chamber, and an annulus separated from said casing and said spreader and surrounding the latter to direct the combustion gases onto said perforate element.

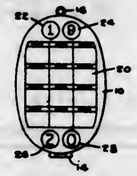
1,390,297. PAPER-FILLER AND PROCESS OF MAKING THE SAME. WILLIAM N. KOHLINS, Newark, N. J. Filed Feb. 27, 1919. Serial No. 279,645. 11 Claims. (Cl. 134—18.)



2. A paper filler comprising a mixture containing magnesium hydroxid, calcium sulfate, aluminum hydrate and calcium hydroxid.

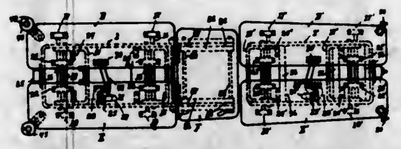
1,390,298. UNCOUPLING MECHANISM. CLARENCE H. KRAKAU, Chicago, Ill. Filed Feb. 12, 1921. Serial No. 444,352. 4 Claims. (Cl. 213—59.)

1. Uncoupling mechanism comprising, in combination with the lock lifter or pin of a coupler, a lock lifter or pin controlling member pivotally mounted at one end on a car end-sill while the other end has a loose operative relation with the lock-lifter or coupler pin, an operating member pivotally mounted intermediate of its ends on the car end-sill, and means pivotally secured at one end to said last-mentioned member and at the other end to said first mentioned member whereby downward movement of the last mentioned member will cause a pulling action on said means and thereby move the first member upwardly about its pivot.



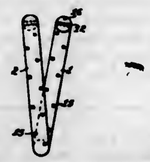
1,390,299. STAND FOR ROLLED GOODS. EDWARD A. LUZENBERG, San Antonio, Tex. Filed Nov. 6, 1919. Serial No. 336,113. 3 Claims. (Cl. 211—18.)

3. A stand for supporting a roll of goods comprising telescoping frames relatively adjustable longitudinally of each other to receive rolls of different length, means associated with the said frames for engaging and supporting a roll of goods within the frames, a roll rewind-shaft supported outwardly from the said frames on one side thereof and in parallel longitudinal relation thereto, whereby it serves as a guide in unwinding goods from the roll of the



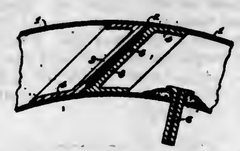
engaging and supporting means, crank means for rotating the rewind-shaft, and clip means carried by said shaft for connecting the roll of goods thereto whereby the latter may be rewound thereon when the shaft is rotated.

1,390,300. CALENDAR-FOB. HARRY A. MCELLIGOTT, Minneapolis, Minn. Filed Feb. 17, 1920. Serial No. 359,354. 1 Claim. (Cl. 63—23.)



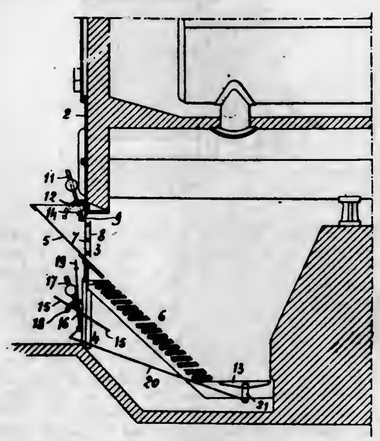
A calendar fob comprising in combination two oval-shaped recessed members adapted to fit together so as to form a shallow receptacle when closed, a hinge connecting said members at one end of the longitudinal axis of the fob, an eye member secured to one of said oval-shaped members at the end thereof opposite said hinge and by means of which the fob may be suspended, and an oval calendar card adapted to fit into said receptacle, said card containing the months of the year, and having the first two figures of the year above the months and the last two figures of the year below the months, one of said oval-shaped members being provided with a cut-out portion for viewing the months on said card, and being also provided with two holes above and two holes below said cut-out portion for viewing the figures of the year.

1,390,301. TREATMENT-TABLE. JOHN V. MCMANIS, Dayton, and FRANK KOENIGKRAMER, Cincinnati, Ohio; said Koenigkramer assignor to said McManis. Filed Nov. 23, 1916. Serial No. 133,073. 31 Claims. (Cl. 128—74.)



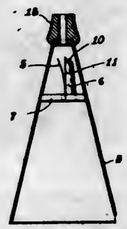
1. A treatment table comprising a vertically adjustable standard, a main top section frame adjustably mounted on said standard, an auxiliary top section frame adjustably mounted on said standard and top sections in pairs separated from each other longitudinally of the table mounted respectively upon said main top section frame and said auxiliary top section frame.

1,390,302. MANDREL. HARVEY F. MARANVILLE, Akron, Ohio, assignor to The Miller Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Dec. 11, 1919. Serial No. 344,130. 13 Claims. (Cl. 18—45.)



1. A tube or air bag mandrel for use in pneumatic tire manufacture comprising an annular body made in two segments which are pivoted together at one end to swing laterally.

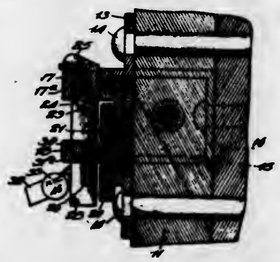
1,390,303. AIR-BAG FOR PNEUMATIC-TIRE MANUFACTURE. HARVEY F. MARANVILLE, Akron, Ohio, assignor to The Miller Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Dec. 11, 1919. Serial No. 344,132. 9 Claims. (Cl. 18—45.)



6. A sectional expansible air bag for pneumatic tire manufacture.

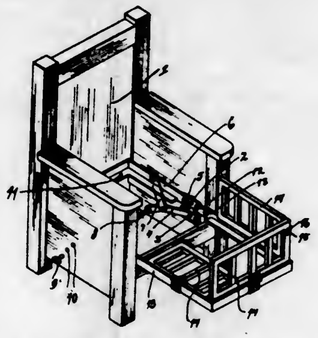
1,390,304. FURNACE FOR BURNING FACTORY REFUSE. ARTHUR MARGO, Nantes, France. Filed Mar. 31, 1919. Serial No. 286,612. 2 Claims. (Cl. 110—32.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. A furnace for burning waste products, comprising in combination a stepped grate having flat bars, a feeding chute arranged outside the furnace, a pivoted vertically-movable shutter separating the feeding chute from the furnace, a counter-weighted lever to operate the movable shutter, a graduated sector enabling the shutter to be maintained so as to give any desired opening, a shield for preventing the flames of the furnace from entering the feed chute, and two lower pivoted shutters to regulate the entrance of air under the furnace.



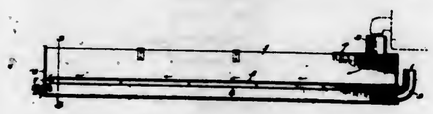
1,390,305. HORN-REED. ISIDORE MARKS, Boston, Mass. Filed Oct. 5, 1920. Serial No. 414,747. 4 Claims. (Cl. 116—137.)

1. A horn reed comprising a tongue having marginal extensions adjacent one end, a trough-shaped throat piece



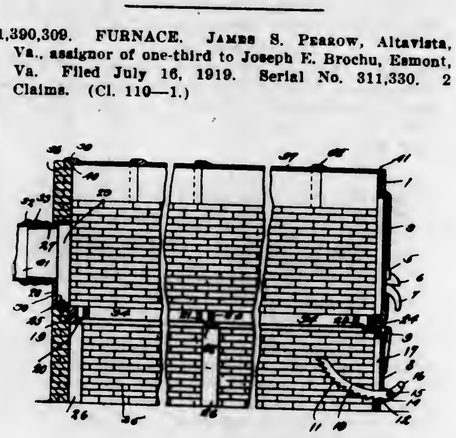
having a marginal outwardly extending flange, and a disk composed of compressible material having a substantially semi-circular opening with cuts extending in opposite directions therefrom, the opening between the walls of said cuts being less than the combined thickness of the marginal portions of the tongue and throat piece, the throat piece and tongue being mounted in the disk opening with the tongue at the open side of the throat piece and the flange of the throat piece and the marginal extensions of the tongue held in contact with each other in said cuts by frictional contact with the disk caused by compression of its material.

1,390,306. CAR-DOOR FASTENER. EDWARD A. MAYHEW, Chicago, Ill., assignor to Union Metal Products Company, Chicago, Ill., a Corporation of Illinois. Filed May 6, 1919. Serial No. 295,144. 2 Claims. (Cl. 292—284.)



1. In a car door fastener, a bracket having a staple, a hasp adapted to be placed over said staple, a channel shaped locking pin adapted to be placed in said staple over said hasp, the ribs of said channel shaped locking pin projecting forwardly, each having a slot so that when the pin is placed in the staple the slots will be below the staple, said slots adapted to receive a sealing wire, said bracket having a perforated lug formed thereon over said staple to guide the locking pin, said lug having an internal web projecting between the ribs of said pin, the lower ends of said ribs being bent inwardly after the pin has been inserted in said guiding lug to engage said rib and prevent the pin from being completely withdrawn from said guiding lug.

1,390,307. COMBINATION DEVICE. HENRY MOLENDA, Ollie, Mont. Filed Mar. 18, 1921. Serial No. 453,330. 1 Claim. (Cl. 5—49.)

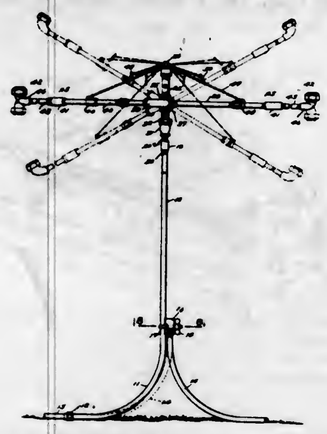


A device of the class described comprising a support, brackets attached to said support, substantially horizontal ears attached to said brackets, a U-shaped frame pivotally attached to said ears at one end of said ears, links pivotally attached to said brackets, a rod rigidly secured to the free ends of said links, supports pivotally attached at one end to said links and at the other end to said frame, a second U-shaped frame pivotally attached to said ears at their opposite ends, and side members pivotally mounted upon said second frame.

1,390,308. APPARATUS FOR PASTEURIZING WHEY. DAVID E. NOALLEBN, Abbotsford, Wis. Filed Aug. 23, 1920. Serial No. 405,225. 2 Claims. (Cl. 257—66.)

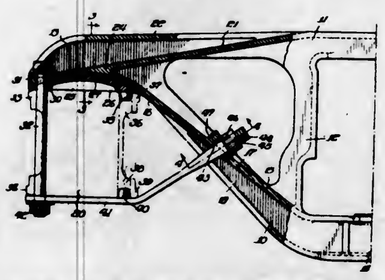
1. The herein described apparatus for pasteurising whey consisting of a receptacle having an outlet at one end adjacent its bottom, an imperforate false bottom arranged above the plane of said outlet and extending from the opposite end of the receptacle to within a short distance of the wall in which the outlet is formed, a deflector extending into the space between the bottoms of the receptacle, above the outlet and in the path of whey flowing through the passage between the false bottom and the end wall in which the outlet is formed, and means for supplying a heating medium to the space between the bottoms of the receptacle.

1,390,309. FURNACE. JAMES S. PEAROW, Altavista, Va., assignor of one-third to Joseph E. Brochu, Esmont, Va. Filed July 16, 1919. Serial No. 311,330. 2 Claims. (Cl. 110—1.)



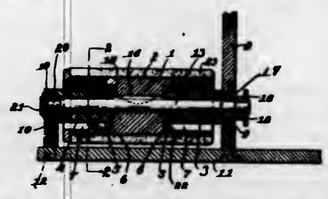
2. A furnace comprising a front wall; a casing including a rear end wall and side walls; a crown extended between the front wall and the rear end wall and supported on the side walls; a grate-carrying frame secured at its forward end to the front wall and provided at its rear end with an outstanding lip mounted in the rear end wall; a plate provided with a thimble, and including a circumferential rim, the rim being mounted in the rear end wall and being supported on the lip; and means for securing the rim to the lip.

1,390,310. SPRAYER. JAMES T. PLUMER, Detroit, Mich. Filed Dec. 30, 1919. Serial No. 348,304. 10 Claims. (Cl. 299—69.)



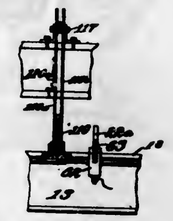
1. In a sprayer, a revolubly mounted laterally disposed sprayer element, a sprayer head on said element remote from the axis of revolution thereof, and a separate cap on said head presenting at one side thereof a series of jet

orifices at varying angles to the longitudinal axis of said element; said head being turnable on said element to



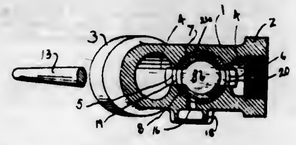
permit of the cap being inverted, and said cap being turnable on the head to dispose said orifices at the trailing side of the head whether the head be inverted or not.

1,390,311. TRUCK-SIDE-FRAME ARRANGEMENT. WILLIAM S. TROWBRIDGE, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed Apr. 8, 1920. Serial No. 372,232. 11 Claims. (Cl. 105—205.)



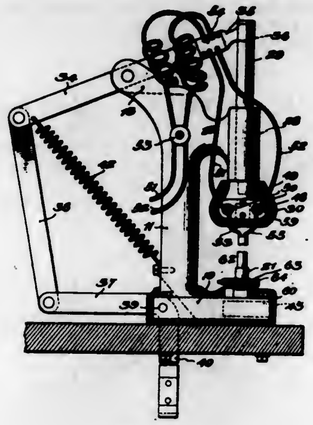
1. A truck side frame including integrally-formed tension and compression members having webs which extend diagonally with respect to the length of said respective tension and compression members and are joined to each other at the journal box receiving portion.

1,390,312. ROLLER CONSTRUCTION. DOUGLAS TURNER, St. Louis, Mo., assignor to The Measuregraph Company, St. Louis, Mo., a Corporation of Missouri. Filed July 26, 1919. Serial No. 313,658. 3 Claims. (Cl. 64—17.)



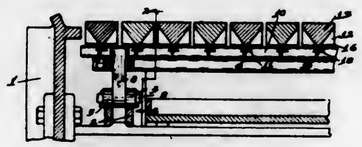
1. In a measuring roller construction for a fabric measuring and cost computing machine, the combination of a substantially cylindrical shell having a pocket extending into each end of the shell and having a transverse head between the pockets, a shaft received in the head and connected thereto so as to be rotated by the roller when it rotates, a fixed arbor extending axially into each end of the shell, completely covering the shaft within the pocket and in the vicinity of the roller, said head having counterbores fitting to and receiving the ends of the arbors and coöperating with the arbors to exclude lint from contact with the shaft.

1,390,313. LEATHER-MEASURING MACHINE. DOUGLAS TURNER, St. Louis, Mo., assignor to The Hosch Mechanisms Corporation, St. Louis, Mo., a Corporation of Missouri. Filed Feb. 7, 1920. Serial No. 356,827. 23 Claims. (Cl. 33—124.)



1. In a machine of the kind described, the combination of a measuring wheel adapted to roll upon the surface of the article being measured as it passes through the machine, an indicator actuated thereby, a guide roller coöperating with the measuring wheel, and means for giving the guide roller a limited circumferential movement while the article being measured is touching the roller and wheel, to change the relative position of the guide roller with respect to the measuring wheel and produce a correcting movement in the indicator to compensate for the thickness of the article measured.

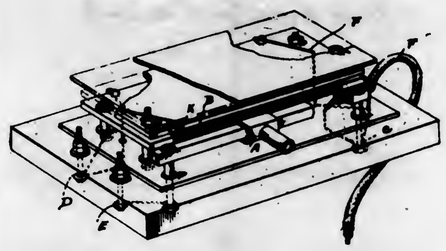
1,390,314. ANGLE-COCK. WILLIAM F. ULLMAN and WILLIAM C. HILLSINGER, Syracuse, N. Y. Filed Feb. 17, 1920. Serial No. 359,330. 3 Claims. (Cl. 251—110.)



1. In an angle cock for train lines, including the usual casing and handle, a plug having the usual diametrically opposed ports therethrough, connecting with a central chamber, there being a vertically positioned angular slot through the wall of said plug, having its upper end inclined away from the hose side of said angle cock, when the valve is in full open position, and atmospheric ports passing through the opposite side of said casing to that of the inclined slot of said plug, said atmospheric ports having direct connection through the wall of said angle cock with the atmosphere, whereby, upon the turning of said plug, said angular slot opens communication between the hose side of the regular ports of said angle cock casing, co-incident with the opening of the other of the regular ports in said plug with said atmospheric port, whereby the angular formation of said slot affords a means of gradation of the flow of air from said hose side of said regular ports, through said plug to the atmosphere.

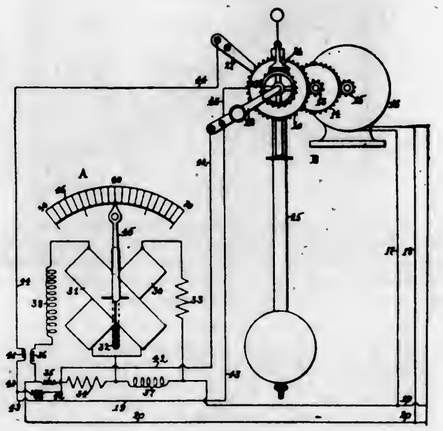
1,390,315. SOLDERING DEVICE FOR FUSE-SOCKETS. HENRY E. VAN NESS, Elmira, N. Y. Filed Jan. 28, 1919. Serial No. 272,761. 8 Claims. (Cl. 113—92.)

1. A machine of the class described including in combination, a frame having a base, an anvil set into said base comprsiing a base of high specific heat and an aluminum extension, heating means in said first base, a plunger mounted on the frame for movement to and from the anvil, a second anvil secured to said plunger formed to fit over said extension, and means to heat said second anvil.



1,390,316. GRATE-BLOCK LOCK. HENRY VICK, Chicago, Ill. Filed Feb. 3, 1919. Serial No. 274,662. 1 Claim. (Cl. 110—40.)

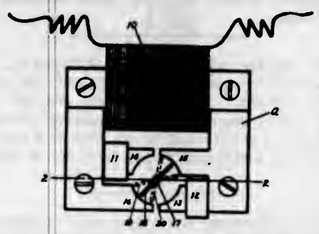
The combination with grate members having dovetail slots therein, of grate blocks, dovetail tenons integrally formed on said blocks and engaging in said slots, a locking plate in each of said slots below the block tenon therein, and oppositely directed lugs integrally formed on the ends of each of said plates adapted to removably engage the ends of said block tenons and the sides of said grate members to hold said blocks locked in position, said lugs at either end of a plate adapted to be bent into the plane of the plate to permit independent removal of any one of said blocks from its respective grate member when necessary.



1,390,317. ELECTRICAL CURRENT-CONTROL DEVICE. CHARLES WAGNER, New York, N. Y. Filed Mar. 25, 1920. Serial No. 368,674. 2 Claims. (Cl. 219—62.)

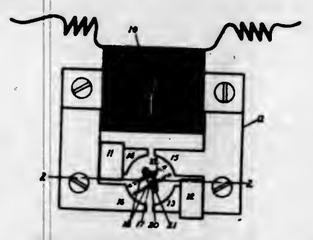
1. In a device of the character described, in combination, a base, two insulated asbestos boards placed apart above said base and provided with a suitable cover, connected coils mounted upon said boards and connected with each other, and a suitable source of electrical

energy, outlet terminals, and a slidable switch interposed between one of said outlet terminals and one of said coils whereby the reduction in current may be regulated.



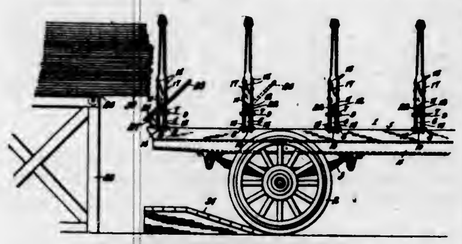
1,390,318. APPARATUS FOR REGULATING FREQUENCY. HENRY E. WARREN, Ashland, Mass., assignor to Warren Clock Company, Ashland, Mass., a Corporation of Maine. Filed Sept. 29, 1916. Serial No. 122,927. 9 Claims. (Cl. 172—245.)

1. In combination, a device driven synchronously with an alternating current, a device measuring the passage of time, one of said devices being movable with relation to the other, and an indicator responsive to the alternations of said current and to relative movement of said devices.



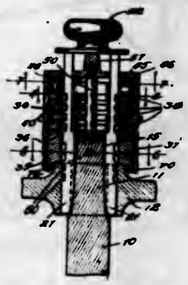
7. In an apparatus for showing frequency, means for obtaining instantaneous readings of the frequency, and means responsive to the value of the average frequency to modify the instantaneous reading.

1,390,319. SELF-STARTING SYNCHRONOUS MOTOR. HENRY E. WARREN, Ashland, Mass., assignor to Warren Clock Company, Ashland, Mass., a Corporation of Maine. Filed Feb. 2, 1918. Serial No. 215,028. 13 Claims. (Cl. 172—278.)



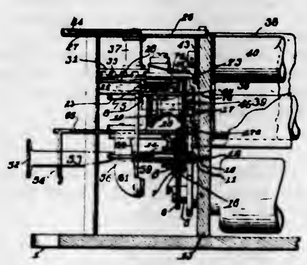
3. A self-starting alternating current synchronous motor comprising a stator provided with an alternating current exciting winding, and a polar rotor which has a natural frequency of oscillation resonant to the frequency of said alternating current.

1,390,320. SELF-STARTING SYNCHRONOUS MOTOR. HENRY E. WARREN, Ashland, Mass., assignor to Warren Clock Company, Ashland, Mass., a Corporation of Maine. Filed Feb. 2, 1918. Serial No. 215,029. 12 Claims. (Cl. 172—278.)



10. In a self-starting synchronous motor, means for producing a rotating magnetic field, and a rotor comprising a non-polar starting member and a synchronizing member arranged to be moved into active position within said field by centrifugal force.

1,390,321. LUMBER-TRUCK. GEORGE E. WATERS and GEORGE M. STEVENSON, Baltimore, Md. Filed Oct. 9, 1919. Serial No. 329,489. 11 Claims. (Cl. 214—84.)

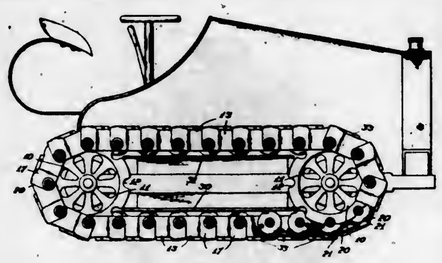


1. Means for loading lumber for transportation, comprising an elevated platform for receiving a pile of lumber, a lumber receiving truck with a roller bed and means for actuating the rollers to propel the lumber from the platform to the truck, and means for causing the truck to rise under and engage the assembled pile of lumber for movement of the latter by the rollers onto the roller bed of the truck.

1,390,322. STEERING DEVICE. PETER WAYDA, Aurora, Ill., assignor to Leopold Moss, Chicago, Ill. Filed June 27, 1917. Serial No. 177,198. 8 Claims. (Cl. 70—129.)

1. In a steering device, the combination of a steering post and a steering wheel on the end of the post with a threaded end of the post projecting above the wheel, a keyway between the hub of the wheel and the steering post, a lock adapted for engagement with the threaded projecting end of the steering post, means to fix the lock in place, and a sliding bolt in the lock adapted to enter the keyway and to be withdrawn therefrom whereby the wheel may be fixed against rotation on the end of the steering post or may be released therefrom.

1,390,323. ZERO-SETTING MECHANISM FOR MEASURING-MACHINES. JOHN L. WHEELER, St. Louis, Mo., assignor to The Measuregraph Company, St. Louis, Mo., a Corporation. Filed July 14, 1919. Serial No. 310,753. 9 Claims. (Cl. 235—144.)

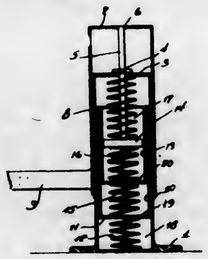


1. In a zero setting mechanism for cloth measuring machines, the combination of a clutch, means for closing said clutch, indicating mechanism driven through said clutch, a hand-actuated member for opening said clutch, means for returning the indicating mechanism to the zero position after the clutch is opened, and automatic means operating after release of the hand-actuated member for holding the clutch open until the indicating mechanism has completed its return movement to the zero position.

1,390,324. TRACTION MECHANISM. JAMES M. WORTH, Chicago, Ill. Filed Mar. 8, 1919. Serial No. 281,559. 9 Claims. (Cl. 305—10.)

1. Traction mechanism, comprising an endless tractor element composed of a plurality of shoes or units having vertically disposed sides, the sides at one end of each shoe being spaced farther apart than the sides at the opposite end of the shoe so as to receive the end of an adjacent shoe therebetween, means whereby the adjacent ends of

the shoes are pivotally connected together, lubricant-holding means rotatably mounted on said first mentioned



means, and a stationary track or run-way along which the rotatably mounted means is adapted to travel and the endless element held against flexing.

1,390,325. INTERTWISTED NET. TAKEJIRO YAMAMOTO, Tokyo, Japan. Filed May 29, 1919. Serial No. 300,569. 1 Claim. (Cl. 66—4.)

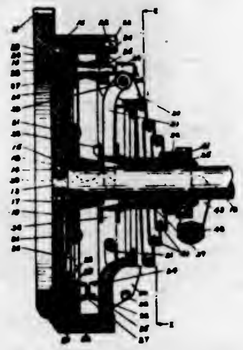
An interlocked netting joint formed from two intersecting cords or ropes, each cord comprising three strands, each strand of either cord being passed between two of the three pairs of strands of the other cord, no two strands of either cord passing between the same strands in the same direction, the two cords being subsequently twisted tightly to form a knotless joint.

1,390,326. AUTOMOBILE-SPRING. JOE E. BARRY, Granville, N. D. Filed Mar. 16, 1921. Serial No. 452,694. 4 Claims. (Cl. 267—69.)

1. An automobile spring comprising a plurality of telescoping cylinders, the cylinders having certain ends closed, coil springs interposed between the closed ends of the cylinders, a sliding outside cylinder provided with a supporting bar, a piston carried by the said outside cylinder and extending into the innermost sliding cylinder, and coil springs engageable with the said piston and with the ends of the said cylinders.

1,390,327. ACID-PROOF REFRACTORY COMPOSITION. HARRY P. BASSETT, Cynthiana, Ky. Filed Oct. 15, 1919. Serial No. 330,904. 10 Claims. (Cl. 106—9.)

3. The herein described acid proof refractory composition comprising silica, a metal comprised within the iron and aluminum groups, an alkali metal compound and a silicate binder.



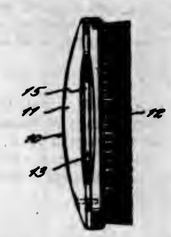
1,390,328. BASIC REFRACTORY MATERIAL. HARRY P. BASSETT, Cynthiana, Ky. Filed Oct. 15, 1919. Serial No. 330,906. 10 Claims. (Cl. 106—9.)

3. The herein described basic refractory material comprising double burned dolomite, an oxid of a metal of the iron group, an alkali metal compound, and a silicon compound.

1,390,329. PROCESS OF TREATING WASTE DENITRATION LIQUORS. HARRY P. BASSETT, Cynthiana, Ky. Filed June 18, 1920. Serial No. 390,016. 15 Claims. (Cl. 23—13.)

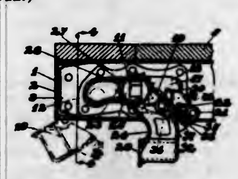
1. The process of recovering values from denitration liquors resulting from denitrating artificial silk with sodium hydrogen sulfid, comprising treating the same with an alkaline zinc compound, and separating the precipitate formed.

1,390,330. CLUTCH. EDWARD H. BELDEN, Toledo, Ohio, assignor, by mesne assignments, to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Nov. 30, 1917. Serial No. 204,634. 10 Claims. (Cl. 192—68.)



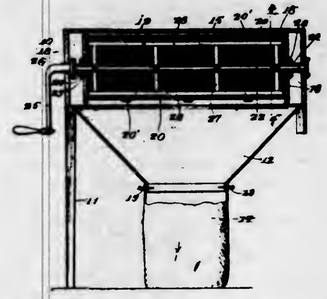
10. A device of the class described comprising a recessed driving member provided with a cover plate, a driven member within said driving member, a clutch member movable within said driving member, levers pivoted upon and extending through said cover plate and operatively connected with said clutch member and means for actuating said levers to effect movement of said clutch member.

1,390,331. CUE-TIP. NORMAN E. BENSINGER, Chicago, Ill. Filed Nov. 28, 1919. Serial No. 341,038. 5 Claims. (Cl. 46—9.)



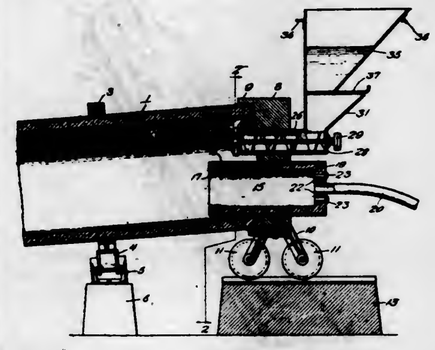
1. A method of making and of securing the tip to the billiard cue including the steps of roughening the face of the fiber washer, coating the non-glossy side of the leather with cream, and subsequently sizing it and cementing the roughened side of the fiber to the sized side of the cue tip.

1,390,332. COMBINED COMB AND BRUSH. ALBERT BETHINCOURT, New York, N. Y. Filed Apr. 30, 1921. Serial No. 465,683. 2 Claims. (Cl. 132—86.)



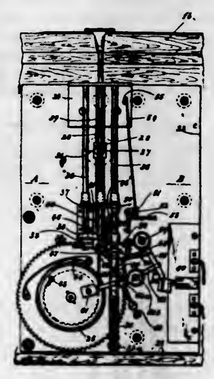
1. A cover for a toilet kit comprising, a body, flaps along the marginal edges of the body, a mirror secured to the inner side of the body and means for holding the flaps in position to support the mirror in upright position.

1,390,333. DOOR-OPERATING MECHANISM. MINOT C. BLEST, Bellevue, Pa., assignor to Pressed Steel Car Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed May 10, 1921. Serial No. 468,300. 5 Claims. (Cl. 105—312.)



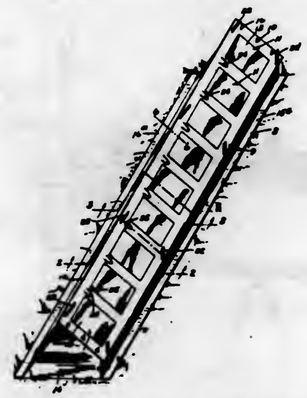
1. In a dump car, a sill, a discharge door operating shaft behind said sill and an operating lever mounted on said shaft having a socket portion depending below said sill, said socket portion being movable beyond the outside vertical lines of said sill.

1,390,334. FLOUR-SIFTER. JOHNSON BREWER, Rice, Tex. Filed Feb. 10, 1921. Serial No. 443,843. 1 Claim. (Cl. 83—39.)



A flour cleaner including a housing having a lower discharge opening, a rotatable sifting drum mounted longitudinally in the housing, a longitudinal central and stationary shaft disposed through the center of the drum and supported at its ends in the ends of the housing, a plurality of arms secured to the shaft and extending vertically therefrom in a longitudinal series, a plurality of arms secured to the shaft and extending vertically downwardly therefrom in a longitudinal series, a longitudinal series of downwardly and outwardly inclining arms secured to the shaft and extending at opposite sides of the downwardly extending vertical arms, and scraper blades secured to the outer ends of the arms of each series and in parallel relation to the shaft.

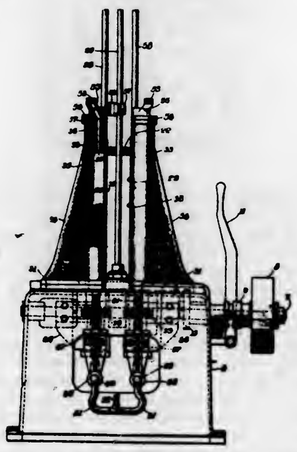
1,390,335. PARALLEL-CURRENT CALCINING-KILN. HARRY E. BROOKBY, Evanston, Ill. Filed Mar. 10, 1919. Serial No. 281,772. 11 Claims. (Cl. 263—32.)



1. A common direction, parallel current, calcining kiln having a rotary shell, a combustion chamber projecting into the shell, and means for introducing the charge into the shell and passing it over a portion of the surface of the combustion chamber for raising the temperature of the charge and lowering the temperature of the gases of combustion before the two mingle in the shell.

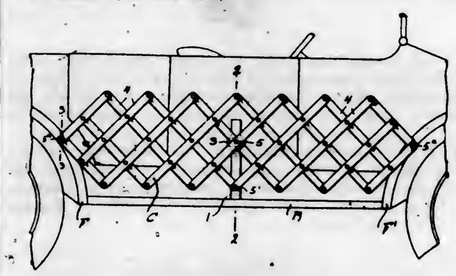
1,390,336. TIME-SWITCH FOR PHOTOGRAPHIC PURPOSES. ALBERT BÜCHI, Klosters, Switzerland. Filed Dec. 29, 1919. Serial No. 348,108. 2 Claims. (Cl. 200—39.)

1. The combination, in the herein-described time switch for use with photographic printing boxes, of a clockwork and an electric contact making device mounted at the inside of the cover of the said box, means for winding up the clockwork, and means to actuate the said contact making device when the winding up mechanism is released, the said winding up mechanism comprising a slidable actuating spindle, a plate secured to one end of the spindle and having integral downwardly projecting arms, a second plate fitted over the spindle and at a certain distance from the first plate, a spring mounted between the two plates and tending to keep the same apart, means to guide and support the said spindle and the plates, and a flexible steel band of which one end is attached to the said arms and the other end fixed to the clockwork casing for winding up the clockwork-spring, all as and for the purpose set forth.



1,390,337. PLANTING-BOX. WILLIAM H. BUSSEY, Minneapolis, Minn. Filed Nov. 17, 1919. Serial No. 338,665. 10 Claims. (Cl. 47—27.)

1. A planting box having its body made from a sheet bent to form inclined roof and side portions, the inclined roof having windows therein, said body-forming sheet having a tuck at the extremity of its roof portion, and anchoring stakes passed through said tuck and adapted to be driven into the ground to anchor the box.



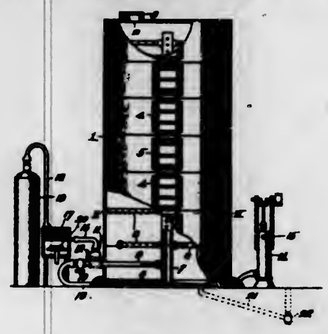
8. A planting box having its body made from a sheet bent to form inclined roof and side portions, the inclined roof having windows therein covered with a material that permits the passage of light into the box, the window-equipped roof forming portion of said sheet, at its upper and lower edges, having extended tucks, the said sheet, at all edges, having ground-engaging flaps, stakes passed through said tucks and ground-engaging flaps and adapted to be driven into the ground to anchor the box, the back-forming portion of said sheet being inclined in a direction reverse to the window-equipped roof-forming portion thereof, and the said back-forming portion having windows therein covered by a material permitting light to enter the box.

1,390,338. DRIER. WILLIAM CAMERON, Chicago, Ill. Filed Dec. 4, 1919. Serial No. 342,342. 16 Claims. (Cl. 34—11.)

5. In a drier, the combination of a hollow heating element having a screw threaded exterior, means for applying heat to the interior of said element, means for delivering can ends into operative relation to said element, means for maintaining said ends in contact with said element and means for revolving said element so as to feed the can ends longitudinally of the element and at the same time impart a rotary movement to said ends.

1,390,339. PARCEL-CARRIER. WILLIAM L. CAMPBELL and AUGUSTUS E. STRAUGHAN, McKinney, Tex., assignors of forty-nine one-hundredths to A. J. Commons, S. Weisman, J. A. Caldwell, and E. H. Winton, Collin county, Tex. Filed Mar. 1, 1919. Serial No. 280,151. 1 Claim. (Cl. 224—29.)

The combination with an automobile body provided with front and rear fenders and a running-board, of an upstanding post carried by said board at a point substantially midway between the fenders, a loop slidably engaged therewith, and a carrier comprising a plurality of bars pivotally secured to each other to form lazy tongs, the central pivotal member for the bars being secured to the loop, a second pivot member substantially in vertical alinement with the central pivot member being secured to the post, and means for detachably engaging the opposite end portions of the carrier with the fenders when the carrier is extended, said carrier when collapsed, being positioned in close relation to the post.



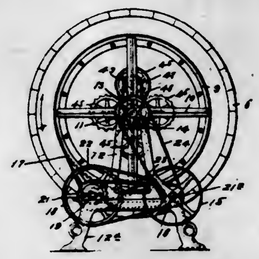
1,390,340. DEVICE FOR INDICATING THE LENGTH AND HANG OF COAT-SLEEVES. JOHN C. CARLSON, Chicago, Ill. Filed Sept. 18, 1920. Serial No. 411,213. 16 Claims. (Cl. 33—15.)

1. A device for indicating the length and hang of a coat sleeve embodying a scale for designating a point to be indicated upon the body of a coat, and means for attaching said scale to the arm of the person.

1,390,341. PROCESS FOR STORING AND CURING ENSILAGE. WILLIAM H. CUSHING, Topeka, Kans., assignor of one-third to Joseph H. Mercer and one-sixth to Paul J. McBride, Topeka, Kans. Filed Dec. 18, 1918. Serial No. 267,369. 3 Claims. (Cl. 99—11.)

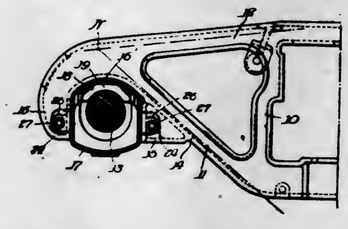
1. The process of curing fresh vegetable matter, consisting in placing such matter in a substantially air-tight chamber and in discharging compressed air into the chamber and in effecting the removal from the chamber of

liquid produced by the drying of the vegetable matter by the action of the compressed air thereon.



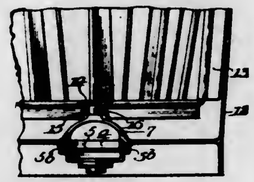
1,390,342. CATTLE-MARK. EUGÈNE DELAY, Geneva, Switzerland. Filed Oct. 14, 1920. Serial No. 416,905. 1 Claim. (Cl. 40—3.)

A cattle mark comprising a male part having a bowl portion and a plane rim, a pointed piercing bar having a plurality of circular grooves mounted in said male part, a hollow female part with a conical formed hood and having a convex inner portion extending toward said bowl of the male part and being formed to press the ear of an animal into said bowl portion in such a manner as to leave an air gap on either side of the ear adjacent the perforation, said female part having also an aperture through which said bar is adapted to be inserted, and a device within said female part for gripping and retaining said bar after its insertion through said aperture, said device comprising a plurality of disks, said disks being provided with teeth arranged in such manner that the teeth of one disk are displaced with regard to the teeth of any adjacent disk, said teeth being adapted to engage with a plurality of said circular grooves in the bar, and a protection plate on either side of said toothed disks, said toothed disks and said protection plates being mounted with provision for a certain play within said female part to permit the latter to be freely turnable around said disks and plates, said male and female parts and said disks and plates being adapted to render the said piercing bar inaccessible from the outside, substantially as described.



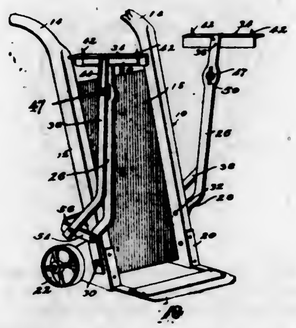
1,390,343. COMBINED CHURN AND BUTTER-WORKER. REUBEN B. DISBROW, Owatonna, Minn. Filed Oct. 30, 1920. Serial No. 420,662. 7 Claims. (Cl. 259—84.)

1. The combination with a drum arranged to rotate on an approximately horizontal axis, of diametrically opposite lifting flights within said drum, a group of four working rollers arranged in diametrically opposite pairs around the axis of said drum, and roller shafts extended through one drum head and combined with means for rotating one of said pairs of rollers in the same direction



as the drum and the other pair of rollers in the opposite direction, one of said rollers being nearer to the axis of said drum than the other pair of rollers.

1,390,344. RAILWAY-CAR TRUCK. HARRY E. DOERR, St. Louis, Mo., assignor to Scullin Steel Co., St. Louis, Mo., a Corporation of Missouri. Filed Sept. 3, 1920. Serial No. 407,832. 5 Claims. (Cl. 105—220.)

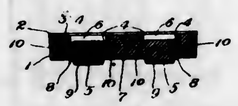


5. In a railway car truck, the combination of a side frame having pedestal jaws, a journal box received by said pedestal jaws and having a top crowned in a plurality of directions and coöperating with the side frame, the crowning in one direction permitting the journal box to have a transversely rocking movement with respect to the side frame for equalizing pressures on the journal brasses, and means whereby said journal box may guidedly move in a vertical direction within said truck side frame to permit the insertion of a shim between said truck side frame and journal box.

1,390,345. REMOVABLE REFUSE-CATCHER. WILLIAM H. DUNN, Chicago, Ill. Filed Mar. 19, 1919. Serial No. 283,600. 4 Claims. (Cl. 141—9.)

1. In a device of the class described, the combination of a ring adapted to be inserted into an orifice, said ring being closed by a perforated member, said ring and perforated member producing a receptacle into which material may be lodged, a member extending from said ring and said last mentioned member having means whereby another member may be held in pivotal relation thereto.

1,390,346. BAG-HOLDER FOR TRUCKS. ERNEST EUGENE DURKEE, Deer River, Minn. Filed Oct. 22, 1920. Serial No. 418,816. 5 Claims. (Cl. 83—26.)

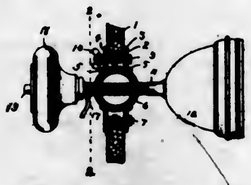


1. The combination with a support, of brackets arranged on opposite sides of and in advance of the support, cross heads arranged at the outer sides of said brackets and having teeth extended upwardly through the brackets, a U-shaped treadle having sides pivoted to the sides of said support and having a connecting and foot engaging portion at the rear side of the support adjacent the lower end of the same, and means connecting the sides of said U-shaped treadle and said cross head.

1,390,347. HOT-AIR REGISTER. JAMES LEE ELLISTON, Clinton, Mo. Filed Mar. 25, 1921. Serial No. 455,663. 2 Claims. (Cl. 98—49.)

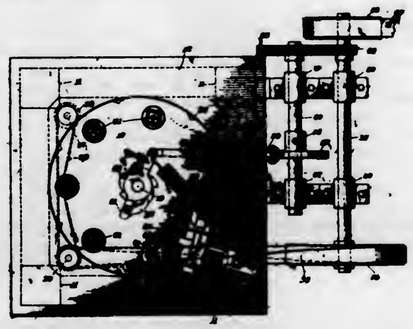
1. A heat register for one-pipe furnaces comprising a reticulated body having a plurality of spaced parallel bars, said reticulated body being adapted to be arranged at the upper end of a conduit of a one-pipe furnace, and a plurality of angle bars having attaching means secured to the bars of said body and provided with upper flanges arranged in inclined position and terminating in the plane of the adjacent bars of the body, said angle bars also being provided with inclined flanges arranged at right angles to said first named flanges and constituting dust baffles, and a means for directing the heat between the upper flanges, said angle bars being arranged in spaced parallel relation.

1,390,348. RESILIENT HEEL. ELIAS J. EMERY, Lynn, Mass. Filed May 21, 1020. Serial No. 383,057. 3 Claims. (Cl. 36—35.)



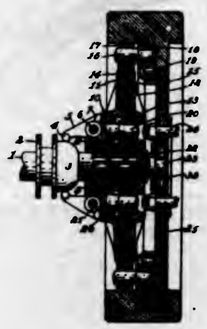
1. A resilient heel molded in one integral piece of a plastic substance, having tensile resilience, and having therein a partially separated body constituting a plug having ends normally displaced from coincidence with the tread and attachment surfaces of the heel respectively, and movable into line with the body of the heel, and connected to the body of the heel by an integral resilient bridge constituting a support adapted to stretch and resiliently return, to permit motion and return of the plug.

1,390,349. ARTIFICIAL GRAPE AND METHOD OF PRODUCING SAME. JAMES H. EMERY, New York, N. Y. Filed Feb. 5, 1921. Serial No. 442,603. 13 Claims. (Cl. 41—13.)



1. An artificial grape comprising a core of thermoplastic material and a coating of colored material covering said core.

1,390,350. SPOTLIGHT-SUPPORT. WILLIAM S. EVANS, Duluth, Minn. Filed Jan. 10, 1921. Serial No. 436,178. 2 Claims. (Cl. 240—7.)

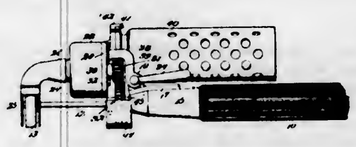


2. In combination a spot light of the character described mounted upon a spindle within a rotatable ball, an upright support having an opening therein in which the ball is mounted, two spaced clamping members surrounding the ball, attached to the support and forming a closure to either side of the opening therein, a separatey adjustable portion in one of said clamping members engaging the ball, and a handle on the spindle for adjusting the spot light.

1,390,351. AUTOMATIC NUT-APPLYING DEVICE. ALBERT FAESSEL, Chicago, Ill., assignor to Continental Bolt & Iron Works, Chicago, Ill., a Corporation of Illinois. Filed Jan. 31, 1920. Serial No. 355,433. 13 Claims. (Cl. 10—155.)

1. In an apparatus of the class described, including means for receiving individual nuts, means for spinning said receiving means at a point remote from the nut receiving position, means for moving said receiving means from receiving position to spinning position, and means for feeding the nuts.

1,390,352. ADJUSTING MEANS FOR FRICTION-CLUTCHES. THOMAS L. FAWICK, Chicago, Ill., assignor to Twin Disc Clutch Company, Racine, Wis., a Corporation of Wisconsin. Filed Mar. 4, 1918. Serial No. 220,147. 2 Claims. (Cl. 192—68.)

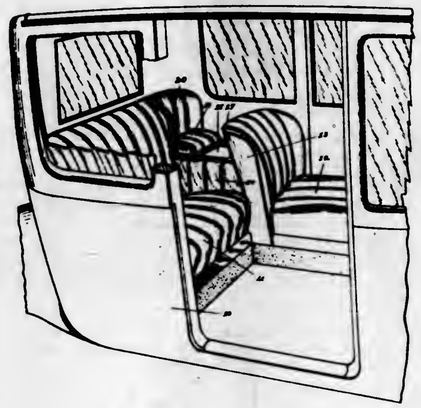


1. In a friction clutch, a rotatable driven element, a rotatable driving element including a friction-head slidably non-rotatably connected thereto, a friction-abutment fixed on said driven element adjacent one friction-face of said friction-head, a friction-element slidably non-rotatably mounted on said driven-element, movable into contact with the opposite face of said friction-head, and separate tension-producing means of different powers bearing against opposite parts of said friction-element.

1,390,353. ARTIFICIAL TOOTH. THOMAS FLINTOFF, Claremont, Perth, Western Australia, Australia. Filed Sept. 12, 1918. Serial No. 253,707. 3 Claims. (Cl. 32—9.)

1. The combination with an artificial tooth having a groove of dovetail cross section extending longitudinally therein and having an open end directed toward the nonbiting edge of the tooth, of a flat metal back adapted to be slid within the dovetail groove and on which the tooth is adjustable to regulate the bite, and studs rigid on the metal back extending outward from the groove, the length of the groove being greater than the measurement in the same direction of the metal back so that regulation of the bite can be effected by adjusting the tooth relatively to the back without the latter being caused to protrude through the open end or to contact with the closed end of the groove.

1,390,354. DENTAL APPARATUS. JULIUS FRIED, New York, N. Y. Filed Dec. 26, 1918. Serial No. 268,358. 7 Claims. (Cl. 51—273.)

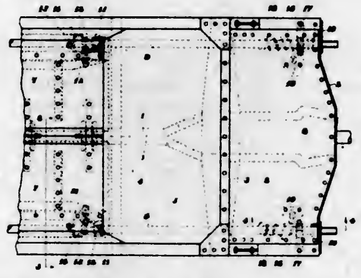


1. In combination with a dental hand piece, a sleeve to encircle the same, a lug formed on said sleeve, a second lug pivotally connected to the first, and a shield, blower casing and receptacle mounted on said second lug for movement relative to the hand piece.

1,390,355. SEPARATOR FOR STORAGE BATTERIES AND METHOD OF MAKING. DAVID FOSTER GOULD, Newark, N. J., assignor to General Lead Batteries Company, a Corporation of Delaware. Filed Aug. 24, 1916. Serial No. 116,594. 3 Claims. (Cl. 204—29.)

1. The process of preparing battery separators which consists in shaping wood containing no substance in sufficient quantity to injure the positive battery plate, into the form of a separator, increasing the fluid passages through the wood by the removal of gums, resins and other substances, not an integral part of the true wood fiber, by immersing in a solution of a sulfite and heating the solution to such temperature and for such time as produces the porosity desired, the wood of the finished separator containing a small quantity of gum, resin and other substances, not an integral part of the true wood fiber, relative to those naturally existing in the wood.

1,390,356. SEATING ARRANGEMENT FOR COUPÉS. ABUNDIUS GRAVEL, Toledo, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Feb. 13, 1918. Serial No. 216,854. 5 Claims. (Cl. 296—64.)

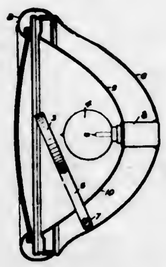


1. In a motor vehicle provided with a passenger's seat and a driver's seat advanced in front of said passenger's seat, the combination of a storage compartment formed in the rear of said driver's seat and to one side of the passenger's seat; a top wall closing the upper end of said storage compartment, and provided with an opening therein; a hinged cover closing said opening; a back formed in line with the rear end of said top wall; a cushion secured to the lower face of said cover and adapted to be disposed with its rear end in line with the lower edge of said back when said cover is fully open.

1,390,357. DISCHARGE-DOOR-OPERATING MECHANISM. HARRY E. KAUP, Bellevue, and RICHARD J. WILCOX, Carnegie, Pa., assignors to Pressed Steel Car Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed May 16, 1921. Serial No. 469,807. 14 Claims. (Cl. 105—301.)

1. In a dump car, a discharge door, a bodily movable

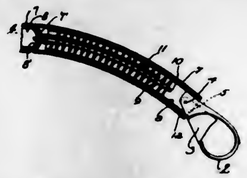
shaft for operating said door, and means for moving said shaft bodily, said means comprising a flexible con-



nection from said shaft to said door and a flexible connection from said shaft to a stationary part of said car.

1,390,358. OIL-GAGE. THOMAS J. KEHOE, Toledo, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio. Filed May 23, 1917. Serial No. 170,472. 25 Claims. (Cl. 116—117.)

14. In a lubricating system, means forming an expansible oil chamber continuously open to one side of the system, and a valve in said chamber adapted to be opened to the opposite side of the system automatically at a predetermined point of expansion of said chamber.

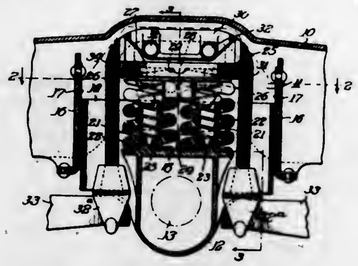


1,390,359. DIMMER. THOMAS J. KEHOE, Toledo, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio. Filed May 23, 1917. Serial No. 170,473. 14 Claims. (Cl. 240—45.)

1. In a device of the class described, the combination of a reflector, a light source within said reflector, and a resilient spiral strip adapted to be extended over said light source to screen lateral rays therefrom.

1,390,360. BRACELET. CLIFFORD G. KING, Providence, R. I., assignor to himself and Arthur I. Clark, Cranston, R. I. Original application filed June 8, 1918, Serial No. 238,821. Divided and this application filed Apr. 8, 1919. Serial No. 288,460. 2 Claims. (Cl. 63—5.)

1. The combination with an expansible bracelet of a snap hook comprising a hollow body portion terminating in a hook and having a depression in one of the interior walls thereof, and a tongue inclosed within and pivoted

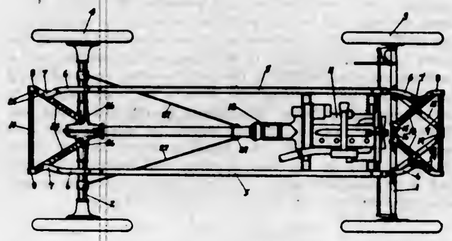


to said body portion and having an enlargement of one of the sides thereof arranged to coöperate with said depression in the interior wall of said body portion.

1,390,361. LATCH FOR BRACELETS AND THE LIKE. CLIFFORD G. KING, Providence, R. I., assignor to himself and Arthur I. Clark, Cranston, R. I. Original application filed June 8, 1918, Serial No. 238,821. Divided and this application filed Apr. 8, 1919. Serial No. 288,461. 3 Claims. (Cl. 63—5.)

1. An expansible bracelet comprising in combination a series of tubes, a series of shells each embracing a tube, a shell inclosing a latch, said shell being hingedly connected to one of two juxtaposed shells and a tube within said shell, said tube being hingedly connected to the other of said juxtaposed shells.

1,390,362. RAILWAY-CAR-TRUCK ARRANGEMENT. JOHN A. LAMONT, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed Apr. 25, 1921. Serial No. 464,112. 4 Claims. (Cl. 105—195.)

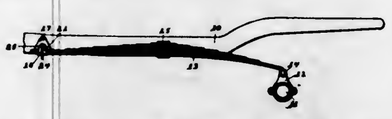


1. In a railway car truck, the combination of a journal box, springs mounted directly on top of said journal box, a spring cap bridging said springs, an equalizing beam, said cap and beam having a connection whereby one may be rotated on the other, and means operatively connected to said equalizing beam whereby loads may be transmitted to the latter and equalized with respect to said journal box.

1,390,363. SPRING SUSPENSION FOR VEHICLES. HARRY W. LINDSEY, Jr., Toledo, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Oct. 9, 1919. Serial No. 329,419. 19 Claims. (Cl. 267—41.)

6. In a vehicle, the combination of a frame, front and rear axles, a pair of cantaliver springs converging rearwardly from the front end of the frame to the front axle, means for rigidly connecting the forward ends of

said springs to the front end of the frame, a second pair of cantaliver springs converging forwardly from the rear



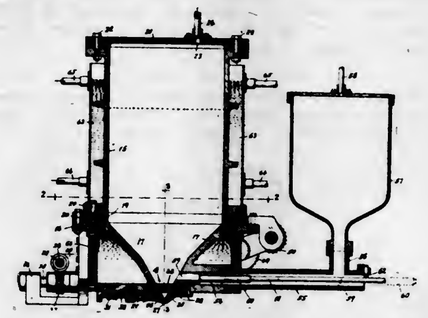
end of the frame to their connection with the rear axle, and means for rigidly securing the rear ends of said springs to said frame.

1,390,364. BEAM, GIRDER, OR THE LIKE. EMILIO LÖLING and MARIO BARONI, Milan, Italy. Filed Mar. 27, 1917. Serial No. 157,776. 1 Claim. (Cl. 72—110.)

A structural element more particularly adapted for use in a reinforced concrete structure, comprising a plurality of longitudinal beams arranged in horizontal and vertical rows, transverse bolt members arranged at right angles to each other and interposed alternately between the horizontal rows and between the vertical rows of beams and having their thickness designed so as to determine all the spaces between the beams, and bolt heads and nuts on the bolt members for engaging the beams and retaining same in spaced position and against the sides of the bolt members.

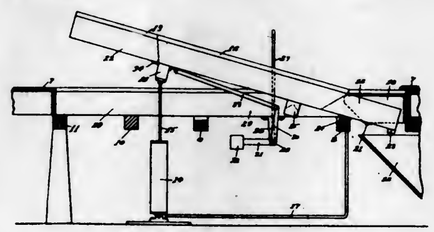
1,390,365. SPRING SUSPENSION FOR VEHICLES. CHARLES W. MCKINLEY, Toledo, Ohio, assignor to The Willys-Overland Co., Toledo, Ohio, a Corporation of Ohio. Filed Oct. 29, 1917. Serial No. 199,093. 4 Claims. (Cl. 267—56.)

3. In a support for a leaf spring, a bracket for slidably sustaining one end of the spring, provided with a pair of spaced posts and an intermediate connecting base member, a saddle member provided with a pair of posts and a base member adapted to fit over the first mentioned base member and between the posts of the bracket, and a pin journaled in said posts, whereby the end of the spring is adapted to be confined between the pin and the base of the saddle member.



1,390,366. FOUNTAIN-PEN. RODERICK J. MACKENZIE, Cambridge, Mass., assignor to Crocker Pen Company, Boston, Mass., a Corporation of Massachusetts. Filed Dec. 3, 1919. Serial No. 342,071. 8 Claims. (Cl. 120—46.)

1. In a fountain pen, the combination comprising the barrel of the pen, a pen-carrying section having jointed engagement with said barrel, both said barrel and pen-carrying section having a slot to provide a keyway at the point of the joint between said members when the pen-carrying section is turned to occupy a determinate position with relation to said barrel, a compressible sack within the barrel, a presser bar for collapsing said sack when

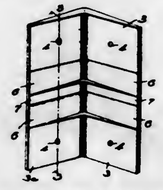


actuated, means for actuating the presser bar, and means carrying said presser bar and extended to lie within said keyway.

1,390,367. COATING-MACHINE. JOHN R. MASSEY, New Brunswick, N. J., assignor, by mesne assignments, to Vitrocell Company, Columbus, Ohio, a Copartnership composed of Walter A. Jones, Jo. L. Keener, and O. S. Marckworth. Filed Apr. 12, 1918. Serial No. 228,083. 7 Claims. (Cl. 91—43.)

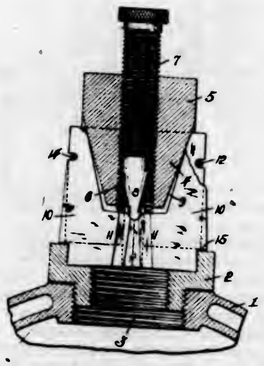
2. A coating apparatus of the kind described comprising a reservoir for containing a coating material and having an outlet, means whereby said outlet is controlled, means independent of said outlet controlling means located adjacent to said outlet for forming the outflowing coating material into a film and means whereby said independent means is adjusted to fixed positions to vary the transverse thickness of the film.

1,390,368. COMBINATION AUTOTRUCK AND WAGON DUMP. PEARLY W. MANN, Minneapolis, Minn. Filed Mar. 15, 1920. Serial No. 365,930. 2 Claims. (Cl. 214—49.)



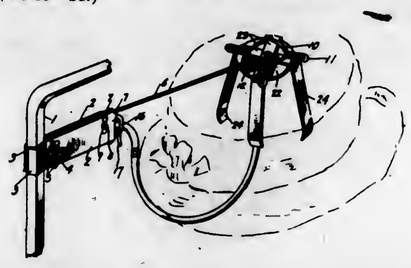
1. A vehicle dumping mechanism for relatively long and short vehicles, comprising a relatively long member tiltably mounted on a suitable bearing, a relatively short member forming a part of and tiltably mounted on said long member, means for locking said members in relatively rigid positions, means for tilting the shorter of said members singly or both members simultaneously when in said locked position, a horizontal frame having a grate therein pivotally secured to said long member rearward of said short member, and adapted to be lowered when said long member is tilted.

1,390,369. TROLLEY-WIRE CLAMP. SAMUEL S. MATTHEW, Mansfield, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed June 9, 1920. Serial No. 387,595. 12 Claims. (Cl. 191—43.)



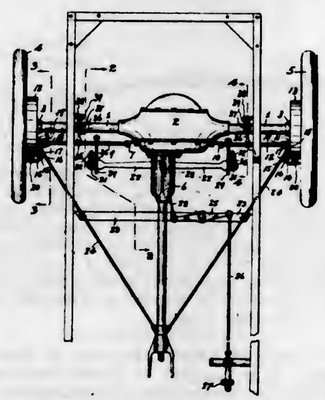
5. A supporting device to engage and clamp a conductor comprising a supporting member, means to engage a hanger, clamping means rotatably mounted within the supporting member and held in clamping position thereby and arranged to clamp a conductor, and an operating member mounted on the supporting member and movable longitudinally thereof to engage the clamping means and move them into clamping engagement with the conductor and means on the supporting member engaging means on the operating member to prevent the removal of the parts of the device and limit the longitudinal movement of the operating member in one direction only.

1,390,370. PROTECTOR FOR DESKS. ROBERT HENRY MESTER, Webster Groves, Mo. Filed Aug. 17, 1920. Serial No. 404,234. 4 Claims. (Cl. 45—137.)



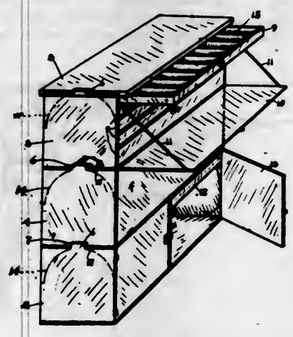
1. A protector of the class described comprising a body of yieldable material provided with wings having their inner sides formed with pairs of spaced grooves defining air pockets, and ribs disposed between said pairs of grooves, thereby separating the same, the portions of said wings surrounding said air pockets being adapted to flatly contact with the article to which the protector is secured for entirely closing said air pockets.

1,390,371. WRENCH. CARL MEYER, Toledo, Ohio. Filed Feb. 14, 1921. Serial No. 444,742. 2 Claims. (Cl. 81—72.)



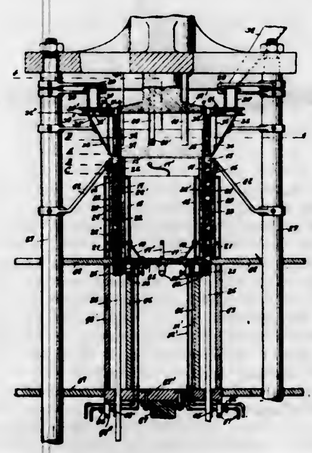
1. In a wrench of the class described, a cylindrical body member having an opening axially therethrough and a wrench gripping portion at its outer end and having a plurality of longitudinally extending recesses in its sides opening at one end into the inner end portion of the axial opening, jaws mounted in said recesses for radial movement therein and having portions entering the axial opening of the member and end portions extending beyond the inner end of the member in work engaging position, and a split spring ring encircling the body member and yieldingly holding the inner ends of the jaws to the body member to permit swinging radial movements of the outer end portions of the jaws, said ring normally locking the jaws against removal from the body member, and a screw threaded into the member opening and having its inner end in engagement with the jaws to effect a radial expansion thereof when the screw is turned inward.

1,390,372. HAT-HANGER. CARL P. MILLER, Fargo, N. D. Filed July 24, 1920. Serial No. 398,606. 4 Claims. (Cl. 45—13.)



1. A device for the purpose set forth comprising a support, an arm held by and extending from said support and provided at its free end with a base member to rest upon the crown of a hat, a sustaining arm pivotally fitted within the support below the first-mentioned arm and constructed at its free end to engage within the crown of a hat and support the same against said base member, and a latch carried by the support to engage under and sustain said pivoted arm.

1,390,373. BRAKE MECHANISM FOR AUTOMOBILES. MORRIS MOSKOWITZ, Montclair, N. J. Filed July 15, 1920. Serial No. 396,547. 11 Claims. (Cl. 188—204.)

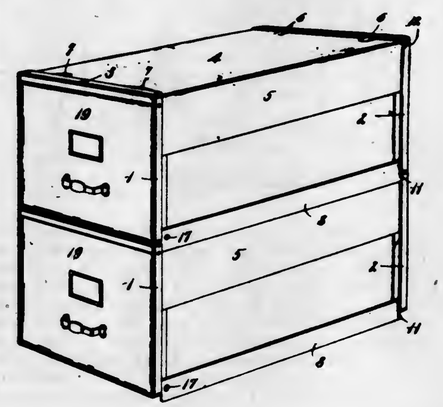


1. In an automobile braking system, the combination with the rear wheel brake mechanisms of an equalizing bar parallel with and adjacent to the axle housing, and means for applying a pushing pressure to said equalizing bar.

1,390,374. SECTIONAL FURNITURE. EDITH LINCOLN NILES, Delaware, Ohio. Filed Dec. 26, 1919. Serial No. 347,546. 2 Claims. (Cl. 45—78.)

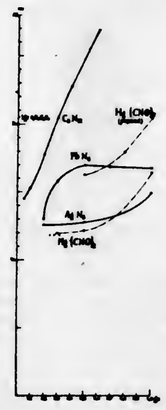
1. In sectional furniture having a plurality of sections, each section having an integral lug on the upper edge of its end and each coöperating superimposed section having a central recess in the lower edge of its end and a central notch in its floor adjacent said recess, each recess and notch being adapted to receive its coöperating lug to hold said sections in fixed lateral end relation to each other, substantially as set forth and for the purposes specified.

1,390,375. FORCED ARTICLES AND PROCESS AND APPARATUS FOR MAKING THE SAME. FRITZ OFFENHÄUSER, Tarrytown, N. Y. Filed Apr. 25, 1918. Serial No. 230,751. 21 Claims. (Cl. 18—14.)



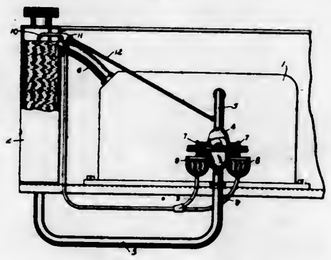
1. An apparatus of the character described, comprising a mold chamber to receive the material to be shaped, feeding means arranged at one end of said chamber and including a material directing member at the outer side of the chamber, a compressing plunger movable into and out of said end of the chamber and coöperating with said directing member to cut off the further feed of the material upon the entrance of the plunger into said chamber, and relatively stationary means at the opposite side of the chamber to prevent the overflow of the material therefrom.

1,390,376. AUTOMATIC SPEED-GOVERNOR FOR INTERNAL-COMBUSTION ENGINES. RICHARD ARNOLD OGLESBY, South Bend, Ind., assignor to Quick Action Ignition Company, South Bend, Ind., a Corporation of Indiana. Filed Aug. 5, 1918. Serial No. 248,361. 2 Claims. (Cl. 123—118.)



1. In ignition systems for internal combustion engines, a crank shaft, an engine casing, an armature plate supported by said casing, a magnet supporting member supported by the crank shaft, a permanent field magnet thereon, a coil on the armature plate adapted to have currents induced therein as the magnet is moved adjacent thereto, a circuit breaker supported on the armature plate, means rotative with the magnet adapted to actuate the breaker, one or more spark plugs for the engine, connections from the coil to the spark plugs, a centrifugal governor carried in unison with the field magnet movement, and means controlled by the governor for automatically depriving the spark plugs of current at excessive engine speeds and restoring the same at lowered speeds.

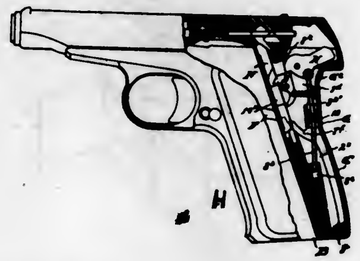
1,390,377. SECTIONAL FILING-CASE. ENOCH OHNSTRAND, Mohawk, N. Y., assignor to Library Bureau, Cambridge, Mass., a Corporation of New Jersey. Filed July 9, 1919. Serial No. 309,663. 4 Claims. (Cl. 45—2.)



1. A metal sectional filing case, each section of which comprises rectangular front and rear frames, and side flanges between the front and rear frames, extending downwardly below the bottom of the section and overlapping the sides of the next section below and covering the joint between the two sections, the ends of said depending side flanges fitting between the front and rear frames of the section below, and interlocking means between the rear ends of the depending side flanges and the rear upright frame members of the section below.

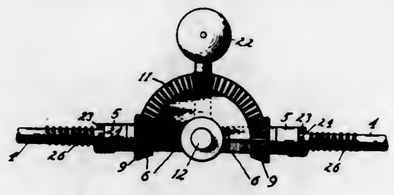
1,390,378. EXPLOSIVE AND PROCESS OF MAKING SAME. EDWIN OTT, Basel, Switzerland, assignor to Prof. Dr. Edwin Hanton Faust, Basel, Switzerland. Filed May 25, 1920. Serial No. 384,208. 2 Claims. (Cl. 23—24.)

1. The herein described process for the manufacture of cyanure triazid, consisting in treating aqueous solutions of sodium azid with a cyanure halogenid.



1,390,379. MEANS FOR CATCHING AND RESTORING FLUID-LEAKAGE. FRANK E. PAYNE, Glencoe, Ill. Filed Jan. 31, 1920. Serial No. 355,342. 7 Claims. (Cl. 123—175.)

5. In combination with the water cooling system of an internal combustion engine, said system comprising a radiator, pump, and conduits, of catch basins forming part of the pump structure, drain pipes leading therefrom, said drain pipes uniting in a single drain pipe extending into the upper part of the radiator above the water line and terminating in a downwardly turned bend, a check valve formed in said drain pipe beneath said bend, and an injector pipe leading from said pump to said drain pipe and joined thereto at a point between said check valve and said bend.



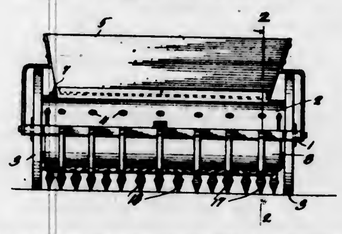
1,390,380. FIREARM. JOHN D. PEDERSEN, Jackson, Wyo. Filed Dec. 16, 1919. Serial No. 345,176. 18 Claims. (Cl. 42—8.)

1. In a firearm, in combination, a frame of said firearm, a firing member movable to firing position and to fired position, a sear member engageable with said firing member, a shiftable slidable member, means for moving said shiftable member in direction to lock said sear member and firing member in firing position, said sear member being engageable with said shiftable slidable member to move the shiftable slidable member in direction reverse to the first mentioned direction when said firing member is moved to fired position, a grip-compressible member engageable with said frame and engageable with said shiftable slidable member when in position of safety to block the shiftable slidable member in said locking position, and by grip-compression releasable from engagement with said frame

and settable for releasing the shiftable slidable member, and a trigger engageable with said shiftable slidable member to shift the same, when said grip-compressible member is grip-compressed, to release said grip-compressible member from engagement with said shiftable slidable member, and move said sear member for releasing said firing member for movement to fired position.

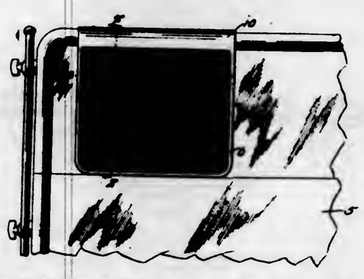
1,390,381. VEHICLE DIRECTION-INDICATOR. JULES PEYRÉ, San Francisco, Calif. Filed Aug. 29, 1919. Serial No. 321,242. 4 Claims. (Cl. 116—47.)

1. In a vehicle direction indicator, the combination with a signal plate pivotally mounted upon each rear side of a vehicle, of a shaft operatively connected to each of said signals and extending to the approximate center of the vehicle; pinions mounted upon the inner ends of said shafts; an operating shaft rotatably mounted upon the under side of said vehicle; means mounted in a position adjacent the operator of the vehicle for rotating said shaft in either direction; a segmental gear mounted upon rearward end of the operating shaft to engage the signal shaft pinions upon opposite extremities thereof in such manner that a rotation of the operating shaft in one direction from a normal position will rotate one signal into a displayed position, and rotation of the operating shaft in the other direction from said normal position will rotate the opposite signal into a displayed position.



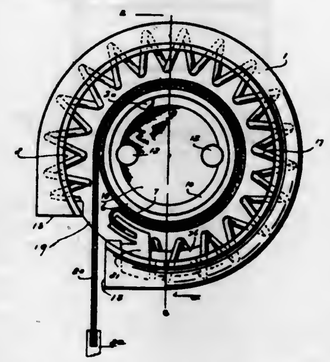
1,390,382. COLLAPSIBLE UMBRELLA. OTTO W. F. POSSELT, New York, N. Y. Filed June 9, 1920. Serial No. 387,588. 4 Claims. (Cl. 135—33.)

4. The combination with an umbrella including a telescopic staff, of a casing carried by one end thereof and open at its top, a flexible covering adapted to be received in the casing when the umbrella is in operative position and adapted to inclose the umbrella when collapsed, a resilient band carried by the outer end of the covering and adapted to resiliently engage the upper end of the casing when the covering is received therein, and a closure for the casing



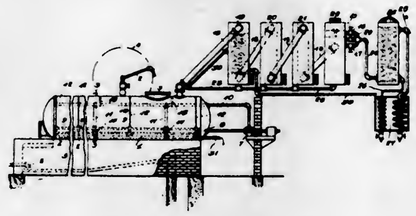
hinged to the band and provided with a longitudinal slot for the reception of the staff when the covering is housed within the casing.

1,390,383. PLANTER AND FERTILIZER-DISTRIBUTER. GEORGE D. POWELL, McKenzie, Tenn. Filed July 24, 1919. Serial No. 312,901. 2 Claims. (Cl. 221—137.)



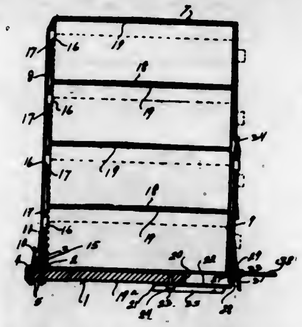
1. In a machine for distributing seed and fertilizer, concentric cylinders, one of the cylinders having a row of openings and the companion cylinder having rows of openings which are adapted to register with certain openings of the cylinder having the single row of openings, the several rows of the adjustable cylinder having a varying number of openings, whereby the mechanism may be adjusted to distribute the material in any given number of rows within the range of adjustment of the mechanism.

1,390,384. GLARE-SHIELD. THOMAS A. RAMSAUR, Fayetteville, N. C. Filed Mar. 17, 1920. Serial No. 366,527. 1 Claim. (Cl. 296—97.)



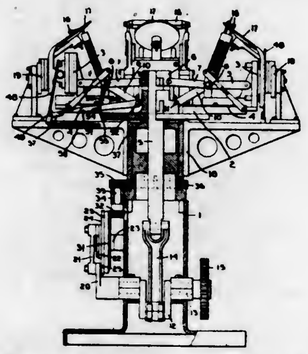
The combination with the wind-shield of a vehicle, of a light diffusing sheet extending parallel to the wind-shield and spaced from one face thereof, a resilient clip carried by the upper edge of the sheet and engaging the upper edge of the wind-shield, a bar depending from the clip and extending parallel to the opposite face of the wind-shield, and a yieldable strip carried by the bar and engaging the wind-shield.

1,390,385. SNUBBER. FRED H. REAM, Dayton, Ohio. Filed Oct. 21, 1920. Serial No. 418,490. 1 Claim. (Cl. 188—130.)



A snubber device for automobiles, consisting of a circular housing member, a concaved bed in the periphery of said member, a compression spring lodged in said bed and conforming therewith, an attaching member demountably mounted in the rearward side of said housing member and provided with an inwardly projecting cylindrical plug, a hollow cylindrical drum mounted on the projecting plug on said attaching member and provided externally with brake lining, a strip of brake lining connected with one end of said spring and arranged to travel on said drum and extend outwardly of the housing member, a buckle adjustably mounted on said strip, said buckle having a rigid jaw portion and an adjustably mounted hook member coöperating with the jaw to form a grip, and a cap member demountably mounted in the front side of said housing member and having an inwardly projecting plug entering the adjacent end of said drum.

1,390,386. STILL. WIRT D. RIAL, Ponca City, Okla., assignor to Marland Refining Company, Ponca City, Okla., a Corporation of Oklahoma. Filed Nov. 13, 1919. Serial No. 337,722. 4 Claims. (Cl. 196—25.)



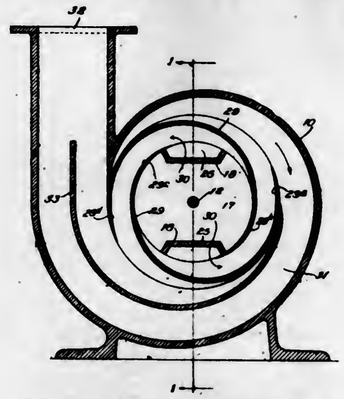
2. In an apparatus of the character described, in combination, a still, and means adapted to prevent substances settling on the bottom thereof comprising a pipe suspended from the upper part of the still carrying a plurality of headers flexibly supported closely adjacent the bottom of the still, and a plurality of lateral pipes having perforations on their under sides whereby the liquid within the still is drawn therefrom and discharged down through said perforations.

1,390,387. LUGGAGE-CARRIER FOR AUTOMOBILES. JOHN B. RICE, Uniontown, Pa. Filed Dec. 23, 1920. Serial No. 432,722. 9 Claims. (Cl. 224—29.)

1. In a carrier, a main carrier strap comprising dominant and auxiliary sections, the dominant section being connected to the inner edge of the running board adjacent the body of the automobile, the auxiliary section being connected to the outer edge of the running board, the two sections engaging about the luggage, and a plurality of auxiliary straps adjustably and detachably connected to the main strap for passing about each article of luggage.

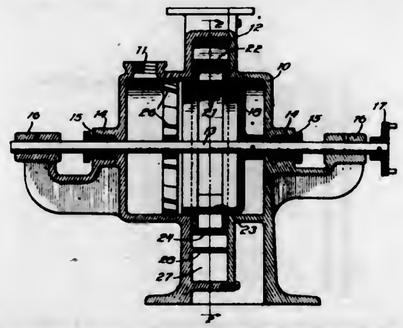
1,390,388. PRINTING-MACHINE. CHARLES F. ROBBINS, Keene, N. H., assignor to Markem Machine Company, Boston, Mass., a Corporation of Massachusetts. Filed Oct. 8, 1920. Serial No. 415,590. 9 Claims. (Cl. 101—193.)

1. In a printing machine of the type having a frame carrying a plurality of radially-movable type-carriers, a rotatable platen-supporting member carrying a plurality of platens, and means to give the platen-supporting member an intermittent rotative movement, thereby to bring the platens into line with the type-carriers successively, the combination with a plunger reciprocating in the frame for giving the type-carriers their radial movement, of a lock for holding the platen-supporting member from rotation while the printed impression is being made, and means to actuate said lock by the movement of the plunger.



1,390,389. LIGHTING DEVICE. FRANCIS M. ROSENFELD, New York, N. Y., assignor, by mesne assignments, to Diamond Electric Specialties Corporation, Newark, N. J., a Corporation of New Jersey. Filed Jan. 31, 1920. Serial No. 355,404. 4 Claims. (Cl. 248—42.)

4. A Christmas tree lighting device comprising in combination a hollow lamp holder and a support adapted to retain the lamp holder in upright position on a Christmas tree and having one end arranged in convolutions to form a gripping member and the other end bent back upon

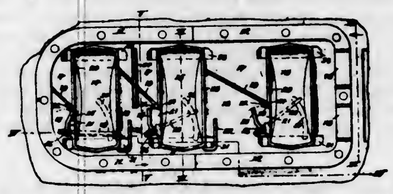


itself to form a hook shaped member adapted to project through an open end of the holder and to support the same in operative position on a Christmas tree.

1,390,390. FLUID-DISPLACING APPARATUS. BENJAMIN SKIDMORE, Jr., Chicago, Ill. Filed Aug. 21, 1919. Serial No. 318,984. 7 Claims. (Cl. 230—14.)

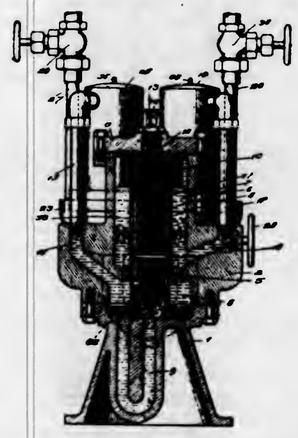
1. An apparatus of the character described embodying a casing having a liquid inlet and a discharge outlet, a rotor mounted in the casing, and means for imparting a high rate of speed of rotation to the rotor, said rotor embodying a plurality of blades extending from the periphery of the rotor inwardly and terminating short of the axis of rotation of the rotor, said blades being spaced to form fluid passages therebetween, the portions of proximate blades adjacent the outlets of the passage being substantially parallel and substantially concentric with the axis of rotation of the rotor, whereby little centrifugal force or turbine action will be imparted to the liquid as the rotor operates therein and the blades move therethrough.

1,390,391. FLUID-PUMP. BENJAMIN SKIDMORE, Jr., Chicago, Ill. Filed Jan. 12, 1920. Serial No. 350,982. 8 Claims. (Cl. 253—200.)



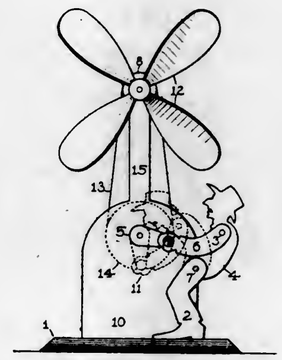
1. A pump embodying a rotor having a high speed of rotation, said rotor embodying a plurality of blades, arranged about but spaced from the axis of rotation of the rotor, said blade being spaced and coöperating to form liquid passages therebetween, the portion of proximate blades adjacent the outlets of the passages being in substantially parallel circles and concentric with the axis of rotation of the rotor, whereby the liquid between the blades will be maintained in a substantially quiescent condition and substantially no centrifugal or turbine action will be imparted to the liquid between the blades as the blades and the liquid therebetween are displaced relatively one with relation to the other.

1,390,392. EMBALMING FLUID. THEODORE SPEABER, Chicago, Ill. Filed May 27, 1921. Serial No. 473,006. 4 Claims. (Cl. 27—22.)



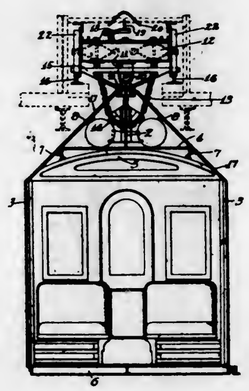
1. An embalming fluid composed of formaldehyde and citrate of magnesia.

1,390,393. LUBRICATING SYSTEM. HENRY U. SPENCE, Painesville, Ohio. Filed Dec. 18, 1920. Serial No. 431,633. 17 Claims. (Cl. 184—13.)



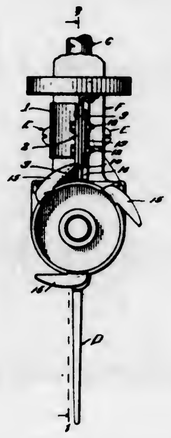
4. In a lubricating system of the splash type, the combination of a pan over which the oil flows from one end to the other; a plurality of pockets formed in the pan in position to be entered by the connecting rods and to receive oil from the pan as it flows over the same; and means for maintaining the level of the oil in each of the pockets at a substantially constant level.

1,390,394. FLOW-METER. JACOB M. SPITZGLASS, Chicago, Ill., assignor to Republic Flow Meters Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 25, 1917. Serial No. 198,432. 7 Claims. (Cl. 177—351.)



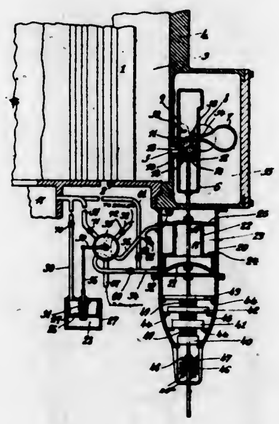
1. A safety-seal for a differential flow meter comprising a pair of cylinders connected at the bottom by a U-tube, connections at the bottoms of the cylinders for applying differential pressure, and tubular means extending from the tops of the cylinders for applying differential pressure to a flow meter.

1,390,395. MECHANICAL TOY. AXEL ELOF SPONGBERG, Brooklyn, N. Y. Filed Nov. 2, 1920. Serial No. 421,225. 2 Claims. (Cl. 46—40.)



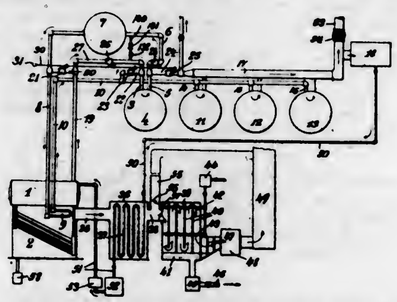
1. A toy including a jointed figure whose parts are adapted to move in parallel planes, a base supporting said figure, a post upon said base having a rotatable crank mounted therein, a pin connecting the free end of said crank to the upper pair of movable extremities of said figure, and means for rotating said crank, with means for transmitting said movement to other parts of said toy including primarily a manually operated crank secured axially to said first crank behind said post, and secondarily a pulley secured on the axis of said cranks connected by a cord to said other toy parts.

1,390,396. RAILWAY-CAR. JOSEPH B. STRAUSS, Chicago, Ill. Filed Dec. 19, 1914. Serial No. 878,028. 14 Claims. (Cl. 105—141.)



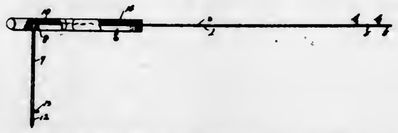
1. A car comprising a body portion, a stiffening frame connected with said body portion, said stiffening frame having side pieces and a cross piece at the top connecting said side pieces, and a central beam extending longitudinally of the car body substantially throughout the length of the car and connected with said stiffening frame.

1,390,397. SELF-CLEARING PROPELLER. TOBIAS SVENSON, Milwaukee, Wis. Filed Dec. 6, 1920. Serial No. 428,517. 7 Claims. (Cl. 115—40.)



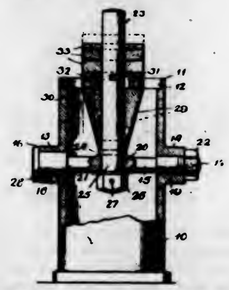
1. In a device of the character described, the combination of a propeller and its shaft, movable means operated by the latter, and stationary means coacting with said movable means and the propeller for severing material.

1,390,398. UNIFLOW ENGINE. EVERETT W. SWARTWOUT, White Plains, N. Y. Filed June 3, 1916. Serial No. 101,511. 26 Claims. (Cl. 121—125.)



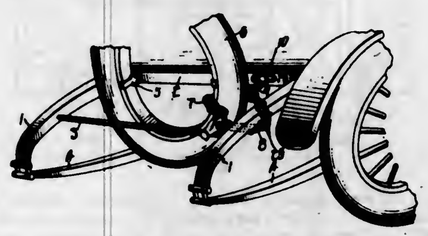
1. The combination with a source of fluid compressed to a substantially constant pressure, of a uniflow device communicating with said source, said uniflow device comprising a cylinder and a piston reciprocable within said cylinder and means for precluding compressional pressure within said cylinder in excess of said constant pressure, said precluding means including a clearance means comprising a plurality of clearance chambers, means for controlling the communication of said clearance means with the interior of said cylinder and exhaust pressure responsive means controlling said controlling means.

1,390,399. STEAM-MOTIVE-POWER PLANT. EVERETT W. SWARTWOUT, White Plains, N. Y. Filed May 22, 1917. Serial No. 170,121. 24 Claims. (Cl. 121—125.)



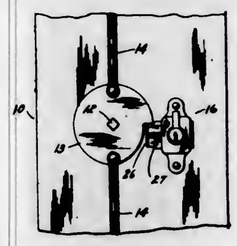
1. The combination with steam supplying means, of a uniflow engine comprising a plurality of cylinders, each cylinder being provided with a piston, inlet and exhaust means and a normal clearance space, variable supplemental clearance means for said cylinders, means connecting said steam supplying means and said cylinders for operating one of said cylinders at high pressure and the remainder of said cylinders at low pressure and means connecting said steam supplying means and said cylinders for operating all of said cylinders at uniform pressure.

1,390,400. COMBINATION-TOOL. PRESTON E. THREET, Philadelphia, Pa., assignor of one-third to Alexander Dredden and one-third to Omar G. Jones, Philadelphia, Pa. Filed Aug. 11, 1920. Serial No. 402,844. 1 Claim. (Cl. 30—9.)



In a device of the character described, a blade, a handle fitted to said blade, said handle having a recess formed therein, two cavities leading from said recess, a spring consisting of the inner portion of the blade located over one of the cavities, a member pivoted within the recess in such manner that its heel end will bear against said spring, and a prong carried by said member, said prong being adapted to enter the other cavity.

1,390,401. AUTOMATICALLY-ADJUSTABLE EXHAUST-NOZZLE FOR LOCOMOTIVE-ENGINES. JAMES TROTTER, Chicago, Ill. Filed Nov. 22, 1920. Serial No. 425,695. 11 Claims. (Cl. 162—8.)

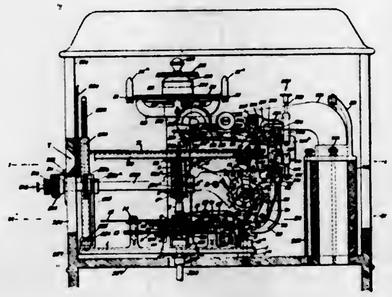


1. A constantly open exhaust nozzle for locomotive engines, a floating element operable automatically by the action of the steam thereupon to vary the exhaust blast from the nozzle, the external diameter of the element at all points being considerably less than the internal diameter of the nozzle, and means maintaining the element entirely within the nozzle.

1,390,402. TIRE-LOCKING DEVICE. EDWARD H. VINCENT, Detroit, Mich. Filed June 6, 1919. Serial No. 302,170. 1 Claim. (Cl. 70—30.)

In combination with two permanent parts of a vehicle and a spare tire or wheel carried by said vehicle, a three-branched chain having one branch anchored to one of said permanent parts and the other two branches passing about said tire or wheel and also about said other permanent part, and lock means for securing together the ends of said other two branches for preventing the unauthorized removal of said chain from said tire or wheel.

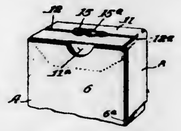
1,390,403. LOCK. HENRY G. VOIGHT, New Haven, Conn., assignor to Sargent & Company, New Haven, Conn., a Corporation of Connecticut. Filed Apr. 9, 1919. Serial No. 288,667. 10 Claims. (Cl. 70—47.)



1. In combination with a sheet metal door, a pin tumbler lock casing having an end thereof secured against the inner face of said door, said casing having a notch formed in the door engaging face thereof, a bolt slidably mounted within said notch and retained therein by the inner face of said door, and a key plug rotatable within said casing and having its forward end accessible through an opening in said door, said plug provided with means adjacent its forward end for imparting a sliding movement to said bolt.

1,390,404. PHONOGRAPH. JOHN WAHLBERG, New York, N. Y. Filed June 22, 1920. Serial No. 390,789. 381 Claims. (Cl. 274—10.)

15. A record magazine comprising a stationary record guiding and spacing plate, separating slides above and supporting slides below said stationary record guiding and spacing plate, and means for alternately shifting said slides in reverse directions.

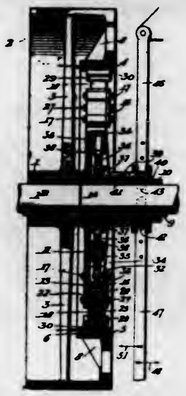


52. In apparatus of the character described, record-engaging slides, shafts for operating the same provided with gears, a double-ended rack in mesh with said gears, and means for positively shifting said rack in reverse directions.

152. In a phonograph, a vertically movable turn-table support provided with a rack, a gear element engaging said rack and automatically controlled indexing mechanism controlling said gear element.

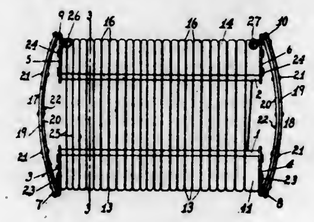
381. In a phonograph, a turn-table, columns at diametrically opposite sides of said turn-table, horizontally operating record separating and supporting slides mounted on said columns, arcuate record guiding plates fixedly mounted on the columns between the separating and supporting slides, vertically operating record lowering fingers mounted on the columns, a reproducer supported to coöperate with a record on the turn-table and mounted for a vertical falling movement, a record on the turn-table having a depression at the end of the sound groove therein to impart a falling motion to the reproducer, a trip member positioned beneath the reproducer to be actuated thereby upon falling movement of the same, a power device normally restrained by said trip member, a reproducer lifting lever adapted to be actuated by said power device, index mechanism for lowering the turn-table step by step and arranged to be actuated by the power device and means controlled by said index mechanism for swinging the reproducer clear of the record, for operating the record changing slides and fingers and for then returning the reproducer and lowering the same over the turn-table.

1,390,405. HOOK-AND-EYE PACKAGE. JINDŘICH WALDES, Prague, Bohemia. Filed Aug. 1, 1919. Serial No. 314,758. 1 Claim. (Cl. 211—40.)



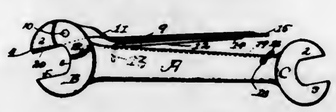
A hook and eye package, comprising a box for a supply of hooks and eyes and having a cover having slots terminating in enlarged openings whereby a hook and eye may be supported with the eye extending through one of said openings and the hook extending through the other opening and detachably engaging the eye on the outside of the cover.

1,390,406. FLEXIBLE-FLANGE FRICTION-CLUTCH BELT-PULLEY. THOMAS C. WALKER, Jr., Denver, Colo. Filed Oct. 1, 1920. Serial No. 414,042. 5 Claims. (Cl. 192—113.)



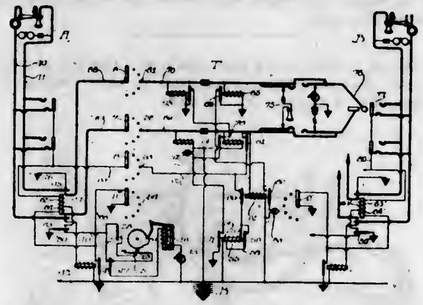
1. A flexible flange clutch gripping pulley, comprising a pulley having a belt receiving rim, and a flange member arranged to be engaged by a friction clutch member, and

to yieldingly spring under the pressure thereof, said flange projecting downward from said rim and provided with a



series of apertures, and a ring on the end of said flange against which said clutch bears.

1,390,407. ELECTRIC HEATING UNIT. JOHANN G. WALLMANN, Oakland, Calif. Filed Sept. 25, 1920. Serial No. 412,763. 5 Claims. (Cl. 219—63.)

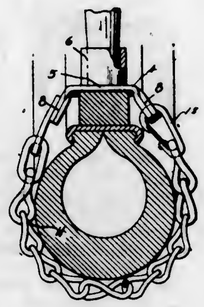


1. In an electric heating unit, two bars of insulation spaced apart, a conducting wire wound around said bars, a thermal bar interposed between said bars, whereby said bars are forced apart and separated farther upon the passage of a current through the wire.

1,390,408. END-WRENCH. WILLIAM S. WEBBER, Chicago, Ill. Filed Oct. 28, 1920. Serial No. 420,202. 2 Claims. (Cl. 81—125.)

1. The improvement in end-wrenches comprising a shank member of generally oval form in cross section having a groove in its margin extending longitudinally of the shank and having a pair of nut engaging jaws at one end of the shank, one of said jaws being slotted, a pivoted lever fulcrumed in said slotted jaw, the handle end of the lever extending over the grooved margin of the shank and being concaved in cross section to form a groove complemental to the shank groove, a resilient member positioned in the grooves between said lever and shank, secured at one end to the latter and adapted to operate the lever, and means for locking the lever against movement.

1,390,409. AUTOMATIC TELEPHONE-SWITCH. HARRY G. WEBSTER, Chicago, Ill. Filed Apr. 19, 1916. Serial No. 92,060. 44 Claims. (Cl. 179—27.)

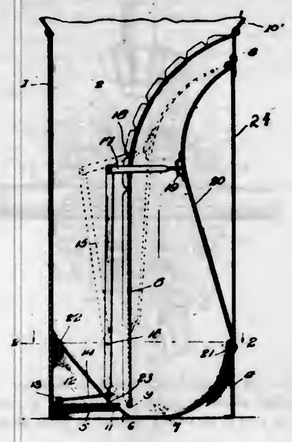


2. In combination, a plurality of stationary contacts, a plurality of movable wipers adapted to make contact with said stationary contacts, a shaft for controlling said wipers, a ratchet for the shaft, a stepping magnet for operating said ratchet, a pawl normally engaging said ratchet, said ratchet having means for throwing said pawl outward, means for holding said pawl outward, said means controlling the circuit of the stepping magnet.

1,390,410. ART OF ACID MANUFACTURE. PAUL WENTWORTH WEBSTER, Pelham Manor, N. Y., assignor to Perry & Webster Incorporated, New York, N. Y., a Corporation of New Jersey. Filed Oct. 26, 1918. Serial No. 259,775. 7 Claims. (Cl. 23—1.)

6. The process of recovering sulfuric acid, comprising supplying an acid-collecting liquid to gases containing a sulfuric acid mist and simultaneously subjecting the gas, mist and fluid to a strong centrifugal force.

1,390,411. MUD-CHAIN. NOAH R. WHITE, Delta, Colo. Filed Aug. 31, 1920. Serial No. 407,129. 1 Claim. (Cl. 152—14.)

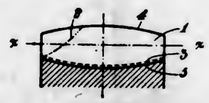


A mud chain for vehicle wheels including a pair of plates, each consisting of a base to engage the wheel felly and an upstanding semi-cylindrical portion to embrace the spoke of the wheel, means pivotally connecting the plates at one end, and a chain engaged with said means and extended around the tire of the wheel into engagement with the opposite ends of said plates to detachably engage the latter with the wheel spoke.

1,390,412. FEED-RACK. MARGARET V. WIDHELM, Fremont, Nebr. Filed Oct. 2, 1919. Serial No. 327,874. 5 Claims. (Cl. 119—54.)

5. A hog-feeding bin having an upwardly inclined floor, a hopper discharging onto the upper portion of the floor,

a sliding gate controlling the passage of feed from the hopper onto the floor, and a swinging door operatively

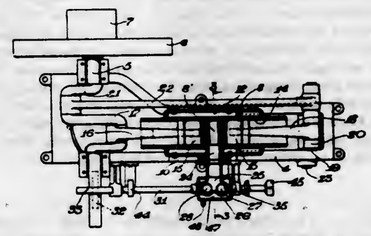


connected to the gate and shifting the gate upon the movement of the door.

1,390,413. WALL-COVERING AND PROCESS OF MAKING SAME. JOHN D. WIGGIN, Montclair, N. J., assignor to H. B. Wiggin's Sons Company, Bloomfield, N. J., a Corporation of New Jersey. Filed Feb. 2, 1916. Serial No. 75,709. 14 Claims. (Cl. 8—20.)

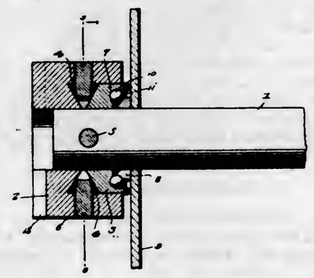
1. A wall or other covering fabric having as a basis woven goods having uneven threads, the unevennesses of which have been enlarged after the weaving of the fabric.

1,390,414. GEAR-WHEEL. ERIK HJALMAR WINGQVIST, Gottenborg, Sweden, assignor to Aktiebolaget Svenska Kugghjulsfabriken, Gottenborg, Sweden, a Corporation of Sweden. Filed July 8, 1919. Serial No. 309,303. 8 Claims. (Cl. 74—41.)



1. A toothed gear-wheel having teeth the top surfaces of which are convex in the longitudinal direction of the tooth in such manner that the height of the tooth, and thus the bending moment, is decreased toward the ends of the tooth, said teeth being shaped in such manner that when meshing with the teeth of another gear wheel, they touch the latter teeth along the whole length of the tooth.

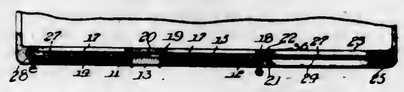
1,390,415. OIL-GAGE. LEE L. WINTERS, Ann Arbor, Mich. Filed Oct. 22, 1920. Serial No. 418,654. 1 Claim. (Cl. 73—82.)



In an oil gage for a crank shaft casing, a dome-shaped shell, a float located in the shell, a rod connected to the float and extending through the top of the shell, and a block of felt located on the float and around the rod for seating within the dome and around the opening through which the rod extends.

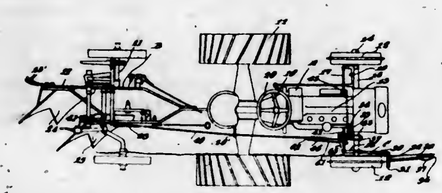
1,390,416. GAS-ENGINE. JACOB WOLF, Milwaukee, Wis. Filed Oct. 11, 1919. Serial No. 330,145. 2 Claims. (Cl. 123—51.)

1. In a two piston internal combustion engine, the combination, with a base frame, of a cylinder having a bore open at both ends, two pistons working in said bore in opposite directions and forming a combustion chamber therewith, a cranked shaft having opposed cranks, a connecting rod connecting one of the pistons to one of the cranks, a beam pivotally mounted at its lower end on said frame, a wrist pin carried by the upper end of said beam, a connecting rod connecting said wrist pin with the other piston, and a connecting rod connecting said wrist pin with the other crank.



1,390,417. ATTACHMENT FOR CRANK-SHAFTS. WALTER W. YARBROUGH, Memphis, Tenn. Filed July 12, 1920. Serial No. 395,677. 2 Claims. (Cl. 64—49.)

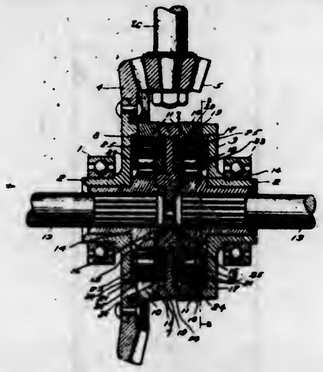
1. In combination, a motor crank shaft having a fan belt pulley at the end thereof, said pulley being recessed



on its inner face and the bottom of the recess being conical and having its convex surface toward the recessed face of the pulley, a cone shaped ring fitting about the crank shaft and within the recess of the fan belt and having its conical surface facing that of the fan belt, a pin extending transversely of the crank shaft and the fan belt at the conical surface of the cone and belt, and set screws threaded through the fan belt and engaging the conical surfaces for moving said surfaces away from each other, said cone shaped ring carrying a ball bearing comprising a bearing and a sectional race, the cone shaped member carrying one section of the race and the other section abutting the crank case.

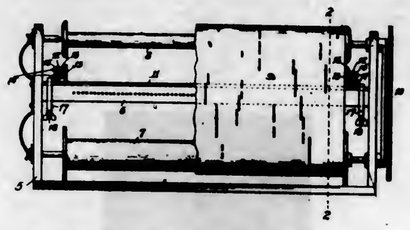
1,390,418. VEHICLE-TOP. MORRIS ZUTMAN, Chicago, Ill. Filed June 20, 1917. Serial No. 175,736. 5 Claims. (Cl. 296—47.)

1. A vehicle body having a door and a pair of windows arranged in one side of the body of the vehicle, said windows being arranged at the opposite edges of the door, one of said windows and the door being arranged in substantially the same plane, the other window being arranged in another plane in the rear portion of the top of the body, said last mentioned window being movable, a guide for the last mentioned window, said guide and window being arranged in substantial alinement with each other, and said guide extending from the rear to the front portion of the side, the movable window being movable along the guide from its position in the rear of the body to the front portion thereof, and said door being operable when the window is in either of its extreme positions.



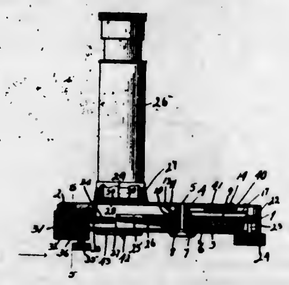
1,390,419. AUTOMATIC TRACTOR-GUIDE. FRANK L. ZYBACH, Grand Island, Nebr. Filed Oct. 8, 1920. Serial No. 415,588. 7 Claims. (Cl. 97—81.)

1. In combination with a tractor including a steering mechanism and a plow, of an automatic actuating mechanism for said steering mechanism including a pilot member adapted to ride in a furrow and follow the curvature thereof, means operatively connecting the pilot member to the steering mechanism of the tractor, means for automatically stopping the tractor, when the pilot member leaves the furrow, and means for automatically operating said last mentioned means upon accidental detachment of the plow from the tractor.



1,390,420. COMPENSATING GEARING FOR MOTOR-VEHICLES. JOHN D. ALLEN, Philadelphia, Pa. Filed Jan. 13, 1919. Serial No. 270,836. 3 Claims. (Cl. 74—7.)

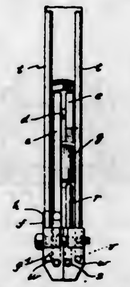
1. In a gearless differential, the combination with the alined driven members provided with ratchet teeth, the inclosing driving casing, and the intermediate member having a lost-motion connection with the casing, of pawl-



carriers pivoted on said intermediate member and having lugs engaging slots in said casing, and a pair of oppositely facing pawls pivotally seated in each pawl-carrier.

1,390,421. ATTACHMENT FOR PLAYER-PIANOS. JOHN H. BATES, Chicago, Ill. Filed Mar. 29, 1920. Serial No. 369,651. 3 Claims. (Cl. 84—136.)

1. An attachment for player-pianos comprising guides for the edges of the note sheet, and clamping devices extending around the face of the tracker bar and provided with means between which the tracker-bar will be clamped to secure the guides thereon.

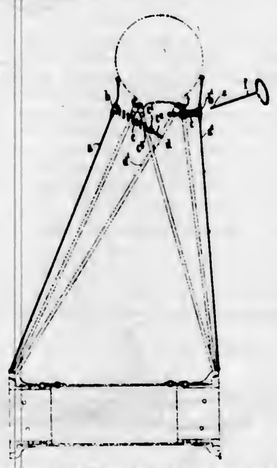


1,390,422. HEMOGLOBINOMETER. GEORGE BENNETT, Sr., Philadelphia, Pa., assignor to American Instrument Company, a Partnership composed of George Bennett, Sr., Harry W. Pohlke, and William D. Kidney, Philadelphia, Pa. Filed June 18, 1920. Serial No. 389,846. 7 Claims. (Cl. 88—14.)

7. In an instrument of the character described, a dust proof casing carrying two face plates, glass covered open-

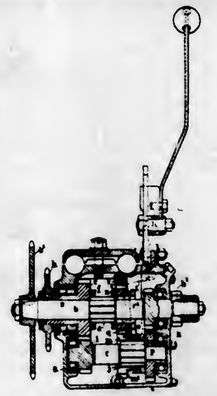
ings formed in said face plates, a test glass disk mounted within the casing so as to rotate, means for rotating said disk, a test glass carried by the disk, a blood holder adapted to slide in the casing and be held in position by friction, an observation tube carried by one of the face plates of the casing, and an observation disk located in the base of said tube, said disk having two holes located adjacent each other.

1,390,423. WELDING-TIP. SIMON BERG, Detroit, Mich., assignor to Michigan Steel Tube Products Company, Detroit, Mich., a Corporation of Michigan. Filed June 3, 1920. Serial No. 386,400. 15 Claims. (Cl. 158—27.4.)



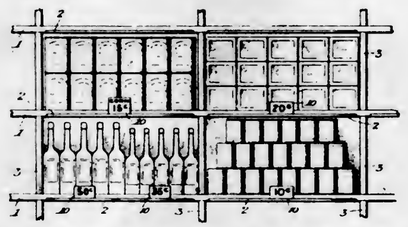
1. In a torch, the combination of a stem, an extension clamp which can be secured thereto, a two-section block tip one of whose sections is secured to the end of the extension, and means for adjustably securing the other section directly to the first-mentioned section.

1,390,424. WATERPROOF COMPOSITION. WILLIAM C. BEYENBERG, Passaic, N. J. Filed Dec. 1, 1920. Serial No. 427,587. 3 Claims. (Cl. 134—17.)



1. A composition for waterproofing and stiffening textile material which comprises a combination of rubber, glue, starch, gum-arabic, and rosin, in about the proportions herein specified.

1,390,425. MEANS FOR ATTACHING VEHICLE-SPOKE COVERS. WILLIAM BLAIR, Coventry, England, assignor to Rudge-Whitworth Limited, Crow Lane, Coventry, Warwick, England. Filed Nov. 8, 1918. Serial No. 261,683. 4 Claims. (Cl. 301—37.)

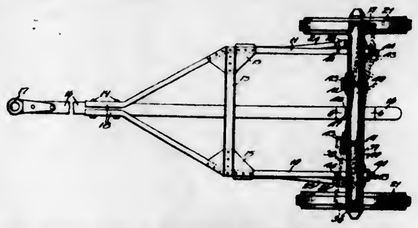


1. Means for attaching spoke covers to wheels comprising an eyelet, a coiled spring connected with the eyelet, said spring being provided with a hook.

1,390,426. VARIABLE GEAR FOR MOTOR-VEHICLES AND THE LIKE. WILLIAM BLAIS, Coventry, England, assignor to Rudge-Whitworth, Limited, Crow Lane, Coventry, England. Filed Feb. 28, 1920. Serial No. 362,151. 6 Claims. (Cl. 74—58.)

1. A variable ratio power transmission gear comprising a main shaft, a lay shaft, a pinion fixed to one end of the lay shaft meshing with a pinion rotatable upon the main shaft; a pinion rotatable upon the other end of the lay shaft meshing with a fixed pinion upon the main shaft, a pair of pinions always in mesh, one on each shaft, means for sliding said pair of pinions always in unison on said shafts and engaging means upon said shafts, pair of pinions and rotatable pinions whereby the movement of said pair of pinions effects desired changes in the gear ratio.

1,390,427. PRICE-CARD HOLDING AND DISPLAYING DEVICE FOR STORE-SHELVES. WILLIAM F. BLANCHARD, Denver, Colo. Filed Apr. 20, 1920. Serial No. 375,371. 1 Claim. (Cl. 40—11.)

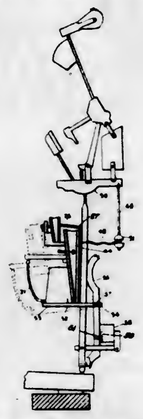


The combination with a shelf, of a thin resilient metal angle bar, made up of wings of unequal width, the narrower wing being provided with holes through which screws are passed to secure said wing to the under side of the shelf; the wider wing of said angle bar extending parallel with the front edge of said shelf, and being bent inwardly upon itself to form a resilient lip which diverges from the wing from the bending point of the said lip to its longitudinal edge, which is slightly spaced from the said front edge of the shelf, said resilient lip acting in conjunction with the front edge of the shelf to hold price cards inserted therebetween.

1,390,428. POLE-TRAILER. ORRA E. BYRON, Chicago, Ill., assignor to Lee Trailer & Body Co., Chicago, Ill. Filed Oct. 31, 1918. Serial No. 260,487. 2 Claims. (Cl. 280—33.4.)

1. A vehicle of the character described comprising an axle, wheels therefor, a bolster, a transversely mounted

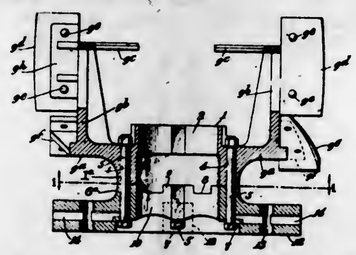
spring connected to the axle and supporting said bolster centrally thereof, whereby said bolster is adapted to have a lateral yielding tilting movement in a vertical plane, cushion springs mounted on said axle and being spaced from said bolster to act as spring stops to yieldingly limit the lateral movement of said bolster, a pole carriage piv-



otally mounted on said bolster and adapted to swing in a horizontal plane and stops carried by said bolster for limiting the pivotal movement of the carriage in said horizontal plane whereby said pole carriage has a combined yieldingly limited transverse tilting movement in a vertical plane and a limited pivotal movement about a vertical axis relatively to said axle.

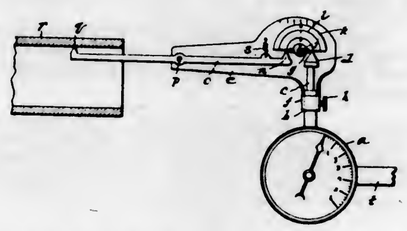
1,390,429. ELECTRODE. JOSEPH STANLEY CAPE, Detroit, Mich. Filed Nov. 5, 1919. Serial No. 335,881. 5 Claims. (Cl. 174—89.)

1. In a high frequency electro-therapeutic apparatus, an electrode comprising a vacuum tube constructed of dielectric material and a conductor of aluminum forming a coil substantially filling and contacting the interior walls of the tube.



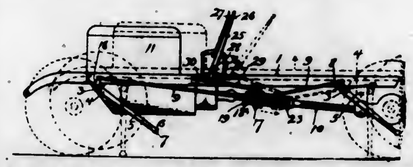
1,390,430. PNEUMATIC PLAYER-PIANO ACTION. FRANK DATHAN, Oakland, Calif. Filed Oct. 23, 1917. Serial No. 198,053. 6 Claims. (Cl. 84—60.)

1. An improvement in player pianos comprising striker pneumatics and means for operating the same, a wippen, an operating wire attached thereto, and a single integral flexible means secured at one end to said wire and connected at the other end with one wall of said pneumatic,



3. An improvement in player pianos comprising a master valve chest and pneumatics supported thereby, a shelf on which said valve chest is superposed, pivotal supporting means for said shelf, and means for normally preventing pivotal movement of the shelf.

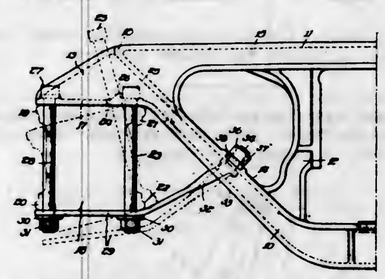
1,390,431. PULVERIZER-MILL YOKE. ERNEST H. DIMLER, South Bethlehem, Pa., assignor to Bethlehem Foundry & Machine Co., South Bethlehem, Pa. Filed Apr. 17, 1918. Serial No. 229,097. 2 Claims. (Cl. 83—45.)



2. In combination, a pusher member having a central body formed to fit around a driving member and outwardly directed arms, and a separate fan center having means for supporting a plurality of fan blades, said fan center also having a central body formed to fit around said driving member, said fan center being located above said pusher member.

1,390,432. GAGE. HARRY B. DOUGLASS, Detroit, Mich. Filed May 24, 1919. Serial No. 299,541. 4 Claims. (Cl. 33—172.)

1. An instrument for the purpose specified, having in combination, an indicator provided with an indicator stem, a carrier which can be secured to the indicator, a lever pivoted on the carrier for contacting the work, and a motion converting member fixable at various positions along the carrier and provided with unit markings thereon, the said motion converting member adapted to engage both the stem and lever on the said unit markings to fix a definite multiplying ratio between the lever and the indicator stem.

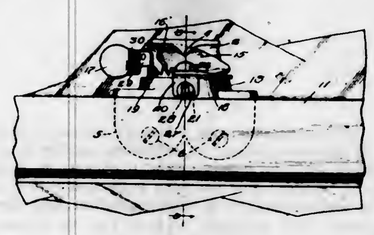


1,390,433. AUTOMOBILE ATTACHMENT. CHARLES M. EIERMANN, New York, N. Y. Filed Oct. 11, 1920. Serial No. 415,995. 7 Claims. (Cl. 254—86.)

1. In a device of the class described the combination with an automobile having power driving means and a

transmission shaft, of a plurality of pivotal members carried by the automobile and adapted to bodily raise the automobile and to support it in an elevated position and means mounted on said transmission shaft for operating said raising means.

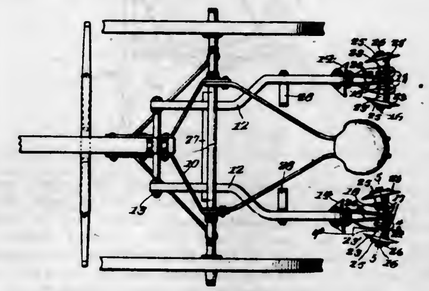
1,390,434. SIDE FRAME AND TIE-BAR CONNECTION. GEORGE G. FLOYD, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed Apr. 8, 1920. Serial No. 372,223. 3 Claims. (Cl. 105—221.)



1. In combination, a truck side frame having a journal box receiving flange with an elongated slot therein whereby a securing bolt may be passed therethrough at an inclined angle, a journal box receiving said bolt in an inclined position after which the bolt and box may be moved into normal position, a tie bar connected to said box and having a threaded end, and a nut for engaging said threaded end for securing the tie bar to the side frame.

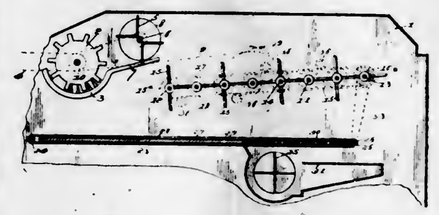
1,390,435. PROCESS OF PREPARING PLASTIC MOLDING MATERIAL. OSCAR GERLACH, Danville, and CHRISTIAN B. LIEHME, Chicago, Ill., assignors to The Industrial Research Laboratories, a Corporation of Illinois. Filed Dec. 15, 1917. Serial No. 207,219. 3 Claims. (Cl. 106—35.)

1. The process of aging materials to be used for molding purposes which comprises mixing with the material an acid solution containing sulfite liquor which acts immediately to impart to the material a plasticity such as obtained by allowing the material to stand in a damp condition for a long period of time.



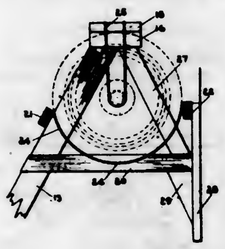
1,390,436. SASH-LOCK. WILLIAM HARLEY, Jr., Oak Park, Ill. Filed Mar. 30, 1918. Serial No. 225,782. 7 Claims. (Cl. 292—210.)

1. In a sash lock, a latch comprising a rotatable member, a supporting base for attachment to the sash, and means for adjustably mounting the member in the base.



7. The combination with an upper and lower window sash, of a catch affixed to the upper sash, and a latch for the lower sash and comprising a supporting member rigidly attached thereto, a pivoted latching member, means for adjusting the latching member in the supporting member toward and from the catch, and locking means comprising a pawl attached to the latching member, and locking teeth engaged thereby as the latching member is rotated in a direction to engage the catch, preventing the reverse rotation of the latching member until the pawl is manually raised.

1,390,437. FURROW-OPENER. JOSEPH A. HARRIS, Palmyra, Nebr. Filed Feb. 28, 1921. Serial No. 448,742. 2 Claims. (Cl. 97—92.)



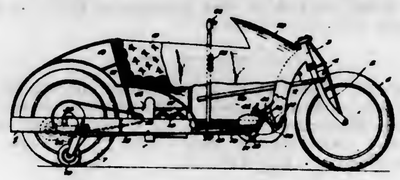
1. A furrow forming device comprising a beam, a shovel on the beam, a transversely extending and rearwardly bowed shaft supported on the beam rearwardly of the shovel, and cutting disks on the ends of the shaft.

1,390,438. ROTARY CLEANER-CARRIER. ROBERT C. HIMMEL, Topeka, Ill. Filed Sept. 11, 1920. Serial No. 409,594. 2 Claims. (Cl. 130—23.)

1. In a machine for the purpose indicated, a casing having a separator chamber, a threshing cylinder and beater in the forwaard part thereof and including means for driving the latter from the former, a rotary grain pan having its forward end under the cylinder and the beater with its remaining portion extending rearwardly to carry the grain from the cylinder to the rear, a cleaner-carrier with its forward end operable partially under the beater and having its remaining portion inclined slightly upwardly and extending rearward, said cleaner-carrier being disposed over the greater part of the rotary grain pan, said cleaner-carrier comprising a series of shafts arranged in parallelism, each shaft being disposed on a slightly increased higher plane toward the rear of the chamber thereby inclining the cleaner-carrier, cleaner carrier arms arranged in series on each shaft, each series comprising a plurality of groups, the arms adapted to intermesh, said arms being sharpened on certain of their edges in directions with the rotation of the shafts, the outer portions of the edges being rounded off, the sharpened edges extending over the rounded portions of the arms, means for driving the shafts simultaneously in the same direction, and means operatively connecting the shafts and the thresher and the beater for transmitting motion thereto, and means for operatively connecting between the carrier and the rotary grain pan.

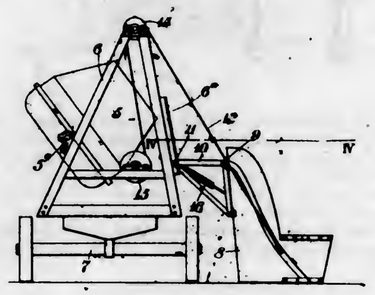
1,390,439. DECKING SYSTEM. EDWARD HOLMES, Toledo, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Feb. 7, 1921. Serial No. 443,313. 10 Claims. (Cl. 105—368.)

1. A means for packing automobiles in freight cars comprising four supporting frames, two at each side, transverse rails supported on said frames, one in front and one in the rear of each wheel, a wheel hammock slung from each pair of rails to conform to and support the wheel, and a stirrup extending beneath the axle, the upper ends of the stirrup being secured to said frame.



1,390,440. CUTTING AND WELDING TORCH. CHARLES F. HUMMEL, Roselle Park, N. J. Filed Apr. 12, 1920. Serial No. 373,135. 3 Claims. (Cl. 158—27.4.)

1. A gas torch for cutting and welding metals, comprising a head provided with a tapered chamber, a grooved tapered plug located within said chamber, a gas supply-pipe secured in the end of said head, an independent apertured disk provided with grooves located in the end of said gas supply-pipe, and a second gas supply-pipe of smaller diameter passing through the entire length of the first named gas supply-pipe and through said apertured disk and projecting into the outer-most end of said tapered plug.



1,390,441. MOTOR-VEHICLE. EVERETT BANFIELD JACKSON, Colorado Springs, Colo. Filed Aug. 8, 1919. Serial No. 316,232. 1 Claim. (Cl. 208—114.)

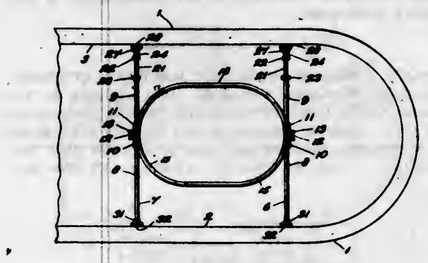
A motor vehicle comprising a body and pair of wheels journaled on the body in longitudinal alinement thereof, said body having a seat between the wheels, a fork comprising a body journaled on the vehicle body and arms between which the front wheel is journaled, levers pivoted

to the vehicle, and links connecting the levers with the arms of the fork for swinging said fork.

1,390,442. CONCRETE-MIXER. GERHARD JAEGER, Columbus, Ohio. Filed Nov. 28, 1919. Serial No. 341,028. 3 Claims. (Cl. 214—130.)

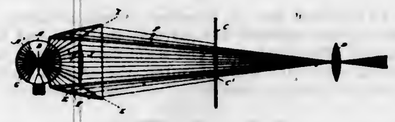
1. The combination with a mixing vessel, a frame for supporting the same, of a bucket for the materials to be mixed, a link hingedly connected with both the bucket and frame, means for elevating both the bucket and the link, and means for arresting the upward movement of the link when the bucket and the link are raised without arresting the upward movement of the bucket.

1,390,443. BEARING-LUBRICATOR. JOHN T. JANETTE, Chicago, Ill. Filed Nov. 8, 1920. Serial No. 422,609. 3 Claims. (Cl. 64—24.)



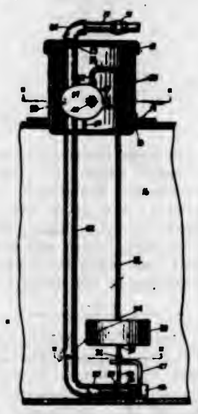
2. The combination with a bearing having a threaded hole in the side thereof, of a bushing having a hole in alinement with the threaded hole, a wick guide engaging with the threaded hole having a projection fitting in the hole in said bushing, an oil cup opening into said threaded hole, and a wick extending up from the cup through the wick guide.

1,390,444. SUPPORT FOR INFANTS' BATHTUBS. SELMA W. JEFFS, Santa Monica, Calif. Filed June 13, 1921. Serial No. 477,095. 4 Claims. (Cl. 4—27.)



1. In a device of the class described the combination of a plurality of transverse supporting members adapted to engage the sides of a bath tub; a plurality of longitudinal

members extending between said transverse members and adapted to support a smaller tub; and connections rigidly

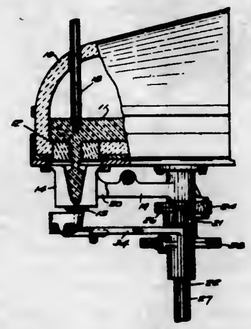


securing said longitudinal members to said transverse members, and pivotally connecting said transverse members together in pairs, substantially as described.

1,390,445. PRODUCING LIGHT-BEAMS. CHARLES FRANCIS JENKINS, Washington, D. C. Filed Apr. 16, 1918. Serial No. 228,891. 1 Claim. (Cl. 240—41.)

The combination with a spherical electric light bulb, of an open approximately parabolic tubular reflector in position to receive rays from the bulb and focus them approximately at a distant projecting lens, a plate interposed in the light beam and provided with an exposure aperture therefor, and a lens in the axis of the beam in position to receive the rays directed centrally out of the larger end of the tubular reflector and adapted to focus them approximately at the projecting lens, said bulb being provided on the side most distant from the tubular reflector with a spherical reflecting surface.

1,390,446. FUEL-RESERVE-SUPPLY SYSTEM. FRANCIS JERDONE, Jr., Toledo, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed May 31, 1919. Serial No. 300,981. 21 Claims. (Cl. 158—46.5.)

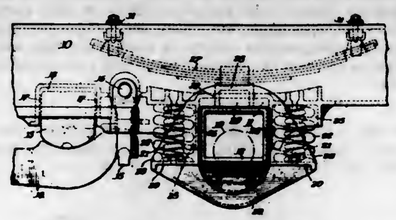


1. A fuel control device comprising a casing adapted to be connected with a fuel supply tank, a tube connected with said casing and adapted to be extended into the tank, a float controlled valve adapted to automatically close said tube when the fuel in the tank is reduced to a predetermined amount and means rotatable in said casing to effect the opening of the valve, said means being arranged to automatically return to normal position when the fuel in the tank is increased above said pre-determined amount.

1,390,447. GUN-BARREL-MUZZLE STEADIER. MILLARD L. JOHNSTON, Utica, N. Y. Filed Sept. 21, 1918. Serial No. 255,165. 19 Claims. (Cl. 89—42.)

1. In a gun barrel muzzle steadier, continuous walled depending means connected with the muzzle of said barrel, said means having a chamber and a vent above said chamber whereby the tendency of the muzzle to jump upward is counteracted.

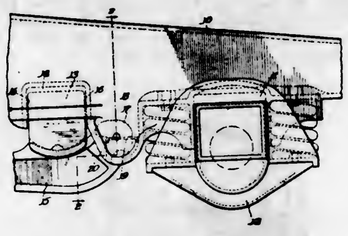
1,390,448. APPARATUS FOR MANIPULATING HOT GLASS. RICHARD LA FRANCE, Toledo, Ohio, assignor to The Owens Bottle Machine Company, Toledo, Ohio, a Corporation of Ohio. Filed Mar. 20, 1918. Serial No. 223,548. 18 Claims. (Cl. 49—55.)



15. The combination with a sectional cup in which a flowing stream of glass accumulates to form a gob, of means to separate the cup sections to drop the gob, a cutter arranged to bear against the bottom surface of the cup and slidable thereon to sever the gob, and means to hold the cutter with a yielding pressure against the bottom of the cup.

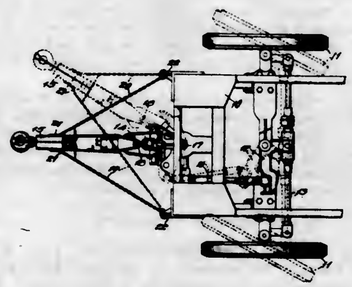
18. The combination of a tank having a flow opening, means forming a passageway through which the glass flows from said opening, means to periodically restrict the passageway at one point, and means to sever the glass, said restriction being sufficient to prevent a continued flow of glass therethrough after it is severed.

1,390,449. CAR-TRUCK CONSTRUCTION. JOHN A. LAMONT, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed Apr. 25, 1921. Serial No. 464,113. 5 Claims. (Cl. 105—213.)



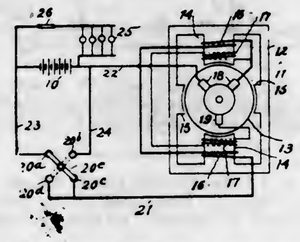
5. In a railway car truck, the combination of a side frame having depending spring pockets and an opening intermediate same, a journal box having a main journal receiving portion, laterally extending brackets projecting therefrom, and a platform extending upwardly through

said side frame opening, springs mounted on said brackets and located within the spring pockets of said side frame



and another spring mounted on said platform and interposed btween the latter and side frame whereby the dead and live loads and shocks are absorbed.

1,390,450. RAILWAY-CAR-TRUCK CONSTRUCTION. JOHN A. LAMONT, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed Apr. 25, 1921. Serial No. 464,114. 5 Claims. (Cl. 105—195.)



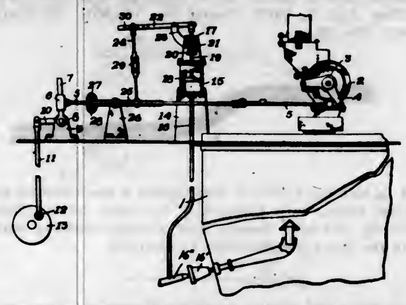
3. In a railway car truck, the combination of a side frame having a bracket, an equalizing lever slidably mounted on said bracket for permitting longitudinal movement of said equalizing lever with respect to said side frame to prevent shocks incident to starting and stopping of the car being taken by said lever.

1,390,451. DRAWBAR MECHANISM. ALBERT P. LEE, Chicago, Ill., assignor to Lee Trailer & Body Company, Chicago, Ill. Filed June 23, 1919. Serial No. 306,201. 3 Claims. (Cl. 280—33.5.)

1. A trailer of the character described having a framework, wheels therefor, means including a draw bar associated with said framework for steering said wheels, said draw bar having a predetermined radius of action, and flexible tension means operable when said draw bar is at the limit of its stroke for transferring the force of additional sidewise pull between a portion of said steering mechanism forwardly of its pivotal point and a portion of the framework sidewardly of the pivotal point of said steering mechanism.

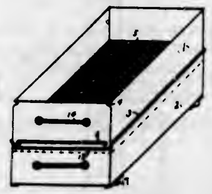
1,390,452. DYNAMO-ELECTRIC-MACHINE CONTROL. BENNETT M. LEECH, Cleveland, Ohio, assignor to The Leece-Neville Company, Cleveland, Ohio, a Corporation of Ohio. Original application filed Dec. 22, 1913, Serial No. 808,064. Divided and this application filed Nov. 23, 1918. Serial No. 263,851. 6 Claims. (Cl. 290—31.)

1. In a system such as described, a storage battery, a dynamo electric machine for charging the same and provided with differential series and shunt field windings, and switching means for short circuiting the dynamo electric machine and disconnecting the latter from the battery.



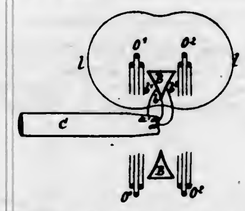
1,390,453. PUMP. MADISON M. LIFF, Los Angeles, Calif. Filed Mar. 19, 1920. Serial No. 367,066. 5 Claims. (Cl. 103—60.)

1. A pump of the class described comprising a pump barrel, a plunger barrel within the same, a pump rod, clutch means for connecting the same to the plunger barrel, a valve located at the lower end of the plunger barrel, packing means for said plunger barrel, a valve at the lower end of the pump barrel, and means for moving both valves off their seats when the plunger barrel is released from the pump rod by the clutch means.



1,390,454. GAS-PRODUCER-REGULATING MECHANISM. CHARLES W. LUMMIS, Worcester, Mass., assignor to Morgan Construction Company, Worcester, Mass., a Corporation of Massachusetts. Filed July 31, 1918. Serial No. 247,574. 10 Claims. (Cl. 48—86.)

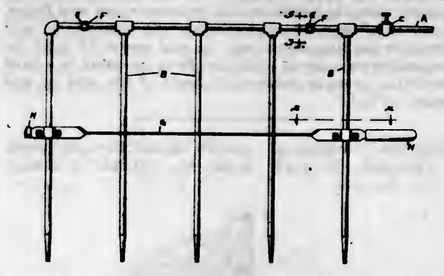
1. In apparatus of the class described, a gas producer having a steam actuated device for delivering a blast of air and steam to the fuel bed, a mechanically actuated fuel feeding mechanism for said producer, means controlled



by the steam pressure acting on said blast devices for varying the rate of feed of said feeding mechanism, and means for manually adjusting said rate of feed.

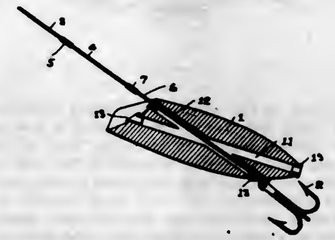
1,390,455. ASH-PAN. WILLIAM J. MCCOLLOM, Clifton, N. J. Filed Apr. 9, 1920. Serial No. 372,557. 1 Claim. (Cl. 83—60.)

An ash sifter consisting of a lower receptacle and an upper receptacle adapted to be seated in the upper part of said lower receptacle, a sieve in the lower part of said upper receptacle, similar slideways, one at the top of said upper receptacle and another in the bottom of said upper receptacle below said sieve, and an imperforated slide adapted to fit and slide in either of said slideways.



1,390,456. ELECTRIC-ARC LAMP WITH ROTARY ARC. LOUIS MAUCLAIRE, ANDRÉ GARBARINI, and GEORGES GAUTIER, Paris, France. Filed Oct. 23, 1917. Serial No. 198,170. 8 Claims. (Cl. 176—51.)

1. An arc lamp of the revolving arc type comprising a central carbon electrode and a surrounding annular electrode, and two separated solenoids whereby the rotating arc is stabilised, said solenoids being substantially concentric with the axis of said central electrode.



1,390,457. APPARATUS FOR THAWING FROZEN GROUND. WILLIAM E. MORAN, Detroit, Mich. Filed Mar. 13, 1920. Serial No. 365,391. 3 Claims. (Cl. 61—36.)

1. In combination with a common connection to a source of steam supply, a plurality of nozzle members projecting laterally therefrom in substantially parallel relation, a valve controlling the flow of steam to said nozzles, means adjustably located intermediate the length of the nozzle members for maintaining their discharge ends in substantial alinement one with another, and handle members de-

tachably secured to that portion of the pipe connection from which said nozzle members project, for guiding the discharge ends of the nozzles along the line of earth to be thawed.

1,390,458. FISH-LURE. EDWARD A. MOREE, New York, N. Y. Filed Dec. 15, 1920. Serial No. 430,832. 6 Claims. (Cl. 43—46.)

6. A fish lure comprising a cylindrical waterproof buoyant body having a bore therethrough coinciding with the longitudinal axis of said body and another bore at an angle to the first bore and intersecting the same, said body also having one end tapered and the other end provided with an inclined concaved surface for causing said body to dive, the axis of said concaved surface being at an angle to the longitudinal axis of said body, eyelets in the ends of said bores, a wire snell held in one of said bores and swivelly connected to a fishing line, and a hook attached to the other end of said snell and normally held in contact with said body and capable of movement away from said body.

1,390,459. ILLUMINATED REFLECTING-SIGN. CHARLES W. RAINKE, Brooklyn, N. Y. Filed June 30, 1921. Serial No. 481,574. 2 Claims. (Cl. 40—130.)

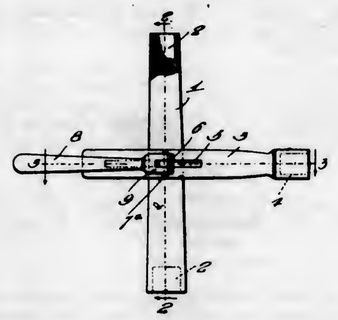
1. A device of the class described comprising a frame, a wall rising from said frame and inclosing the form of a

letter or the like, a plurality of spaced apart reflector elements mounted on said frame within said wall, said wall extending to a distance from said frame slightly greater than the height of said elements above said frame, a source of light situated substantially centrally of said letter or the like, and means on said source of light for preventing issuance of light therefrom excepting in a band extending partway between the ends of the axis of said source of light.

1,390,460. WRENCH. SIGURD ROOD, Tacoma, Wash. Filed May 18, 1920. Serial No. 382,323. 2 Claims. (Cl. 81—89.)

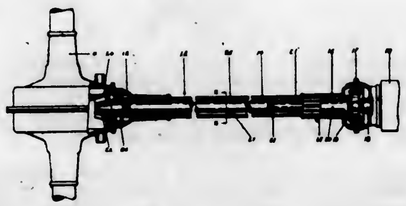
1. A wrench of the character described comprising a channeled shank provided at one end with a jaw having a tapered opening therein in alinement with the shank channel, and having another opening in the base of the channel adjacent the jaw, a second shank slidably mounted in the first said opening adapted to pivot hingedly in said opening and to be moved into and from the channel of the first shank, a jaw at the outer end of the second shank located coöperatively with respect to the first jaw; said jaws to be opened apart at their outer ends by the moving apart of the said shanks, a locking block slidably mounted in the second said shank opening and extending into the channeled portion thereof and having locking teeth on its inner edge, a spring secured to the channeled shank engaging said block to yieldingly urge it into the channel; said second shank having teeth on the inner edge thereof in opposed relation to the block teeth to engage the latter when the shanks are moved into nested relation to lock the same against longitudinal movement relative to each other.

1,390,461. CASKET-HANDLE. EDWARD R. SARGENT, New Haven, Conn., assignor to Sargent & Company, New Haven, Conn., a Corporation of Connecticut. Filed May 14, 1920. Serial No. 381,318. 8 Claims. (Cl. 16—112.)



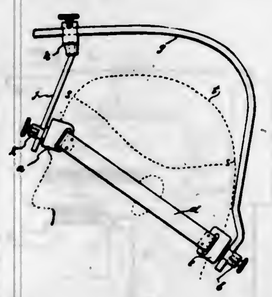
1. In a casket handle, a handle bar, a supporting arm, comprising a soft metal ornamental portion and a strengthening brace, said soft metal portion extending downwardly along the front of the brace then rearwardly along the lower portion of the brace and terminating at a point near the lower portion thereof.

1,390,462. BOOT OR SHOE SOLE. ADDISON T. SAUNDERS, Chicopee, Mass., assignor to A. G. Spalding & Bros., Jersey City, N. J., a Corporation of New Jersey. Filed Aug. 7, 1917. Serial No. 184,951. 13 Claims. (Cl. 36—32.)



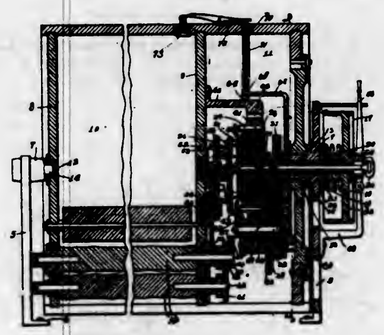
1. A sole for a boot or shoe having a tread and an arch shaped shank, both vulcanized, the shank having fibrous material localized therein, and thereby rendered stiffer than the tread, substantially as described.

1,390,463. FOLDABLE SOCKET-WRENCH. RICHARD C. SCOTT, Chicago, Ill. Filed Apr. 7, 1921. Serial No. 459,459. 1 Claim. (Cl. 81—121.)



A wrench of the type described comprising a bar having sockets formed in its opposite ends, a second socket-carrying bar formed with an elongated slot, a pivot and connecting pin passing through the center of first-named bar and through slot in the remaining bar, connecting the latter to the former and permitting it to be adjusted, folded against, or arranged at various angular positions with respect to the first bar, and a handle pivoted to the free or extended end of said pin.

1,390,464. PROPELLER-SHAFT MOUNTING. ANTOINE G. SENSTIUS, Toledo, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Nov. 22, 1918. Serial No. 263,780. 8 Claims. (Cl. 64—12.)



1. In a device of the class described, in combination, a propeller shaft, bearings near the ends thereof, and means supported independently of the shaft intermediate the bearings for preventing whipping of the propeller shaft.

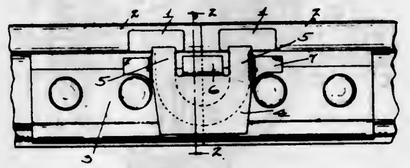
1,390,465. HAIR-CUTTING GAGE. CARL R. SHAFER, Detroit, Mich. Filed Feb. 2, 1921. Serial No. 441,750. 8 Claims. (Cl. 132—45.)

7. In a hair-cutting gage, the combination of a pair of plates, one fitted to the front of the head, the other to the back of the head, a pair of straps connecting the same, a yoke supported upon said plates and movable transversely of the head by its ends being adjustable along the plates.

1,390,466. CHURN AND BUTTER-WORKER. HENRY J. SMITH, Minneapolis, Minn. Filed July 26, 1920. Serial No. 398,991. 3 Claims. (Cl. 31—25.)

1. In a churn, supporting legs, a drum supported by the supporting legs, a partition disposed within the drum for partitioning the drum into a gear casing, an arm having connection with the partition, a gear having internal teeth formed integral with the arm, means including friction disks for causing the operation of the gear and drum, butter working rolls supported within the churning compartment, a pinion having connection with each of the butter working rolls, a pinion supported centrally of the partition and causing the operation of the pinions of the butter working rolls, and means for holding the pinion supported centrally of the partition member stationary, to cause the operation of the butter working rolls.

2. In a churn, supporting legs, a revolving drum mounted on the legs, a partition within the drum and dividing the drum into a gearing compartment and a butter working compartment, a gear having a flange for securing the gear to the partition, an operating shaft, a bracket member movable on the shaft and carrying an elongated gear, means for moving the elongated gear into and out of operation, butter working rolls within the butter working compartment, and means for automatically releasing gas from the butter working compartment.

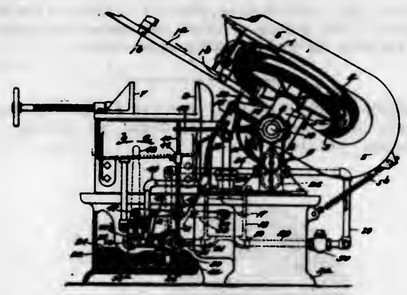


3. In a churn, supporting legs, a revolving drum mounted on the legs, means for partitioning the drum into a gearing compartment, and a butter working compartment, gearing within the gearing compartment for rotating the drum, butter working rolls within the butter working compartment, gearing for operating the butter working rolls, means for throwing the first mentioned gear into operation to cause the rotation of the drum, said means adapted to throw the butter working rolls into operation, when the rotation of the drum has ceased, and means for exhausting gas from the butter working compartment.

1,390,467. VEHICLE-TIRE. JOHN O. SMITH, Cleveland, Ohio. Filed Sept. 10, 1919. Serial No. 322,939. 4 Claims. (Cl. 152—5.)

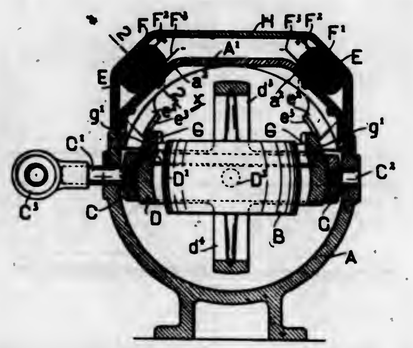
3. A core for tires comprising a yieldable annular body formed in one piece and provided with a central passageway extending lengthwise of the body, a spiral web bridging said passageway and integral with the body, and a plurality of passageways between the first-named passageway and the periphery of the core.

1,390,468. RAIL-BOND PROTECTOR. MARK T. STANTON, Cleveland Heights, Ohio, assignor to The Electric Railway Improvement Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 31, 1917. Serial No. 171,972. 5 Claims. (Cl. 173—262.)



3. The combination with two abutting rail ends, a fishplate connecting the same and a bond having its terminals attached to the heads of said rails, and its body portion extending downwardly therefrom in U-shape adjacent to said fishplate, of a roughly U-shaped protector plate formed to cover the body portion of said bond when disposed adjacent thereto and provided with extensions integrally joined to said fishplate above and below and on either side of the body portion of said bond.

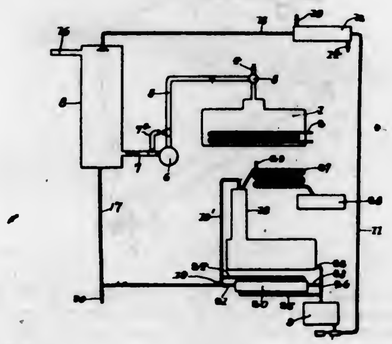
1,390,469. OPERATING DEVICE FOR MATERIAL-WORKING MACHINES. BYRON F. STOWELL, Springfield, Mass., assignor, by mesne assignments, to Metal Saw & Machine Co., Inc., Springfield, Mass., a Corporation of Massachusetts. Filed Sept. 22, 1919. Serial No. 325,433. 46 Claims. (Cl. 29—68.)



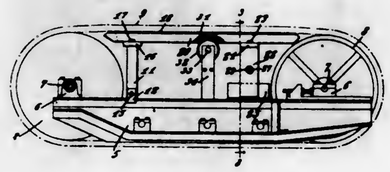
1. A material working machine having therein an implement for working on the material, means to support the implement, means for actuating said implement, means

to support the material, a motor acting on one of said supports to cause relative motion between the implement and the material and means operative for energizing said motor independently of the actuation of the implement.

1,390,470. [WITHDRAWN.]



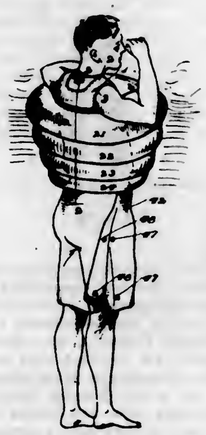
1,390,471. GYROSCOPIC STABILIZER. HERMANN SUNDHAUSSEN, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Sept. 3, 1920. Serial No. 408,085. 5 Claims. (Cl. 33—46.)



1. An apparatus of the class described which comprises a gyroscope, a Cardan suspension therefor, a body to be stabilized operatively connected to said gyroscope, a stationary casing, spaced electro-magnets carried by said casing, armatures carried by the Cardan suspension and means for energizing said electro-magnets, for exerting a turning movement to the gyroscope which will cause an adjustment of the body to be stabilized.

1,390,472. MANUFACTURE OF GASOLENE. GEORGE H. TABER, Jr., Pittsburgh, Pa., assignor to Gulf Refining Company, Pittsburgh, Pa., a Corporation of Texas. Filed Apr. 6, 1917. Serial No. 160,186. 2 Claims. (Cl. 196—25.)

1. The process of recovering gasolene which comprises weathering casinghead gasolene to produce vapors of mixed relatively light and relatively heavy gasolene, regaining the heavy constituents of such vapors in solution in a heavier mineral oil, subsequently separating such heavier vapors from such mineral oil by distillation, and blending therewith another mineral oil.

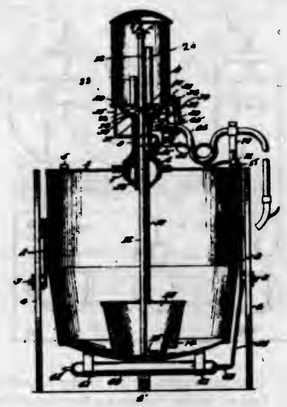


1,390,473. SUPPORT FOR ENDLESS TRACKS. JAMES H. THOMPSON, Harrisonville, Mo. Filed Sept. 2, 1919. Serial No. 321,061. 3 Claims. (Cl. 305—9.)

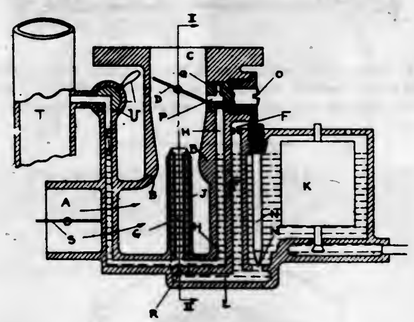
1. In combination with the frame of a creeper tractor and the supporting wheels and endless driving element thereof, a support for the upper portion of the endless driving element, said support including a trough like member, over which the endless driving element operates, an inverted V-shaped member secured to the frame, spaced supporting arms having their upper ends connected with the trough like member, the lower ends thereof engaging the inverted V-shaped member, and means carried by the arms for causing the lower ends of the arms to move over the inverted V-shaped member for causing a vertical adjustment of the trough like member.

1,390,474. LIFE-PRESERVER. WILEY P. TIBBITS, Charleston, S. C. Filed May 25, 1920. Serial No. 384,052. 3 Claims. (Cl. 9—20.)

1. In a device of the class described, a garment provided with an open front and having the side portions of its front adapted to be overlapped to a greater or less extent, closing means upon the overlapping side of the front, a plurality of closing means upon the overlapped side of the front spaced at varying distances from the edge of the said side, and an inflatable air chamber extending circumferentially of the garment.



1,390,475. SAFETY MEDICINE-SPOON. HUBERT TOLER, Sweetwater, Tex. Filed May 24, 1920. Serial No. 383,864. 1 Claim. (Cl. 30—22.)

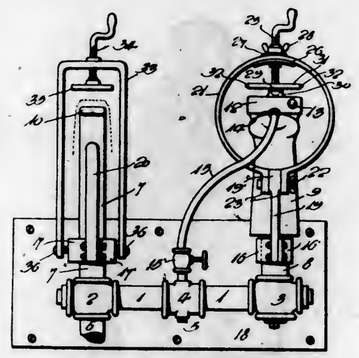


In a medicine spoon, the combination with a bowl portion and a handle portion therefor, of a snugly fitting cover plate normally closing said bowl portion and having an operating handle overlying the handle portion of the spoon, a shoulder formed at the juncture of the bowl portion and the handle portion thereof and having its horizontal wall continuous with the top edge of the bowl portion to provide a supporting surface for the cover plate at this point, a removable pin hingedly securing said cover plate and its operating handle in position, and a coiled spring disposed between the operating handle of said cover plate and the handle portion of the spoon for holding the former in normally closed position on the latter.

1,390,476. PORTABLE LIQUID-DISPENSER. WILLIAM S. TOWNSEND, Washington, D. C. Filed Aug. 24, 1920. Serial No. 405,732. 23 Claims. (Cl. 221—100.)

1. A liquid dispenser comprising a main tank, a measuring container or vessel, a universal joint connecting the lower end of the container with the top of the main tank, means for supplying the container from the main tank, and means for discharging the contents of the container.

1,390,477. CARBURETER. RAYMOND M. ANDERSON, Detroit, Mich., assignor to George M. Holley, Detroit, Mich. Filed Apr. 8, 1920. Serial No. 372,323. 2 Claims. (Cl. 261—41.)

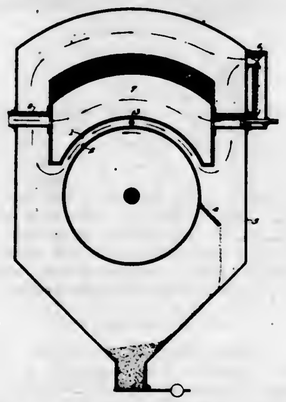


2. In a carbureter, a main air passage, a throttle valve, a main fuel nozzle delivering into said main air passage on the atmospheric side of said throttle, a constant level reservoir having a regulable outlet, a passage connecting said reservoir outlet and said fuel nozzle, a low speed fuel outlet slightly in advance of the throttle valve, an auxiliary air passage connecting the main outlet from said main fuel nozzle and the low speed fuel outlet and an auxiliary fuel orifice delivering fuel from the main nozzle into said auxiliary passage between the main outlet from said nozzle and the low speed fuel outlet.

1,390,478. RUBBER-SHOE-VULCANIZING MACHINE. JOHN MALIN ARTHUR, New Woodstock, N. Y., assignor of one-half to James W. Arthur, Akron, Ohio. Filed Mar. 2, 1921. Serial No. 448,975. 4 Claims. (Cl. 18—17.)

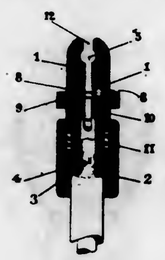
1. A shoe vulcanizing outfit comprising a hollow steam heated pedestal, a support for said pedestal, a carrier pivotally connected with said support and extending about the upper portion of said pedestal and having

movement longitudinally of the upper portion of the pedestal, and clamping means adjustably carried by said



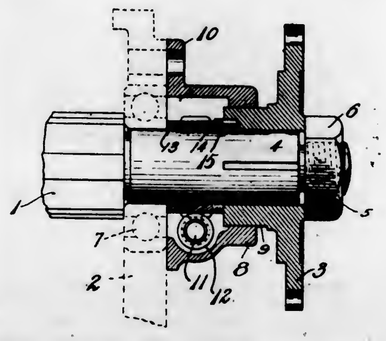
carrier for movement transversely of the upper portion of said pedestal, and at right angles to the movement of said carrier when the carrier is adjusted.

1,390,479. PAVING APPARATUS. ROBERT D. BAKER, Detroit, Mich. Filed Apr. 6, 1914. Serial No. 830,001. 30 Claims. (Cl. 94—45.)



8. In a paving apparatus, a frame, and a reciprocating surfacing member mounted upon said frame for movement and having an arched surfacing face variable in radius.

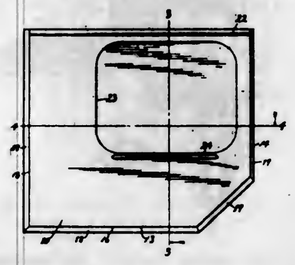
1,390,480. MANUFACTURE OF CARBON-BLACK AND OTHER SOLID REACTION PRODUCTS. WILDER D. BANCROFT, Ithaca, N. Y. Filed Jan. 3, 1920. Serial No. 349,138. 3 Claims. (Cl. 134—65.)



1. Process of removing a finely divided reaction product from a reaction zone, comprising maintaining in proximity to said reaction zone a temperature-gradient sufficient to effect a transfer of a material proportion of the solid product to a cooler zone, and collecting said solid product.

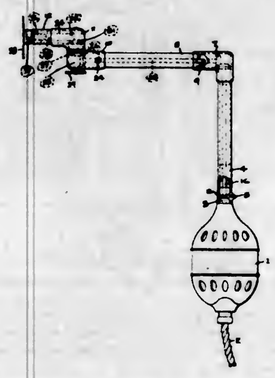
1,390,481. ELECTRICAL CONNECTOR FOR ENGINE SPARK-PLUGS AND OTHER PURPOSES. VICTOR BARDIN, St.-Denis, France. Filed Apr. 16, 1919. Serial No. 290,525. 2 Claims. (Cl. 173—269.)

1. A device for connecting electrically an electric conductor to a contact terminal, comprising in combination a sleeve of insulating material having an internal shoulder in the bore thereof, said bore having a smooth portion and a screw threaded portion, a bifurcated metal member the limbs of which are provided with an exterior bevel surface, said device having a screw threaded shank cooperating with the screw threaded portion of said bore, a ring encircling said limbs and formed with an interior bevel surface coacting with said exterior bevel surface, said ring having an extension thereon fitting slidably in the smooth portion of said bore, and a spring located in said bore between the inner end of said ring extension and said shoulder.



1,390,482. OPERATING CONNECTION. WALTER J. BAUMGARTNER, Brooklyn, N. Y., assignor to Duplex Engine Governor Company, Inc., Brooklyn, N. Y., a Corporation of New York. Filed June 20, 1919. Serial No. 305,567. 5 Claims. (Cl. 64—21.)

3. The combination of a casing, a shaft mounted in said casing and projecting therefrom, a gear loosely mounted on the shaft, a housing inclosing the gear, a coupling rigid with the shaft and having a hub extending into the housing, said hub engaging the gear to rotate the same, and a second gear to be actuated by said first-named gear in said housing.

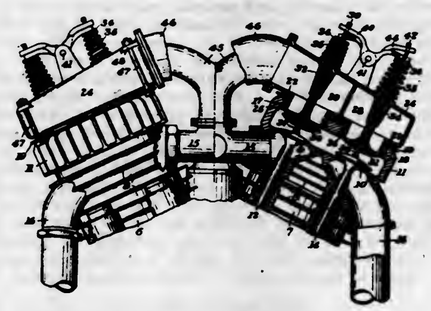


1,390,483. CAB-DOOR. KENNETH S. BAXTER, Michigan City, Ind., assignor to Sheet Steel Products Company, Michigan City, Ind., a Corporation of Indiana. Filed Oct. 15, 1920. Serial No. 417,109. 2 Claims. (Cl. 296—44.)

1. A frameless sheet metal half-door comprising, in combination, two sheet metal panels constituting respectively the inner and outer faces of the door, flanges on the two side edges and on the bottom edge of the inner panel parallel with but offset from the plane of the body of the inner panel and lying against the inner face of the outer panel, the corresponding margins of the outer panel being folded about said flanges and forming therewith an inwardly facing stop engaging shoulder comprising three thicknesses of metal extending about the said three sides of the door adjacent the plane of the outer face of the door, and a stiffening rib extending across the top of the door upon the inside face of the same produced by folding the upper marginal portion of the inner panel outwardly and downwardly and folding the upper marginal portion of the outer panel

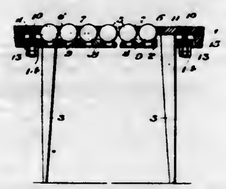
inwardly to the plane of the inner panel thence downwardly to meet the folded upper edge of the inner panel and finally outwardly and upwardly substantially to the plane of the upper edge of the door, the said outwardly and downwardly folded portion of the inner panel and the said outwardly and upwardly folded portion of the outer panel respectively providing downwardly and upwardly facing parallel channels extending throughout the width of the door, and a locking strip covering the said meeting folded edges of the outer and inner panels throughout the width of the door, the longitudinal edges of the locking strip being inwardly folded upon the body of the strip and entering the said downwardly and upwardly facing channels respectively.

1,390,484. UNIVERSAL SHAFT. WILLIAM L. BELL, Oakland, Calif. Filed Nov. 20, 1919. Serial No. 339,503. 2 Claims. (Cl. 64—92.)



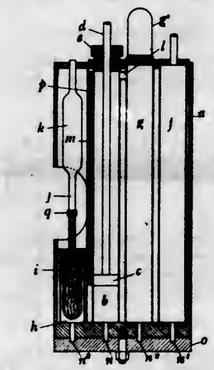
2. In a device of the class described, a plurality of shaft sections, disposed at right angles to one another, and having their adjacent ends rotatably connected, an elbow for housing each pair of the adjacent ends of the shafts, a pipe section telescoping each of the shafts and having one of its ends rigidly connected to the adjacent elbow, and its other end sliding within the adjacent elbow and having an annular groove formed in its portion within the elbow, and a set screw threaded through each elbow and its inner end adapted to extend within the groove formed in the end of said pipe sections, whereby the one end of said pipe sections is rotatably held.

1,390,485. BOLT. WILLIAM L. BELL, Oakland, Calif. Filed Jan. 28, 1920. Serial No. 354,661. 3 Claims. (Cl. 85—1.)



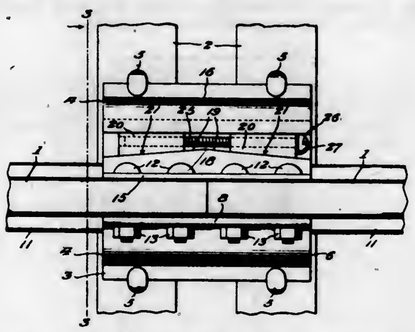
1. A bolt having a threaded portion, a nut on said portion; a reduced shank forming a head; a reduced neck, and a supplemental head slotted to pass said neck and engage said shank contiguous to said head.

1,390,486. INTERNAL-COMBUSTION ENGINE. GEORGE A. BLACK, Franklin, Pa. Filed Nov. 24, 1919, Serial No. 340,264. Renewed Feb. 17, 1921. Serial No. 445,859. 24 Claims. (Cl. 123—85.)



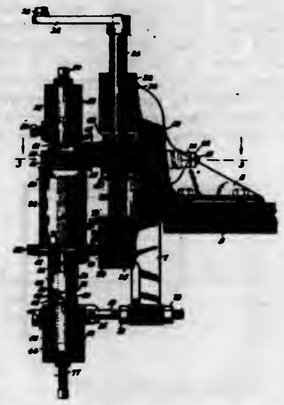
1. An internal combustion engine, comprising a cylinder having exhaust and admission ports, valves for said ports, a cylinder head, supplemental exhaust and admission ports in said head, valves for said ports, and means for actuating said second mentioned valves by said first mentioned valves, substantially as described.

1,390,487. BALL-BEARING TABLE FOR SAWING-MACHINES. ROBERT BLACK and WILBER I. FRANCIS, Evansville, Ind. Filed May 26, 1920. Serial No. 384,314. 3 Claims. (Cl. 143—132.)



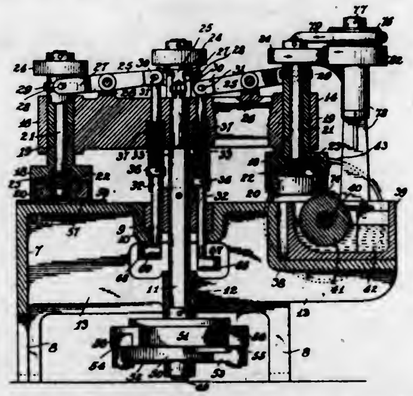
1. A work supporting table for power saws comprising an upper table having ball sockets extending through the upper surface thereof, means supporting said table, an under-table having ball sockets, balls in the sockets of the respective tables and which project above the upper surfaces of the upper table, and means adjustably suspending the under table from the upper table.

1,390,488. ABSORPTION APPARATUS FOR ANALYZING GASES. PERCIVAL RAYMOND BOULTON, Birmingham, England. Filed Apr. 6, 1920. Serial No. 371,702. 1 Claim. (Cl. 23—3.)



In portable absorption apparatus for analyzing gases, the combination comprising a vertical reciprocatory pump, absorption chamber, and pressure gage chamber, the absorption chamber being permanently open at its upper end to the upper side of the pump and to the gage chamber, a vertical desiccating chamber, a gas inlet at the upper end of the desiccating chamber, a collapsible bulb forming part of a fluid pressure gage in the gage chamber, a vertical gage tube in conjunction with the bulb, a case containing the above mentioned parts, said case being formed with an aperture through which the gage tube is visible, a base formed with passages communicating with the lower ends of the aforesaid chambers and pump, and a rotary valve disk on the underside of the base whereby the lower end of the pump can be connected with the lower end of the desiccating chamber or the absorption chamber, and the gage chamber opened or closed to the atmosphere, substantially as described.

1,390,489. RAILWAY-RAIL JOINT. FRANK R. BOWLBY, Cottonwood Falls, Kans. Filed Dec. 13, 1920. Serial No. 430,265. 4 Claims. (Cl. 238—203.)

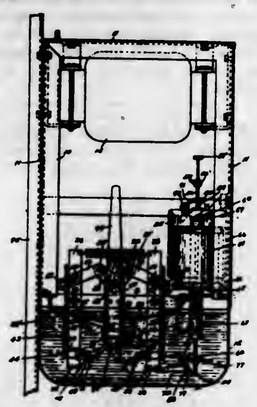


1. In a means for connecting the meeting ends of two railway rails, a chair on which the rails rest, a flange on said chair having its inner surfaces received in the fishing spaces of the rails and also receiving the base flanges of the rails, an angle bar engaging the opposite sides of the rails, an upstanding longitudinal lug on the base of the chair spaced from the angle bar, wedge means between the angle bar and lug, adjusting means for said wedge means, and locking means for said adjusting means.

1,390,490. CAN-HEADING MACHINE. JULIUS BRENZINGER, Fairfield, Conn., assignor to The Max Ams Machine Company, Bridgeport, Conn., a Corporation of New York. Filed Apr. 16, 1919. Serial No. 290,473. 18 Claims. (Cl. 113—23.)

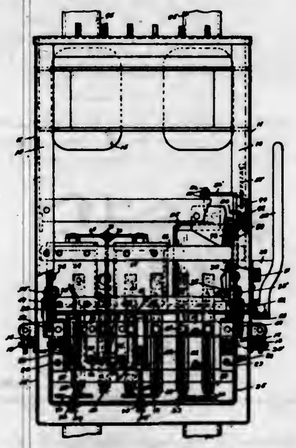
1. In a can heading machine, the combination, with means for rotatively supporting in assembled condition the parts to be joined, said parts having superposed flanges adapted to be intercurled and compressed to form a substantially solid seam, of a seaming roller having compound motion and coöperating with said supporting means to successively perform both the intercurling and the compressing steps of the seaming operation, and means for positively actuating said roller to effect all movements thereof.

1,390,491. CAN-COVER-LINING MACHINE. JULIUS BRENZINGER, Fairfield, Conn. Filed Apr. 22, 1919. Serial No. 291,905. Renewed Jan. 31, 1921. Serial No. 441,454. 26 Claims. (Cl. 113—80.)



1. In a can-cover lining machine, the combination, with means for forming and holding a gasket of semi-liquid material, of means for subsequently depositing said gasket around the edge of a can-cover.

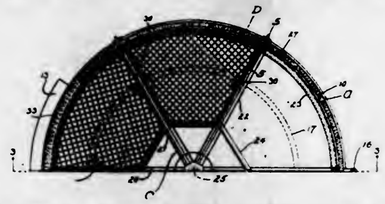
1,390,492. ELECTRIC SWITCH. GEORGE A. BURNHAM, Saugus, Mass., assignor to Sears B. Condit, Jr., Brookline, Mass. Filed Oct. 5, 1917. Serial No. 194,974. 39 Claims. (Cl. 200—6.)



12. A starting device for electric motors comprising a starting switch, a running switch, operating mechanism

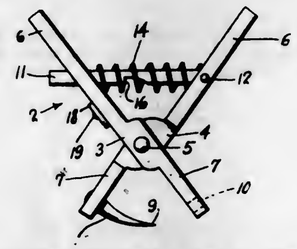
for said switches and means connected with one of said switches normally preventing the operation of the other of said switches.

27. A starting device for electric motors comprising a starting switch and a running switch independently operable, current responsive means operable to cause a movement of the running switch from closed position upon a predetermined current flow, and means connected with one of said switches normally restraining said current responsive means from operation.



1,390,493. ELECTRIC SWITCH. GEORGE A. BURNHAM, Saugus, Mass., assignor to Sears B. Condit, Jr., Boston, Mass. Filed Nov. 6, 1917. Serial No. 200,618. 4 Claims. (Cl. 200—6.)

1. In a starting device for electric motors two movable switch members each comprising a U-shaped frame having its arms pivotally supported, an insulating block carried by it and contact-members carried by said block, stationary switch-members disposed between said frames, an operating shaft, and toggle-mechanism connecting said shaft with said frames.



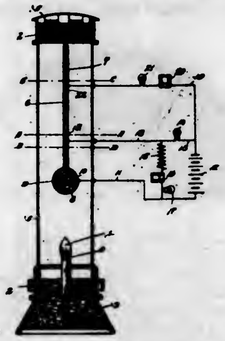
1,390,494. ICING-MACHINE. ANDREW S. CAIRNCROSS, St. Paul, Minn. Filed Aug. 7, 1920. Serial No. 401,955. 4 Claims. (Cl. 91—4.)

1. An icing machine, comprising, in combination, a cylindrical casing having an opening in one side thereof, a bottom for said casing, a downwardly sloping floor therein, extending at its lower extremity through said opening, said casing, bottom and floor forming a chamber for a heating medium, a central support passing through the floor and secured at its lower end to said bottom, a frame revolubly centered on said support, an annulus within the casing having an upright flange turned inward at its lower

edge to form a horizontal track member, the upper edge of said casing being turned downward over the flange and attached thereto to strengthen the upper margin of the casing and secure the annulus in place, antifriction elements between the frame and track member for supporting the outer margin of the latter and severally removable trays of open work material carried by said frame.

1,390,495. HIDE-COUPLER. GEORGE B. CAMPBELL, Canisteo, N. Y. Filed Sept. 9, 1919. Serial No. 322,615. 1 Claim. (Cl. 24—250.)

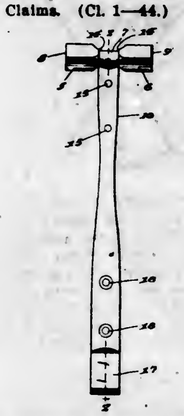
A hide coupler comprising a pair of pivoted bars, a pointed cutting prong or tooth carried by the jaw of one bar, a locking bar pivoted to the handle of one bar and extending through the handle of the other or companion bar, said locking bar provided with a notch, a latch pivoted to said last mentioned bar, said latch adapted to engage the notched portion of the locking bar and hold the pivoted bars in closed position and a coil spring disposed around the locking bar between the handle members of the coupler bars.



1,390,496. COLD-WATER PAINT AND PROCESS OF MAKING SAME. WILLIAM E. CARSON, Riverton, Va. Filed Oct. 9, 1919. Serial No. 329,431. 7 Claims. (Cl. 134—46.)

1. As a new composition of matter, a dry fine powder adapted for coating purposes and comprising chemically combined sugar and lime in the form of horny elastic particles soluble in water.

1,390,497. METHOD AND APPARATUS FOR THE DETECTION OF COMBUSTIBLE AND VITIATED ATMOSPHERES. EDWIN M. CHANCE, Wilkes-Barre, and THOMAS M. CHANCE, Philadelphia, Pa. Filed Apr. 17, 1917. Serial No. 162,809. 5 Claims. (Cl. 73—51.)



1. A method of detecting changes in the constituent gases of the atmosphere and measuring the oxygen content thereof, which consists in maintaining a temperature responsive element in operative relation to a source of heat maintained at a predetermined constant value whereby the temperature of said element will be a function of the

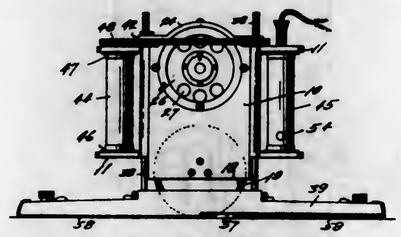
composition of said constituent gases, said element being operatively connected to signaling means adapted to give warning of such changes; bringing said gases in contact with said source of heat; in causing said element to operate said signaling means when the temperature of

said element reaches a predetermined lower limit; and in permitting reductions in the heat received from said source of heat, due to changes in said constituent gases, to cause the temperature of said element to reach said limit; whereby said signaling means are operated and a warning of said changes given.

1,390,498. GLAZIER'S HAMMER. FRANKLIN R. CHANDLER, St. Joseph, Mo. Filed May 27, 1921. Serial No. 473,060. 5 Claims. (Cl. 1—44.)

1. A glazier's hammer comprising a head, a metal strap engaged about the head and in which the head is rotatable and a handle in which the strap is held, the head having a plurality of flat side faces parallel with its axis of rotation.

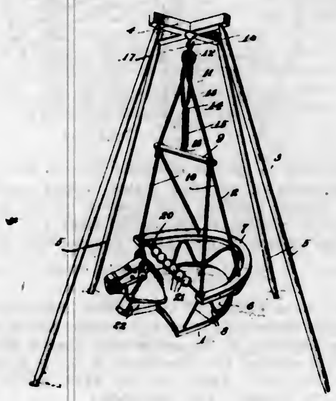
1,390,499. NEEDLE-ADJUSTING MEANS. FORREST CHENEY, Chicago, Ill., assignor to Cheney Talking Machine Company, Chicago, Ill., a Corporation of Illinois. Filed July 17, 1918. Serial No 245,277. 1 Claim. (Cl. 274—1.)



A needle discharging and positioning device for talking machines comprising a base adapted to be secured adjacent the turn-table, a sound box supporting member projecting upwardly from said base and having its supporting surface formed in contiguous stepped portions, the horizontal planes of said stepped portions being at successively lower levels, the highest stepped portion being nearest the turn-table, and a needle positioning member projecting at an angle to and in spaced relation with said lower stepped portions.

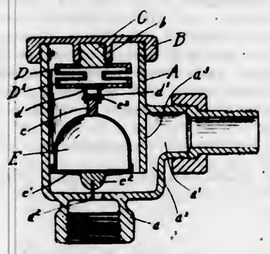
1,390,500. FLEXIBLE WATER HEATER AND DRIPPER. HERBERT W. CHRISTIAN, Detroit, Mich. Filed Aug. 8, 1919. Serial No. 316,070. 1 Claim. (Cl. 128—213.)

The combination of a reservoir, a flexible electrically heated conduit in communication therewith, means for changing the temperature in said conduit, a dripper interposed between said reservoir and said conduit, a nozzle communicating with said conduit, and a thermometer interposed between said nozzle and said conduit and all of said elements being flexibly connected together.



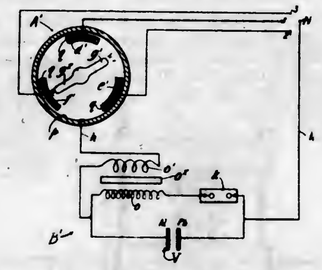
1,390,501. MOTOR-DRIVEN SURFACE-TREATING MACHINE. ALEX A. CLARKE, Dallas, Tex. Filed Feb. 13, 1920. Serial No. 358,485. 2 Claims. (Cl. 51—170.)

1. In a machine of the character described, the combination with a base, of substantially vertical posts secured to the base and having their upper portions screwthreaded, a frame carrying apertured knuckles slidably mounted upon the post, said frame having apertured arms receiving the posts and spaced from the knuckles, sprocket wheels engaging the screwthreaded portion of the post and arranged between the knuckles and arms to be held thereby against vertical displacement, pairs of horizontally extending arms carried by the frame near its ends and extending outwardly, a pair of vertical handles arranged between and connected with the horizontally extending arms, one handle being rotatable, a sprocket wheel connected with the upper end of the rotatable handle to be turned thereby, a sprocket chain engaging all of the



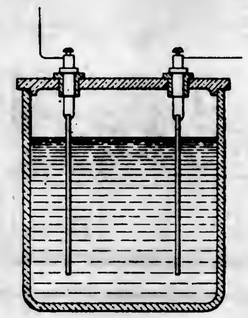
sprocket wheels to cause them to be moved simultaneously, an idle sprocket wheel rotatably mounted upon the horizontally extending arm near the sprocket wheel carried by the rotatable handle and permanently engaging such sprocket wheel, and means to lock the idle sprocket wheel against turning movement.

1,390,502. SWING. CLARENCE J. CLOUSER, Columbus, Ohio. Filed Mar. 19, 1921. Serial No. 453,607. 4 Claims. (Cl. 155—17.)



1. In a swing, a support therefor comprising a double pulley, a seat structure, a transverse rod above said seat structure, downwardly diverging cords between said rod and seat structure, a cable connected with the outer ends of said rod, the intermediate portions of said cable being trained around the pulley so as to produce a downwardly extending loop, a connection between the lower end of said loop and said rod, and a spring coöperative with said cable to effect the resilient support of the seat structure.

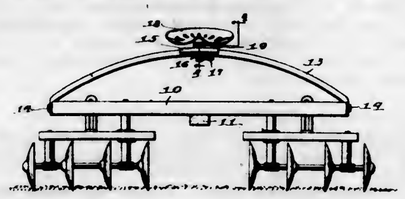
1,390,503. EXHAUST-VALVE FOR RADIATORS. HARRY A. CONNERS, Cincinnati, Ohio. Filed Sept. 11, 1919. Serial No. 323,105. 2 Claims. (Cl. 236—58.)



1. In a radiator exhaust valve the combination of a casing having an extension upon its side adapted to be connected to a radiator and an apron upon its interior extending below the extension and forming with the walls of the casing a float chamber open at its lower end and having at its lower end an internal valve seat, a heat sensitive expansible member mounted upon the interior of the float chamber, a float suspended from the expansible member within the aforesaid chamber and a valve carried by the float and adapted to contact with the valve seat.

1,390,504. TRANSFORMATION OF POLYPHASE CURRENTS INTO PRACTICALLY CONSTANT DIRECT CURRENTS. ORSO MARIO CORBINO, Rome, Italy. Filed Jan. 7, 1918. Serial No. 210,716. 7 Claims. (Cl. 175—364.)

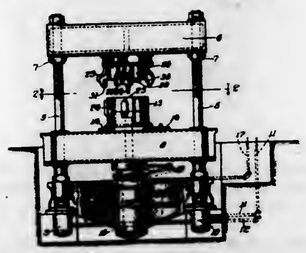
1. A system for transforming alternating current into constant continuous current, comprising a converter of the mercury jet type for transforming the alternating current into unidirectional current; means for connecting said converter with a source of alternating current; means for conducting the converted current from the converter for utilization; and an equalizer for delivering current between the successive impulses of the intermitting unidirectional current.



1,390,505. ELECTROLYTE. JOHN COULSON, Wilkinsburg, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 19, 1917. Serial No. 149,533. 8 Claims. (Cl. 175—318.)

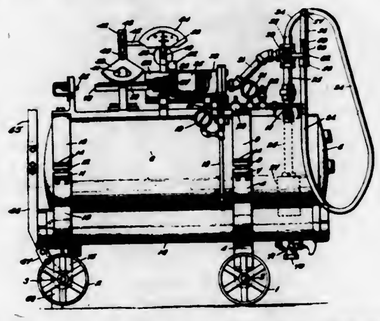
1 to 2% Solution of pyrogallic acid and ammonium citrate.

1. An electrolyte for electrolytic condensers, lightning arresters, rectifiers and the like comprising an aqueous solution containing pyrogallic acid radicals.



1,390,506. VEHICLE-SEAT SUPPORT. RUFUS CARTER, Jr., Danville, Va. Filed May 5, 1921. Serial No. 466,991. 2 Claims. (Cl. 155—122.)

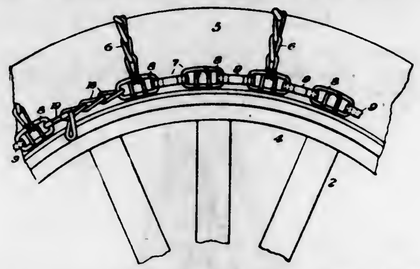
1. In combination, an implement having a frame and ground engaging members, an upwardly bow-shaped sup-



port affixed to the frame and extending transversely thereof substantially the width of the implement and a seat slidably supported on the bow-shaped support.

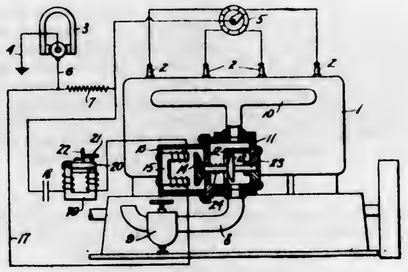
1,390,507. MACHINE FOR MAKING RINGS. JOHN F. CRAWFORD, Racine, Wis., assignor to J. I. Case Threshing Machine Company, Racine, Wis., a Corporation of Wisconsin. Filed Feb. 20, 1919. Serial No. 278,269. 6 Claims. (Cl. 29—1.)

1. A press comprising a head, a table movable in the direction of said head, a die mounted upon said table, a forming block on said die, a die carried by said head comprising a forming member registering with said forming block, and means for actuating said table and its die to bring material in contact with said forming member to press and shape the same.



1,390,508. OIL-DISPENSING APPARATUS. RAYMOND CROWDER, Raleigh, N. C. Filed Apr. 19, 1920. Serial No. 374,979. 15 Claims. (Cl. 221—102.)

2. In an oil dispensing apparatus, the combination of a tank for containing oil; means to force said oil from said tank; means to convey said oil after leaving said tank to a measuring cylinder; a valve controlling said last named means; a delivering means communicating with said cylinder and controlled by said valve; means comprising a pair of valves located in its end adapted to normally maintain said delivering means full of oil; and means for forcing out of said cylinder and delivering means at each operation of said first named valve, the same quantity of oil that passes into said cylinder, substantially as described.

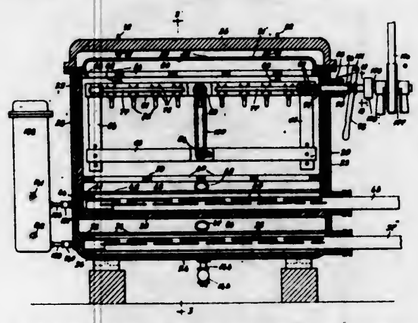


1,390,509. CHAIN-LINK. PETER E. DAUBENSPECK, Butler, Pa. Filed Mar. 10, 1920. Serial No. 364,787. 3 Claims. (Cl. 152—14.)

1. A tire chain for vehicle wheels, comprising side chains and cross chains, each of said side chains having a series of special links to which the ends of the cross chains are connected and intermediate links connecting the adjacent ends of the special links, said special links having a central eye provided with a double bearing surface for the cross chains, and having end eyes for the intermediate links, said eyes being separated by transversely extending bracing members connecting opposite sides of

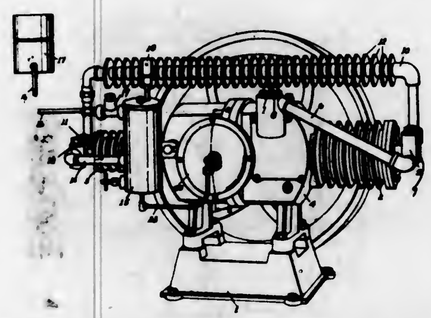
the special links to prevent distortion thereof and lying on opposite sides of the cross chains to hold the cross chains in central position with relation to the special links whereby twisting of the special links and rolling of the cross chains is prevented, substantially as described.

1,390,510. ELECTRICALLY-OPERATED SPEED-REGULATOR. THEODORE DOUGLAS, Scarboro, and WARNER T. TABB, Brooklyn, N. Y., assignors to Duplex Engine-Governor Company, Inc., Brooklyn, N. Y., a Corporation of New York. Filed June 23, 1919. Serial No. 306,185. 4 Claims. (Cl. 123—102.)



1. The combination of an internal combustion engine having a throttle valve and an ignition system including a high-tension magneto, a resistance in the high-tension circuit of the magneto, and a circuit in parallel with said resistance, said circuit including an electro-magnet to control said valve, and containing inductance and capacity to produce resonance to enable said valve to be actuated.

1,390,511. TANK-BAND SADDLE. WHITTLESEY A. DRAKE, Petroleum, Ohio. Filed June 19, 1920. Serial No. 390,192. 6 Claims. (Cl. 220—85.)



1. The combination with a tank having a lapped riveted joint, of a saddle engaging the tank at opposite sides of the joint and adapted to receive and support a tank band out of engagement with the riveted joint, the saddle having its outer ends tapered outwardly for the purpose described.

1,390,512. DYEING-MACHINE. HOWARD M. DUDLEY, Philadelphia, Pa. Filed Nov. 26, 1919. Serial No. 340,940. 9 Claims. (Cl. 8—19.)

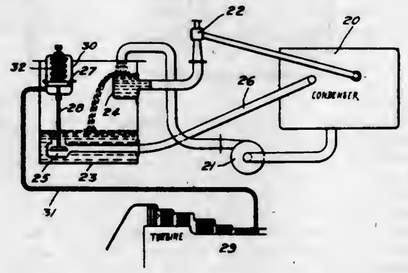
1. In a dyeing machine, in combination, a dyeing chamber, two series of spaced parallel bars capable of holding skeins in a substantially taut condition and means for circulating a liquid in reverse directions through the dyeing chamber parallel to the length of the skeins.

1,390,513. PUMP. HARLEY M. DUNLAP, Battle Creek, Mich. Filed May 27, 1918. Serial No. 236,727. 10 Claims. (Cl. 103—94.)

7. The combination with a pressure pump, of a delivery connection therefor provided with a check valve, an oil trap disposed in said delivery connection in front of said check valve, an unloading valve connected to the lower end of said oil trap, a governor means for controlling said unloading valve comprising a spindle having driving connection with said pump, governor weights mounted on said spindle, and a member actuated by said governor weights to close said unloading valve when the speed of the pump exceeds a predetermined point.

1,390,514. FLEXIBLE COUPLING. GEORGE M. EATON, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 4, 1918. Serial No. 260,959. 19 Claims. (Cl. 64—96.)

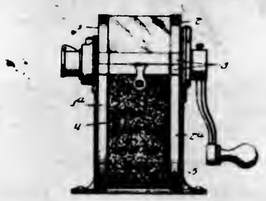
10. In a flexible coupling, the combination with two abutting coupling members, each of which is provided with two quadrant shaped lugs on their opposing faces, said lugs overlapping each other and being of such size as to afford two diametral passages through said coupling structure at right angles to each other, of a spring unit comprising two back-to-back cantaliver leaf springs, each leaf being provided with centrally disposed lugs, binding members surrounding said springs on each side of said lugs, respectively, and each having a semi-circular lateral extension, said extensions together forming a laterally extending cylindrical boss, and a ring member surrounding said boss for clamping said binding members together,



said ring member being seated in an opening in the immediately adjacent coupling member, whereby each spring unit is firmly clamped together and loosely pivoted in place.

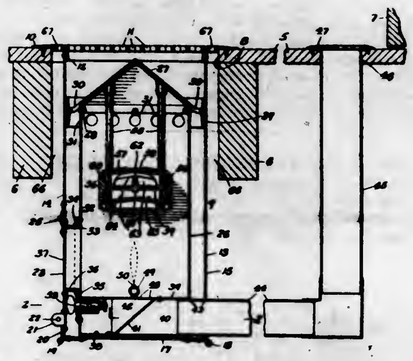
1,390,515. CONTROLLER. RALPH EHRENFELD and NIELS HANSEN, Wilkinsburg, Pa., assignors to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 17, 1918. Serial No. 258,553. 6 Claims. (Cl. 219—48.)

1. In a controller, a movable member comprising a pivoted lever provided with an insulating surface, a plurality of resilient contact fingers adapted to normally engage said insulating surface at a relatively light pressure, and a plate of conducting material mounted on said insulating surface to engage said contact fingers at a relatively heavy pressure upon movement of said lever.



1,390,516. HEAT-CONSERVING APPARATUS. RAYMOND N. EHRHART, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 4, 1917. Serial No. 166,465. 11 Claims. (Cl. 257—24.)

1. In a heat conserving apparatus, a prime mover, a condenser, an ejector for removing air and other non-condensable gases and vapors from the condenser, means whereby the condensate from the condenser is employed in cooling and condensing the fluids discharged by the ejector and for allowing the air to separate therefrom, a hot well for storing the condensate and liquids discharged by the ejector, and means directly communicating with the interior of the prime mover and responsive to the

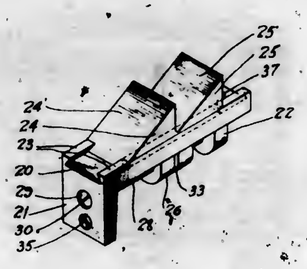


amount of motive fluid passing through the prime mover for automatically delivering liquid from the hot well to the condenser to be cooled and employed as condensate when the supply of condensate is insufficient to cool and condense the fluids discharged by the ejector.

1,390,517. CHIP-RECEPTACLE AND ART OF PRODUCING SAME. EMORY S. ENSIGN, Rockford, Ill., assignor to Spengler Loomis Mfg. Co., Chicago, Ill., a Corporation of Illinois. Filed Mar. 14, 1921. Serial No. 452,016. 2 Claims. (Cl. 120—94.)

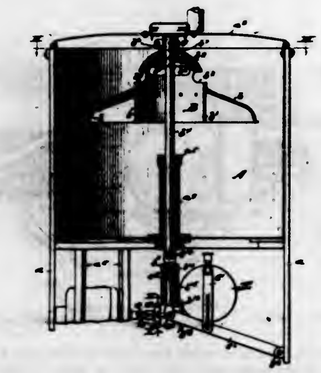
1. A chip receptacle and casing for pencil sharpeners comprising spaced and mutually sustaining framing members, an intervening strip of wall-forming transparent material sustained between said framing members, and an obscuring, protecting, and coloring sheath of pigment applied as a backing to, and protecting and rendering non-transparent the bottom and side forming portions of said strip, and receiving its surface gloss from the surface thereof.

1,390,518. GAS-HEATER. CHARLES E. EPWORTH, Brooklyn, N. Y. Filed Aug. 19, 1920. Serial No. 404,531. 5 Claims. (Cl. 126—116.)



1. A heater adapted to be mounted in and suspended from the floor of a room or compartment, said heater comprising a grate plate secured to said floor, a casing suspended from said plate, a burner device within said casing, means for supplying fresh air to the burner device of said casing, a conical head forming a closure for the top portion of said casing, and means whereby the heated air may pass upwardly and laterally through said casing around said conical head and outwardly through said grate plate.

1,390,519. ADJUSTABLE STRIKER-PLATE FOR DOORS. FRED EVANS, Summit, N. J., assignor to Eric T. Transen, Maplewood, N. J., and Arthur C. Hensler, Newark, N. J. Filed Nov. 13, 1920. Serial No. 423,777. 5 Claims. (Cl. 292—340.)

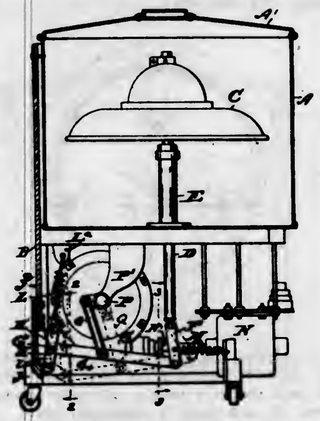


1. A spring bolt keeper having two adjusting catches, either of which may be engageable by the bolt.

5. A spring bolt keeper comprising a plate fixed in the jamb of the door carrying the bolt, a plurality of catches slidable longitudinally on said plate, a lug extending

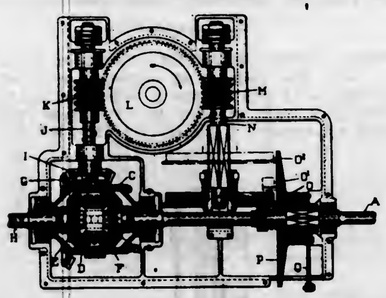
through the plate, said lug and catches being integral, an adjusting screw for said lug and means in the lug for maintaining said screw in adjustment.

1,390,520. WASHING-MACHINE. LEO F. FAY, Ecorse, Mich. Filed Feb. 9, 1920. Serial No. 357,215. 8 Claims. (Cl. 259—113.)



1. A washing machine comprising a clothes container, a beater in the container, a spindle extending through the bottom of the container and connected with the beater, a motor located below the container and a yieldable device connected with the motor and with the spindle and located wholly below the container, said yieldable device comprising a cylinder, a piston rod having a head operating within the cylinder and springs located within the cylinder and yieldably engaging the piston head above and below the same.

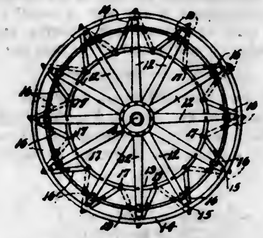
1,390,521. WASHING-MACHINE. LEO F. FAY, Ecorse, Mich. Filed Feb. 7, 1921. Serial No. 442,980. 5 Claims. (Cl. 74—14.)



1. A motor, a movable spindle fitted with an operated device, a rocking lever, means actuated by the motor for operating the rocking lever, a movable fulcrum for the rocking lever whereby the rocking lever may be automatically shifted to adjust itself to load conditions, means for returning and normally retaining the movable fulcrum in its normal position, whereby the rocking lever

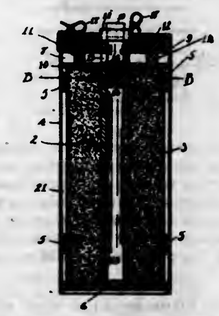
may operate under normal load conditions, a link connection between the swinging end of the rocking lever and

the spindle, and resilient means for checking the sudden return of the rocking lever to its initial position.



1,390,522. VARIABLE GEARING. JOHN WILLIAM FISHER, Blackpool, England. Filed Nov. 16, 1920. Serial No. 424,353. 2 Claims. (Cl. 74—34.)

1. A variable speed gear comprising a driving shaft, a sun wheel on said driving shaft, a driven shaft, a sun wheel on said driven shaft, planet wheels connecting said sun wheels, a revoluble cage carrying said planet wheels, a countershaft, a driving connection between said countershaft and said cage, a worm on said countershaft, a worm wheel gearing therewith, a second countershaft, a second worm on said second countershaft meshing with said worm wheel, a friction disk keyed to but slidable along said second countershaft, a friction disk contacting therewith and keyed to said driving shaft and having a cut away center portion, and an anti-friction thrust ring in said cut away portion to allow the driven friction disk to rotate freely when displaced on to its central portion.



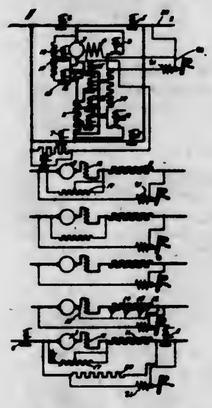
1,390,523. PADDLE-WHEEL. ALFRED FORTIER, Mayo Landing, Yukon Territory, Canada. Filed Sept. 9, 1918. Serial No. 253,297. 1 Claim. (Cl. 170—146.)

A paddle wheel for boats, including spaced and opposed end members formed with radial arms, corresponding concentric rings carried by the end members, transverse rods connecting the outer concentric rings, paddles pivotally connected to the inner concentric rings and extending outwardly between the cross rods so that the cross rods will form stops for the paddles as they swing back and forth into opposite angular positions, a rotatable ring loosely connected with the paddles for causing a simultaneous shifting thereof, and guide means upon the end members loosely receiving the rotatable ring, the pivotal mounting of the paddles enabling them to shift automatically into an

opposite angular position when the direction of rotation of the wheel is reversed and the paddles being arranged in either instance to enter the water substantially flatwise and leave the water substantially edgewise.

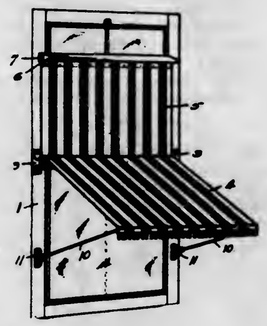
1,390,524. ELECTRIC BATTERY. HARRY F. FRENCH and RAYMOND C. BENNER, Fremont, Ohio, assignors, by mesne assignments, to National Carbon Company, Inc., a Corporation of New York. Filed Jan. 27, 1917. Serial No. 144,830. 12 Claims. (Cl. 204—38.)

1. An electric cell of the reserve type comprising; a closure for the cell having an opening therein; a positive electrode, a negative cartridge assembled in spaced relationship from the positive electrode; paste material normally out of contact with the electrode and cartridge, adapted to be introduced in the space between the cartridge and electrode through said opening, said space being connected with the opening in the closure whereby the paste may be introduced to render the cell active.



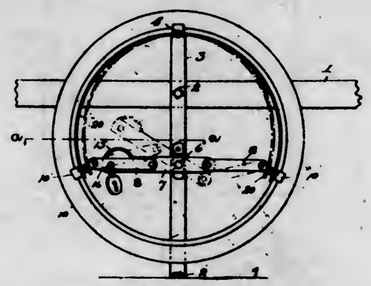
1,390,525. CHAIR OR THE LIKE. SAMUEL GAGE, Holloway, London, England, assignor to The London General Omnibus Company, Limited, Broadway, Westminster, London, England. Filed Dec. 27, 1920. Serial No. 433,094. 4 Claims. (Cl. 155—196.)

1. In a chair or the like the combination with a seat of a back comprising a wooden side frame-member which



supports the rear of the seat and forms a leg extending down to the floor, said frame-member being slotted in a front and rear direction, intermediate its side faces, and throughout a considerable portion of its length adjacent the point of attachment to the seat, a metal plate which occupies said slot, and means for securing said plate to the frame-member to stiffen and strengthen the latter.

1,390,526. ELEVATOR-CONTROL SYSTEM. ADOLPH A. GARDA, Pittsburgh, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 5, 1918. Serial No. 210,580. 6 Claims. (Cl. 172—179.)



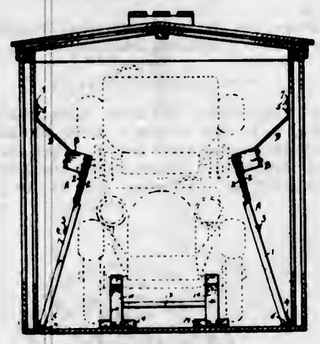
3. In a motor-control system, the combination with a source of power, an armature winding, and an induction coil and a starting resistor in series therewith, of a dynamic-braking resistor in parallel relation with said armature, said induction coil and said starting resistor, and a brake coil connected, at one end, to said dynamic braking resistor, and, at the other end, to said source of power.

1,390,527. WEATHER-SHIELD FOR SPRING-SHADE AWNINGS. EDWIN GRAY, Maplewood, Mo. Filed Dec. 8, 1919. Serial No. 343,435. 3 Claims. (Cl. 156—44.)

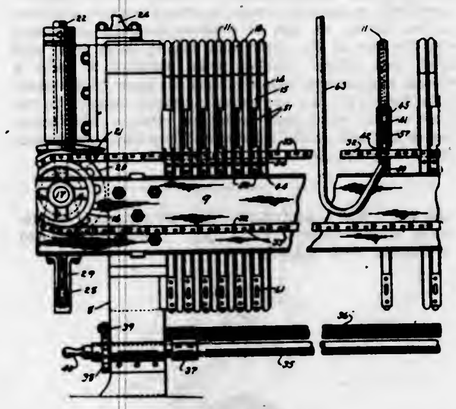
2. In combination with a spring-shade awning, a weather shield comprising a plate adapted to be secured to the upper edge of the awning so as to move therewith, said plate having a forwardly extending shield portion terminating in a suitably curved forward edge to provide a positive water-drip, said shield portion adapted to cover the awning when the awning is in its rolled up position to provide an effective weatherproof shield therefor.

1,390,528. TIRE-CARRIER. MARTIN L. GRUBBS, Wernersville, Pa. Filed Sept. 22, 1920. Serial No. 411,978. 1 Claim. (Cl. 224—29.)

In a tire-carrier, the combination of a support, a rocker pivotally supported between its ends, links pivotally secured to said rocker, a member pivotally secured to the outer end of each link, a segmental plate, of spring material, secured, intermediate its ends, to said support and bearing, at its ends, against said members, and two shoe-members, each bearing against said plate at one end thereof and provided with side flanges and an arched central portion forming depressions or pockets in which a plurality of tires may be received, and means for securing said superposed pivotally-secured members, segmental plate, and shoe-members rigidly together.



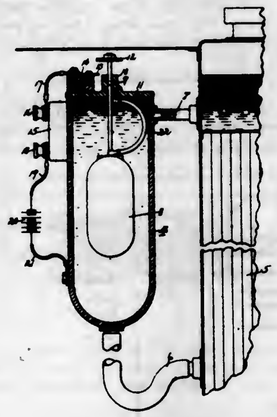
1,390,529. VALVE-SILENCER. FREDERICK GRINHAM, St. Louis, Mo., assignor of one-fourth to Henry W. Spalding, one-fourth to John C. Stiles, and one-fourth to George P. Ward, St. Louis, Mo. Filed June 24, 1921. Serial No. 480,040. 3 Claims. (Cl. 123—90.)



1. A valve silencer comprising a piece of non-metallic substance having a hole in its center, the same being elongated in its longitudinal dimension, and adapted to serve as a buffer on two surfaces of a movable-member.

1,390,530. AUTOMOBILE-TRANSPORTATION SUPPORT. WILLIAM A. HANSEN, Salt Lake City, Utah, assignor of one-sixth to Robert F. Elvin, one-sixth to Alfred Lefavor, one-sixth to Finis L. Ewing, one-sixth to Marshal M. Daniels, and one-sixth to John Percy Bowers, Salt Lake City, Utah. Filed Dec. 15, 1920. Serial No. 430,965. 2 Claims. (Cl. 105—368.)

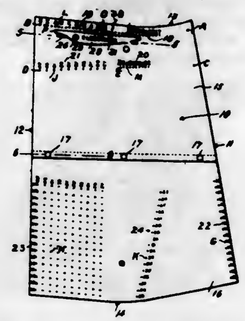
2. An automobile support for use in shipping, comprising upwardly converging channel irons; triangular metal sheets to fasten said channel irons together at the apex; a hollow metal box secured to one of said triangular sheets; a bracket brace fastened to said box and extending upward at an incline from said box; and a block to be carried in said box and recessed to receive the end portions of an automobile axle.



1,390,531. FILTER-PRESS EQUIPMENT. NELSON A. LOCKWOOD, Ogden, Utah. Filed Sept. 22, 1920. Serial No. 412,022. 17 Claims. (Cl. 210—193.)

1. In filter presses embodying a series of filter units operative therealong, for opening and closing the press, the combination of conveyer elements movably associated with said filter units, for shifting the latter in reverse directions as desired, means for operating said conveyer elements, and means for detachably coupling said filter units with said conveyer elements, substantially as described.

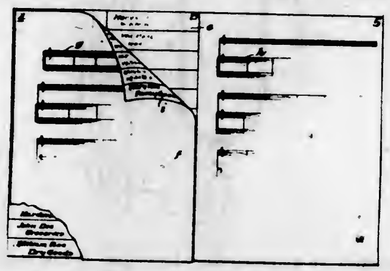
1,390,532. HEAT AND LOW-WATER INDICATOR. OSCAR H. LUDEMAN, Hartford, Conn. Filed Dec. 9, 1918. Serial No. 265,998. 5 Claims. (Cl. 200—84.)



1. An operating mechanism for a low water and heat indicator including a case adapted to be connected with a holder to receive liquid therefrom, a float within the case, means actuated by the float to set an indicator in operation at a predetermined position of the float, and a thermostat positioned to move said float.

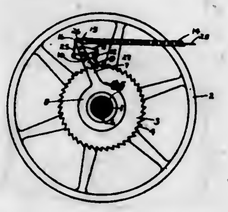
1,390,533. PROCESS OF MAKING AMMONIA. KARL P. MCELROY, Washington, D. C., assignor to Ferro Chemicals Inc., Washington, D. C., a Corporation of Delaware. Filed Dec. 24, 1917, Serial No. 208,647. Renewed Feb. 7, 1921. Serial No. 443,224. 9 Claims. (Cl. 23—21.)

1. The process of producing ammonia which comprises passing air at a high temperature through a pervious charge comprising lime, carbon and returned potash, the temperature being high enough to produce potassium cyanid in fume form, removing the hot gases containing the fume, separating the fume to recover potassium cyanid, hydrolysing the potassium cyanid to produce ammonia and a potassiferous residue and returning the potassiferous residue to form part of a charge.



1,390,534. SKIRT-TEMPLET. UICHIRO MAEDA, Los Angeles, Calif. Filed Aug. 16, 1919. Serial No. 318,017. 1 Claim. (Cl. 33—13.)

A templet adapted to be used for the laying out of a skirt pattern to correspond to predetermined measurements, said templet being provided with a plurality of measurement indicating points at the waist, hip, front and back lines of a skirt, said indicating points at the waist and hip lines extending approximately across the templet between its front and back edges and represent-

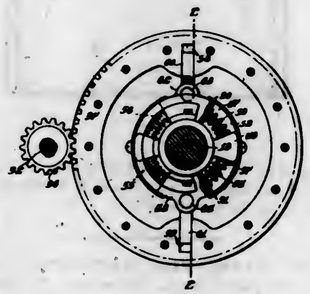


ing measurement units, said templet being further provided with indicating points for establishing the point of the dart of the skirt on said pattern midway of predetermined measurements at the hip line and for establishing the points of the flare of said dart at predetermined distances from the front and back edges of the skirt pattern.

1,390,535. MUSIC-SHEET ADVERTISING DEVICE. CLARENCE H. MAIER, New York, N. Y. Filed Nov. 26, 1920. Serial No. 426,369. 1 Claim. (Cl. 283—56.)

A sheet music book adapted to constitute a gift, for distribution by advertising concerns, said book including a four-page sheet and an insert in the form of a two-page sheet, said four page sheet identified in order as pages 1, 2, 5 and 6, of which page 1 constitutes a front cover sheet and sheet 6 constitutes a back cover sheet, page 2 on the reverse side of the front cover page having a text thereon constituting an advertisement which advertisement sheet cannot be thrown away without also throwing away the front cover page, said insert sheet identified in order as pages 3 and 4 in the book having a size to fit over and hide the advertising matter on page 2 when the book is open to expose pages 4 and 5 said exposed pages 4 and 5 having a text thereon constituting a complete piece of music whereby the piece can be sung or played without turning any of the sheets, the reverse sides of said pages 4 and 5 being respectively page 3 and the back cover page 6 having a text thereon constituting advertisements which cannot be thrown away without also throwing away the piece of music.

1,390,536. MEANS FOR MOVING THE DRIVE-SHAFTS OF STEAM-ENGINES FROM DEAD-CENTERS. SANFORD E. MANNING, West Columbia, Tex. Filed Aug. 21, 1920. Serial No. 405,138. 6 Claims. (Cl. 74—54.)



5. A device of the character described comprising a power shaft, a ratchet wheel fixed on said shaft, a lever adjacent said wheel, an operating lever spaced from said shaft, a rigid means connecting said operating lever with said first named lever, whereby the latter may be thrown either backward or forward and means to connect said first named lever with said ratchet wheel and operable from said operating lever.

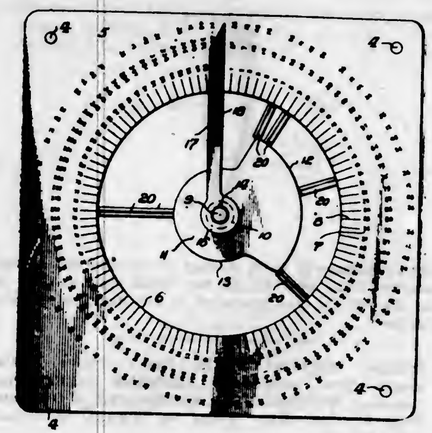
1,390,537. COMPOSITION OF MATTER DESIGNED FOR USE ON SHOES AND BOOTS AND ON LEATHER ARTICLES GENERALLY. JOSEPH RAOUL MONTPETIT and JAMES SCOTT ADAMSON, Ottawa, Ontario, Canada. Filed Oct. 4, 1920. Serial No. 414,656. 7 Claims. (Cl. 134—8.)

1. A composition for the preservation of leather comprising a varnish, a cellulose ester solution and a rubber solution.

1,390,538. YIELDABLE GEARING. HOWARD J. MURRAY, Brooklyn, N. Y., and WALTER S. RUGG, Pittsburgh, Pa. Original application filed May 27, 1918, Serial No. 236,856. Divided and this application filed July 2, 1920. Serial No. 393,544. 11 Claims. (Cl. 74—29.)

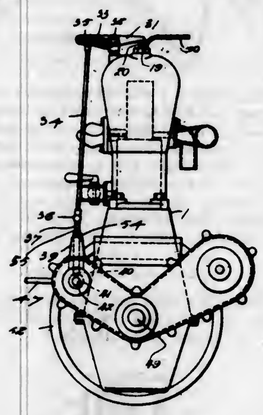
1. In a device of the class described, the combination of a power transmission including a wheel, a power member operatively connected thereto to drive the same, a driven member having its axis of rotation normally coinciding with the axis of the wheel and spaced apart from said wheel, said driven member being mounted to have a freedom of movement axially across the plane of the wheel and a flexible driving connection normally disposed in the plane of the wheel and extending between said transmission and said driven member and in sliding engagement with the transmission.

1,390,539. WALL-BRACKET. ROY F. PERKINS, Middleboro, Mass. Filed Mar. 23, 1921. Serial No. 454,645. 4 Claims. (Cl. 248—31.)



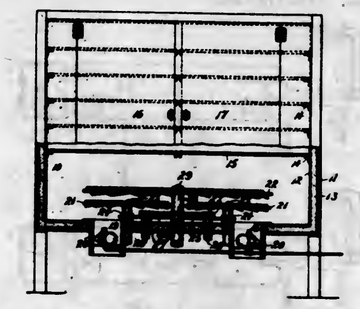
1. A device of the class described comprising a body having a laterally projecting rib constituting a shoulder, a hook having a shank passing through said rib and provided with an offset portion engaging said shoulder.

1,390,540. DEVICE FOR TESTING INACCURACIES IN CAMS. STEPHEN PICHLER, Detroit, Mich. Filed June 21, 1920. Serial No. 390,557. 5 Claims. (Cl. 33—75.)



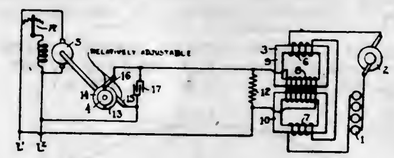
1. Means for gaging a cam comprising a gage plate having an opening in which a cam to be gaged is placed.

means adapted for supporting the cam in the plate opening so that said cam may be rotated therein, and a plu-



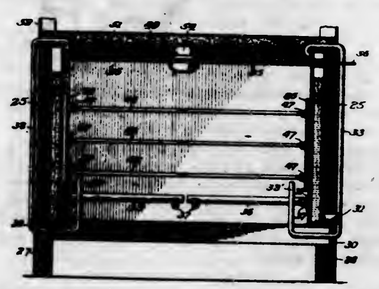
rality of pins adapted to be interposed between the cam and the wall of the plate opening.

1,390,541. ACTUATING MEANS FOR FUEL-INJECTOR PLUNGERS. RICHARD H. RANDALL, Brockton, Mass., assignor of one-half to Athelstan E. Gooch, Brockton, Mass. Filed June 20, 1917. Serial No. 175,850. 4 Claims. (Cl. 123—90.)



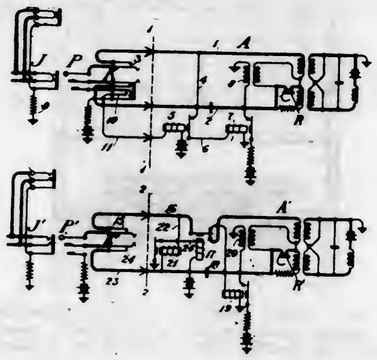
1. Actuating means for the plunger of a valve for injecting fuel charges into the cylinder of an internal combustion engine, comprising a rocker arm engaging the plunger and adapted to move the plunger inwardly, a retraction spring adapted to move the plunger outwardly, a link rod, means pivoting the link rod to the rocker arm and adapted to be adjusted lengthwise of the rocker arm in the direction of and away from its pivot, and means for imparting motion to the link rod.

1,390,542. HEATING AND BAKING STRUCTURE. JAMES J. REID, Oakland, Calif. Filed Mar. 3, 1920, Serial No. 362,977. Renewed Feb. 16, 1921. Serial No. 445,448. 5 Claims. (Cl. 107—60.)



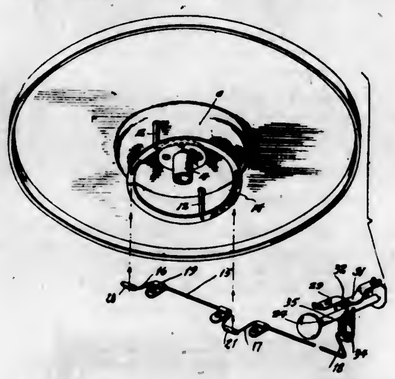
1. In a heating structure, a heat generating element and movable means actuated by the radiating heated air to uniformly distribute said heated air over a given area.

1,390,543. CURRENT-REGULATOR. FREDERICK L. RE QUA, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Aug. 19, 1918. Serial No. 250,421. 7 Claims. (Cl. 171—119.)



1. In a current regulator, the combination with a magnetic amplifier having coördinated alternating and direct current windings, of a local circuit for the direct current winding of said amplifier and means for subjecting said last mentioned winding to a given potential intermittently.

1,390,544. STOVE. HENRY C. REUTER, Chicago, Ill., assignor to Samuel Block and Henry C. Reuter, doing business as Block & Reuter, Chicago, Ill. Filed July 29, 1920. Serial No. 399,759. 8 Claims. (Cl. 126—20.)

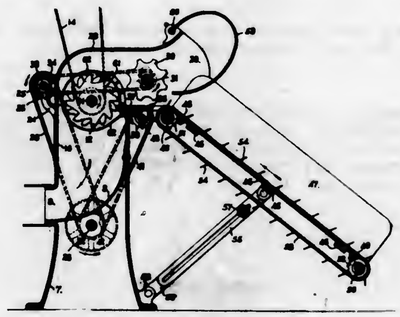


1. A stove comprising an insulated chamber closed at its top and entirely open to the air at its lower end, and having a door, a water jacket lining within the chamber, heat generating means within the lower part of the chamber and means for supplying steam vapor from the water jacket to the interior of the chamber.

1,390,545. DESK-OPERATOR'S CIRCUITS. WILLIAM A. RHODES, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Dec. 5, 1918. Serial No. 265,438. 8 Claims. (Cl. 179—53.)

1. In a telephone system, a plurality of operator's cords, an operator's telephone set common to said cords, means to associate said set with any one of said cords, means normally connected with the tip conductors of said cords to complete a busy test circuit for said set when a test is made with a cord to which the set is connected, and means common to said cords for opening said busy test circuit when a connection is established over said cord.

1,390,546. RECORD-LIFTING DEVICE. WALTER A. RICHMAN, Egg Harbor, N. J. Filed July 27, 1920. Serial No. 399,314. 3 Claims. (Cl. 274—9.)

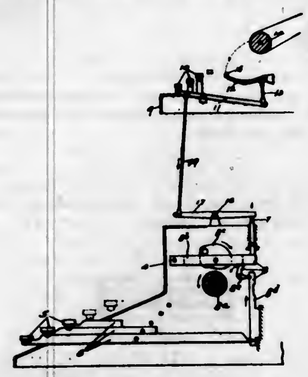


1. The combination with the turntable of a sound reproduction apparatus, of a record lifting plate associated with the table, an annulus located beneath the table and having connection with the plate through the table, a rock shaft having crank portions to ride against the annulus when the shaft is rocked in one direction, and thus move the annulus in an upward direction, and means for rocking the said shaft, the said means comprising a shiftable member having a guide, the said shaft having a crank engaging the guide.

1,390,547. DAMPER FOR MOISTENING ADHESIVE CEMENTS AND THE LIKE. HARRY BOTWRIGHT ROGERS and MAURICE GOAD ROGERS, London, England. Filed Feb. 8, 1921. Serial No. 443,405. 3 Claims. (Cl. 91—67.4.)

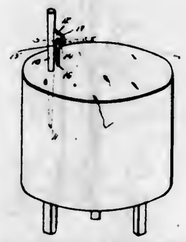
1. A damper comprising a chamber adapted to contain liquid, and having an opening and an absorbent pad filling said opening and protruding from an end of the chamber, that part of the pad within the chamber having applied thereto a liquid proof coating and the sides thereof caused to adhere to the sides of the body of the damper to prevent the passage of water through the opening and a small puncture being provided in the liquid proof coating in the edge of the pad presented to the liquid within the chamber.

1,390,548. FORAGE-CUTTER. LEE C. SHARP, Plattsmouth, Nebr., assignor to Alfa-Laise Manufacturing Company, Wilmington, Del., a Corporation of Delaware. Filed Dec. 26, 1918. Serial No. 268,510. 3 Claims. (Cl. 146—29.)



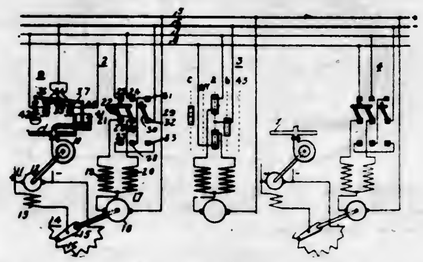
1. In a forage cutter, a cutting cylinder, a fixed support having bearings for said cylinder and inclosing the lower portion thereof, a drive-shaft mounted on said support, a feed-cylinder, actuating means therefor connecting the same with the drive-shaft, and a casing-member covering the upper portion of the cutting-cylinder and feed-cylinder, said casing-member, the feed-cylinder and the actuating means therefor being swingable about the axis of the drive-shaft to fully uncover and expose the cutting-cylinder.

1,390,549. BOTTLE-CLOSURE. FRANK H. SILVERTHORNE, New York, N. Y. Filed Aug. 25, 1919. Serial No. 319,783. 11 Claims. (Cl. 215—76.)



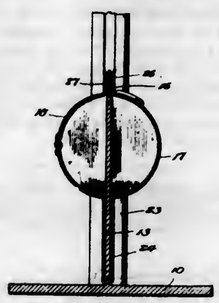
1. A closure for a bottle including a spring ring, a ferrule for securing said ring to the bottle, a rotary valvular construction for controlling the flow from the bottle, said construction including a nozzle seat, a pouring nozzle rotatably mounted in said seat and held resiliently in place by said spring ring.

1,390,550. LINOTYPE-INSTRUCTION DEVICE. HARRY SMITH, Portland, Oreg. Filed July 24, 1920. Serial No. 398,751. 1 Claim. (Cl. 35—16.)



A device of the character described, having in combination therein, a linotype keyboard mechanism of common type with a power transmission shaft extending within the casing thereof, a horizontal bar pivoted at one end in the casing above the shaft, with a rigid vertical pin on its opposite free end, a cam member pivoted in the bar above the shaft, a slidable vertical arm engaging at its lower end an opposing linotype key-bar, a cam lever pivoted near the upper end of the arm in position where one part of the lever engages the upper part of the arm and the opposing lever part supports the bar in sliding engagement therewith, a typewriter mechanism of common type, and a lever pivoted at its center on the linotype case, its free end extending over the free end of the aforesaid pin, and having a rod extending from its opposing end to a desired typewriter key-bar, the whole being arranged to allow the cam lever to be manually moved to permit the bar to drop sufficiently so that its cam member may engage the shaft, and the shaft automatically to cause said member to raise the free end of the bar and the end of its pin to deliver an impact stroke to the intervening mechanism and it in turn to actuate a desired type key-bar to an impression.

1,390,551. CHUCK-PIN. JOSEPH J. HARRINGTON, Philipsburg, Mont. Filed Mar. 28, 1921. Serial No. 456,261. 3 Claims. (Cl. 17—14.)

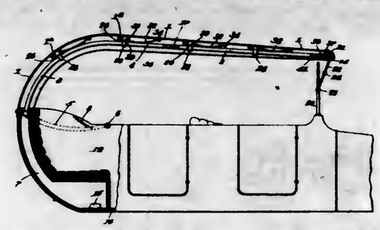


1. As a new article of manufacture, a chuck pin having a handle pivotally connected thereto adjacent the upper end thereof, and means for limiting the pivotal movement of the handle with relation to the pin.

1,390,552. MOTOR-CONTROL SYSTEM. ALBERT L. HARVEY, Braddock township, Allegheny county, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 7, 1917. Serial No. 200,661. 4 Claims. (Cl. 103—87.)

1. In a system of control for a fluid system, the combination with a plurality of fluid pumps for maintaining pressure in the fluid system, a plurality of motors severally connected to said pumps, rheostats for governing the excitation of said motors, and pilot motors for respectively controlling the operation of said rheostats, of a supply circuit, and means for jointly connecting any number of said pilot motors to the supply circuit and controlling the operation thereof in accordance with the pressure in the fluid system.

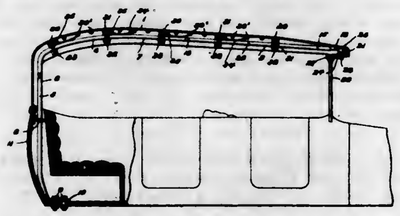
1,390,553. TOOTHPICK-DISPENSER. HIRAM S. HEARN and ARNOLD E. PERRETEN, Denver, Colo. Filed Apr. 12, 1920. Serial No. 373,226. 4 Claims. (Cl. 206—23.)



3. A device of the character described including a base, guide posts rising therefrom, an ejector upstanding from the base between said posts, a hopper slidably supported by said posts and depressible over the ejector, springs surrounding the posts and normally holding the hopper elevated, casings housing said springs, and means upon the upper ends of the posts securing the casings and limiting the hopper against upward displacement.

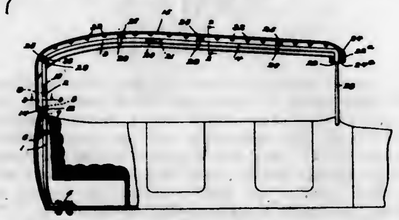
1,390,554. FOLDING AUTOMOBILE-TOP. ABRAHAM D. HEDGES, Long Beach, Calif. Filed Aug. 21, 1919. Serial No. 318,917. 18 Claims. (Cl. 296—107.)

1. An automobile top including a top frame comprising side rods having straight front portions extending from the back of the vehicle to the front thereof, said side rods being also provided with downwardly curved rear portions, and approximately horizontal balancing arms extending forwardly from the lower terminals of the curved rear portions and pivotally connected to the body of the vehicle and adapted to effect a counterbalancing of the forwardly extended portions of the side rods.



4. An automobile top including a top frame composed of side rods having curved rear portions and straight

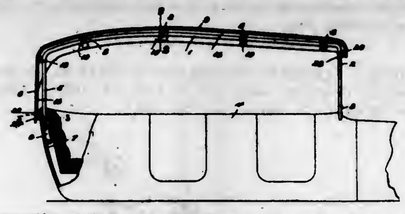
front portions, a cover stretched over the top frame and secured to the front ends of the side rods and yieldable means arranged at intervals for connecting the cover with



the side rods for stretching the cover, said yieldable means extending in the direction of the cover when the same is arranged for use.

1,390,555. AUTOMOBILE-TOP. ABRAHAM D. HEDGES, Long Beach, Calif. Filed Dec. 15, 1919. Serial No. 345,102. 18 Claims. (Cl. 296—107.)

1. An automobile top including a top frame, a flexible cover arranged on the top frame, a spring actuated member slidable on and carried by the top frame and connected with the front of the flexible cover for stretching the same, means for slidably connecting the spring actuated member with a fixed portion of the automobile, and means for locking the slidable member in a retracted position to relieve the flexible cover of the spring.

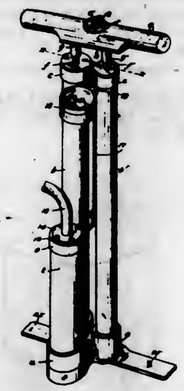


1,390,556. AUTOMOBILE-TOP. ABRAHAM D. HEDGES, Long Beach, Calif. Filed Dec. 15, 1919. Serial No. 345,103. 13 Claims. (Cl. 296—107.)

1. An automobile top including a flexible cover, a top frame composed of fixed rear sections provided at their lower ends with attaching means for securing them to the lower portion of an automobile body in rear of the back seat, a short coupling section, a bent, forwardly extending section, and pins connecting the sections and threaded at one end, and cover stretching means mounted on the pins and retained in place by the sections and connected with the said flexible cover.

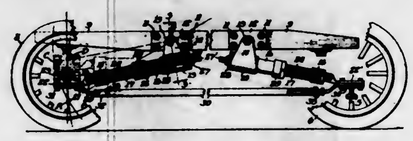
1,390,557. AUTOMOBILE-TOP. ABRAHAM D. HEDGES, Long Beach, Calif. Filed Oct. 9, 1920. Serial No. 415,718. 11 Claims. (Cl. 296—107.)

1. An automobile top including a top frame, a flexible cover, transverse bows or slats arranged at intervals and secured to the cover, members slidably connected with the slats or bows and slidable on the top frame, and a flexible



connection attached to the bows or slats and arranged when placed under tension to engage the slidable members with the top frame.

1,390,558. PHONOGRAPHIC REPRODUCER. ALEX HOOVER, Bellefourche, S. D. Filed Aug. 8, 1919. Serial No. 316,114. 1 Claim. (Cl. 274—29.)

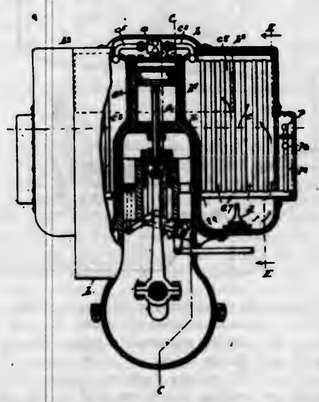


A reproducer comprising a shell, a plurality of diaphragms in the shell and spaced from each other and the shell, a needle post extending transversely through and secured in the central portions of and carried solely by the said diaphragms and projecting forwardly from the foremost diaphragm and adapted to carry a needle at its forward end; said needle post having an enlargement opposed to the forward side of the foremost diaphragm, spacing washers on the post and between the diaphragms, and a spider surrounding and carried by the post and spaced from the rear side of the foremost diaphragm and having fingers opposed to said rear side of the foremost diaphragm.

1,390,559. VARIABLE-POWER HAND AIR-PUMP. CHARLES L. HUNTLEY, Milwaukee, Wis., assignor of one-half to Jessie A. Allen, Oregon City, Oreg., one-fourth to Edward Nicholson and one-fourth to Joseph I. Nicholson, Portland, Oreg. Filed July 16, 1919. Serial No. 311,366. 6 Claims. (Cl. 230—27.)

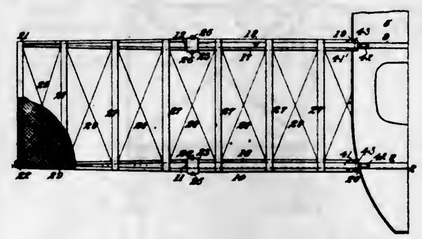
1. In a pump comprising a plurality of barrels of larger and smaller cross-sections respectively, a piston in each barrel, a single operating element, and means for connecting both or either of said pistons to said operating elements.

1,390,560. SPRING-SUPPORT FOR VEHICLES. ALBERT HUPP, Oak Park, Ill. Filed Nov. 28, 1919. Serial No. 341,235. 12 Claims. (Cl. 267—20.)



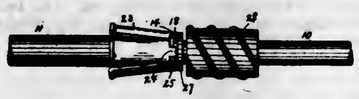
10. In a spring support for vehicles, the combination with a side sill of a chassis frame, and front and rear axles, of front and rear supporting devices for said side sill each comprising a hanger bracket pivotally suspended at its upper end from said side sill, a tubular member rigid with said bracket, a second tubular member telescopingly engaged with said first named tubular member and pivotally jointed at its outer end to one of said axles, a coil compression spring housed within said tubular members, an adjustable abutment member for one end of said spring mounted in the outer end of one of said tubular members, and a tie-rod connecting said front and rear axles substantially in the vertical plane of said supporting devices.

1,390,561. ILLUMINATED SIGN. JOHN HUGH KELLY, New Orleans, La. Filed Apr. 4, 1921. Serial No. 458,234. 1 Claim. (Cl. 40—132.)



A sign comprising, a casing having openings in two sides thereof the walls of which are formed with channels, glass panels removably fitted within the channels, illuminating means within the casing, and a latch member pivotally supported on the casing and arranged to simultaneously span the ends of certain of the channels to maintain the panels within the channels and to be frictionally held in spanning position.

1,390,562. POWER-PLANT. LEO I. KELLY, Detroit, Mich. Filed July 25, 1917. Serial No. 182,622. 4 Claims. (Cl. 60—27.)



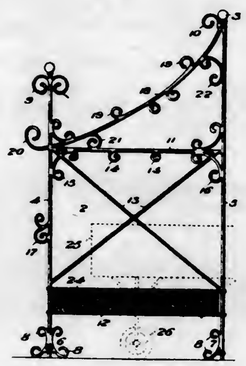
1. In a power plant, the combination of a steam cylinder having an interior wall adapted to form a bearing surface for a piston, a power receiving and imparting piston adapted to reciprocate in said cylinder bearing against said surface, means for supplying steam to said cylinder to impart power to said piston and exhausting the same from said cylinder, means for applying a high temperature to the exterior wall of said cylinder opposite and adjacent to said bearing surface, and heat insulating means interposed between said source of high temperature and said bearing surface, the quality of said insulator by which the flow of heat is obstructed being such that the heat shall be supplied through the wall of the cylinder to the interior surface thereof at the rate that the heat is withdrawn from said interior surface in the normal working of the engine.

1,390,563. AEROPLANE-WING. WALTER E. KNOELL, Tacoma, Wash. Filed Sept. 7, 1920. Serial No. 408,717. 6 Claims. (Cl. 244—12.)

1. In an aeroplane, a fuselage, two beams mounted in said fuselage extending to both sides of the same, two wings inclosing said extended beams, and secured to their tips at approximately the center of gravity of said wings.

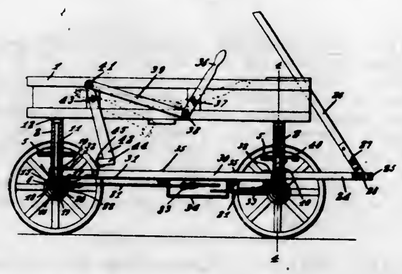
1,390,564. HOSE-CLAMP. FREDERICK J. KNORR, New York, N. Y., assignor to Margaret R. Elkin, New York, N. Y. Filed Jan. 24, 1920. Serial No. 353,650. 16 Claims. (Cl. 285—82.)

14. In a hose-clamp, the combination of a tube having a nipple extremity and an abutment at the base of the nipple, a collar placed over said tube, and having a plurality of hook-like portions, a plurality of jaws having hooks engaged over said portions, whereby said jaws are hingedly connected with said collar, an annular flange on said tube secured in close contact with said collar to hold the collar against said abutment and also to hold the jaw-hooks in position, and a locking sleeve for fitting over said collar and jaws, all of said parts being stamped-up from sheet metal.



1,390,565. FRAME FOR PLANES. JOHN KNOWLES, New Britain, Conn. Filed Dec. 13, 1920. Serial No. 430,170. 2 Claims. (Cl. 145—5.)

1. In a carpenter's plane, a frame having a body formed of sheet material and comprising a seat for the blade, and the said seat being of skeleton form, composed of a

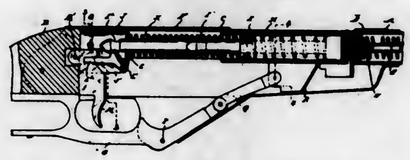


plurality of lips that are integral with the material of the said body and each connected by one edge with the general body structure.

1,390,566. FLORAL CANOPY. EMMA M. KOEHLER, Evansville, Ind. Filed Mar. 3, 1920. Serial No. 362,945. 1 Claim. (Cl. 211—14.)

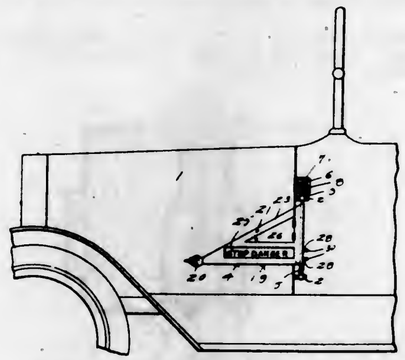
A skeleton panel for a floral canopy having crossed braces and lateral cross connections constituting a rigid frame, an exposed shelf connecting the lower parts of the uprights below the braces and projecting out from the plane of the panel, and an upright screen connected to the uprights and located at the back of said shelf, and means on the upper part of the panel for sustaining flowers.

1,390,567. VEHICLE. PETER KRIEGER, Sr., Paterson, N. J. Filed July 20, 1920. Serial No. 397,647. 3 Claims. (Cl. 280—102.)



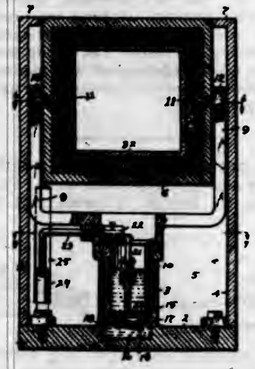
1. A vehicle comprising a body; bolsters on the body; front and rear axles coöperating with the bolsters and having openings; a reach having its ends disposed in the openings; king bolts connecting the axles with the bolsters, the king bolts extending across the openings, and the ends of the reach being mounted on the king bolts; rods extended along the axles; clips on the axles and retaining the rods on the axles; ground wheels on the rods; and crossed foldable members having their ends pivoted to the clips of the front and rear axles.

1,390,568. HEEL-GRIP FOR SHOES. GEORGE LAWLER, Auckland, New Zealand. Filed Aug. 26, 1920. Serial No. 406,253. 3 Claims. (Cl. 36—58.5.)



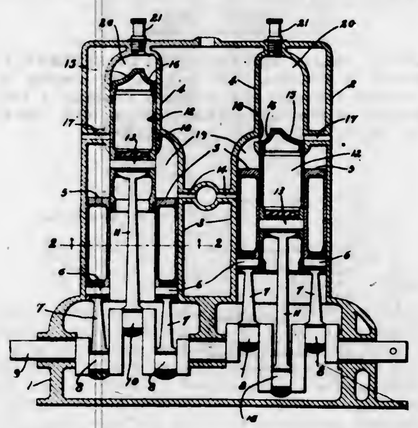
1. A heel grip for shoes comprising a flat pad having an internal fluid-tight air chamber providing a pneumatic cushion, said pad being adapted to be secured about and to cover the major portion of the heel of a shoe.

1,390,569. AIR-GUN. CHARLES F. LEFEVER, Plymouth, Mich., assignor to Daisy Manufacturing Co., Plymouth, Mich., a Corporation of Michigan. Filed Dec. 20, 1920. Serial No. 431,815. 8 Claims. (Cl. 124—8.)



1. In an air gun, the combination with a shooting barrel and a frame rigid therewith, of an air compression cylinder in alinement therewith, a piston in said cylinder, a spring, and means pivoted to said frame for simultaneously compressing said spring and moving said cylinder laterally to expose the breech of the shooting barrel for loading.

1,390,570. INDICATOR. THOMAS LEWIS and FRANKLIN C. SCRIMGER, Pontiac, Mich. Filed Apr. 27, 1920. Serial No. 376,895. 2 Claims. (Cl. 116—52.)



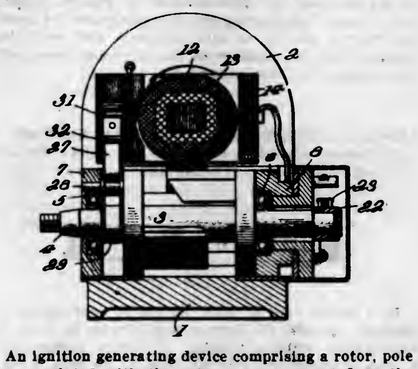
1. An indicator comprising a vertical rotatable shaft, a substantially triangular shaped frame having its bight portion to the shaft, marginal flanges formed on said frame and one flange being of width greater than the others and provided with a doorway, a door for said doorway, character bearing panels secured to the flanges and closing the spaces formed by said flanges and means for imparting movement to the shaft.

1,390,571. SAFE. JOSEPH LOSEKY, Cleveland, Ohio. Filed Aug. 6, 1920. Serial No. 401,640. 5 Claims. (Cl. 109—1.)

1. A safe comprising a main body having a receptacle tiltable about a horizontal axis, means for vertically shifting said receptacle in different positions therein, said receptacle having a door, said door being covered or uncovered upon shifting and tilting said receptacle.

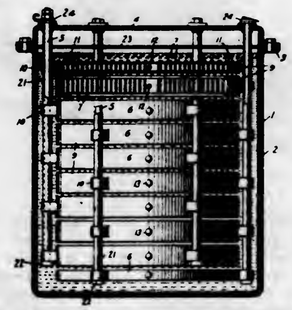
1,390,572. INTERNAL-COMBUSTION ENGINE. LOUIS LEONARD LUCE and LEROY MATTSON, Aberdeen, Wash. Filed Aug. 5, 1920. Serial No. 401,332. 4 Claims. (Cl. 123—65.)

1. A two cycle internal combustion engine including a tubular charging piston, a firing piston mounted for movement therein, a cylinder for each piston, means for reciprocating the pistons in opposite directions respectively, an intake port controlled by the charging piston, means controlled by the firing piston for establishing communication between the cylinders and with the external atmosphere, the cylinder of the tubular piston forming a compression chamber, and means under the control of the user for varying the capacity of the compression chamber.



1,390,573. SIGNAL FOR VEHICLES. WALTER W. MCKESKY, Houston, Tex. Filed Dec. 2, 1919. Serial No. 341,890. 1 Claim. (Cl. 116—43.)

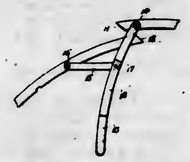
A vehicle signal, including a casing, a transparent pane in a wall thereof, rotatable rollers mounted within the casing above and below said pane respectively, a traveling flexible apron mounted on said rollers and arranged to travel behind said pane, a fixed pulley carried by one end of one roller, a fixed and an idler pulley carried by the corresponding end of the other roller, a fixed pulley at the



front of the vehicle, an endless cable operating over said pulleys, said idler pulley forming a bearing for the cable, and a foot pedal carried by the vehicle and connected to the cable, through which said cable and said rollers are operated.

1,390,574. IGNITION APPARATUS FOR INTERNAL-COMBUSTION ENGINES. CHARLES THOMAS MASON, Sumter, S. C., assignor to Splitdorf Electrical Company, Newark, N. J., a Corporation of New Jersey. Original application filed Nov. 18, 1918, Serial No. 263,027. Divided and this application filed Oct. 1, 1920. Serial No. 414,052. 5 Claims. (Cl. 128—149.)

1. An ignition generating device comprising a rotor, pole pieces associated with the rotor, a core mounted on the pole pieces, a generating coil mounted on the core, a distributer including a vibrating lever, pins associated with said vibrating lever and connected with the generating coil, means for supporting said pins, said supporting means for the pins being carried by a structure supported on the core, whereby the generating coil and the distributer pins may be removed as a unit.

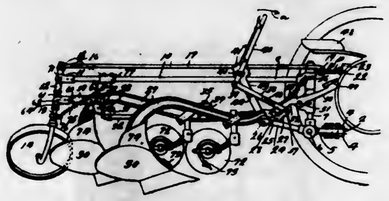


1,390,575. ELECTROLYTIC CELL. FREDERICK H. MILLER, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 5, 1917. Serial No. 159,961. 13 Claims. (Cl. 175—318.)

1. An electrode for electrolytic condensers, lighting arresters, rectifiers and the like comprising a spirally wound

strip of filming material and means integral with the said strip for spacing apart the convolutions of the said strip.

1,390,576. DEMOUNTABLE RIM. ALFRED MINNICK, Newark, N. J., assignor to M-V All Weather Train Controller Company, Wilmington, Del., a Corporation of Delaware. Filed Jan. 22, 1919. Serial No. 272,551. 4 Claims. (Cl. 152—21.)

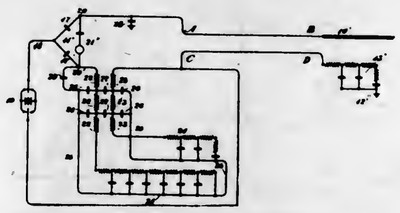


1. A demountable wheel-rim consisting of a split ring having abutting terminals adapted for relative deflection, and a toggle lever having its pivotally connected members respectively pivoted to said terminals and occupying a position between the lines of the inner and outer peripheries of the rim when expanded.

1,390,577. PISTON-RING. LOUIS NAGY, Esterhazy, Saskatchewan, Canada. Filed May 10, 1920. Serial No. 380,437. 1 Claim. (Cl. 74—109.)

In a piston ring, a joint, formed of overlapping counterparts, dividing the ring ends widthwise in three equal longitudinal sections forming, a bottom section having a flush abutment the full thickness of the ring, a central section having a tongue extending well beyond the bottom section and over half the thickness of the ring and a central notch in the ring extending well back of the tongue, an upper section having cut-away portions extending half the length of the central notch portion and of the same depth thereof.

1,390,578. TRACTOR GANG-PLOW. WILLIAM HIRAM NICHOLS, Lanesville, Ill. Filed Feb. 16, 1921. Serial No. 445,486. 8 Claims. (Cl. 97—67.)

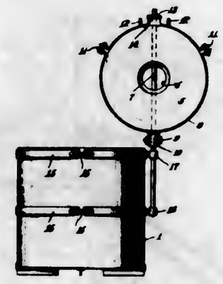


1. A tractor drawn gang plow, said gang plow comprising a standard vertically disposed and carried by a horizontally pivoted member of a tractor, a wheel standard vertically disposed and spaced from the first mentioned standard, a horizontally disposed guy rod having its forward end horizontally pivoted on the tractor supported standard and its rear end pivoted to the wheel standard so that said wheel standard may be moved in a longitudinal vertical plane, a bail pivoted adjacent the tractor supported standard and extending rearwardly, lever means for raising said bail, plow beams disposed beneath the guy rod and pivotally connected to the wheel supporting standard at their rear ends, the forward ends of said plow beams being pivotally connected to the bail raising mechanism and spring means for assisting in the raising of the bail and pulling the lower end of the wheel supported standard forwardly during a plow raising operation.

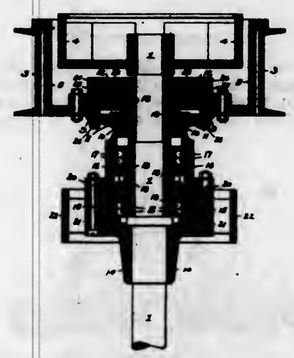
1,390,579. COMBINATION HINGE AND LID-SUPPORT. RALPH A. NORQUIST, Jamestown, N. Y. Filed Feb. 17, 1921. Serial No. 445,654. 2 Claims. (Cl. 217—60.)

1. In combination with a support, a plate rigidly attached to the support and having its upper free horizontal edge at the rear thereof struck outwardly and at a downward incline to form a rigid stop having a horizontal flat bottom which faces downwardly and a lid supporting bar pivoted to the plate between its ends and having a striking surface on its rear upper face engageable with the bottom of the stop.

1,390,580. MEANS FOR REDUCING INTERFERENCE. HAROLD S. OSBORNE, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Nov. 13, 1918. Serial No. 262,362. 11 Claims. (Cl. 178—63.)



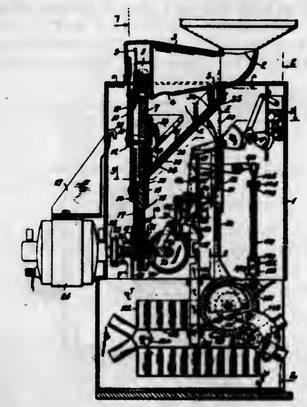
1. In a signal transmitting system, a line conductor, a receiving apparatus connected thereto, a return circuit for said receiving apparatus having an impedance different from that of the line conductor, a pair of conductors connecting the line conductor and the return circuit with said receiving apparatus, and means located between said return circuit and the adjacent end of the conductor connecting it with the receiving apparatus for preventing the receiving apparatus from being affected by voltages induced in said pair of conductors by outside sources.



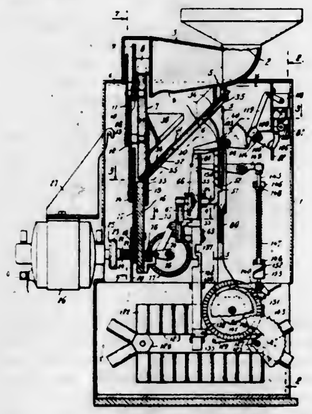
1,390,581. COVER-REMOVING DEVICE FOR FURNACES. ALVA L. PALMER, Jamaica, N. Y. Filed Oct. 24, 1919. Serial No. 332,959. 17 Claims. (Cl. 263—12.)

1. The combination with a furnace having a removable cover, of a rotatable supporting rod to which the cover

is pivotally connected, and a holder attached to the furnace and wherein the supporting rod or carrier is freely rotatable without endwise movement; whereby in removing the cover, it is first swung upwardly on the supporting rod or carrier and the latter then rotated in the holder to locate the cover in any desired position.



1,390,582. SUSPENSION-BEARING. JOHN PARKER, Philadelphia, Pa. Filed Feb. 27, 1920. Serial No. 361,890. 1 Claim. (Cl. 64—48.)

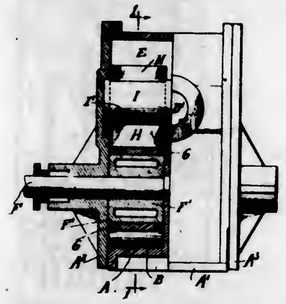


The combination, in a suspension bearing, of a fixed frame, a hanger mounted thereon, a sleeve suspended in a spherical seat on said hanger, an external flange on said sleeve, a spindle passing loosely through said sleeve and being provided, at its upper end, with a driving element, a casing secured to said spindle and embracing said sleeve below its seat, radial bearings interposed between said casing and said sleeve, and suspension bearings interposed between said casing and the flange on said sleeve.

1,390,583. COIN-HANDLING APPARATUS. EDWARD B. PAUL, Lancaster, Pa., assignor to Lancaster Automatic Machine Company, Lancaster, Pa., a Corporation of Delaware. Original application filed Nov. 16, 1918, Serial No. 262,767. Divided and this application filed Mar. 28, 1919. Serial No. 285,929. 17 Claims. (Cl. 226—14.)

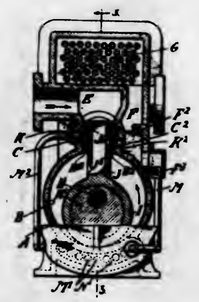
1. In a coin-handling machine, a plurality of receptacles adapted to hold coin wrappers, means for supplying coins to the wrappers, a ratchet wheel, a reciprocating coin-controlled member for imparting a step-by-step movement to the ratchet wheel for each coin supplied to a wrapper, means associated with the ratchet wheel whereby the member may produce additional movement of the wheel after a predetermined number of coins have been supplied to the wrapper, and means whereby such additional movement of the ratchet wheel will advance the receptacles to bring an empty wrapper into position to be filled with coins.

1,390,584. COIN-HANDLING APPARATUS. EDWARD B. PAUL, Lancaster, Pa., assignor to Lancaster Automatic Machine Company, Lancaster, Pa., a Corporation of Delaware. Filed Nov. 16, 1918, Serial No. 262,767. Renewed Feb. 25, 1921. Serial No. 447,807. 16 Claims. (Cl. 235—32.)



7. Coin-controlled apparatus comprising, in combination, a reciprocating member, an actuating bar, a pivoted member attached to the bar, mechanism for periodically moving said member into engagement with the reciprocating member, a coin pocket, a movable bottom for said pocket, a connection between said bottom and said pivoted member whereby a coin in the pocket will hold the pivoted member in engagement with the reciprocating member to cause the bar to be lifted into actuating position, and means whereby said upward movement of the bar will withdraw the bottom from beneath the coin pocket to permit the coin to be discharged therefrom.

1,390,585. ROTARY COMPRESSOR. GUSTAV B. PETSCHE, Yonkers, N. Y. Filed Oct. 6, 1920. Serial No. 415,145. 3 Claims. (Cl. 230—30.)

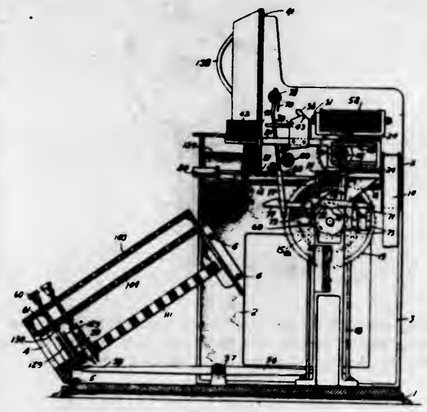


1. A rotary compressor having an eccentric ring piston provided with a slide extension having formed through

it a passage to serve as the admission port of the compressor in combination with a swivel block serving as a guide for the slide and as a closure for the admission port in the slide during the interval between the operative cycles of the piston, the port in the slide and the closing surface of the swivel block being so positioned

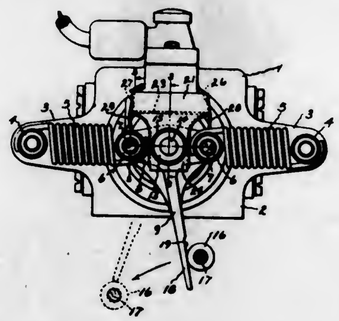
and interrelated that the port is open during substantially the whole operative cycle of the piston, a delivery port leading from the cylinder and valve mechanism timed to close said delivery port except during the latter portion of the compression cycle of the piston and at the end of said cycle.

1,390,586. ROTARY COMPRESSOR. GUSTAV B. PETSCHE, Yonkers, N. Y. Filed Oct. 28, 1920. Serial No. 420,082. 3 Claims. (Cl. 230—30.)



1. A compound compressor comprising a rotary compressor in combination with a second rotary compressor connected to receive and act upon the compressed gas from the first compressor and of such smaller capacity as will receive a substantially equal weight of gas, an intercooler for cooling the compressed gas from the first compressor before its entrance into the second compressor, an oil receiving chamber at the delivery port of the larger compressor, a separate oil cooler connected to said chamber and located at a lower level than the gas cooler and a conduit leading from said cooler to the admission side of the smaller compressor.

1,390,587. MONEY-HANDLING MACHINE. HENRY ROHWER, Seattle, Wash. Filed June 22, 1917. Serial No. 176,271. 14 Claims. (Cl. 133—4.)

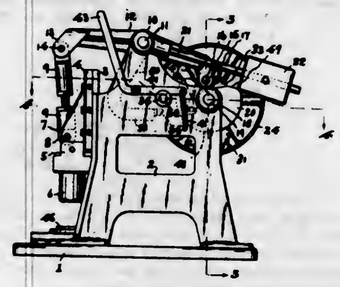


1. In a machine of the character described, the combination of a plurality of receptacles for coins, a plunger for ejecting one or more coins from each receptacle, means for selectively operating each of said plungers comprising a double rack, a gear sector for engaging said racks and means for bringing said racks into engagement with the gear sector and means for operating said gear sector.

3. In a machine of the character described, the combination of a plurality of keys, a circuit common to a plurality of said keys, a switch in said circuit, a plurality of coin receptacles, plungers therefor, a motor for operating

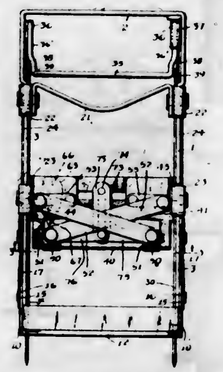
said plungers, a circuit for said motor, a switch in said circuit, means for closing said motor switch and means operated by the motor for opening said first switch immediately after the motor starts.

1,390,588. LUBRICATOR. ADOLPH ROSNER, Springfield, Mass., assignor to American Bosch Magneto Corporation, Springfield, Mass., a Corporation of New York. Filed Mar. 24, 1921. Serial No. 455,144. 21 Claims. (Cl. 184—1.)



9. In an oscillating device having an oscillatory mechanism including a shaft and a trip lever secured thereto, the combination of an oiler carried by said trip lever to oscillate therewith and comprising a container having a supporting portion, and means for securing said supporting portion to said trip lever, said supporting portion being provided with means for maintaining said oiler in fixed relation to said lever, and means bearing against and supporting the bottom of said container.

1,390,589. POWER-PRESS. LOUIS SAMETZ, Brooklyn, N. Y. Filed Oct. 7, 1920. Serial No. 415,297. 10 Claims. (Cl. 25—87.)



1. In a device of the kind described, a pair of dies, means for mounting one die for vertical reciprocatory movement, a rocking lever for actuating said movable die,

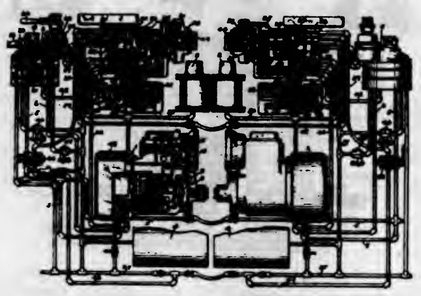
a secondary lever device movable with said rocking lever, a cam for actuating said rocking lever in one direction to produce the operative stroke of said movable die, and

means coöperating with said secondary lever device for actuating said rocking lever in the opposite direction to positively and forcibly initiate a separation of said movable die from the work after operation.

1,390,590. MEASURING AND MOLDING DEVICE. HERMANN J. SCHUBERT, Hackensack, N. J. Filed Dec. 29, 1917. Serial No. 209,419. 14 Claims. (Cl. 107—48.)

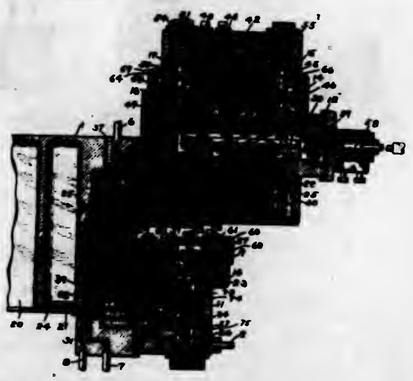
1. In a measuring device adapted to separate a portion of merchandise from the bulk thereof, means for cutting through all the contiguous sides and the bottom of the portion to be removed, said cutting means comprising end plates for separating said portion at the ends and oscillating blades for separating at the sides and bottom; and means for discharging said portion intact therefrom.

10. In a measuring device for separating a portion of material from bulk thereof, means for inserting said device to a predetermined depth in said bulk, comprising a handle at one end of said device; cutting blades at the opposite end thereof for cutting the sides of the portion to be removed and shiftable to cut transversely of the device to sever the portion from the bulk, a transverse gage plate intermediate said handle and blades; and means for removing extraneous matter from said plate.



1,390,591. CAR-UNLOADER. EDWARD R. SUTTON, Philadelphia, Pa. Filed Feb. 19, 1920, Serial No. 359,975. Renewed Feb. 14, 1921. Serial No. 445,015. 1 Claim. (Cl. 14—72.)

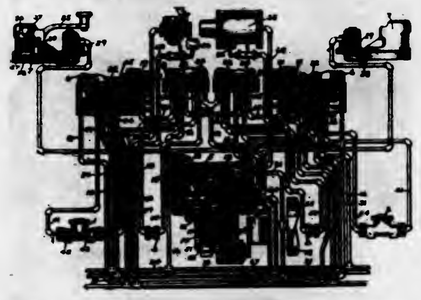
The combination with a railroad track of a car unloader, comprising a plurality of individual supports of graded heights, braces connecting the individual supports in spaced relation with each other to form an inclined trestle, the bases of each of said individual supports being adapted to be positioned on the track adjacent the car to be unloaded, a gangway positioned on said trestle, means whereby the supports adjacent the car may be adjusted as to height to meet the varying heights of cars and means to



secure the gangway to the track, substantially as shown and described.

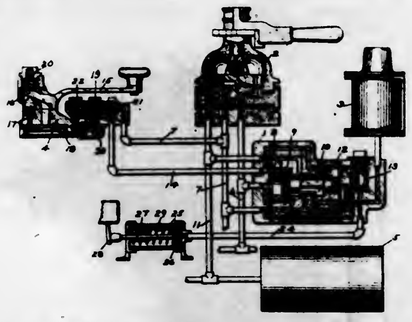
1,390,592. LOCOMOTIVE BRAKE EQUIPMENT. THOMAS H. THOMAS, Edgewood, Pa., assignor to Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed May 10, 1919. Serial No. 296,179. 5 Claims. (Cl. 303—14.)

2. In a locomotive brake, the combination with a brake cylinder and a brake equipment at each end of the locomotive for releasing fluid from the brake cylinder, of an additional release valve at each end of the locomotive adapted to be operated by venting fluid pressure from one side for releasing fluid from the brake cylinder, an equalizing pipe adapted to be vented by the release valve, a valve device having one position for establishing communication for varying the fluid pressure on said release valve and another position for connecting the equalizing pipe with the release valve for venting fluid therefrom, and a brake valve for venting fluid from said release valve.



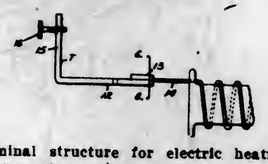
1,390,593. LOAD-BRAKE APPARATUS. THOMAS H. THOMAS, Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Sept. 3, 1919. Serial No. 321,399. 7 Claims. (Cl. 303—23.)

3. In a load brake equipment, the combination with a brake pipe and three brake cylinders, of a valve device



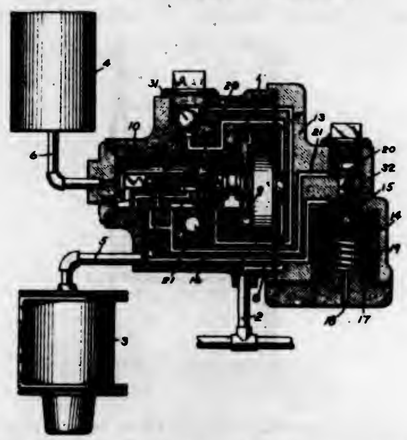
subject on one side to fluid pressure corresponding with the brake pipe pressure and on the opposite side to the pressure of fluid supplied to the first brake cylinder for controlling the supply of fluid to the second brake cylinder, and a valve device subject on one side to fluid pressure corresponding with brake pipe pressure and on the opposite side to the pressure of fluid supplied to the second brake cylinder for controlling the supply of fluid to the third brake cylinder.

1,390,594. SAFETY CAR-CONTROL EQUIPMENT. THOMAS H. THOMAS, Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Sept. 3, 1919. Serial No. 321,400. 8 Claims. (Cl. 303—6.)



4. The combination with a door engine operated by increasing and decreasing the fluid pressure thereon for controlling an end car door and a door engine operated by increasing and decreasing the fluid pressure for controlling a center car door, of a conductor's controlling valve device having one position for varying the fluid pressure on the door engine controlling the center car door, another position for varying the fluid pressure on the door engine controlling the end car door, and a third position for varying the fluid pressures on both door engines.

1,390,595. SAFETY CAR-CONTROL DEVICE. THOMAS H. THOMAS, Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Oct. 18, 1919. Serial No. 331,650. 7 Claims. (Cl. 303—6.)

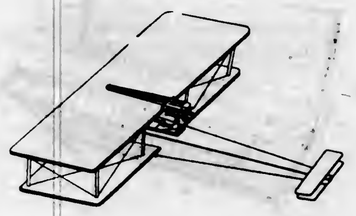


1. In a safety control equipment, the combination with a controller handle, of mechanism effective upon release of the controller handle for applying the brakes and cutting off the power, means operative upon a straight air application of the brakes for rendering said mechanism ineffective, and means for rendering said straight air controlled means ineffective in a power on position of the controller handle.

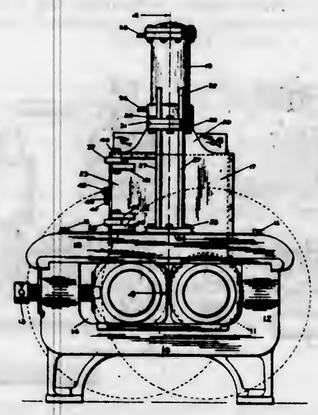
1,390,596. TERMINAL STRUCTURE AND METHOD OF MAKING THE SAME. FRANK THORNTON, Jr., Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 13, 1918. Serial No. 222,164. 3 Claims. (Cl. 173—324.)

1. A terminal structure for electric heating devices comprising two plates, one of which is provided with means for securing a line wire thereto, and a conductor of resistance material having a portion at the end thereof clamped between said plates, said plates being electrically welded together along their edges.

1,390,597. FLUID-PRESSURE BRAKE. HENRY HERMAN WESTINGHOUSE, New York, N. Y., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed June 14, 1919. Serial No. 304,126. 1 Claim. (Cl. 303—84.)



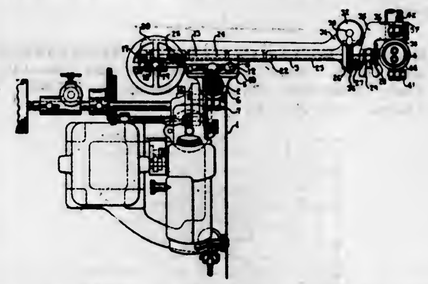
In a fluid pressure brake, the combination with a brake pipe, a brake cylinder, an auxiliary reservoir, and a triple valve device adapted to make its full traverse in a service application of the brakes and comprising a piston and valve means operated upon a reduction in brake pipe pressure for venting fluid from the brake pipe and the auxiliary reservoir to the brake cylinder, of a valve device normally providing a large opening through which fluid is supplied from the triple valve device to the brake cylinder and operated at a predetermined brake cylinder pressure for closing said opening, a restricted port being provided through which fluid is supplied to the brake cylinder when said large opening is closed.



1,390,598. PARACHUTE. FRANK BAKER, Pimlico, London, England. Filed Oct. 6, 1919. Serial No. 328,881. 3 Claims. (Cl. 244—21.)

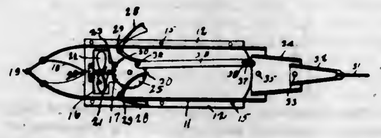
1. A releasable parachute mounting for aeroplanes and the like including in combination with the upper wing of the plane, a bracket carried by the latter and consisting of arms having spring clutch elements at the ends thereof, a parachute including a mast having rollers at one end adapted to be releasably held by the said clutch elements, a device for restraining the parachute in position and also releasing the same, said device consisting of a holding band pivoted at one side of the parachute

and adapted to be disposed transversely thereof, a manually operated lever for releasing the free end of said band, a plunger placed under compression when the parachute is held beneath the said strap, an arm carried by the mast of the parachute, a tension spring engaging the arm and tending to lift the parachute, and a flexible load connector also carried by the parachute mast.



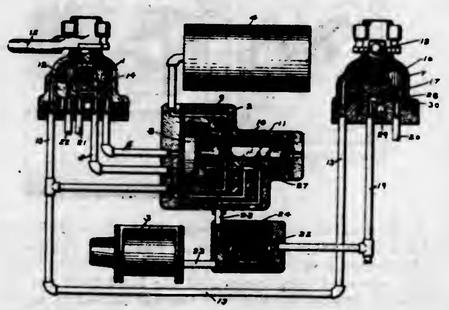
1,390,599. RUBBER-CRACKER. DAVID R. BOWEN, Ansonia, Conn., assignor to Farrel Foundry & Machine Company, Ansonia, Conn., a Corporation of Connecticut. Filed July 11, 1919. Serial No. 310,021. 30 Claims. (Cl. 18—2.)

1. A rubber treating machine having rolls arranged to receive bulk rubber and discharge the same in sheet form and means for applying pressure to the stock being fed to the rolls.



1,390,600. TORCH-ADJUSTER ARM. WORTHY C. BUCKNAM, Jersey City, N. J., assignor to Davis-Bournonville Company, New York, N. Y., a Corporation of New York. Filed July 1, 1920. Serial No. 393,358. 17 Claims. (Cl. 263—23.)

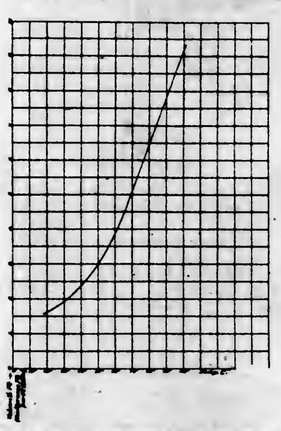
1. A torch-adjuster arm of the character described, comprising a primary bracket, a horizontally extending arm member, vertical and horizontal slide means and adjusting devices whereby said arm member is adjustable up and down and in and out relatively to the primary bracket, a torch-holder, and a swivel on the outer end of the arm member carrying the torch-holder and enabling



the torch to be tilted forward and rearward in a plane transverse to the arm member.

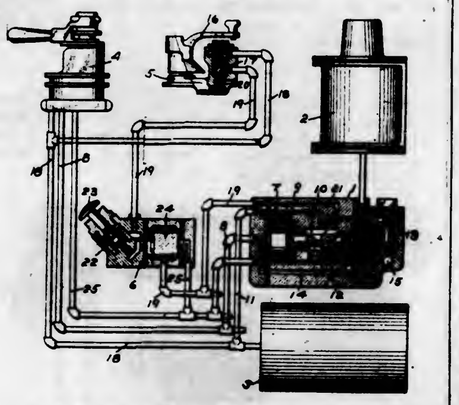
1,390,601. ARTIFICIAL BAIT. JOHN C. CALDWELL, Miami, Fla. Filed Sept. 12, 1919. Serial No. 323,242. 5 Claims. (Cl. 43—43.)

1. In a device of the character described, the combination of a body, a disk rotatable within said body, means for rotating the disk, movable members pivoted upon said body adjacent the forward and rear portions thereof, the movable members and the forward portion of the body projecting above the disk, link means connected to the disk and to the movable members at the rear portion of the body whereby as the disk is rotated, the link means will swing the movable members at the rear portion of the body and will strike the movable members extending above the disk to cause the movement of all of said movable members, as set forth.



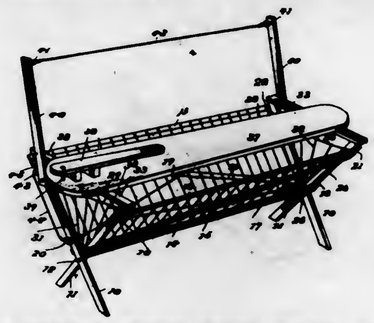
1,390,602. SAFETY CAR-CONTROL DEVICE. CHRISTOPHER P. CASS, St. Louis, Mo., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Apr. 2, 1920. Serial No. 370,756. 3 Claims. (Cl. 303—6.)

1. The combination with a brake cylinder, of a brake valve device for controlling the supply of fluid under pressure to the brake cylinder for effecting a straight air application of the brakes, a manually operated valve device for controlling the supply of fluid under pressure



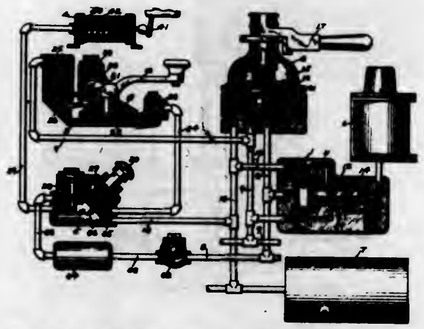
for operating a car door, and a double check valve device operated by fluid supplied for controlling the car door for opening communication for supplying fluid to the brake cylinder.

1,390,603. PROCESS OF TREATING LEAD-CARBONATE ORES. NIELS C. CHRISTENSEN, Salt Lake City, Utah. Filed Sept. 30, 1919. Serial No. 327,403. 9 Claims. (Cl. 75—18.)



1. The process of treating carbonate ores of lead which consists in treating said ores with a concentrated solution of sodium chlorid containing iron salt in solution and thereby dissolving the lead.

1,390,604. SAFETY CAR-CONTROL DEVICE. JOSEPH M. DAPRON, St. Louis, Mo., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed July 15, 1919. Serial No. 311,110. 5 Claims. (Cl. 303—19.)



1. In a safety car control equipment, the combination with a relay valve for effecting an emergency application of the brakes, a safety control pipe, and a controller handle device operated upon removal of the hand from the controller handle for venting fluid through the safety control pipe, to operate said relay valve, of a straight air pipe and means operated by straight air pressure for cutting off communication from the relay valve through said safety control pipe to said controller handle device and for opening communication from the relay valve to the straight air pipe.

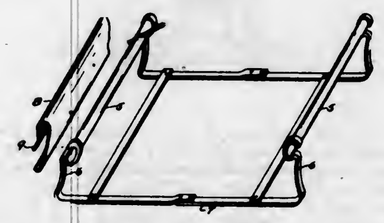
1,390,605. COMBINATION-STAND. LUCKEY C. DAVIS, Boley, Okla. Filed Nov. 21, 1918. Serial No. 263,573. 2 Claims. (Cl. 68—10.)

1. A stand of the character described including pairs of crossed pivotally connected supporting legs, side bars connecting and supporting said pairs of legs in spaced relation, cross strips extending between the upper ends of the legs of said pairs and supporting said legs extended at their upper extremities, a flexible element connected to said side bars and forming the side walls of a basket having cross strands at the ends of said side walls, and flexible elements connected to said cross strands to form end walls for the basket, the strands of said latter flexible elements being held under tension by the cross strips.

1,390,606. SAFETY CAR-CONTROL EQUIPMENT. CLYDE C. FARMER, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Oct. 15, 1919. Serial No. 330,785. 8 Claims. (Cl. 303—6.)

7. In a safety car control equipment, the combination with a controller handle, a pilot valve, and means for normally operating said pilot valve and operated upon release of the controller handle, of means operated by fluid under pressure for effecting the opening of the power circuit, an emergency brake pipe, a reduction in pressure in which effects an emergency application of the brakes, a relay valve controlled by said pilot valve for venting fluid from the emergency brake pipe to said means, a reservoir, through which fluid flows from the emergency brake pipe to the relay valve, and a check valve for preventng back flow from the reservor to the emergency brake pipe.

1,390,607. ELECTRIC CONTACT DEVICE. CLYDE C. FARMER, Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Dec. 10, 1919. Serial No. 343,950. 2 Claims. (Cl. 173—332.)

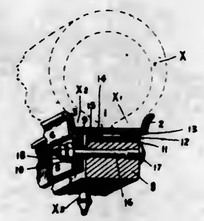


2. In an electric train line coupling, the combination with a coupler head, of a butt contact member mounted

in said head and adapted to be depressed by engagement with a corresponding contact member in a counterpart coupler head and means operated by the coming together

of said contact members for producing a relative rotative movement between the coacting faces of said contact members, the central portion of the meeting face of the contact member being cut away.

1,390,608. FASTENER FOR BLANKETS, QUILTS, &c., FOR BABY-CRIBS. WILLIAM E. FLEMING, Los Angeles, Calif. Filed Jan. 20, 1920. Serial No. 352,785. 2 Claims. (Cl. 5—22.)

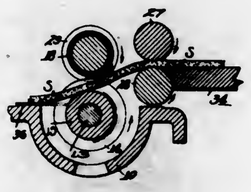


1. A bed clothes holder comprising a frame adapted to be arranged transversely of a bed frame with its end portions supported by the side rails of the bed frame, socket members carried by the ends of said frame and positioned adjacent to the side rails of the bed frame, said socket members being continuous from end to end and substantially C-shaped in cross section with their open sides outwardly presented, and retaining members adapted to be removably positioned in said C-shaped socket members, which retaining members are substantially C-shaped in cross section of smaller cross sectional area than the socket members and being provided with continuous inclined lip portions to facilitate their insertion within and removal from the socket members.

1,390,609. COTTER-PIN, LINCH-PIN, AND THE LIKE. ARTHUR GRAHAM FRANCE, London, England. Filed Aug. 21, 1919. Serial No. 319,035. 3 Claims. (Cl. 74—8.)

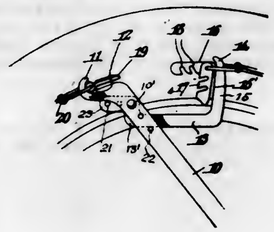
1. In combination with a bolt having a transverse opening and a nut on said bolt, a pin in said opening and arranged with its head and tail projecting from opposite sides of the bolt and bearing on the nut, said pin having a shank comprising a single solid undivided strip of metal provided with a hump of a length not greater than the length of the opening in the bolt, said hump being formed by bodily displacing the metal shank out of normal plane, and said opening being of a diameter greater than the thickness or width of the shank of the pin.

1,390,610. SEPARABLE RIM FOR TIRES. RICHARD GARNETT, Oakland, Calif. Filed Jan. 24, 1918. Serial No. 213,488. 1 Claim. (Cl. 301—11.)



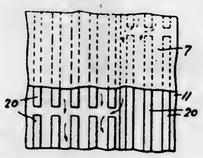
A tire rim adapted to be removably mounted upon the felly of a wheel comprising an annulus having an outwardly extending flange on one edge and an inwardly extending flange on the opposite edge thereof; a plurality of hollow externally threaded bushings spaced around the surface of said inwardly extending flange and projecting laterally therefrom through which securing means fastened onto the felly are adapted to pass; a retaining flange provided with a plurality of openings engaging said hollow means and having an attaching portion engaging said inwardly extending flange; a plurality of nuts adapted to threadedly engage said externally threaded bushing for securing said retaining flange to said inwardly extending rim flange.

1,390,611. HOG-OILER. CHARLES A. HAISLEY, Richmond, Ind. Filed Feb. 15, 1921. Serial No. 445,170. 4 Claims. (Cl. 119—157.)



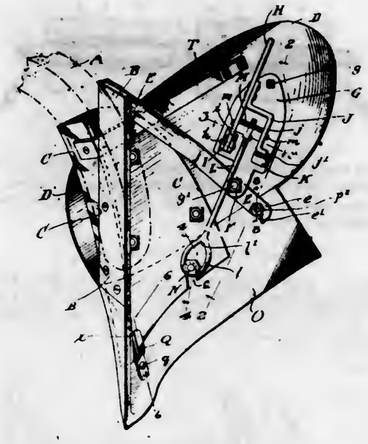
1. A hog oiler comprising a base, a standard projecting upward from the base, a drum mounted around the standard and adapted to revolve and to slide endwise thereon, a spring supporting the drum, an oil reservoir mounted on the upper end of the standard, a valve located in the bottom of the reservoir and adapted to be opened by the upward movement of the drum, substantially as set forth.

1,390,612. LEATHER-CUTTING MACHINE. THOMAS F. HICKEY, Shrewsbury, Mass. Filed May 29, 1919. Serial No. 300,511. 1 Claim. (Cl. 164—61.)



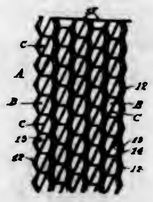
A leather cutting machine comprising a cutting shaft having a series of spaced disk knives thereon, a grooved shaft coöperating with said knives, a pair of feed rolls spaced from said shafts and engaging the stock as it approaches the knives, and means to drive said cutters at a certain surface speed, and to drive said feed rolls at a slower surface speed.

1,390,613. SKID-CHAIN TIGHTENER. ELMER L. HILL, Rapelje, Mont. Filed May 22, 1920. Serial No. 383,421. 1 Claim. (Cl. 254—78.)



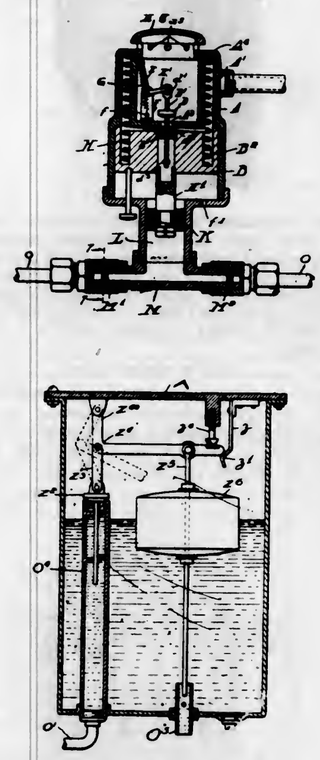
A skid chain tightener comprising a frame including a long arm having a terminal hook and a short arm spaced materially therefrom and having a right-angular extension directed away from the first arm and provided with a longitudinal series of perforations, and a lever having a hook at one end in opposed relation to the first-named hook, and a pivot passed through the lever and one of said perforations and adjustable from one to another thereof.

1,390,614. GLASS-TANK FURNACE. JOSEPH E. HURLEY, Jeannette, Pa. Filed June 15, 1920. Serial No. 389,191. 4 Claims. (Cl. 49—54.)



1. A glass tank furnace comprising tanks forming the walls thereof, means for supplying water to said tanks, a fibrous facing on the inner walls of said tank, and a passage formed between said walls of said tank and said facing, said passage communicating with said tank.

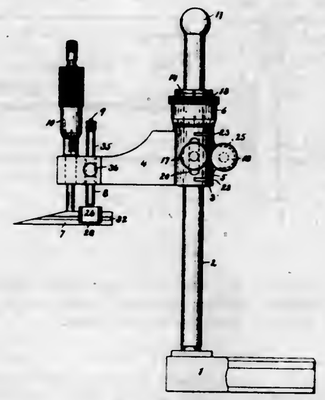
1,390,615. PLOW. RICHARD M. IVERSON, Rock Island, Ill. Filed Mar. 23, 1920. Serial No. 368,086. 2 Claims. (Cl. 97—18.)



1. A plow, comprising a frog having a slotted portion, a mold-board, a land-side, and a detachable share, and means for connecting the share with the frog, the mold-board and the land-side, comprising a projection on the share adapted to enter the slot in the frog, a connecting rod having an elongated loop engaging said projection, a bracket secured to the mold-board and carrying a bifurcated standard, a brace on the bracket, a lever pivotally connected with said standard and provided with an arm engaging the brace, and a connecting rod adjustably connected with the lever and having a looped end engaging a projection on the share.

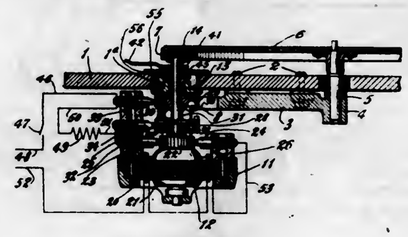
1,390,616. RADIATOR FOR MOTOR-VEHICLES. HARRY JAFFE, Chicago, Ill., assignor to Jaffe Radiator Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 29, 1919. Serial No. 341,488. 8 Claims. (Cl. 257—130.)

1. A radiator core, including, in combination, a series of vertically disposed, spaced apart, water tubes, and a series of filler strips in the spaces between the water tubes, said water tubes being transversely crimped, said filler strips comprising each a ribbon of sheet metal, said ribbon having a saw-tooth formation affording horizontally disposed members alternating with obliquely arranged members, the horizontally disposed members contacting with the apexes of oppositely located crimps of the water tubes, the obliquely arranged members extending diagonally through the space between adjacent water tubes, and from an apex thereof on one side to the next adjacent apex on the other side.



1,390,617. SUCTION-ACTUATED PUMPING DEVICE. WEBB JAY, Chicago, Ill. Continuation in part of application Serial No. 89,524, filed Apr. 7, 1916. This application filed May 10, 1917. Serial No. 167,638. 11 Claims. (Cl. 103—67.)

1. In combination, a large cylinder and a small cylinder; a large piston and a small piston rigidly connected together and operating in said cylinders respectively, the large cylinder having at the same side of the piston therein, two independent ports, one for atmosphere inlet and the other for suction connection; valve means operated by the piston movement for alternating the dominance of the suction and atmospheric pressure through said ports respectively, and valve-controlled inlet and discharge passages for the small cylinder.

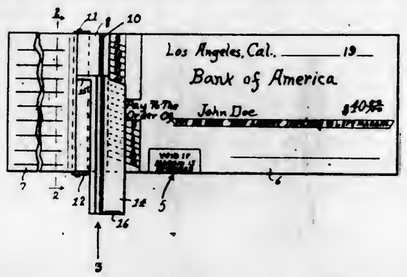


1,390,618. MICROMETER HEIGHT-GAGE. LYMAN E. JENNISON, West Springfield, Mass. Filed July 10, 1920. Serial No. 395,302. 6 Claims. (Cl. 33—169.)

1. The combination, in a micrometer height gage, with a suitably supported shaft, a bushing mounted on said shaft for circumferential and vertical adjustment, said bushing being provided with a nipple, and a thumb-screw tapped into and through said nipple and adapted to bind said bushing to said shaft, of an arm having a sleeve

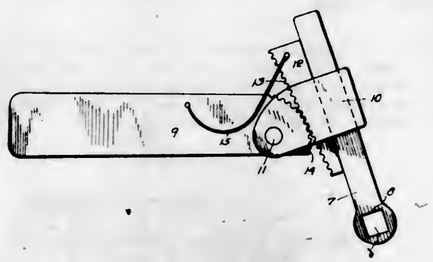
mounted on said bushing, and means to bind said sleeve to said bushing.

1,390,619. SPEED-GOVERNOR FOR ELECTRIC MOTORS. GEORGE MCD. JOHNS, St. Louis, Mo., assignor to Machine Products Company, St. Louis, Mo., a Corporation of Missouri. Filed May 21, 1918. Serial No. 235,766. 6 Claims. (Cl. 200—80.)



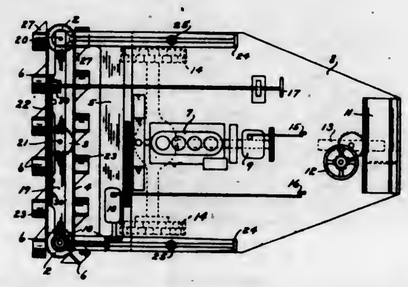
3. The combination with a motor and its circuit, of a first rotary ring, a second rotary ring, a pair of stationary brushes engaging electrically with the rings and both normally included in the motor circuit, a contact-member carried by the first ring, a yieldingly held switch arm pivoted for movement upon the first ring and having electrical engagement with the second ring, the arm being adapted normally for contact with said member to complete the motor circuit through both the brushes and the rings and for centrifugal movement out of contact with said member to break the circuit through the rings as the motor speeds up, and a resistance having electrical connection with the brush of the second ring and normally in shunt of a part of the circuit, the resistance being automatically thrown into the circuit, and the circuit being completed through the resistance, on a breaking of the circuit through the rings.

1,390,620. CHECK-PROTECTOR. ORTON R. JONES, Monrovia, Calif. Filed May 24, 1920. Serial No. 383,828. 1 Claim. (Cl. 33—83.)



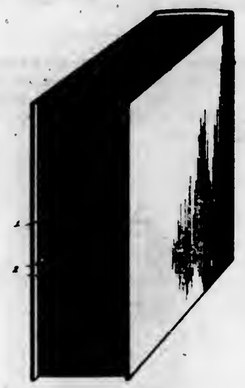
A check protector for checks having vertical rows of figures indicating various amounts in dollars, said protector including a base plate having lugs at the ends thereof and a longitudinal rib with an enlarged head, a

back strip having ends turned at right angles to the main portion, said ends having apertures therein in



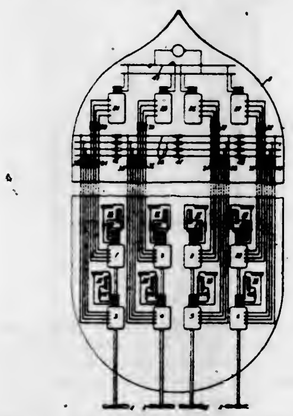
which are received the lugs of the base plate; and a cutter plate having a portion bent to fit upon the rib of the base plate and a stop lug at its upper end.

1,390,621. EXTENSION ADJUSTABLE HANDLE. GOTTLIEB L. E. KLINGBEIL, Omaha, Nebr. Filed Jan. 6, 1921. Serial No. 435,558. 4 Claims. (Cl. 74—39.)



1. A device of the character described comprising a two part handle one of which constitutes an operating extension of the other, means to which one of said parts is pivoted and which embraces the other of said parts and a wedge adapted to engage between said parts.

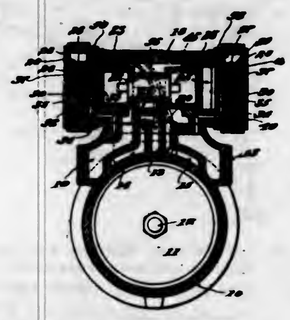
1,390,622. METHOD OF AND APPARATUS FOR REMOVING SNOW. ADOLPH F. KAUBERA, Milwaukee, Wis. Filed Apr. 26, 1920. Serial No. 376,487. 22 Claims. (Cl. 37—62.)



1. The process of removing snow from highways, which comprises, rapidly successively removing relatively narrow transverse vertical strips of the snow, elevating the removed snow, and hurling the elevated snow toward the side of the highway.

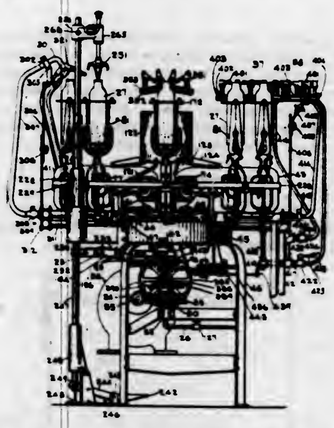
1,390,623. BOOK-INDEX. PAUL O. KUEHN, South Bend, Ind. Filed Feb. 21, 1919. Serial No. 278,474. 2 Claims. (Cl. 283—36.)

1. The combination with a book having a plurality of leaves, of an index therefor, said index forming finger engaging recesses, said index consisting of indicia formed by removing portions of the edges of contiguous leaves in such a manner that when the contiguous leaves are in engagement with each other, a complete outline of the indicia will be formed in sunken relation to the edges of the leaves.



1,390,624. SYSTEM OF ELECTRICAL SHIP PROPULSION. BENJAMIN G. LAMME, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 29, 1918. Serial No. 242,621. 7 Claims. (Cl. 172—274.)

1. A motor aggregate comprising a plurality of induction motors having their rotor members rigidly coupled together, each of said motors having a polyphase primary member and a single-phase secondary member, and means for cophasially energising the primary windings of said motors, said coupling being such that the torque impulses in said secondary members are noncoincident.

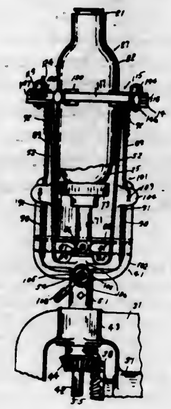


7. A system of control comprising a plurality of induction motors having polyphase primary and secondary windings, respectively, and having their rotors rigidly coupled together, means for operating said motors with polyphase secondary connections to produce a speed near synchronism, and means for operating said motors with single-phase secondary connections to produce a materially lower speed, the phase relations of the single-phase secondary connections being selectively displaced to maintain a substantially uniform collective distribution of torque by said rotors.

1,390,625. INTERNAL VALVE-GEAR FOR STEAM-ENGINES. JOHN A. LE CAIN, Malden, Mass. Filed June 17, 1919. Serial No. 304,782. 11 Claims. (Cl. 121—158.)

1. A fluid pressure engine comprising a main steam cylinder, a slide-valve, a connected valve-plunger, two separate and independently operable auxiliary valves each controlling the inlet and exhaust of steam at one end respectively of the plunger, and means controlled by the slide-valve for controlling the movements of the auxiliary valves and the inlet and exhaust of steam to and from the main cylinder.

1,390,626. METHOD OF AND APPARATUS FOR MANUFACTURING GLASSWARE. ERICK P. LINDAHL, Cincinnati, Ohio, assignor to The Icy-Hot Bottle Company, Cincinnati, Ohio, a Corporation of West Virginia. Filed Oct. 14, 1918. Serial No. 257,999. 51 Claims. (Cl. 49—7.)



1. The method of sealing the mouth-end of a double walled frangible vessel which consists in heating the ends to be sealed thereby rendering the same plastic and rotating said ends at a speed of rotation to produce spreading action by the inner edge upon the outer edge by centrifugal force.

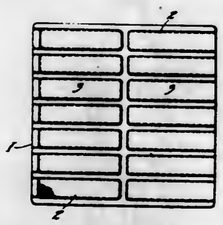
11. The method of sealing the mouth-edge of a double walled frangible vessel comprising an inner wall and an outer wall, which includes rotating the mouth-edges of said inner wall and of said outer wall in the presence of heat, and then accelerating said rotations in the presence of higher heat directed with greater intensity upon said mouth-edge of said inner wall than upon the mouth-edge of said outer wall to render said mouth-edge of said inner wall more plastic than said mouth-edge of said outer wall and spreading said mouth-edge of said inner wall by centrifugal force toward said mouth-edge of said outer wall.

16. In apparatus for manufacturing glassware of the character described, the combination of a carrier, blank-supports thereon, means for intermittently moving said carrier and locating the same in at-rest positions, manual control means for said last-named means, means for rotating said blank-supports, an operating tool arranged to be received on a rotating blank while said carrier is in at-rest position, and means for removing said tool from said blank having connection with said manual control means.

37. In means for manufacturing glassware of the character described, the combination of a carrier, blank-supports thereon, driving means for intermittently moving said carrier and locating the same in at-rest positions at a plurality of stations, said stations including a blank-centering station, a centrifugal station and a plurality of sealing stations, a blank centering means at said blank-centering station, heating means at said centrifugal station, heating means at each of said sealing stations, an operator's station between said centrifugal station and one of said sealing stations, means proximate to said operator's station having connection with each of said heating means for separately controlling the same, control means at said operator's station having connection with said driving means and said blank centering means for respectively controlling the same, and means for rotating said blank-supports at said centrifugal station and at said sealing stations, said means comprising means for rotating the blank-support at said centrifugal station with accelerated speed with relation to the speeds of rotation of the blank-supports at said sealing stations.

1,390,627. CHUCKING MECHANISM. ERICK P. LINDAHL, Cincinnati, Ohio, assignor to The Icy-Hot Bottle Company, Cincinnati, Ohio, a Corporation of West Virginia. Original application filed Oct. 14, 1918, Serial No 257,999. Divided and this application filed Dec. 29 1919. Serial No. 348,028. 21 Claims. (Cl. 49—64.)

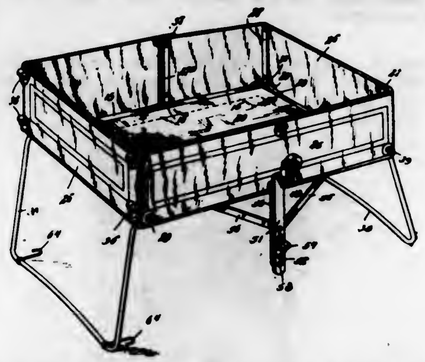
1. In chucking mechanism of the character described, the combination of a blank-holding means comprising a clamp and a plate so mounted that the clamp may be shifted laterally with relation to the plate and the plate rocked with relation to the clamp by pressure of a blank within the holding means.



21. In chucking mechanism, a blank-holding means for a blank comprising an inner member and an outer member, said blank-holding means comprising a frame having a base, a suction-chuck in said frame for one end of the inner member, a yieldable plate, links and springs for supporting said plate from said frame, a rockable plate for the same end of said outer member pivoted to said plate, clamps for said links pivoted to said frame, said base having a passage for said suction-chuck, a valve therefor the movable member whereof has means thereon for operating said clamps, a clamp on said frame for said outer member, said clamp comprising relatively hinged members, closing means for the latter, and resiliently yieldable shoes for the outer member, means for lateral shifting of said clamp in all directions on said frame with relation to said suction-chuck, and adjustable spring means for resisting said shifting of said clamp.

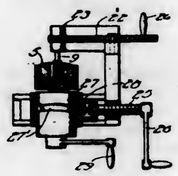
1,390,628. WATER-EXCLUDING DEVICE FOR BATHING-CAPS. ISAAC W. LITCHFIELD, Newtonville, Mass. Filed May 28, 1917. Serial No. 171,399. 4 Claims. (Cl. 2—106.)

1. A water-excluding device for bathing caps including an inflatable tube, a band adapted to be detachably secured to the cap to hold said tube in contact with the cap on the head of the wearer to press the rim of the cap in water-tight engagement with the head, means detachably securing said tube to said band, and means to inflate said tube.



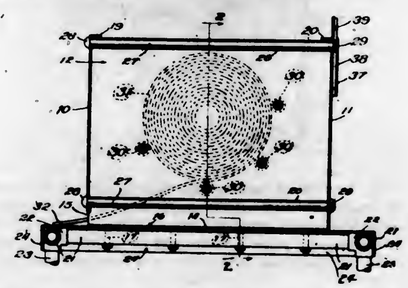
1,390,629. ELECTRODE-PLATE FOR STORAGE BATTERIES. LAMAR LYNDON, West Orange, N. J., assignor to Edison Storage Battery Company, West Orange, N. J., a Corporation of New Jersey. Filed Apr. 30, 1919. Serial No. 293,793. 5 Claims. (Cl. 204—29.)

1. An electrode plate for storage batteries, comprising a pair of thin sheets connected together and provided with integrally formed opposed registering pocket sections, whereby the plate element so formed is provided with a plurality of pockets for the active material, and an apertured grid rigidly secured to said sheets with the openings thereof respectively taking over said pockets, substantially as described.



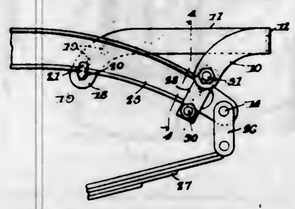
1,390,630. FOLDING CRIB. HARRY CHAS. MCCORD, Baltimore, Md. Filed Mar. 15, 1921. Serial No. 452,412. 3 Claims. (Cl. 5—58.)

1. A folding crib comprising a frame formed in separate sections and hingedly secured together, means for preventing the sections from folding, foldable supporting legs connected to the frame, a foldable bottom, side and end walls secured to the frame, means for supporting



the foldable side and end walls, said means including pivotally mounted standards and means engageable with the standards for holding the latter in upright position.

1,390,631. METHOD OF MAKING BOLT-NUTS. CLIFFORD P. MARYE, Chicago, Ill., assignor to Marye Safety Nut Corporation, a Corporation of Illinois. Filed Feb. 1, 1919. Serial No. 274,447. 2 Claims. (Cl. 10—154.)

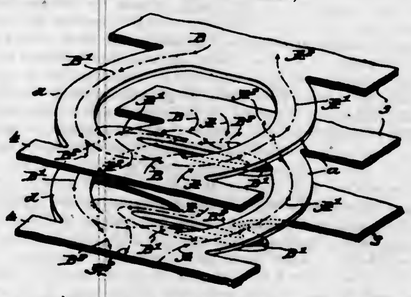


2. Steps in the method of forming screw threads which consist in producing the threads of all of the convolutions of a threaded object coincidently by continuing the thread producing operation circumferentially throughout the threaded region and axially advancing the thread formation at an inconstant speed rate during said operation to produce an anomalous thread spiral.

1,390,632. DISPLAY AND VENDING CASE. MYER METZGER, Chicago, Ill. Filed May 7, 1920. Serial No. 379,441. 7 Claims. (Cl. 211—18.)

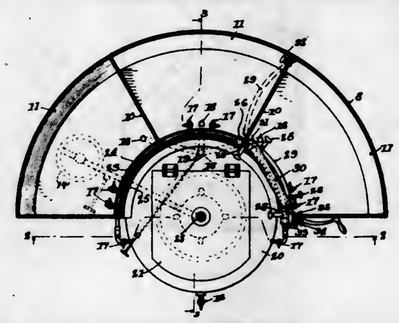
1. A device of the character described embodying an open receptacle constructed of thin sheet material, and one or more upright partitions within and dividing the receptacle into a plurality of compartments, said partitions being constructed of sheet material and terminating short of the bottom of the receptacle, one of the receptacle walls which extends transversely of the partitions terminating short of the bottom of the receptacle to form a dispensing opening extending substantially the width of the receptacle and through which opening the material is dispensed from the compartments.

1,390,633. BUMPER-BRACKET. EDGAR A. MILHAUPT, Appleton, Wis. Filed June 17, 1921. Serial No. 478,294. 4 Claims. (Cl. 293—55.)



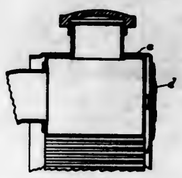
2. A bumper bracket comprising a transverse member, an extended longitudinal arm at one end of said transverse member having a downwardly bent apertured portion, and a shorter longitudinal arm at the other end of said transverse portion downwardly bent and apertured at its free end.

1,390,634. DETACHABLE LINING FOR MUD-GUARDS. RALPH E. MOSHER, Aurora, N. Y. Filed Apr. 9, 1920. Serial No. 372,558. 2 Claims. (Cl. 280—153.)



2. A protective covering for the inner surface of mud guards comprising a water proof lining, means to hold the lining to the mud guard, and a series of longitudinally extending cords transversely spaced apart and extending the full length of the covering and adapted to be pulled downwardly for removing the material from the mud guard.

1,390,635. STORAGE-BUILDING. BENJAMIN F. MULLANEY, Boston, Mass., assignor to James Purdon, trustee, Boston, Mass. Filed Jan. 12, 1921. Serial No. 436,653. 16 Claims. (Cl. 20—1.18.)

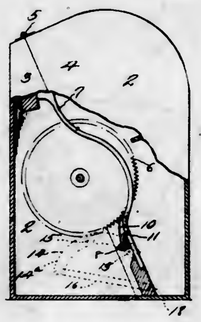


3. A multiple-story storage building having therein upgoing and down-going intersecting spiral ways defining respectively a substantially continuous left handed and right handed spiral, whereby traffic revolves about the respective spiral axes in the same direction, the spiral ways having levels coincident with each other and the respective floors.

1,390,636. WASHING APPARATUS. MARY FRANCES MUNZ, Milwaukee, Wis. Filed Apr. 9, 1918. Serial No. 227,548. 1 Claim. (Cl. 68—31.)

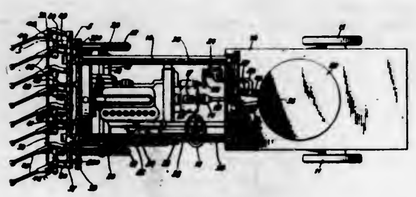
A washing apparatus comprising a main tub, a semi-circular receptacle within the inner arc of which said main tub is secured, said main tub having its bottom and top disposed on a plane above that of the bottom and top of said semi-circular receptacle, partitions in said receptacle to form a plurality of auxiliary tubs, all of said tubs forming a unitary structure, and water supply and discharge means connected with the tubs.

1,390,637. NAME-PLATE ATTACHMENT. OLOF NELSON, Attleboro, Mass., assignor to The Robbins Company, Attleboro, Mass., a Corporation of Rhode Island. Filed July 5, 1921. Serial No. 482,461. 2 Claims. (Cl. 40—20.)



1. The attaching device above described, consisting of a pair of tangs, their free ends spreading from a common center in opposite directions, and a second pair of tangs perpendicular to the back of the plate to be attached, both pairs of tangs being secured upon the back of the plate to be attached; a socket member having apertures to receive the said tangs and surfaces against which the spreading ends of the one pair of tangs impinge, in application, to spread said tangs into locking position, and guide them to the tang receiving apertures.

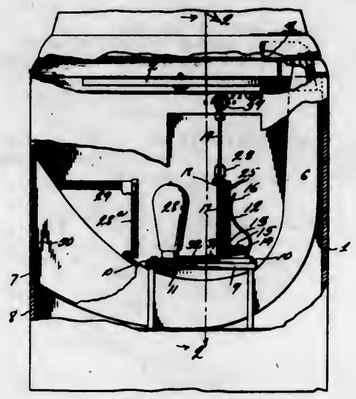
1,390,638. GIN-CLEANER. LESLIE SYDNEY POPE, Raymond, Wash. Filed Nov. 5, 1920. Serial No. 421,907. 1 Claim. (Cl. 13—15.)



The combination with a gin having rotatable saws therein, of a saw cleaning device therefor, said saw cleaning device comprising a bar extending transversely of the gin and disposed beneath the saws, upwardly extending fingers carried by the bar, the ends of said cleaner bar being rectangular shaped and slidably mounted in seg-

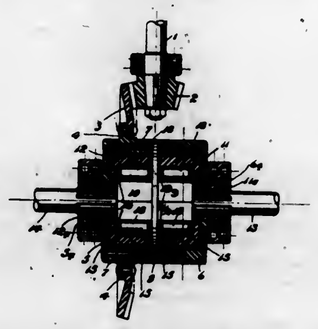
mentally shaped upwardly extending slots in the sides of the gin, a lever pivoted to the sides of the gin at a point centrally of the lever, one end of said lever being

provided with a bifurcation in which the ends of the cleaner bar are disposed and means for rocking said lever for forcing the cleaner bar upwardly and the cleaner fingers into a position for cleaning the teeth of the saws.



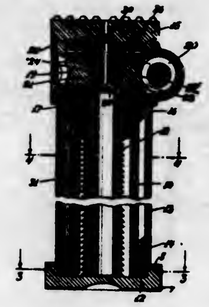
1,390,639. MACHINE FOR CLEANING AND TREATING STREETS. JAMES S. PORTER, Buffalo, N. Y. Filed May 10, 1919. Serial No. 296,268. 1 Claim. (Cl. 126—271.2.)

In a machine of the character described, the combination of a plurality of vertically movable flame delivery nozzles, a vapor supply pipe, a flexible connection between said supply pipe and delivery nozzles, and means for raising and lowering said delivery nozzles comprising a transverse rod on which said nozzles are supported, rock arms carrying said rod, a rock shaft to which said arms are secured, an intermediate arm connected with said shaft, and an operating lever connected with said intermediate arm.



1,390,640. COMBINED PHONOGRAPH AND PICTURE-PROJECTOR. ANDREW RASMUSSEN, Jr., Salt Lake City, Utah. Filed Mar. 8, 1921. Serial No. 450,541. 4 Claims. (Cl. 88—28.)

1. A combined phonograph and picture projector comprising a rotatable disk, a tone arm movable adjacent said disk, said tone arm terminating in a downwardly and outwardly extending amplifier, the outer end of said amplifier curving outwardly, a vertically disposed lens carried in a housing of said amplifier and in alinement with a screen disposed in the amplifier end, a plurality of pictures disposed behind the lens and means for intermittently chang-



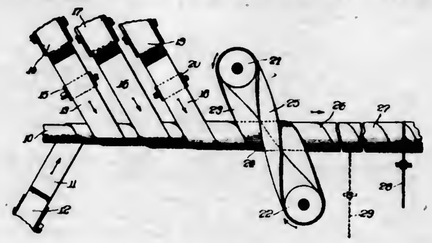
ing said pictures, said means being controlled by the tone arm.

1,390,641. DIFFERENTIAL GEARING. BAYARD E. RICHARDSON, Grand Rapids, Mich., assignor to Mechano Gear Shift Company, Grand Rapids, Mich., a Corporation of Michigan. Filed Aug. 9, 1919. Serial No. 316,350. 2 Claims. (Cl. 74—7.)

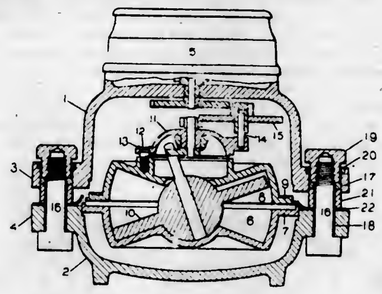
2. In combination, a drive shaft, a hollow casing formed of two cup-like members, a circular plate disposed between the two members of the casing, means for permanently connecting the casing members and plate together, an inner clutch member attached to and projecting from each side of the plate within the casing, each of said members having a plurality of sides disposed at equal angles to each other, an outer clutch member of substantially cup-like form located in each end of the casing and having rotatable mounting on the adjacent casing member, a shaft attached to each outer clutch member, said shafts extending in opposite directions away from each other, a pair of rings within each outer clutch member and around each inner clutch member, rods connecting all of the rings together, said rods passing through openings in the plate larger than the cross section of the rods, and rollers disposed between each inner and outer clutch member, one roller being located at each side of the inner clutch member and formed at its ends with projections of reduced size which are received in openings of larger size in said rings, substantially as described.

1,390,642. LIFTING-JACK. MALCOLM D. RIKER, Dover, N. J., assignor to McKiernan-Terry Drill Company, New York, N. Y., a Corporation of New Jersey. Filed Oct. 23, 1919. Serial No. 332,709. 12 Claims. (Cl. 254—103.)

1. A lifting jack comprising a base having a substantially circular seat, a tubular post having a substantially cylindrical lower end with indented sides engaged in said seat and welded to said base with welding metal flowed into the spaces between the flattened sides of the post and the surrounding walls of the circular seat, a nut block supported in the upper end of the post, a sleeve slidably engaged over the post and a screw engaged with the nut block and connected with the sleeve aforesaid.



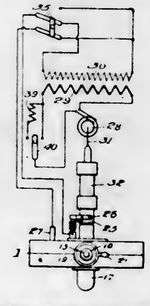
1,390,643. PILE-PULLING RIG. MALCOLM D. RIKER, Dover, N. J., assignor to McKiernan-Terry Drill Company, New York, N. Y., a Corporation of New Jersey. Filed July 10, 1920. Serial No. 395,334. 10 Claims. (Cl. 254—30.)



1. In a pile pulling rig the combination of a power hammer, a cable sling connected therewith and means for fastening said sling to a pile, whereby the action of said hammer is transmitted to said pile.

1,390,644. PROCESS OF MANUFACTURING CONTAINERS. THOMAS W. RITCHIE, Glencoe, Ill., assignor to W. C. Ritchie & Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 24, 1921. Serial No. 455,334. 12 Claims. (Cl. 93—55.)

1. The method of making a container comprising shaping a strip of material into tubular form, shaping a second strip of material into tubular form over said first strip, thereby providing a multi-layer tube, cutting around said tube between its ends through said outer layer only, applying a bottom to one end of said tube, and applying a top to the other end of said tube.



1,390,645. WATER-METER. EDWARD A. RITTER, Amherst, N. Y., assignor to George B. Bassett, Buffalo, N. Y. Filed Mar. 26, 1920. Serial No. 369,077. 13 Claims. (Cl. 285—3.)

11. A water meter comprising a separable part of the meter casing having a hole through it with a recess formed around the outside edge of said hole, a supporting bushing in said hole and a shearing washer in said recess, a clamping bolt passing through both said bushing and said washer, and a shearing collar located on said bolt; substantially as and for the purpose described.

1,390,646. ELECTRIC GAS-GENERATOR. RUDOLF ROSNER, Chicago, Ill. Filed Jan. 28, 1921. Serial No. 440,611. 17 Claims. (Cl. 204—32.)

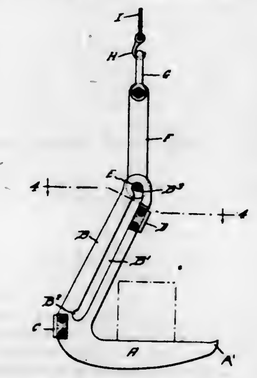
1. In a gas generating machine comprising a chamber of incombustible dielectric material with an inlet, an outlet, a fixed electrode in the chamber adjacent the inlet, a movable electrode mounted to travel past said fixed electrode with a gap between them, means for feeding air through the inlet and a source of high potential electric current connected to said electrodes; means for control-

ling admission of said air through the inlet comprising an inwardly opening valve with a spring tending to hold it seated and an adjustable mounting for said spring adapted to vary its strength.

1,390,647. SUSPENDED ARSENATE OF LEAD AND METHOD OF MAKING SAME. CHARLES H. SAKRYD and HUBERT M. ROSENCRANS, Cleveland, Ohio, assignors to The Grasselli Chemical Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 25, 1921. Serial No. 464,372. 4 Claims. (Cl. 23—13.)

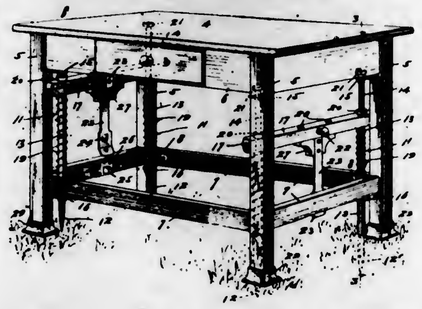
1. In a method of increasing the suspension properties of arsenate of lead, the steps which consist in adding to acid arsenate of lead when being manufactured and before filtering, a small amount of the residual digester liquor from paper-making processes and, then filter-pressing the resulting mixture.

1,390,648. SUSPENDED ARSENATE OF LEAD AND METHOD OF MAKING SAME. CHARLES H. SAKRYD and HUBERT M. ROSENCRANS, Cleveland, Ohio, assignors to The Grasselli Chemical Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 25, 1921. Serial No. 464,373. 4 Claims. (Cl. 23—13.)



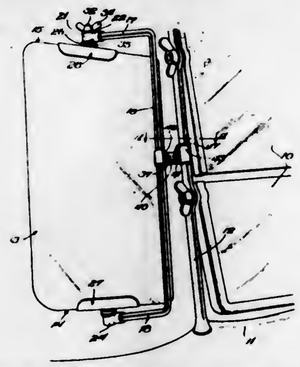
1. In a method of increasing the suspension properties of arsenate of lead, the steps which consist in adding to acid arsenate of lead when being manufactured and before filtering, a small amount of desugared molasses and then filter-pressing the resulting mixture.

1,390,649. LEAF-SPRING. WILLIAM EDWARD SLATER, Buffalo, N. Y., assignor to Buffalo Automobile Spring Company, Inc., Buffalo, N. Y. Filed Apr. 15, 1920. Serial No. 374,020. 6 Claims. (Cl. 267—47.)



2. A spring including a plurality of spring leaves, each of said leaves being formed of a continuous strip of material and a plurality of connections, each connection securing together a pair of adjacent spring leaves and arranged near one end of the pair of leaves, each pair of adjacent spring leaves being secured together by only one connection.

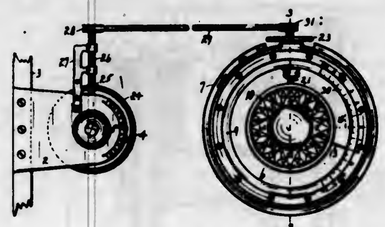
1,390,650. SELF-DUMPING BAR-CARRIER. FRANK H. SMITH, Canton, Ohio. Filed Sept. 18, 1920. Serial No. 411,249. 11 Claims. (Cl. 294—82.)



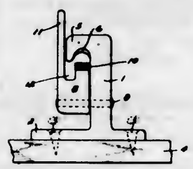
1. A frame comprising horizontal members and inclined upright members, said upright members being longitudinally slotted, the lower sides of said slots being transversely offset, a shaft movable in said slotted members, and centrally directed lifting means connected to said shaft.

1,390,651. LAWN OR GARDEN TABLE. CHRISTOPHER L. SOLBERG, Minneapolis, Minn. Filed Mar. 7, 1921. Serial No. 450,221. 8 Claims. (Cl. 45—31.)

1. The combination with a table, of a pair of anchor rods, guides on the table for the anchor rods, a cross-head connecting the anchor rods, springs under strain to lift the anchor rods, and a latch for holding the anchor rods depressed against the tension of the springs.



1,390,652. WINDSHIELD. ALFRED M. SOUTHARD, Chicago, Ill., assignor to Taylor-Southard Company, a Corporation of Wisconsin. Filed Oct. 10, 1919. Serial No. 329,740. 3 Claims. (Cl. 296—84.)

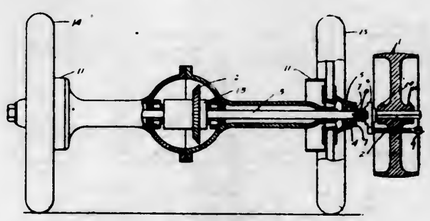


1. A wind shield embodying a supporting structure, said structure embodying a rigid upright, laterally projecting spring arms arranged at the opposite ends of the upright, a socket bearing carried by one of the arms, a bearing carried by the other arm, a wind shield, a clip removably engaging one end of the shield, a portion of the clip being shaped to form a trunnion journaled in said socket, a clip removably engaging the opposite end of the shield, a stem carried by the last said clip, said stem passing through the second recited bearing, the end of said stem being threaded, and a nut engaging the said threads and cooperating with the bearing to frictionally bind the shield against movement with respect to the said support.

1,390,653. STEERING DEVICE FOR AIRCRAFT. LAWRENCE B. SPERRY, Brooklyn, N. Y., assignor to The Sperry Gyroscope Company, Brooklyn, N. Y., a Corporation of New York. Filed Mar. 24, 1915. Serial No. 16,721. 6 Claims. (Cl. 33—46.)

1. A course indicator for air craft comprising a base, downwardly directed sight means adjustably mounted on said base and adapted to be turned in a predetermined relation to the true course of the air craft, a compass including a movable reference member, and connections between said means and said member to move the latter.

1,390,654. ANTISLIP ROPE AND CABLE CLAMP. HENRY A. STORK, St. Louis, Mo. Filed Mar. 30, 1921. Serial No. 456,942. 1 Claim. (Cl. 24—134.)

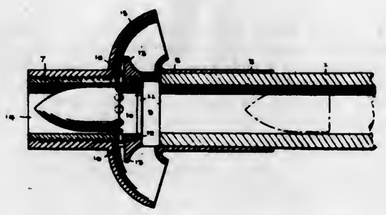


An improved rope and cable clamp, comprising a standard having an overhanging hook-shaped clamping-jaw at its outer end, and provided with perforated attaching flanges at its inner end; said hook-shaped clamping-jaw having a curved clamping-surface upon the inner face of its hook; a locking-cam having teeth that are overhung by the said hook of said overhanging clamping-jaw, and provided with a vertical slot that extends below the plane of said teeth, and located at one side of the latter directly beneath the free end of said overhanging hook, to enable the free end of said hook to enter said slot when a small rope or cable is being clamped; a handle on said locking-cam, forming one side of said slot, and extending upwardly past said hook; and a suitable pivot that fastens said locking-cam to the inner side of said standard.

1,390,655. PHONOGRAPH. GOTTFRIED STUPAR, Chicago, Ill. Filed June 26, 1920. Serial No. 391,940. 3 Claims. (Cl. 181—27.)

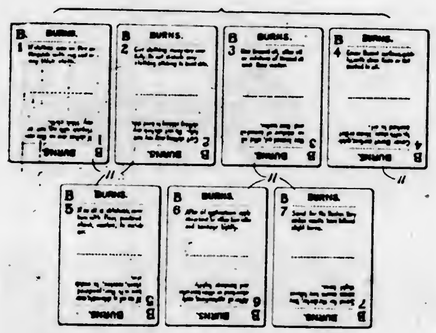
1. A phonograph sound directing device comprising an elongated block having a sound directing passage extending longitudinally thereof from one end to a point near the opposite end and a transverse opening therethrough intersecting the longitudinal passage adjacent one end thereof, the transverse opening on one side of the intersection coöperating in the directing of sound and on the other side providing a journal for a valve, and a rotatable valve for directing the sound from the passage to the transverse opening and operable to modify the sound passing therethrough.

1,390,656. REAR-AXLE PULLEY-DRIVE FOR AUTOMOBILE VEHICLES. LEWIS D. STURM, Portland, Oreg. Filed Mar. 8, 1920. Serial No. 364,279. 3 Claims. (Cl. 180—53.)



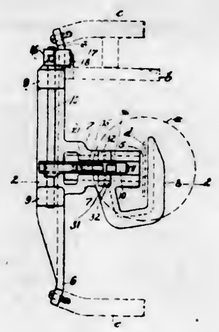
1. In an automotive vehicle, the combination of an extended rear axle, a pulley at the end of the axle, a clutch member slidably mounted on the axle between pulley and rear wheel, and a propelling screw in an arm of the pulley, said propelling screw being operable from the outside of the pulley to press said clutch member against the hub of the rear wheel.

1,390,657. SMOKER'S PIPE. CHRISTEA N. SUBTIRELU, New York, N. Y. Filed July 22, 1919. Serial No. 312,589. 3 Claims. (Cl. 131—12.)



2. In a smoker's pipe the combination with a bowl having a substantially central bottom opening, of a stem having a bore reaching said opening, metallic members forming a lining of the bore adjacent the opening, and a mouthpiece extending into the bore and comprising slidable interlocked members to which said metallic members are fast.

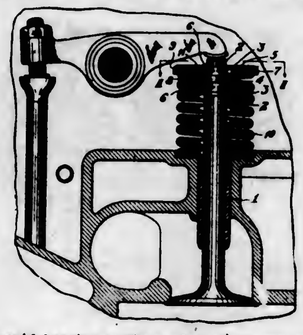
1,390,658. RECOIL NEUTRALIZER AND MUFFLER. RICHARD M. TOWSON, Stafford, Va. Filed June 1, 1917. Serial No. 172,285. 11 Claims. (Cl. 89—42.)



10. A recoil neutralizer for attachment to a gun muzzle comprising a casing having lateral outlets, a support removably positioned within said casing, means removably mounted on said support to deflect the escaping gases through said lateral casing outlets, and means for controlling the direction of travel of said escaping gases from said casing lateral outlets.

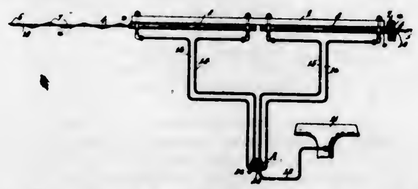
1,390,659. CARD GAME. DAVID L. VAUGHAN, Riverton, N. J. Filed June 20, 1919. Serial No. 305,575. 7 Claims. (Cl. 46—25.)

1. In a card game a plurality of sets of cards, each set having partly on each of its cards words giving instruction on a method of procedure to accomplish a definite purpose, said instruction being complete only when the cards of the set afe assembled.



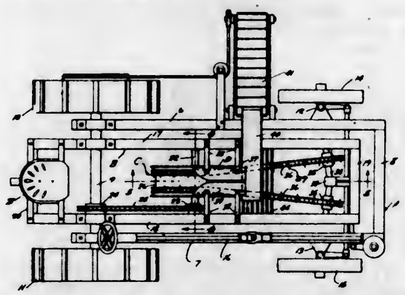
1,390,660. PRINTING ATTACHMENT FOR KNITTING-MACHINES. GEORGE S. WEINERTH, Reading, Pa. Filed Nov. 23, 1920. Serial No. 425,955. 4 Claims. (Cl. 101—318.)

2. A fabric-printing mechanism for circular knitting machines, comprising an attaching frame having operating-lever supports and a slide-way bracket with an extension forming a fabric-way, a reciprocative bed member in said slide-way, a pivoted inking device, means carried by the bed member operating to positively swing the inking device to operative and inoperative positions incident to the retracting and advancing movements, respectively of the bed member and lever mechanism for operating said reciprocative platen member.



1,390,661. SPRING-RETAINER FOR PUPPET-VALVES. WALTER G. WILLARD, Gates Mills, Ohio. Filed Aug. 27, 1920. Serial No. 406,375. 5 Claims. (Cl. 251—134.)

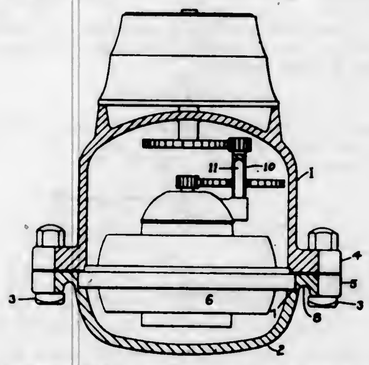
4. In a spring retainer for puppet valves, the combination with a cup member of sheet metal pressed to form an interior concave surface and an exterior seat for the end of a coil-spring: of a two part locking member formed from sheet-metal pressed to form two interior beads and an intermediate exterior curved bearing surface; said beads adopted to engage grooves in a valve



stem and said bearing surface adapted to engage said interior concave surface.

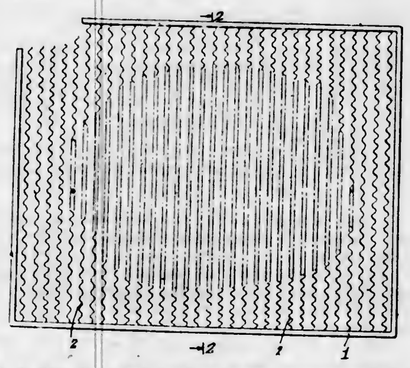
1,390,662. OPERATING MECHANISM FOR SIGNALS AND OTHER DEVICES. ALFRED C. WITTIG, Rochester, N. Y. Filed Aug. 15, 1919. Serial No. 317,721. 3 Claims. (Cl. 123—198.)

3. In combination with a gas engine, a cylinder a device to be operated connected with said piston, a piston operating in the cylinder, a piping connecting with the intake of the gas engine, and a valve for connecting said piping with the cylinder, said valve being movable to a position to admit air to the piping leading to the intake manifold for the purpose of supplying auxiliary air to the gas engine.



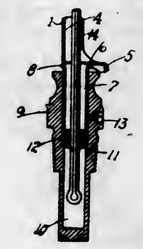
1,390,663. BEET-HARVESTER. JOSEPH E. WYCKOFF, Los Angeles, Calif. Filed May 29, 1920. Serial No. 385,107. 8 Claims. (Cl. 55—108.)

1. In a harvester, a grasper comprising a sheave arranged to ride on the ground, a pair of endless grasper chains passed over said sheave and disposed in the groove thereof, means over which said chains are passed to separate them, whereby the chains approach each other toward one bight and recede from the other toward the other bight, and inwardly directed tines on said chains for penetrating the plants to be harvested as the sheave passes over them.



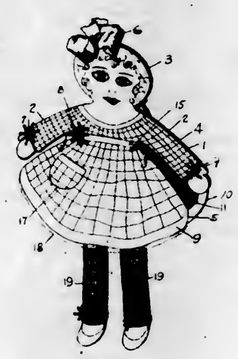
2. In a harvester, a grasper comprising a sheave having radially extending spikes in the groove thereof arranged to ride on the ground, a pair of endless grasper chains passed over said sheave and disposed in the groove thereof, means over which said chains are passed to separate them, whereby the chains approach each other toward one bight and recede from each other toward the other bight, and inwardly directed tines on said chain for penetrating the plants to be harvested as the sheave passes over them.

1,390,664. WATER-METER. ROBERT BASSETT, Buffalo, N. Y. Filed Oct. 22, 1919. Serial No. 332,403. 8 Claims. (Cl. 73—98.)



1. A water meter casing comprising a casing member provided with a securing flange having at the base thereof an internal groove and an external groove which coact to form an annular reduced portion readily breakable parallel to the contact surface of the flange and meter measuring mechanism directly supported by that part of the member surrounded by said portion; substantially as and for the purpose described.

1,390,665. TRAY FOR CARRYING CAKES, &c. FREDERICK BEERS, New Rochelle, and HOWARD L. POWELL, New York, N. Y., assignors to National Biscuit Company, New York, N. Y., a Corporation of New Jersey. Filed Aug. 27, 1920. Serial No. 406,447. 2 Claims. (Cl. 34—17.)

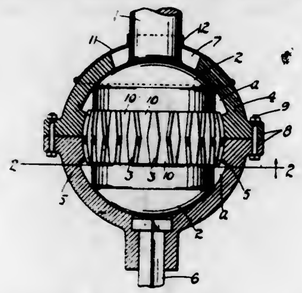


2. A tray for small food products, comprising a marginal frame, opposite members of which have a plurality of horizontal openings therethrough, curved wires extending across said frame, with their ends extending through said openings, and rods mounted on the outer sides of said members, to which the ends of said wires are secured.

1,390,666. THERMOMETER. CHARLES D. BOLIN, St. Louis, Mo., assignor to American Thermometer Company, St. Louis, Mo., a Corporation of Missouri. Filed Sept. 10, 1920. Serial No. 409,314. 4 Claims. (Cl. 73—52.)

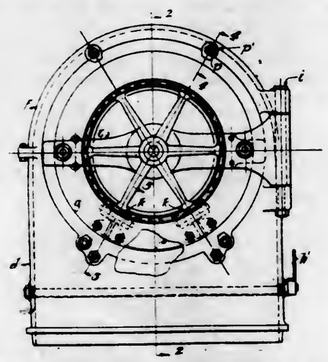
4. A thermometer comprising a pipe-fitting having a cylindrical bore provided with an annular shoulder and closed at one end, a thimble seated in said bore and being separated from said shoulder by a gasket, a scale plate having a depressed surface coated with a vitreous material, and a forwardly extending flange on its lower end, said flange being provided with an opening to receive one end of the thimble, and a mercury tube secured to the scale plate, said mercury tube extending into the pipe-fitting and traversing the gasket therein.

1,390,667. CANDY-PACKAGE. BLANCHE BONESTELL, New York, N. Y., assignor to Huyler's, New York, N. Y., a Corporation of New York. Filed Nov. 26, 1920. Serial No. 426,852. 9 Claims. (Cl. 46—40.)



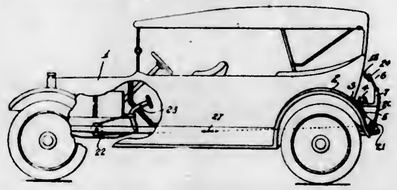
1. A candy package, comprising front and back boards cut and decorated to represent a doll, a candy container arranged between said boards approximately at the waist of the doll, and means for holding said front and back boards together at the upper part and supporting the said container.

1,390,668. UNIVERSAL JOINT. EDWARD A. BURNES, St. Louis, Mo. Filed Aug. 21, 1920. Serial No. 405,015. 2 Claims. (Cl. 64—91.)



2. A universal joint comprising a hollow spherical socket member having an equatorial zone of inwardly projecting teeth and a ball member flattened transversely of

the joint axis to provide a cylinder of less diameter than the member, having its spherical surfaces journaled in said

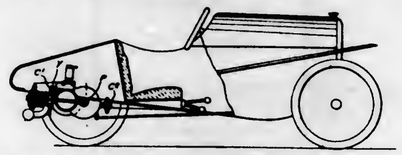


socket member and having a zone of external teeth on its cylindrical surface.

1,390,669. COMBINED CLEANING-DOOR AND CHIMNEY-VALVE. WILBUR T. CLARK, Cleveland, Ohio, assignor, by mesne assignments, to The Hanna Furnace Company, a Corporation of Delaware. Filed Feb. 24, 1919. Serial No. 278,766. 10 Claims. (Cl. 277—67.)

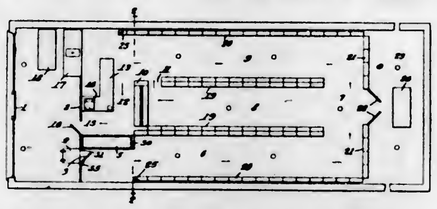
5. The combination with the gas outlet of a stove or the like, of an inclosing casing affording a connection to the chimney stack, a valve member adapted to close said outlet, means for actuating said valve member, and an additional valve member controlling the outlet to the chimney stack, substantially as set forth.

1,390,670. DIRECTION-SIGNAL. ISIAH CONRAD, Columbus, Ohio. Filed Dec. 23, 1920. Serial No. 432,676. 5 Claims. (Cl. 116—45.)



1. A direction signal for motor vehicles, comprising a frame adapted to be mounted rigidly in connection with a motor vehicle, an indicator pivotally mounted in connection with said frame upon horizontal pivots, a weight coöperative with a localized portion of said indicator and normally tending to maintain the latter in a given position, a longitudinally extending flexible cable having its rear terminals secured to said indicator and its forward terminal disposed for connection with an operating pedal of said vehicle, said pedal serving, when normally positioned, to draw said cable longitudinally whereby said indicator will be oscillated to assume a given position and upon the actuation of said pedal to release said cable and to thereby permit of the oscillation of said indicator, under the influence of said weight, to a second operating position.

1,390,671. EXPLOSIVE COMPOSITION. WILLARD C. COPE, Woodbury, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed June 13, 1918. Serial No. 239,774. 9 Claims. (Cl. 52—10.)



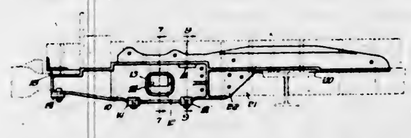
1. A detonating composition containing an organic filling material and an aromatic acid adapted to inhibit the growth of living organisms.

1,390,672. AUTOMOBILE VEHICLE. JOHN VALENTINE CARDEN, Ascot, England. Filed Apr. 4, 1921. Serial No. 458,470. 4 Claims. (Cl. 180—56.)

4. An automobile vehicle wherein the engine, gear box and driving axle constitute a unitary structure pivotally mounted about a transverse axis upon the vehicle frame and the engine cylinders form the outermost element of the pivoted structure and are arranged horizontally side by side in a transverse row with the cylinder heads outward, the crank shaft being connected by parallel gears with the driving axle which constitutes the innermost element of the pivoted structure, said driven axle and cylinders being on opposite sides of the pivotal axis of said structure.

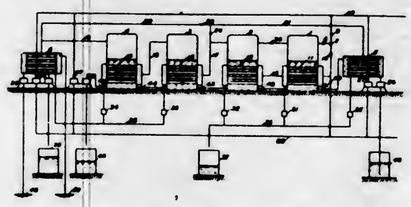
1,390,673. FIXTURE FOR SELF-SERVING STORES. THOMAS DAVID CRAWFORD, Hammond, Ind. Filed Oct. 6, 1920. Serial No. 414,962. 2 Claims. (Cl. 211—8.)

1. In store fixtures of the class described, the combination of duplicate shelving cases, said cases having a series of like spaced openings in alined portions of the rear part of their top walls, and links insertible in adjacent openings, the openings being spaced a like distance apart, and the cases being securable back to back, the desired relation, at will.



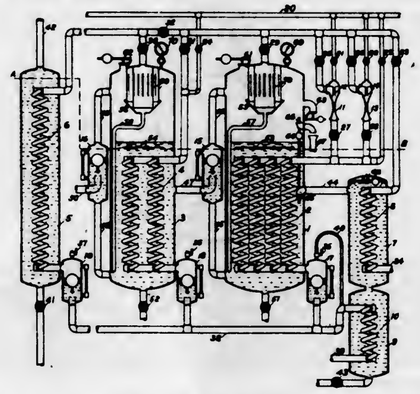
2. In a unit type of fixtures for self-serving store, series of detachable shelving cases arranged to form aisles for the passage of customers, said cases being of unitary size, fastening means for securing the ends of alined cases together, independent removable fastening means for securing intermediate rows of shelving cases firmly together back to back, separate doors for the entrance and exit of customers, and all of said doors being a multiple of the size of the cases.

1,390,674. LOCKING DEVICE FOR AUTOMOBILE-WHEELS. ARTHUR M. CUMMINGS, Aberdeen, Md. Filed Aug. 23, 1919. Serial No. 319,492. 3 Claims. (Cl. 70—90.)



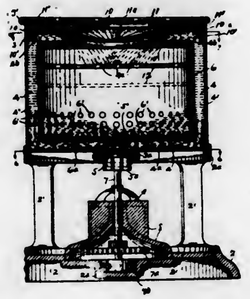
1. A locking device for wheels having pneumatic tires, comprising a pair of pivotally connected members adapted to embrace the wheel rim and tire, said device being provided with a road engaging element and having a socket adapted to completely inclose the inflation valve tube.

1,390,675. DRAFT MECHANISM. ROBERT F. DARBY, Yonkers, N. Y., assignor to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed June 19, 1919. Serial No. 305,225. 4 Claims. (Cl. 213—42.)



1. In draft mechanism for railway cars, draft arms having a center stop formed thereon to coöperate with tandem springs when such are used, said draft arms also having reinforcing beads defining spaces within which openings may be formed in said draft arms for operatively receiving a different form of draft rigging, the beads being adapted to compensate for whatever material may be sacrificed in forming said openings.

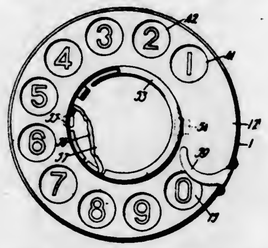
1,390,676. APPARATUS FOR EVAPORATING LIQUIDS. WILLIAM L. DE BAUFRE, Annapolis, Md. Filed Jan. 26, 1917. Serial No. 144,650. 5 Claims. (Cl. 127—9.)



5. In an apparatus for evaporating a liquid, an evaporating chamber containing the said liquid separately by a heating surface from a condensing chamber, means for withdrawing and compressing vapor from the said evaporating chamber and of introducing the compressed vapor into the said condensing chamber, a second evaporating chamber separated by a heating surface from a second condensing chamber, means for discharging the said liquid from the first evaporating chamber into the second evaporating chamber, means for discharging vapor from the first condensing chamber into the the second condensing chamber, and means for discharging vapor from the second evaporating chamber independent of the first evaporating chamber.

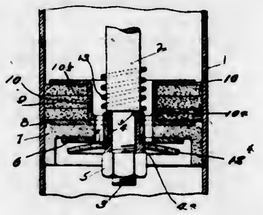
1,390,677. EVAPORATING APPARATUS. WILLIAM L. DE BAUFRE, Annapolis, Md. Filed Mar. 13, 1917. Serial No. 154,584. 3 Claims. (Cl. 127—3.)

1. A plurality of vapor compressors in combination with a multiple effect evaporating plant, each effect of said plant containing a condensing chamber and an evaporating chamber, the said vapor compressors being connected in parallel to withdraw vapor from the evaporating chamber of the first effect and to discharge the said vapor compressed and commingled with the primary operating vapor into the condensing chamber of the said first effect, passages being provided for discharging vapor from the evaporating chamber of each effect into the condensing chamber of the succeeding effect and from the evaporating chamber of the last effect, and valves being provided to reduce the number of vapor compressors in operation.



1,390,678. WASHING AND DRYING MACHINE. JEREMIAH L. DE LANEY, Syracuse, N. Y., assignor to Vortex Washer Corporation, Syracuse, N. Y., a Corporation of New York. Filed May 16, 1921. Serial No. 469,877. 9 Claims. (Cl. 68—18.)

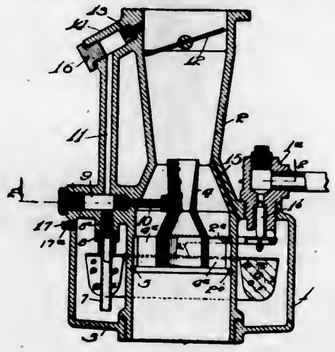
9. A centrifugal clothes washing machine including a cylindrical vat, a smaller cylindrical cage disposed con-



centrically in said vat, a shaft for supporting and rotating said cage for expelling the washing fluid from the cage and for causing said fluid to rise and race toward the top of the cage, a plurality of baffles disposed radially around the top end of the cage adapted to divide the said fluid into a number of portions and to cause said portions to converge and fall in a shower at the center of the cage, and means for compressing the clothes for increasing the centrifugal action of the machine.

1,390,679. IMPULSE-TRANSMITTER. HENRY F. DOBBIN and EDGAR W. GENT, New York, N. Y., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 21, 1919. Serial No. 339,640. 2 Claims. (Cl. 179—90.)

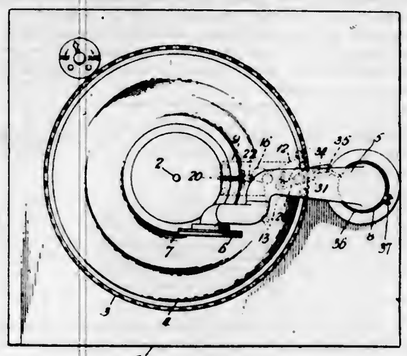
1. In an impulse transmitting device, a stationary base member, a supporting plate attached to said base member, a number plate supported by said supporting plate, a retaining ring arranged to engage said number plate, and resilient fingers on said ring arranged to engage said supporting plate to detachably secure the number plate to said supporting plate.



1,390,680. LUBRICATING DEVICE FOR PUMP-PISTONS. JOHN W. DREW, St. Louis, Mo., assignor to Moon Brothers Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Feb. 28, 1921. Serial No. 448,564. 2 Claims. (Cl. 103—63.)

1. In a piston, the combination of a piston rod, a leather cup-shaped washer fixed thereon, metallic washers arranged above and below said leather cup-shaped washer, uninterrupted air holes through said members, a leather valve member arranged to control one end of said air holes, a fibrous lubricating washer juxtaposed against one of said metallic washers and provided with a central opening of larger diameter than said registering air holes, and a cup-shaped metallic washer fixed to said piston rod for holding said fibrous washer in fixed position, said cup-shaped washer being also provided with registering air holes.

1,390,681. CARBURETER. WILLIAM A. EDWARDS, Chicago, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed Nov. 23, 1918. Serial No. 263,799. 2 Claims. (Cl. 261—41.)



1. In a carbureter, in combination with a liquid fuel chamber and liquid level governing means therefor, a main air supply passage open at one end for air inlet, and adapted for connection at the other end with the engine intake, said passage being constructed for causing reduction of pressure to result at a predetermined point therein from the air currents therethrough; a fuel inlet mouth-piece situated in the main air supply passage having its discharge end located proximate to the point of reduced pressure and open at the opposite end for air inlet, a liquid fuel discharge duct extending horizontally for discharging into the air current entering through said fuel inlet mouth-piece; and at a considerable distance above the governed liquid level of the fuel supply chamber, a chamber substantially at the level of said fuel discharge, from which chamber said discharge duct leads to its discharge end; a duct leading upward from the fuel supply chamber located at the fuel discharge level and delivering at its upper end in said last mentioned chamber, and a duct leading from the top of said chamber to a point in the intake passage beyond the seating point of the throttle valve therein.

2. In a carbureter, in combination with a liquid fuel chamber, a main air supply passage open at one end for air inlet, and adapted for connection at the other end with the engine intake, said passage being constructed for causing reduction of pressure to result at a predetermined point therein from air current therethrough, a fuel inlet mouth-piece situated in the main air supply passage, having its discharge end located proximate to the point of reduced pressure in the main air intake, and open at the opposite end for air inlet; a liquid fuel discharge duct extending substantially horizontally for discharge into the air current entering through said fuel inlet mouth-piece; a throttle valve located in the main air supply passage beyond the point of low pressure therein, a liquid fuel supply by-pass passage leading from the liquid supply chamber for discharge into the intake passage beyond the seating point of the throttle valve therein, said by-pass passage leading past the level of the horizontally-extending liquid fuel discharge duct and being connected therewith, said by-pass passage being relatively reduced in diameter below the point of its connection with the liquid fuel discharge passage and at its discharge into the intake passage beyond the throttle valve, whereby a supply of liquid fuel drawn into said by-pass passage by the suction when the throttle valve is closed, is retarded in its return to the fuel supply chamber, and is held available at and above the level of said horizontally-extending liquid fuel discharge passage when suction is operative through said passage.

1,390,682. AUTOMATIC STOPPING AND STARTING DEVICE FOR PHONOGRAPHS. JOHN A. EITUTIS, Chicago, Ill. Filed Dec. 26, 1919. Serial No. 347,291. 10 Claims. (Cl. 192—116.)

1. In a phonograph, the combination of a turn-table, a tone arm mounted to swing over said turn-table and provided with a reproducer, and mechanism for automatically starting and stopping said turn-table, comprising two stop members movable alternately into engagement with the turn-table for stopping the same, and means actuated upon the swinging of the tone arm and reproducer into

predetermined positions to cause said stop members to be moved alternately into engagement with said turn-table, and to move and hold said stop members out of engagement with the turn-table during the movement of the tone arm between those positions.

1,390,683. PROCESS OF MAKING CATALYZERS. CARLETON ELLIS, Montclair, N. J. Filed Dec. 12, 1916 Serial No. 136,472. 4 Claims. (Cl. 23—28.)

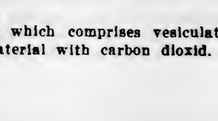
2. The process of making a catalyzer which may be used for the hydrogenation of fatty bodies containing unsaturated components which comprises subjecting a decomposable organic compound of a catalytic metal in an inert suspensory medium comprising a hydrocarbon body, to the action of heat in the presence of a reducing gas whereby an active catalytic body is obtained.

1,390,684. PROCESS OF REGENERATING CATALYTIC MATERIAL. CARLETON ELLIS, Montclair, N. J. Original application filed Nov. 24, 1916. Serial No. 133,252. Divided and this application filed May 1, 1917. Serial No. 165,763. 2 Claims. (Cl. 23—28.)

1. The process of regenerating catalytic nickel material which comprises freeing the catalytic material to a large extent from fatty or oily material, dissolving the residue in nitric acid, precipitating the nickel from the nickel solution as a basic compound, in reacting upon the basic material in the freshly precipitated condition with formic acid, whereby a nickel formate is obtained and in subsequently decomposing such salt by heating to a temperature at or above the decomposition point.

1,390,685. PROCESS OF MAKING CATALYZERS. CARLETON ELLIS, Montclair, N. J. Filed Apr. 11, 1918. Serial No. 227,889. 4 Claims. (Cl. 23—28.)

1. The process of making catalytic material adapted for use in the hardening of fatty oils which comprises dry heating an organic salt of nickel to a temperature at least ten degrees above the initial temperature of reduction.



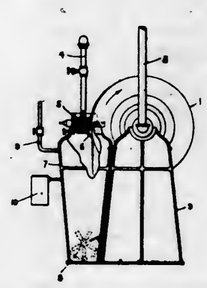
1,390,686. NICKEL FORMO-CARBONATE AND PROCESS OF MAKING SAME. CARLETON ELLIS, Montclair, N. J. Filed Apr. 28, 1919. Serial No. 293,179. 11 Claims. (Cl. 23—28.)

1. The process of making nickel formo-carbonate which comprises reacting on freshly precipitated nickel carbonate with an amount of formic acid insufficient to completely convert the carbonate to the formate and in converting the product into a dry powder.

1,390,687. PROCESS OF ADDING HYDROGEN TO UNSATURATED FATTY MATERIAL. CARLETON ELLIS, Montclair, N. J. Filed Mar. 16, 1916. Serial No. 84,608. 3 Claims. (Cl. 87—12.)

1. In the hydrogenation of oily materials, the step of converting the entire amount of said material to be treated, in the present of a colloidal catalyst, into a fine mist, by water gas.

1,390,688. REMOVING CATALYZER FROM OIL. CARLETON ELLIS, Montclair, N. J. Filed Dec. 30, 1915. Serial No. 69,389. 3 Claims. (Cl. 87—12.)

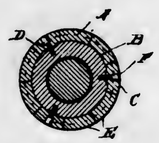


1. A process of separating magnetizable finely divided magnetic catalyzer from hydrogenated oil which comprises passing the oil while in the form of a flowing current, past a stationary magnet, located in proximity to said current, while said oil contains free hydrogen, and thereafter filtering said oil while containing free hydrogen, and while at a temperature above atmospheric.

1,390,689. FOOD PRODUCT CONTAINING HYDROGENATED OIL. CARLETON ELLIS, Montclair, N. J. Original application filed Dec. 23, 1913, Serial No. 808,461. Divided and this application filed Oct. 2, 1916. Serial No. 123,416. 9 Claims. (Cl. 99—13.)

8. A hydrogenated oil mixture, comprising an intimate mixture of super-hydrogenteed oil and under-hydrogenated oil, aerated sufficiently to produce a whitish opaque material, said product being free from linolenic compounds and from nickel-organic compounds, and substantially without action on tinned containers.

1,390,690. EDIBLE FAT AND PROCESS OF MAKING SAME. CARLETON ELLIS, Montclair, N. J. Filed Apr. 16, 1917. Serial No. 162,347. 5 Claims. (Cl. 99—13.)



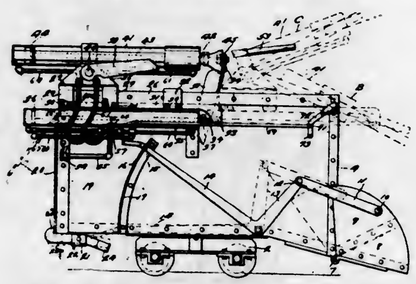
4. A process which comprises vesiculating semi-solid edible fatty material with carbon dioxid.

1,390,691. POLISHING OR FINISHING COMPOSITION. CARLETON ELLIS, Montclair, N. J. Filed Oct. 9, 1917. Serial No. 195,553. 8 Claims. (Cl. 134—24.)

4. A polishing mixture comprising a plurality of hard brittle hydrogenated oils.

1,390,692. [WITHDRAWN.]

1,390,693. SUGAR-CANE MILL. MANUEL GARCIA FERNANDEZ, Buenos Aires, Argentina. Filed Mar. 27, 1919. Serial No. 285,529. 1 Claim. (Cl. 100—47.)

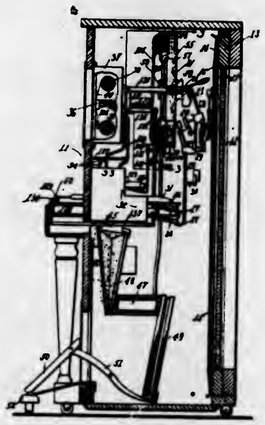


A crushing roll comprising a central cylindrical portion having longitudinal grooves formed in its periphery, a plurality of juxtaposed circumferential plates approximately wedge shaped in cross section and having longitudinal ribs engaging said grooves, and bolts passing through the plates and ribs into said central portion for securing the plates to the latter.

1,390,694. TWYER. WILLIAM E. FRAWLEY, Jr., Birmingham, Ala. Filed June 14, 1920. Serial No. 388,826. 3 Claims. (Cl. 263—41.)

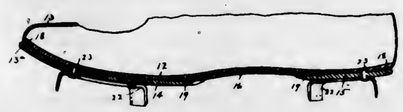
2. A twyer for converters comprising a refractory body tapering from its intake to its outlet end, a refractory jacket tapered to fit snugly about the refractory body of the twyer, and means to connect the jacket and twyer body, substantially as described.

1,390,695. MINE-CAR-LOADING SHOVEL. CHARLES HOWARD FUNKEY, Ramsay, Mich. Filed Feb. 18, 1920. Serial No. 359,744. 9 Claims. (Cl. 214—65.)



1. The combination with a mine car, of longitudinal disposed guides carried by said car, a longitudinally movable cross head mounted on said guides, a cylinder transversely pivoted in said cross head, said cylinder being transversely movable in parallel relation to the cross head and provided with a reciprocating piston having a piston rod connected thereto, the forward end of said piston rod being provided with a shovel, air cylinders carried by the car, a piston and piston rod disposed in said air cylinders, said piston rod being connected to a cross head, means whereby pressure may be applied to said cylinders for simultaneously moving the cross head and the shovel and means whereby the transversely pivoted cylinder may be controlled in a tilting action during a shoveling operation.

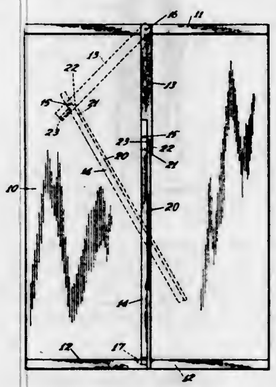
1,390,696. DRY CELL. SAMUEL E. GERTLER, Brooklyn, N. Y. Filed Nov. 20, 1919. Serial No. 339,490. 7 Claims. (Cl. 204—29.)



3. A dry cell comprising spaced electrodes one of which is zinc, and an electrolyte of calcium chlorid.

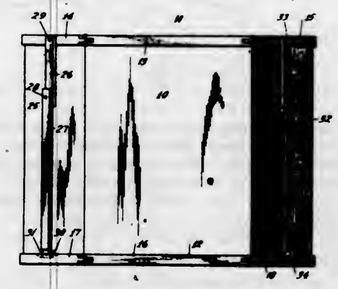
1,390,697. PIANO-PLAYER. ALFRED R. GILLHAM, Cincinnati, Ohio. Filed Dec. 28, 1916. Serial No. 139,344. 14 Claims. (Cl. 84—33.)

1. In a device of the character described, the combination with a set of piano-action units, of automatic means for selectively emphasizing the respective notes produced by the action of said units, and means for regulating the intensity of sound of all of said notes while maintaining the relative prominence of the selectively emphasized notes.



1,390,698. SPORTING-SHOE. DANIEL J. GOLDEN, Brockton, Mass. Filed Sept. 24, 1920. Serial No. 412,493. 2 Claims. (Cl. 36—25.)

1. A sporting shoe comprising a superstructure including an inner sole having a fore portion, a heel portion, and a shank portion, and an upper lasted upon the inner sole; a pieced bottom composed of relatively



stiff spaced apart tap and heel pieces, and a flexible intermediate shank piece formed to fill the space between the tap and heel pieces; fastenings uniting the ends of the shank piece to the contiguous ends of the tap and heel pieces; fastenings uniting the tap and heel pieces to the upper and inner sole at the fore and heel portions of the superstructure; and fastenings uniting the shank piece to the inwardly turned edges of the upper at the shank portion of the superstructure, between the tap and heel pieces, the last-mentioned fastenings being free from engagement with the shank portion of the inner sole, so that the shank portion of the shoe possesses a maximum degree of flexibility.

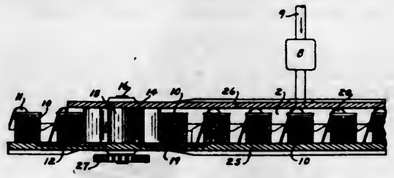
1,390,699. DISPLAY DEVICE. SYDNEY B. GRIFFIN, Mamaroneck, N. Y., assignor to T. Fred Moore, New York, N. Y. Filed Nov. 22, 1920. Serial No. 425,638. 8 Claims. (Cl. 40—125.)

1. In a folding support for posters and the like, the combination with an extensible thrust piece adapted to hold the poster flat when extended, of a prop pivotally secured to the thrust piece and arranged to lock the members of the thrust piece to each other, in extended position, when the prop is inclined to the thrust piece to serve as a support for the poster.

1,390,700. DISPLAY DEVICE. SYDNEY B. GRIFFIN, Mamaroneck, N. Y. Filed Nov. 24, 1920. Serial No. 426,119. 10 Claims. (Cl. 40—125.)

7. In a display device, the combination with a flexible poster, of a piece secured along the back of the poster and comprising members hinged together and each having its front side cut away at the end adjacent to the hinge to provide a space for the bulge of said poster when said members are bent forwardly on their hinge.

1,390,701. HOSE-CLAMP. CLARENCE S. HAINES, Indianapolis, Ind. Filed Jan. 27, 1921. Serial No. 440,426. 4 Claims. (Cl. 24—19.)

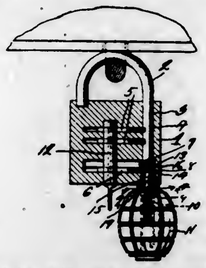


3. A one piece hose clamp comprising an elongated body portion, a tongue struck from the body portion adjacent one end thereof and bent laterally to extend across the hose when the clamp is applied to use and having one of its ends integral with the body, the side edges of said tongue having a plurality of coöperating notches, said body portion having an elongated slot adjacent the opposite end thereof the outer end of which is restricted and adapted to interlock with the notches of the tongue, and gripping members formed at the ends of the body portion.

1,390,702. ELECTRIC RAZOR. JOSEPH A. HAMMOND, Deming, N. Mex., assignor to Hammond-Howard Manufacturing Company, (no stockholders liability,) Deming, N. Mex., a Corporation of New Mexico. Filed May 6, 1920. Serial No. 379,301. 15 Claims. (Cl. 30—12.)

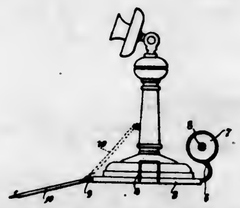
2. A razor, comprising a blade of the straight concave type, with a shank and means providing a pivotal mounting; and means for oscillating the shank on its mounting to impart a swinging cutting stroke to the blade.

1,390,703. METHOD OF TREATING SUBSTANCES. OSWALD H. HANSEN, Port Washington, Wis., assignor of one-half to The Wisconsin Chair Company, Port Washington, Wis. Filed Jan. 7, 1919. Serial No. 270,004. 4 Claims. (Cl. 99—8.)



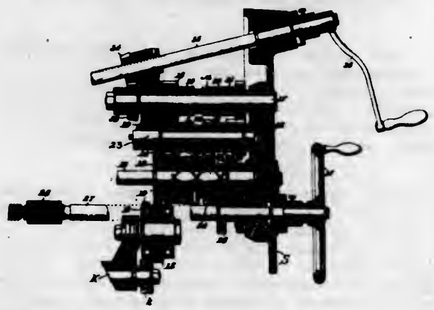
4. The process of sterilizing food, which comprises, simultaneously agitating and transporting the food in open containers through segregated successive zones of gradually increasing temperature, and subsequently transporting said open containers through segregated successive zones of gradually decreasing temperature.

1,390,704. EXPLOSIVE LOCK. CHARLES A. HARBAUGH, Linwood, Kans. Filed May 25, 1920. Serial No. 384,175. 1 Claim. (Cl. 116—11.)



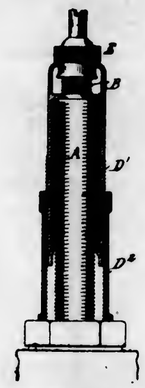
The combination with a lock having a lock bolt disposed therein, of an explosive device therefor, said explosive device comprising a casing having a spring actuated firing pin therein, said firing pin extending through the lock casing and having its end axially disposed in a recess in the end of the lock bolt, a recess carried by said firing pin and registering with an aperture in the end of the lock

bolt, said recess and aperture being in alinement with a detent carried by the lock and held, said firing pin being held against the action of its spring by the detent



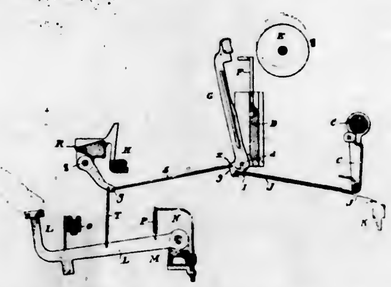
and released by said detent, and means whereby spring actuated firing pin may be held against movement under the influence of its spring independent of the detent.

1,390,705. MEMORANDUM OR WRITING APPLIANCE FOR USE IN CONNECTION WITH TELEPHONES. JOHN MCDONALD HATTERSLEY, Birmingham, England. Filed Feb. 7, 1920. Serial No. 357,085. 11 Claims. (Cl. 281—12.)



1. Memorandum appliance for table telephones, comprising a base, means on said base for detachably securing it beneath the base of a table telephone, a channel formed by upper and lower parts of said base and by distance pieces between them, a flat support for paper carried by said base and located adjacent one end of said channel, a paper supply device located on the other side of the telephone to the said support and adjacent the other end of the channel, whereby the paper from the supply device can pass through said channel to the flat support.

1,390,706. MACHINE-TOOL TRIP. ROBERT T. HAZELTON, Cincinnati, Ohio, assignor to The Cincinnati Milling Machine Company, Oakley, Cincinnati, Ohio, a Corporation of Ohio. Filed Aug. 27, 1918. Serial No. 251,599. 13 Claims. (Cl. 90—21.)



1. A machine tool combining propelling mechanism; a rate-changing clutch therefor; and means for operating said clutch, said means being constructed to act positively when moving said clutch into the position yielding a slow rate and impositively when moving said clutch into the position yielding a high rate of movement.

1,390,707. DUST-CAP FOR TIRE-VALVES. ROBERT H. HENEMIER, New York, N. Y., assignor to A. Schrader's Son, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Dec. 18, 1918. Serial No. 267,360. 3 Claims. (Cl. 152—12.)

1. A dust cap comprising a dust cap portion and a valve cap portion, the dust cap portion being adapted to slide down over the valve casing and having a passage formed therein for the valve, and the valve cap portion being adapted to screw on the valve to hold the dust cap portion in place.

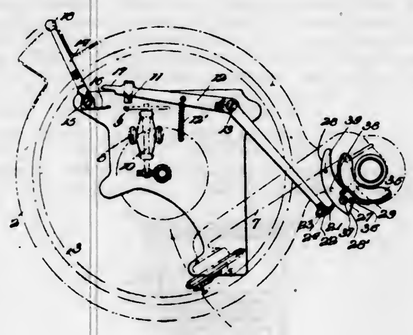
1,390,708. TYPEWRITING-MACHINE. EDWARD BERNARD HESS, Manhattan Beach, N. Y., assignor to Royal Typewriter Company, Inc., New York, N. Y. Filed July 1, 1921. Serial No. 481,771. 17 Claims. (Cl. 197—30.)

2. A noise reducing type action for typewriting machines, comprising toggle link connections between a type bar and a key lever movable to such an extent by the full depression of the key as to move the type bar to a toggle-locking position in front of the platen and at such a distance therefrom as to reduce noise during a further movement of the type bar about is pivot to the platen, caused by the momentum of the type bar.

1,390,709. ART OF PRESERVING LIQUID FOODS. HERMAN HEUSER, Evanston, Ill. Filed Sept. 22, 1919. Serial No. 325,527. 4 Claims. (Cl. 99—1.)

3. The process of preserving liquid food compounds which consists in adding thereto about 0.002% of SO_2 in the form of sulfite and sodium benzoate.

4. As a chemical preservative, a mixture containing 7 to 12 parts of sodium sulfite to 100 parts of sodium benzoate.

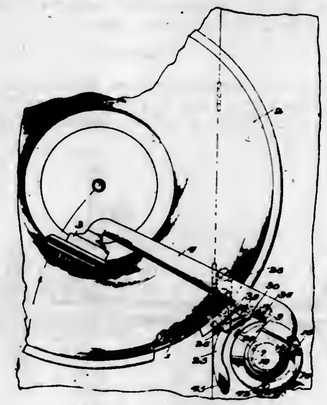


1,390,710. PROCESS OF PREPARING LOW-ALCOHOLIC BEVERAGES. HERMAN HEUSER, Evanston, Ill. Filed June 16, 1920. Serial No. 389,388. 4 Claims. (Cl. 195—1.)

1. The process of preparing low alcoholic beverages having the characteristics of natural alcoholic fermentated beverages which consists in producing a limited yeast fermentation in dealcoholized beer while maintaining carbon dioxid in the liquid from a period prior to the beginning of said fermentation.

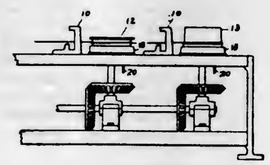
1,390,711. ART OF MANUFACTURING CEREAL BEVERAGES. RAYMOND S. HEUSER, Evanston, Ill. Filed Aug. 2, 1920. Serial No. 400,574. 3 Claims. (Cl. 99—11.)

1. The process of improving the physical and beverage characteristics of fermented beverages which consists in adding glycerin thereto.



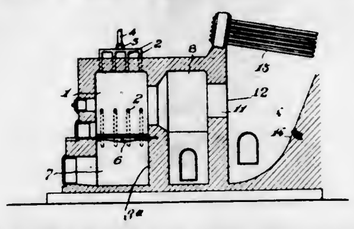
1,390,712. STOP MECHANISM FOR TALKING-MACHINES. FRANK C. HINCKLEY, Bridgeport, Conn., assignor, by mesne assignments, to Columbia Graphophone Manufacturing Company, Bridgeport, Conn., a Corporation of Delaware. Filed Apr. 26, 1917. Serial No. 164,725. 28 Claims. (Cl. 192—116.)

1. The combination with a rotary record-support and a tone-arm, of a member moved by said tone-arm and provided with a shoulder, stop-mechanism and controlling means for said stop-mechanism comprising a one-way collapsible member coöperating with the said first-named member and effecting the actuation of said stop-mechanism upon passing said shoulder.



1,390,713. STOP MECHANISM FOR TALKING-MACHINES. FRANK C. HINCKLEY, Bridgeport, Conn., assignor, by mesne assignments, to Columbia Graphophone Manufacturing Company, Bridgeport, Conn., a Corporation of Delaware. Filed Feb. 23, 1918. Serial No. 218,710. 19 Claims. (Cl. 192—116.)

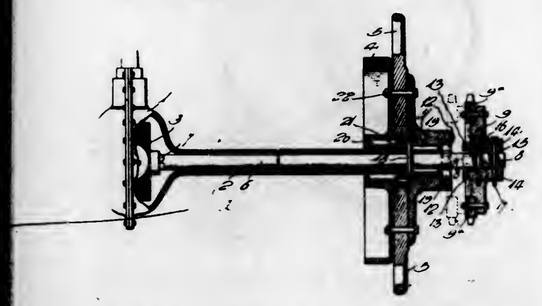
1. The combination of a rotary record-support, a movable sound-conveying element, a brake lever adapted to engage said record support, a pivoted latch carried thereby, and a member moved by said sound-conveying element



and engaged by said latch to retain said brake lever out of braking position.

1,390,714. WIRE-DRAWING MACHINE. HAROLD WILLIAM HODGSON, Worcester, Mass. Filed June 19, 1920. Serial No. 390,149. 5 Claims. (Cl. 205—20.)

1. In a wire drawing machine, the combination with rotary means for receiving wire from a die and drawing it therethrough, of means constituting part thereof for holding water in a position to be directed against the interior surfaces of said rotary means by centrifugal force as the rotary means rotates.



1,390,715. FURNACE FOR BURNING LIQUID FUELS AND PULVERULOUS COAL. HIROSUKE HORIUCHI, Taihoku-Cho, Japan. Filed May 21, 1920. Serial No. 383,132. 1 Claim. (Cl. 110—28.)

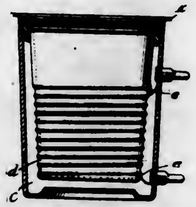
In a furnace, a combustion chamber approximately circular in cross section, a plurality of combined air and fuel pipes communicating with the combustion chamber and arranged to produce rotary movement of the incoming fuel and air within the chamber, an expansion chamber of substantially elliptical form in cross section communicating with the combustion chamber by a restricted pas-

sage and being of greater area in cross section than the combustion chamber, said expansion chamber having an outlet, and a plurality of spaced parallel baffles arranged to arrest the rotary movement of the products of combustion issuing from the expansion chamber.

1,390,716. POWER-TRANSMITTING MECHANISM FOR MOTOR-VEHICLES. ROY E. JOYCE, Bartlesville, Okla. Filed Mar. 15, 1920. Serial No. 365,845. 4 Claims. (Cl. 180—53.)

1. In a motor vehicle, a driving axle, a casing for the driving axle, a ground engaging wheel rotatable upon the axle casing and axle and held against movement longitudinally thereon, said wheel having a hub element extending outwardly and provided with clutch teeth, a power transmitting element slidable longitudinally upon the axle and held against rotation thereon and provided with clutch teeth for engaging the clutch teeth of the wheel, the axle having transversely extending openings in its outer end portion and the power transmitting element having openings for registering with the openings of the axle, and means for passing through alined openings of the axle and power transmitting element to releasably secure the power transmitting element in an adjusted position.

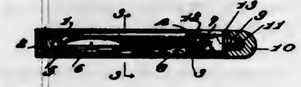
1,390,717. THRUST BALL-BEARING. HENRY B. KEIPER, Lancaster, Pa.; Lucy R. Keiper, Nancy Keiper Long, and George Hammond, executors of said Henry B. Keiper, deceased, assignors to National Bearings Company, Lancaster, Pa., a Corporation of Delaware. Filed July 3, 1920. Serial No. 393,775. 7 Claims. (Cl. 64—49.)



7. A ball thrust bearing comprising two annular plates of different sizes, each having laterally projecting inner and outer marginal flanges turned toward the other plate, and a series of openings between its flanges, the flanges of one plate being arranged within the flanges of the other, a series of balls arranged between the two plates and protruding in opposite directions through said openings, the outer flange of the inner plate terminating short of the inner wall of the outer plate, and an annular plate having spaced flaring inwardly extending projections and having its peripheral portion clamped between the shorter flange of said inner plate and the inner wall of said outer plate; said annular plate being adapted to hold the series of balls in separated relation between said projections and to effect a circulation of oil along the spaces on opposite sides thereof and around the series of balls.

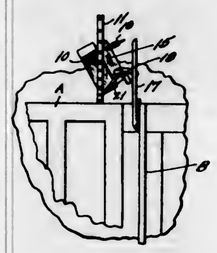
1,390,718. INTEGRAL ENVELOP AND BAG. WILLIAM E. LOVER, Findlay, Ohio. Filed Aug. 21, 1919. Serial No. 319,005. 10 Claims. (Cl. 150—1.)

1. In an article of the class described, a combined envelop and bag comprising a limp wall having a fullness and constituting the back of the bag, a relatively stiff wall constituting the front of the envelop, and a relatively stiff wall common to the envelop and bag and constituting the back of the envelop and front of the bag said walls being integrally connected.



1,390,719. THERMO-ELECTRICAL APPARATUS FOR BOILING AND HEATING PURPOSES. JOAQUIN GRANDE LOZANO, Madrid, Spain. Filed Jan. 8, 1920. Serial No. 350,231. 2 Claims. (Cl. 219—44.)

1. An electrically heated utensil comprising inner and outer containers, said containers being spaced apart to form an air space, the inner surface of said outer container and the outer surface of said inner container being grooved adjacent the upper ends thereof, a sealing compound retained in position in said grooves, said inner container being composed of non-conductive material, an electrical heating element wound upon said inner container and having its terminals connected to said outer container.

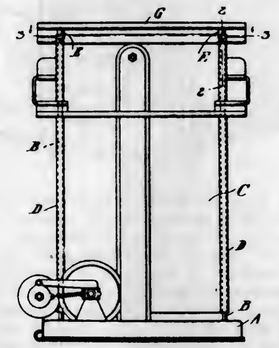


1,390,720. COMBINED ANTISEPTIC CASE AND SURGICAL KNIFE. HENRY K. POWERS, New Kensington, Pa. Filed Sept. 4, 1920. Serial No. 408,290. 2 Claims. (Cl. 128—305.)

1. A combined antiseptic case and surgical knife, comprising a case containing antiseptic liquid and having a closed end, the other end of the case having an internally screw-threaded opening, a blade having at its butt end a head, the head having inwardly and outwardly extending externally screw-threaded projections, washers

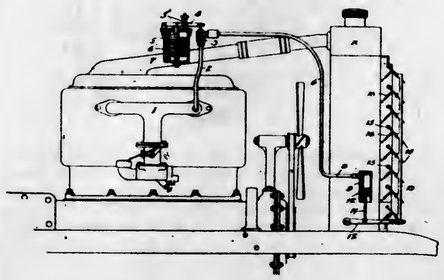
around the screw-threaded projections at opposite ends of the head, and a short cap adapted to receive the outer screw-threaded projection, the parts combined and operating as and for the purpose described.

1,390,721. ELEVATOR-CONTROLLING DEVICE. CHARLES F. QUICK, Dallas, Tex. Filed Sept. 15, 1920. Serial No. 410,496. 12 Claims. (Cl. 187—31.)



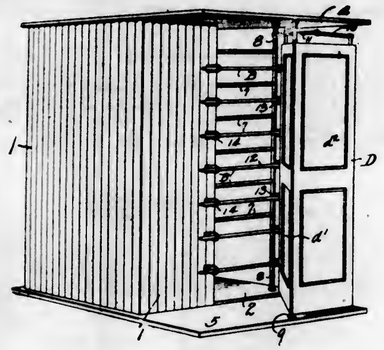
1. In apparatus of the character described, a circuit closing member adapted to be pivotally mounted upon an elevator car and having its axis of turning movement inclined whereby the member will automatically continue its turning movement in the same direction when being swung past dead center, and means including an element adapted to be mounted upon a landing door to effect the starting turning movement of said member.

1,390,722. POOL-CUE-TIP HOLDER. ARTHUR F. REINHEIMER, Detroit, Mich. Filed Jan. 6, 1921. Serial No. 435,449. 3 Claims. (Cl. 46—9.)



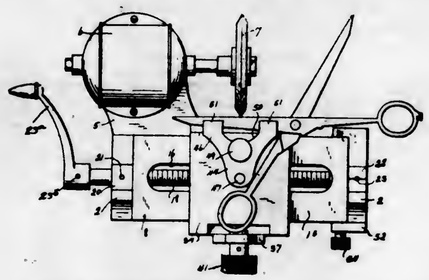
cue and a tip therefor, of a holder for the tip including cup and a tip therefor, of a holder for the tip including a screw extending outwardly from the cue and non-rotatably secured thereto, a housing rotatably mounted upon the outer end of said cue and receiving said screw, a traveling non-rotatable nut mounted upon said screw, a sleeve secured to said nut and frictionally engaging the inner surface of the housing, jaws carried by the sleeve and arranged to normally assume a position out of engagement wich each other, inwardly extending arcuate working faces formed on the outer ends of the jaws, the jaws being adapted to be brought into engagement with each other when the sleeve is brought into the housing, the cut tip having arcuate inwardly extending grooves arranged to receive the working faces, whereby when the jaws are brought toward each other accidental displacement of the tip is eliminated.

1,390,723. COPY-HOLDER. EDWARD W. ROTHFUS, Rochester, N. Y., assignor to Error-No, Inc., Rochester, N. Y., a Corporation of New York. Filed July 12, 1920. Serial No. 395,683. 5 Claims. (Cl. 120—29.)



5. In a copyholder the combination with a stationary frame and a vertically movable support, of shock absorbing means acting to cushion the fall of the movable support upon the stationary frame, said shock absorbing means comprising a resilient body and a spiral spring positioned with reference to the resilient body so that the spring and body are successively compressed.

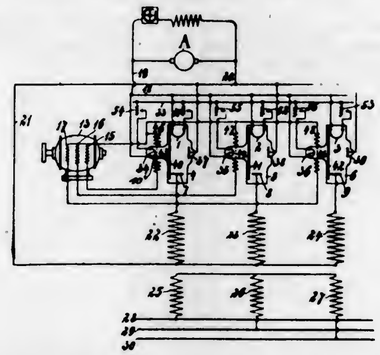
1,390,724. COOLING APPARATUS FOR MOTOR-VEHICLES. GEORGE J. RUMENS, Baltimore, Md. Filed Apr. 5, 1917. Serial No. 159,975. 1 Claim. (Cl. 123—174.)



A temperature controlling apparatus for motor vehicles comprising in combination with a motor and its radiator, a shutter for controlling the flow of air to the radiator, a lever loosely connected to the shutter and extending rearwardly therefrom, a cylinder arranged in the rear of the shutter and above the lever, a piston having pivotal connection with the lever and operating within the cylinder, means forming communication between the intake flue of the motor and the cylinder, a valve arranged within said connecting means and a thermostat connected with the valve subject to the heat of the cooling water in the motor for actuating the valve and controlling the pressure between the intake flue and the cylinder.

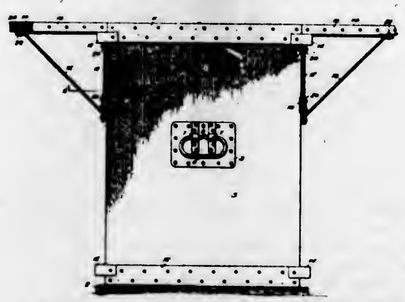
1,390,725. AUTOMATICALLY-LOCKED METERING DOOR AND GATE DEVICE. JAMES ARTHUR RUTH, Marion, N. C. Filed Apr. 26, 1919. Serial No. 293,036. 6 Claims. (Cl. 268—1.)

1. In an apparatus of the class described the combination with a booth or compartment adapted to be occupied by one person and having a passage-way, of a gate hinged at one side of the passage-way and extending across the interior of the booth, a door pivotally supported in front of the passage-way adapted to be engaged by an entering individual, connections between the door and gate to shift the gate to open position upon the closing of the door, the occupant preventing the return of the gate.



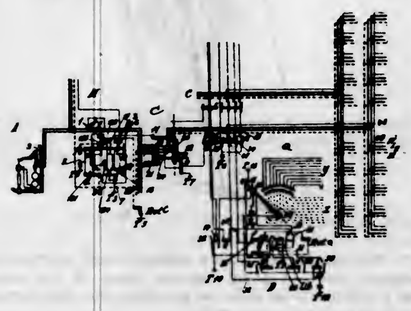
1,390,726. SHEARS-GRINDER. ALBERT T. SCHEIWER and DAVID FERGUSON, Erie, Pa. Filed Oct. 18, 1919. Serial No. 331,613. 9 Claims. (Cl. 51—77.)

1. In a grinding machine as set forth, the combination with a pivoted frame, of a supporting base frame therefor having a grinding member mounted thereon, a dominant carriage guided longitudinally upon the pivoted frame in a direction at right angles to the grinding edge of the member, a screw mounted in bearings of the pivoted frame and having operative connections with said dominant carriage, an auxiliary carriage guided upon the dominant carriage and movable in a direction at right angles to that of the dominant carriage and toward the grinding edge of the member, and means on the auxiliary carriage for clamping a shear blade with its cutting edge in position at right angles to the grinding edge of the member.



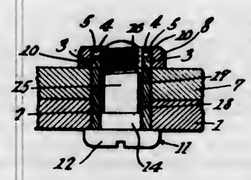
2. In a grinding machine as set forth, the combination with a pivoted frame, of a supporting base frame therefor having a grinding member mounted thereon, a dominant carriage guided longitudinally upon the pivoted frame in a direction at right angles to the grinding edge of the member, a screw mounted in bearings of the pivoted frame and having operative connections with said dominant carriage, an auxiliary carriage guided upon the dominant carriage and movable in a direction at right angles to that of the dominant carriage and toward the grinding edge of the member, means on the auxiliary carriage for clamping a shear blade with its cutting edge in position at right angles to the grinding edge of the member, and means for causing a vibrating movement of the pivoted frame as the screw is rotated.

1,390,727. SYSTEM OF TRANSFORMING DIRECT CURRENT INTO ALTERNATING CURRENT. MORITZ SCHENKEL, Charlottenburg, near Berlin, Germany, assignor to Siemens Schuckertwerke, G. m. b. H., Berlin, Germany, a Corporation of Germany. Filed Mar. 29, 1917, Serial No. 158,468. Renewed Feb. 9, 1921. Serial No. 443,726. 8 Claims. (Cl. 175—363.)



1. A system of transformation of direct current into alternating current, comprising a source of direct current, at least one vacuum apparatus, a primary and secondary transformer winding, a cathode within said vacuum apparatus connected to said source of direct current, an anode within said vacuum apparatus connected to the primary transformer winding, a connection from said source to the free end of said winding, a pair of auxiliary electrodes within said vacuum apparatus arranged to emit cathode rays into space separating said main cathode and anode, means for supplying said auxiliary cathode with current, and means for intermittently barring and bridging to said cathode rays the passage into the space separating the main electrodes.

1,390,728. COMBINED SHIPPING-CRATE AND TABLE. RUDOLPH I. SCHONITZER, Detroit, Mich., assignor of one-third to J. K. Williams, Springfield, Ohio. Filed Oct. 19, 1918. Serial No. 258,846. 8 Claims. (Cl. 190—12.)

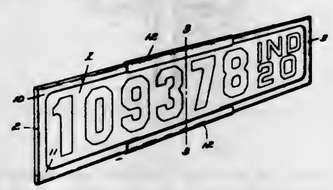


1. A shipping crate of rectangular form having a fixed top and provided with sills extending across the bottom of the crate and projecting therebeyond, one of the sides of the crate being separate from the top and edgewise detachable and normally resting at its bottom edge upon the projecting parts of the sills, and clips carried by other sides of the crate and embracing the detachable side to retain the same in place.

1,390,729. AUTOMATIC TELEPHONE SYSTEM. GIUSEPPE SIMONETTA and AUGUSTO ROSA, Milan, Italy. Filed Mar. 4, 1918. Serial No. 220,399. 6 Claims. (Cl. 179—18.)

1. In an automatic telephone system, line-searchers adapted to connect the caller's line to a calling line, automatically, upon the lifting of the receiver hook of the caller's line, registrators associated with the selected trunk and rendered operative by the lifting of said hook, selectors corresponding to the first figure chosen by the trunk line of the registrator, which selectors are actuated by the calling line when the first figure is formed, whereby the calling line is connected to a second free trunk line having a second selector or connector and the first registrator is rendered inoperative and a secondary registrator is inserted, the secondary registrator being thereafter operable to actuate the second selector similarly to the actuation of the first selector by the first registrator or to select in the connector a point corresponding to the called line and to connect the first trunk line that is served by the caller's secondary registrator with the called line, the secondary registrator being set free upon the making of said connection, and a group of magnets for each trunk leading to the connector, said magnets being operable to maintain the connection of the calling line with the called line and to break the connection if the called line is occupied.

1,390,730. SHEARS. HENRY A. W. SMITH, Chatham, Va. Filed Oct. 15, 1920. Serial No. 417,086. 2 Claims. (Cl. 30—13.)

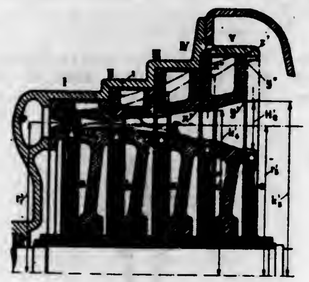


2. A pair of shears comprising a first blade; a tubular bushing mounted on the blade and having fingers at its end; a second blade mounted to swing on the bushing; a nut coöperating with the second blade, the nut having a bolt-receiving opening and being provided with seats communicating with the opening, the fingers being received in the seats with a tight driving fit, and being beveled at their ends thereby to avoid an inward bending of the fingers when the seats do not register exactly with the fingers during the mounting of the nut on the fingers; a bolt comprising a head coöperating with the first blade, the bolt being movable transversely in the bushing, to engage the nut, before the bolt is inserted completely into the bushing; and means for holding the bolt tightly in the bushing, when the bolt is advanced completely into the bushing.

1,390,731. DRILL-HOLDER. JOSEPH SPANELL, Hazleton, Pa. Filed Dec. 18, 1920. Serial No. 431,595. 2 Claims. (Cl. 77—60.)

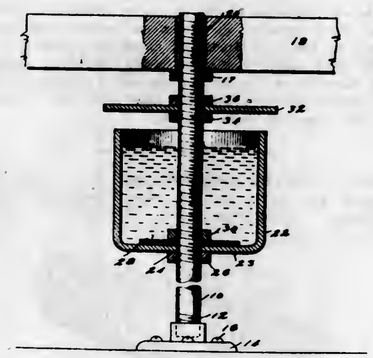
1. In an appliance of the character described, a chuck, a head stock engaging the chuck the latter being slidably movable on the said stock and means for holding a drill in the head stock, the said means including clamping blocks movable in the head stock and a handle having a screw feed connection with the head stock and connected with the clamping block therein.

1,390,732. AUTO-LICENSE HOLDER. PAUL J. SPEICHER, Gaston, Ind. Filed Oct. 25, 1920. Serial No. 419,270. 2 Claims. (Cl. 40—10.)



1. In a plate holder of the class described, adjustable, sectional protective end members entirely embracing the ends and a portion of the top and bottom of a plate, an adjustably mounted sectional supporting clamp having opposed, transverse grooves therein for said protective members and said plate, a vertical screw threaded bolt connecting said clamp sections and a locking bolt engaging the lower vertical wall of the clamp for positively locking said clamp sections.

1,390,733. CONSTRUCTION OF TURBINES. PAUL SPIESS, Zurich, Switzerland. Filed Jan. 2, 1920. Serial No. 349,035. 7 Claims. (Cl. 253—69.)



1. A series of steam- or gas- turbines of the multistage-, axial flow-, disk-, free-jet type, in which the largest turbine of the series has an output that is 2.5 to 5 times as large as that of the smallest turbine, comprising a standard casing of exactly the same dimensions for all the turbines

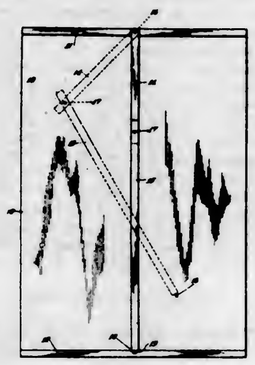
of the series, a plurality of guide wheels the passages of which have in the corresponding stages of all the turbines

of the series approximately the same inside diameter but different outside diameters according to the volumes of steam to be dealt with, and a plurality of runners.

1,390,734. INSECT-PROTECTOR. LEO WATSON STEVENS, Everett, Wash. Filed Oct. 18, 1920. Serial No. 417,550. 2 Claims. (Cl. 43—109.)

1. A device of the class described comprising a standard, a receptacle having a bottom provided with an opening slidably receiving the standard, a nut threaded on said standard and supporting said receptacle, means for providing a liquid-tight connection between said receptacle and said standard, a second nut mounted on said standard, a protecting disk supported by said nut, and arranged in spaced relation to the adjacent end of said receptacle, means coacting with said second named nut to secure said disk in position, and a supporting element adjustably carried by said standard.

1,390,735. TANNING. JOHN K. TULLIS, New York, N. Y., assignor to Fulcra Tan Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 24, 1918. Serial No. 255,477. 4 Claims. (Cl. 149—5.)



2. The process of tanning which comprises treating a hide with a solution of bichromate containing aluminum sulfate and magnesium sulfate, and then effecting reduction in the hide and tanning by treating wth a sulfite waste liquor material.

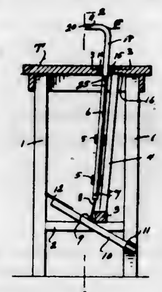
1,390,736. DISPLAY DEVICE, CHARLES W. WADSWORTH, Merrick, N. Y. Filed Aug. 14, 1920. Serial No. 403,528. 7 Claims. (Cl. 40—125.)

7. The combination with a flexible poster, of rigid edge members attached along opposite edges of the poster, and a folding thrust piece for spreading the edge members apart to hold the poster flat.

1,390,737. DISPLAY DEVICE. CHARLES W. WADSWORTH, Merrick, N. Y., assignor to T. Fred Moore, New York, N. Y. Filed Nov. 17, 1920. Serial No. 424,740. 5 Claims. (Cl. 40—125.)

1. The combination with a flexible poster, of edge members attached to opposite edges of the poster, and a foldable thrust piece, comprising a plurality of thrust members pivotally attached together, said thrust piece being permanently pivoted at one of its ends to one of the edge members and having its other end adapted to engage the other of said edge members so as to exert an outward thrust on said edge members when extended and to lie against the edge member to which it is pivoted when folded.

1,390,738. SOCKET-WRENCH. OWEN J. WILLIAMS, Orchard Park, N. Y. Filed Sept. 14, 1920. Serial No. 410,148. 3 Claims. (Cl. 81—118.)

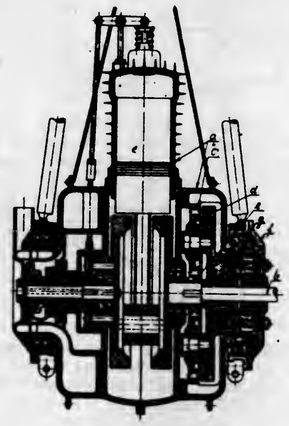


1. A socket wrench, comprising a casing including a threaded portion adjacent its inner end and having an annular series of recesses in its outer end, the walls of said recesses being beveled to form cam faces, a threaded rod screwed into the casing, said rod including an annular rduced portion forming a shoulder, an annular

series of jaws fulcrumed on the shoulder and coöperating to form a socket, beveled lugs on the jaws fitting the

recesses and engaging the cam faces, and a star spring carried by the rod engaging the inner faces of the jaws and tending to spread them apart.

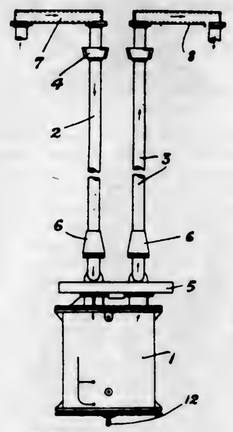
1,390,739. POTATO-CUTTER. ROBERT F. WILSON, Montrose, Colo. Filed Mar. 9, 1921. Serial No. 451,003. 3 Claims. (Cl. 146—7.)



1. A cutter of the class described comprising a table, a cutting element coacting with said table and including a shank having one end portion freely disposed through the table, the opposite end portion terminating in an extension, a cross member carried by the extension, and spaced springs carried by the table below the top thereof and between which the shank of the cutting element is guided.

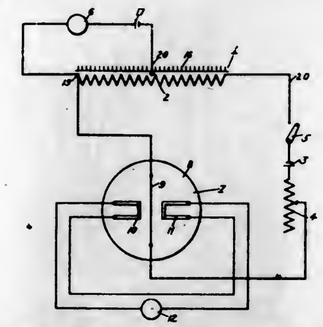
1,390,740. PROPELLENT BULK SMOKELESS POWDER. RICHARD G. WOODBRIDGE, Jr., Wilmington, Del. assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Dec. 11, 1919. Serial No. 344,244. 9 Claims. (Cl. 52—5.)

1. The process which comprises agitating a mixture of at least partially colloided bulk smokeless powder grains and graphite.



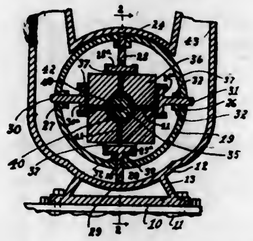
1,390,741. INTERNAL-COMBUSTION ENGINE. YRJÖ JOHANNES AALTONEN, Tampere, Finland. Filed May 29, 1919. Serial No. 300,690. 4 Claims. (Cl. 123—44.)

3. In an internal combustion motor, the combination of a non-rotating frame; a cylinder frame mounted to rotate on said non-rotating frame; a crank shaft mounted to rotate on said non-rotating frame independently of the cylinder frame; a gear on the crank shaft; planet gears meshing with said gear; a disk carrying said planet gears; an internal gear on the cylinder frame meshing with the planet gears; and a friction clutch connected to the non-rotating frame for rendering said disk non-rotating to cause the cylinder and crank shaft to rotate, the planet gears causing the direction of rotation of



the cylinder frame to be the opposite of the direction of rotation of the crank shaft.

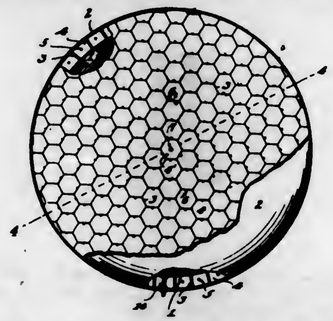
1,390,742. OIL-REFINING APPARATUS. HUGH LOGIE ALLAN, Ayr, Scotland. Filed Apr. 18, 1916. Serial No. 92,026. 1 Claim. (Cl. 196—5.)



An oil refining apparatus, comprising in combination a plurality of vaporizing units, uptake pipes extending from said units, downcomer pipes opening into said units and connections for connecting the uptake pipes of one unit to the downtake pipes of the adjacent unit, means for heating said units, and means for cooling said downcomer pipes, which comprises cooling liquid distributers surrounding the upper ends of said pipes, an anti-splash device disposed at the end of said pipes, and a collecting tray for collecting the cooling liquid.

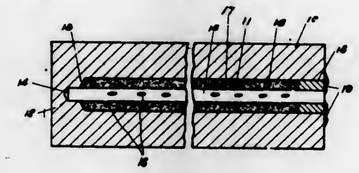
1,390,743. MEASURING DEVICE. CHESTER T. ALLCUTT, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 4, 1918. Serial No. 215,381. 8 Claims. (Cl. 175—183.)

1. A standard measuring device comprising a heater responsive to current, two dissimilar thermo couples subjected to the heater and a galvanometer connected in series with the thermo couples to determine when the couples develop equal thermal electromotive forces.



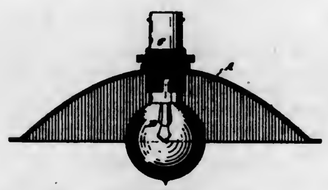
1,390,744. ROTARY PUMP. FRANK F. AMBROSE, Los Angeles, Calif., assignor to Union Steam Pump Company, Battle Creek, Mich., a Corporation. Filed Feb. 24, 1919. Serial No. 278,726. 4 Claims. (Cl. 103—44.)

1. In a rotary pump of the class described, a casing having an annular pumping chamber therein provided with inlet and outlet ports; a driven shaft eccentrically mounted in one of the heads of said chamber; a rotor in said chamber secured to said shaft, said rotor having slots therein; a plurality of pistons in said chamber, each piston comprising a pair of blades connected by a hollow hub and mounted to have the blades reciprocate in the slots of the rotor; a guide shaft mounted in the other head of said casing concentrically thereto; lugs secured to said blades with their opposed faces parallel; and a guide block revolubly mounted on said guide shaft in engagement with said lugs to guide said pistons and prevent the edges of the blades from contacting with the casing, said guide block contacting with said blades at the centers of said blades.



1,390,745. AIRCRAFT OF THE LIGHTER-THAN-AIR TYPE. LAVANDA M. ARMSTRONG, Peoria, Ill. Filed Nov. 24, 1919. Serial No. 340,328. 8 Claims. (Cl. 244—3.)

1. An air craft including in its construction an envelop made up of two spaced walls creating two separate compartments, a series of walls connecting the first named walls, arranged to form a series of cells throughout the space between the latter, one of said cells being a distributing cell, another of said cells being a relief cell at substantially the opposite side of the envelop from the distributing cell, and a valve in one of the walls of each of the cells lying between said distributing cell and said relief cell, adapted to open in the direction of and to communicate with said relief cell only, and to close in the

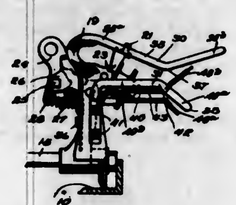


direction of the distributing cell for permitting passage of a gas from the latter through all of the cells into said relief cell.

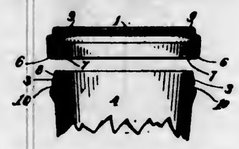
1,390,746. PROCESS OF MAKING CORED TUBULAR BODIES. PERCY A. E. ARMSTRONG, Loudonville, N. Y. Filed Jan. 17, 1919. Serial No. 271,612. 10 Claims. (Cl. 80—62.)

10. The process of making tubular bodies such as hollow drill rod and the like which consists in introducing into a longitudinally apertured billet a core comprising a metallic member surrounded by a substantially thick layer of weld-preventing material, elongating and reducing the cross section of the billet and core as by rolling, and withdrawing such member.

1,390,747. REFLECTOR FOR USE IN LIGHT-PROJECTORS. JOHN GRAEME BALSILLIE, Melbourne, Victoria, Australia, assignor to Flatlite Limited, Sydney, New South Wales, Australia, a Corporation of New South Wales. Filed Nov. 16, 1920. Serial No. 424,530. 6 Claims. (Cl. 240—41.)



2. A reflector for use in light projectors having its reflecting surface provided with corrugations parallel with one meridian.

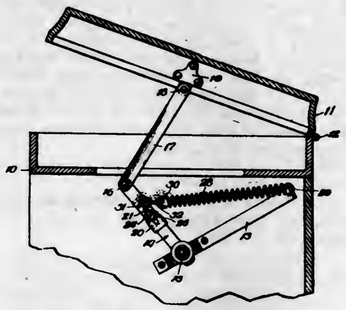


1,390,748. CHECK-HEAD FOR PLANTERS. PHILIP H. BAXTER, Corydon, Iowa, assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed July 18, 1917. Serial No. 181,384. Renewed Dec. 3, 1920. Serial No. 428,151. 17 Claims. (Cl. 111—47.)

8. In a planter, the combination with the check head frame, a seeder actuating device, and a fork for operating

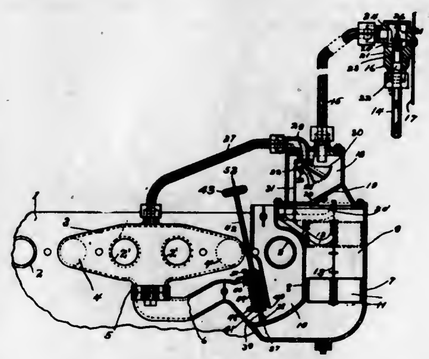
said device movable from an approximately vertical working position to an approximately horizontal wire-discharging position, of a guide having a laterally disposed passageway, said guide comprising two elements both stationary relatively to the frame, one above and the other below the said passageway for the wire, the lower element having a downwardly turned outer extremity and the upper element having an upwardly turned outer extremity, and the two elements being arranged as described whereby said passageway has an outer part which widens vertically outward and an inner part which widens vertically inward, and said fork when in its discharging position having its entrance in the vertically narrowed part of said passageway.

1,390,749. RECEPTACLE-CLOSURE DEVICE. ADOLPHUS E. BAYREUTHER, New York, N. Y. Filed July 19, 1919. Serial No. 312,028. 3 Claims. (Cl. 215—38.)



3. In a closure device for receptacles, a cup shaped member, a serrated edge formed thereon and a gasket ring held within the serrated edge.

1,390,750. WELL-DRILL SOCKET. EDGAR W. BELL, New Wilson, Okla. Filed June 12, 1920. Serial No. 388,437. 1 Claim. (Cl. 255—26.)



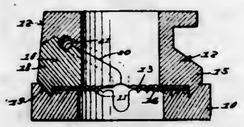
In a device of the class described, a barrel having means at one end for the attachment of a drill and formed with a bore opening through its other end and provided interiorly with a shoulder, the barrel being formed in its side with an opening communicating with its bore and located below the said shoulder, a cable coupling member insertible into the bore of the barrel through the said opening and having a shoulder to engage the shoulder of the bore, and means removably disposed within the opening and extending vertically longitudinally thereof to prevent loss of the said connecting member from the barrel through the opening, the said means comprising a rod having a threaded portion, and the said barrel at one end of the opening being provided with a threaded socket to receive the threaded portion of the rod.

1,390,751. LID-SUPPORTER. RAYMOND T. BELL, Chicago, Ill., assignor, by mesne assignments, to Jewett Phonograph Company, a Corporation of Michigan. Filed Jan. 3, 1921. Serial No. 434,499. 12 Claims. (Cl. 217—60.)

1. A lid supporter embodying a base adapted to be secured to a fixed support, an element pivotally connected with the base, a link pivotally connected by one end with said element and by its other end with the lid whereby when the lid is moved the elements will be moved about their pivots, a spring connected at one end to a fixed support, and an element adjustably carried by the first recited element and to which second recited element the other end of the said spring is connected.

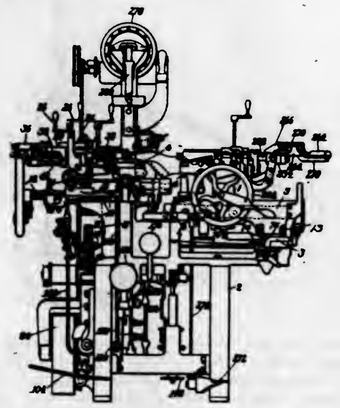
1,390,752. CARBURETER. THOMAS BEMIS, Indianapolis, Ind. Filed July 23, 1917. Serial No. 182,259. 7 Claims. (Cl. 158—36.)

1. A carbureter having a float chamber therein, a float suspended in said chamber, a fuel supply chamber in communication with said float chamber, means for connecting said supply chamber with a supply of fuel, means to produce a suction in said supply chamber for drawing fuel therein, a trap for stopping the suction action in said supply chamber, means extending into the path of



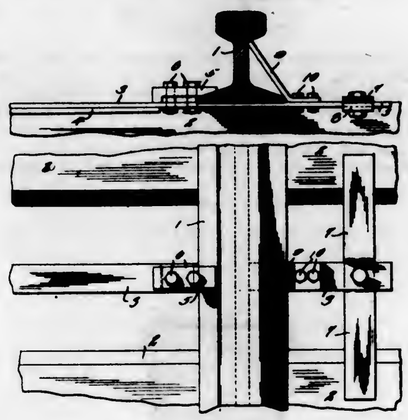
the fuel entering said supply chamber for moving said trap into closed position, and means operated by said float for moving the trap into open position.

1,390,753. SICKLE OR KNIFE. FREDERICK BERGMAN, Chicago, Ill., assignor of one-third to Amuel B. Spach, Chicago, Ill. Filed Oct. 4, 1919. Serial No. 328,474. 9 Claims. (Cl. 56—301.)



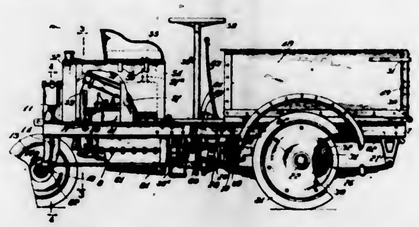
1. A sickle of the character described, comprising a head, a bar secured at one end to said head, a portion of said head being arranged to extend parallel with said bar and provided with an elongated slot disposed above said bar, a plurality of blades or sections formed to be slid onto said bar, the blades or sections at the head-end of the bar being provided on their upper faces with slots, removable keys adapted to extend into the slots in said blades and into the slot in said head and to be secured thereto, and means whereby the outer end blade or section is removably secured to said bar.

1,390,754. MOLDING-FLASK. FRANK M. BIGELOW, Jeannette, Pa. Filed July 9, 1920. Serial No. 394,081. 4 Claims. (Cl. 49—72.)



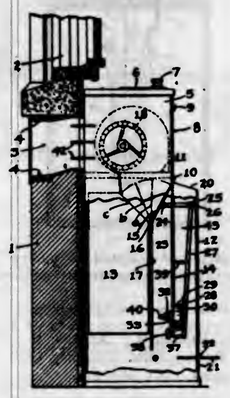
2. A flask for molding receptacles with attached handles having base and cap members provided with complemental rib forming faces, disposed in spaced relation with each other, the cap member comprising separable top and intermediate elements provided in their meeting faces with registering grooves forming complemental members of a handle molding channel.

1,390,755. LASTING-MACHINE. MATTHIAS BROCK, Boston, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 6, 1916. Serial No. 124,187. 134 Claims. (Cl. 12—14.)



1. A machine of the class described having, in combination, a last and shoe support, end embracing wipers constructed and arranged to embrace and wipe the upper at one end of a supported shoe over the lateral periphery of the last and over the edge of the shoe bottom, a power driven shaft, and operating connections from said shaft relatively to move the shoe support and wipers substantially perpendicularly to the plane of the shoe bottom to permit the wipers to be operated as described, said connections including a clutch member movable from a neutral position to a second position to cause said relative movement in one direction and movable to a third position for causing reverse relative movement.

1,390,756. RAILWAY-TIE BRACE. HOBBY C. BUNNELL, Westport, N. Y. Filed Feb. 4, 1921. Serial No. 442,436. 1 Claim. (Cl. 238—51.)



In a rail tie and brace, a sectional brace and tie extending under the rails and lying between the wooden ties, means for clamping the same to the rails, supporting members resting transversely on adjacent ties and having depressed offset portions adapted to receive the outer ends of the brace sections, and bracing means carried by the outer end portions of the said sections for engaging the underside of the rail ball at its point of juncture with the web, as and for the purpose set forth.

1,390,757. AUTOMOBILE-TRUCK. ROBERT J. BURROWS, Buchanan, Mich. Filed Nov. 14, 1918. Serial No. 262,550. 10 Claims. (Cl. 180—54.)

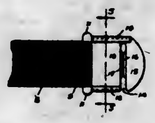
1. An industrial truck comprising a frame, means at the front end portion thereof for supporting the load to be transported, power driven front wheels, a motor mounted on said frame back of said load-supporting means, means operatively connecting the motor with said wheels, ground-engaging steering means at the rear portion of the truck, a driver's seat back of the load-supporting means, and means adjacent to the driver's seat for operating said steering means.

1,390,758. THERMOSTATIC CONTROL FOR DAMPERS FOR UNIT VENTILATORS. MICHAEL J. CALLAHAN, New York, N. Y. Filed May 13, 1920. Serial No. 381,109. 12 Claims. (Cl. 236—13.)

12. An apparatus for controlling the temperature of a room, consisting of a ventilating unit all the elements of which are installed in said room, and comprising a casing divided into a blower chamber, a heating chamber below the blower chamber, and an outlet chamber, and a by-pass chamber the latter being between the outlet and heating chambers; a damper mounted to swing between the heating and by-pass chambers and below the blower chamber; means within one of the chambers for actuating the damper; controlling means for the actuating means located in the room where the apparatus is installed, and means whereby the controlling means is operated by the temperature in the room of installation.

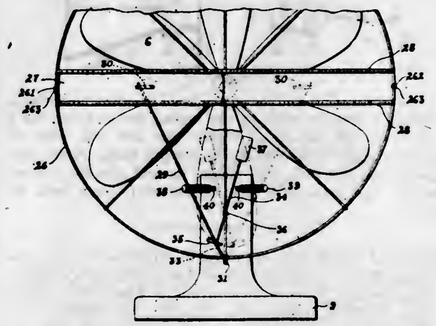
1,390,759. GAS-REGULATOR. BERNHARD G. CARLSSON, Los Angeles, Calif. Filed Apr. 19, 1921. Serial No. 462,742. 6 Claims. (Cl. 116—124.)

1. A gas regulator for motor propelled vehicles, including a dial having a semi-spherical central portion with indicia thereon, for visibly indicating the proper movement of the regulator and a flange surrounding said portion and also having indicia thereon, and an indicator pivotally mounted on said central portion and movable over the face of said dial for registration with said indicia, as described.



1,390,760. FRUIT-PICKER. CHARLES CHARNOPH, Omaha, Nebr. Filed Jan. 23, 1918. Serial No. 213,301. 2 Claims. (Cl. 56—339.)

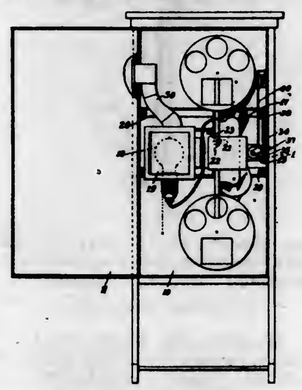
1. A fruit picker comprising a semispherical bowl, a chute leading from said bowl consisting of a rigid tubular member, a handle portion at the lower end of said tubular member, and a flexible tubular member secured to the lower end of the rigid tubular member and forming a continuation of the same, cutting means adjacent the



upper edge of the bowl, a lever pivoted to the rigid tubular member, and a connection between said lever and the cutting means, whereby the latter is operated.

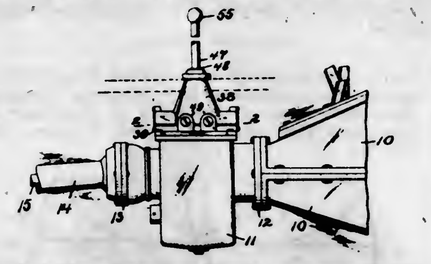
1,390,761. BUCKLE AND WRIST-STRAP. GEORGE CHRISTIANSEN, Omaha, Nebr. Filed May 3, 1920. Serial No. 378,550. 2 Claims. (Cl. 24—197.)

1. A buckle comprising a flat body portion having at one end means for connection with the end of a strap, laterally extending lugs at said end of the body, there being at the opposite end of the body a finger spaced therefrom to form a transverse slot open at one end, strap-engaging lips at each side of said transverse slot, and longitudinal inturned flanges at the sides of the body for the purpose described.



1,390,762. OSCILLATING FAN. PHILIPPE DE CLAMECY, Boston, Mass., assignor to B. F. Sturtevant Company, Hyde Park, Mass., a Corporation of Massachusetts. Filed Oct. 6, 1919. Serial No. 328,686. 9 Claims. (Cl. 230—1.)

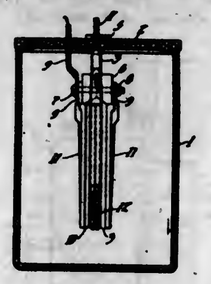
1. An oscillating fan having, in combination, a motor, a fan wheel, a support upon which the motor and fan wheel



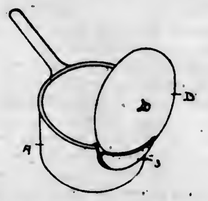
are arranged to oscillate, a vane mounted for rectilinear sliding movement upon the oscillatory element of the fan and normally arranged to obstruct the delivery of air from the fan wheel at one side only of its axis of rotation to effect the oscillation of the fan wheel, and means controlled by the oscillatory movements of the fan for sliding the vane so as to reverse the direction of oscillation of the fan.

1,390,763. MOTION-PICTURE APPARATUS. WILLIAM A. CONDON, Chatham, N. J. Filed July 18, 1917. Serial No. 181,217. 14 Claims. (Cl. 88—17.)

1. The combination with a cabinet of the portable type and provided with a projection aperture; of a motion picture machine inclosed by said cabinet, forming a unit therewith and movably retained therein to oscillate in a vertical plane for the purpose of positioning the lens of said machine relatively to said aperture to properly center the light projected therethrough.



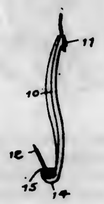
1,390,764. TRANSMISSION DEVICE. EUGENE L. CONORD, Elizabeth, N. J., assignor to Elizabeth Auto Parts Manufacturing Company, Elisabeth, N. J. Filed Dec. 27, 1920. Serial No. 433,327. 7 Claims. (Cl. 74—39.)



1. In a transmission, a shifting mechanism comprising a casing, a slide movable in the casing, the slide having a transverse slot therein, a center pin and end pins arranged to enter said slot, the center pin being on the side opposite the end pins, and means in said slot for moving the slide and capable of side movement to push back the pins.

1,390,765. GALVANIC BATTERY. HAROLD N. COX, Glen Ridge, N. J., assignor to New Jersey Patent Company, West Orange, N. J., a Corporation of New Jersey. Filed Apr. 12, 1919. Serial No. 289,645. 20 Claims. (Cl. 204—38.

1. A negative electrode for a galvanic battery comprising an element of depolarizing material having a layer of conducting material more electro-positive than said depolarizing material disposed therein intermediate the surfaces thereof which are adapted to oppose the positive electrodes of the battery, substantially as described.



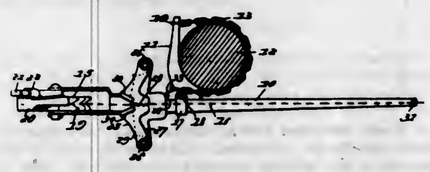
1,390,766. LID-HOLDER. ALBINA J. CUNNINGHAM, Bridgewater, Mass. Filed Oct. 24, 1919. Serial No. 332,895. 2 Claims. (Cl. 53—8.)

1. A detachable lid support for vessels comprising a pocket shaped to receive a lid and curved longitudinally to conform to the side of the vessel to which it is to be applied and having an inturned hook-like member on the upper edge of its inner wall to engage the edge of the vessel, the outer wall of said pocket being lower than the inner wall and more abruptly curved to space it laterally from said inner wall to form a pocket substantially V-shaped in cross section, the outer wall being slightly curved transversely.

1,390,767. FISHHOOK. FRED DAHLGREN, Strandburg, S. D. Filed Feb. 23, 1921. Serial No. 447,126. 2 Claims. (Cl. 43—54.)

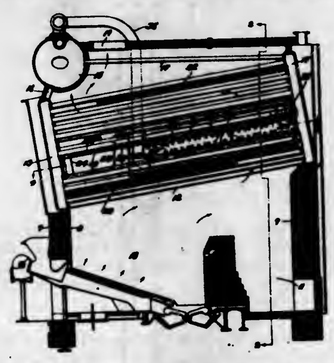
1. A fish hook comprising a body portion adapted at one end for engagement with a line, a hook member arranged adjacent the opposite end of the body portion and embodying a shank embedded in the body portion, said body portion being formed of relatively heavy material and comprising a sinker, said body portion being provided at the last named end thereof with an extension, said extension being formed of pliabe non-resilient material whereby said extension may be deformed to engage the end thereof with the hook at a point spaced from said body portion.

1,390,768. SUBMARINE MINE. HERBERT GROVE DORSEY, Dayton, Ohio. Filed Dec. 14, 1915. Serial No. 66,881. 6 Claims. (Cl. 102—8.)



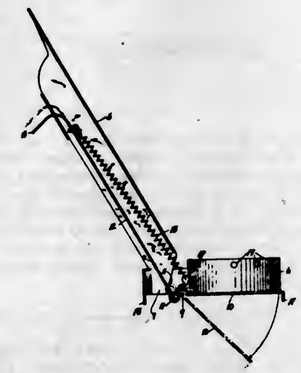
2. A submarine mine having an explosive charge, and control mechanism associated with the mine, said control mechanism comprising a source of electric energy and a circuit therefrom, contacts in said circuit, a plurality of resonator mechanisms controlling said contacts and operative only when subjected to vibrations of predetermined different frequencies for the different resonators, and means exposed to the water of submergence and serving to impart to the resonators submarine vibrations.

1,390,769. HOSE-SUPPORTER. SIMON EICHBERG, Chicago, Ill. Filed Nov. 29, 1918. Serial No. 264,608. 1 Claim. (Cl. 241—1.)



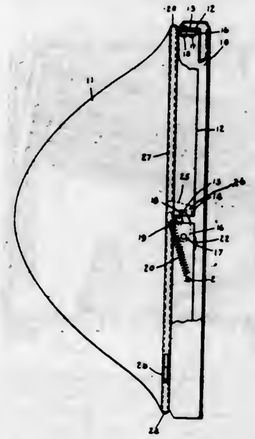
A hose supporter comprising a strip of elastic consisting of an inner wider strip and an outer narrower strip secured to the outer face of said wider strip; eyes arranged at intervals on the outer side of said narrower strip; a loop fixed to the lower end of said elastic; a laterally extending tongue also fixed to the lower end of said elastic and having a hook at its free end adapted to engage said eyes; a tensile element in the form of a strip of non-elastic material fixed to the lower end of said elastic strip; and a hose fastener at the lower end of said tensile element, substantially as described.

1,390,770. FENCE-WIRE STRETCHER. PATRICK H. FINNEGAN, Cresco, Iowa. Filed Nov. 13, 1920. Serial No. 423,774. 4 Claims. (Cl. 254—163.)



1. A fence wire stretcher having a shank provided intermediately of its length with a transverse bearing arm for contact with a post, and having terminally arranged wire stretching and guiding means, said bearing arm being selectively attachable to the shank at either side thereof.

1,390,771. SUPERHEATED-STEAM BOILER. EDWARDS. RUSSELL FISH, Phoenixville, Pa. Filed Apr. 1, 1919. Serial No. 286,806. 6 Claims. (Cl. 122—478.)



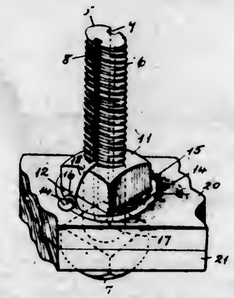
1. A superheated steam boiler including a casing having an opening in its side extending in the direction of the depth thereof; superheater headers spaced one above the other and having an open space therebetween in alinement with said opening, said headers extending in the direction of the depth of the boiler adjacent said side thereof; and superheater tubes connected to said headers and extending into said casing through said opening transversely to the depth thereof, said superheater tubes adjacent their points of connection with the respective headers being bent at diverging angles and joining opposed slanting portions of said headers, said opening being of sufficient length in the direction of the depth of the boiler to permit tubes when detached from said headers to be removed at a slant between the headers in the plane of and outward through said opening into a comparatively narrow space adjacent said side of the casing; substantially as described.

1,390,772. EGG-POACHER. ALFRED FONTAINE, Bridgeport, and CHARLES VINCENT, New Haven, Conn. Filed Mar. 18, 1921. Serial No. 453,350. 3 Claims. (Cl. 53—1.)

1. An egg poacher comprising rings suitably connected together and provided with an upwardly-extending handle, a hinged-plate adapted to close the bottoms of said rings, a rod connected with said plate and extending upward through said handle and provided with a finger-piece, by which the plate may be moved, and a spring tending to hold the plate against the lower edges of the said rings.

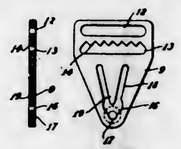
1,390,773. LATCH FOR LAMP CONSTRUCTION. HARRY C. FOSTER, Connersville, Ind., assignor to Indiana Lamp Company, Connersville, Ind. Filed July 6, 1920. Serial No. 394,220. 8 Claims. (Cl. 292—198.)

1. A latching device for a lamp construction comprising a rim having a slot therein, a second rim to be latched thereto having a pin receivable by said slot, a U-shaped lever pivotally supported intermediate its axis and adjacent the slot and movable by the pin into position to retain said pin therein, and a spring secured at one end to the end of one of the arms and at the other end to said first mentioned rim, whereby said lever will be yieldingly held in latched or unlatched position thereby.



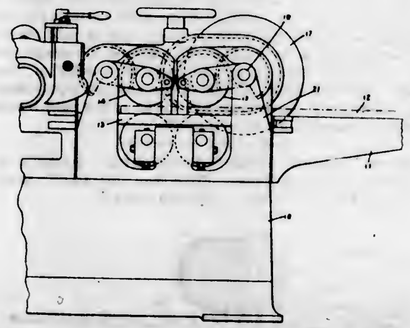
1,390,774. KEY-BASE FOR PLASTIC MATERIAL. JONATHAN O. FOWLER, New York, N. Y. Filed Sept. 21, 1918. Serial No. 255,197. 8 Claims. (Cl. 20—13.)

1. In a device of the class described, a base comprising a sheet of felt having a group of spaced wires disposed in parallel relation on one face thereof and a second group of spaced parallel wires on the opposite face of said sheet, but running in a different direction from those of the first named group, there being spaced perforations in said sheet at points coinciding with the crossing of the wires of the two groups, and solder uniting the crossing wires at said perforations.



1,390,775. NUT-LOCK. CHARLES FAITZ, Baltimore, Md. Filed Apr. 15, 1920. Serial No. 374,136. 1 Claim. (Cl. 151—4.)

The combination with a threaded bolt having longitudinal grooves at diametrically opposite sides and provided with a cross passage through the bolt body from one groove to another, of a washer-plate having perforations therein; a nut on the bolt, and a wire extending through the cross-passage of the bolt with its ends bent laterally and extending through the longitudinal grooves, said wire end bent outwardly from the opposite grooves and over



and around the nut and said wire-ends being engaged in the perforations of the washer plate.

1,390,776. CORSET-CLASP. GEORGE W. GARDNER, Bridgeport, Conn. Filed Mar. 1, 1921. Serial No. 448,781. 1 Claim. (Cl. 24—224.)

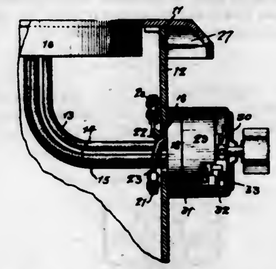
A sheet metal clasp having means for attachment to a garment and an opening of general circular configuration to receive the head of a stud, said opening having in its side farthest from said means for attachment a relatively small pocket of general semi-circular configuration, and a tongue tapered both as to thickness and width, extending into the circle of said opening for a distance about equal to the depth of said pocket, said tapered tongue being in the plane of said clasp and being defined by diverging slots cut in said metal.

1,390,777. FEEDING DEVICE. MONTE B. GATHMAN, Shelbyville, Ind., assignor to Anton Vonnegut, Indianapolis, Ind. Filed Aug. 20, 1920. Serial No. 404,776. 9 Claims. (Cl. 144—247.)

1. A self contained feeding mechanism for molding machines and the like, including a platform upon which the material is fed into the machine, two adjacent pairs of superposed rollers between which the material is adapted to pass, means for pivotally supporting a pair of opposite feed rollers, said pivotally supporting means being arranged to extend toward each other to maintain said feed rollers in substantially tangential relation and in close approximation to each other and the other feed rollers for engaging and feeding short stocks of material, and means for driving said feed rollers.

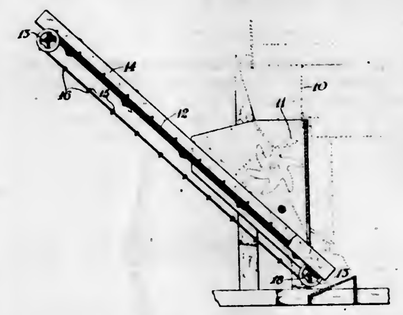
1,390,778. HAIR-ORNAMENT ATTACHMENT. ISAAC GOLDMAN, New York, N. Y., assignor to Hyman & Oppenheim, New York, N. Y., a Corporation of New York. Filed Mar. 16, 1921. Serial No. 452,658. 4 Claims. (Cl. 132—53.)

4. The combination with a hair piece having a woven anchor end portion and a hair ornament constituting the sole means to fasten the hair piece in wearing position, of means to fasten the hair piece to the ornament comprising a flat plate of thin strong material stitched directly to the anchor end portion of the hair piece, and a film of cement serving to secure the anchor plate directly and permanently against the inner surface of the ornament, substantially as set forth.



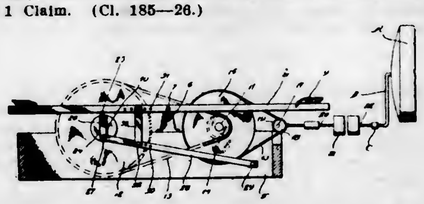
1,390,779. ELECTRICAL APPARATUS HAVING WINDINGS. JOSEPH GOODMAN, Hayes, England. Filed Nov. 20, 1917. Serial No. 202,955. 7 Claims. (Cl. 175—30.)

1. In electrical apparatus, a pair of winding sections and electric stress quenching means alone connecting said sections in direct series relationship, there being consequently no circuit between the sections except that due to the said quenching means.



1,390,780. ELECTRIC-RANGE SWITCH. GILBERT W. GOODRIDGE, Bridgeport, Conn., assignor to The Bryant Electric Company, Bridgeport, Conn., a Corporation of Connecticut. Original application filed Oct. 5, 1917, Serial No. 194,932. Patent No. 1,323,047, dated Nov. 25, 1919. Divided and this application filed Sept. 29, 1919. Serial No. 327,066. 5 Claims. (Cl. 219—35.)

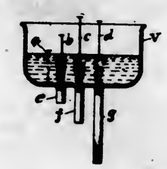
1. The combination with an electric range having a front wall and overhanging top, of an electric switch having a base supported in protected position on said front wall below the overhang, main and branch terminals on the outer face of said base, and an independent switch body



adapted to be secured to said base and having switch terminals adapted to be electrically connected to the corresponding main and branch terminals on the base, substantially as described.

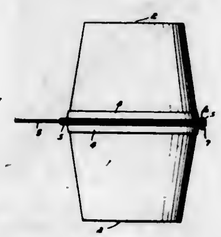
1,390,781. TAILINGS-SEPARATOR. FRANK HAMACHEK, Kewaunee, Wis. Original application filed Aug. 20, 1915, Serial No. 46,445. Divided and this application filed Nov. 19, 1917. Serial No. 202,785. 4 Claims. (Cl. 130—30.)

1. In a pea separator, an inclined conveyer receiving tailings from the drum of the pea separator and comprising an upwardly traveling chaff supporting separating apron, slats on the underside of the apron, and narrow fingers projecting upwardly from the slats through the apron, the apron between the fingers being free from obstruction to form smooth inclined surfaces to permit the peas to roll thereon.



1,390,782. AIR-PUMP. MOSES H. HAMILTON, Forrest City, Ark. Filed Dec. 3, 1919. Serial No. 342,111. 1 Claim. (Cl. 185—26.)

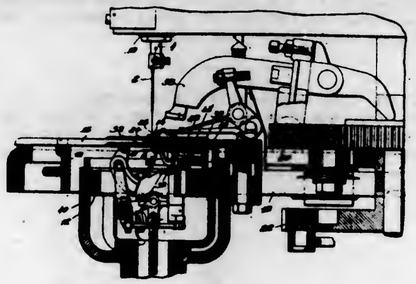
In a motor, a base, spaced transverse shafts journaled upon said base, a pedestal rising from the base, a see-saw beam mounted upon the pedestal, a large sprocket gear fixed to one of the shafts, a relatively small sprocket



gear fixed to the other shaft, an endless sprocket chain trained over the gears, a disk formed on the shaft having the larger gear, a wrist pin mounted eccentrically in the disk and having a link, a swinging lever pivoted at its end to the base and link, respectively, and an adjustable connection between the beam and lever.

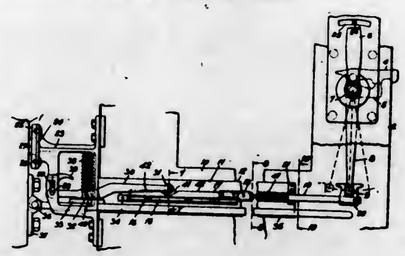
1,390,783. METHOD OF AND APPARATUS FOR TRANSMITTING HEAT. CARL HERING, Philadelphia, Pa. Filed July 17, 1916. Serial No. 100,648. 5 Claims. (Cl. 257—1.)

1. The method of heating a liquid to desired temperature by a hot gas, which consists in transmitting the heat from the gas to the liquid through solid thermal resistances of such magnitudes that they assume at their fire ends a temperature approximately mid way between the temperature of the hot gas and the desired temperature of said liquid, substantially as described.



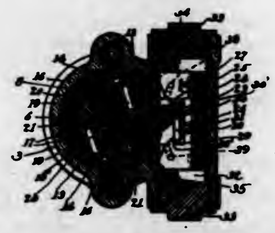
1,390,784. PACKAGE. CLAUDE M. HERRINGTON, St. Louis, Mo. Filed Mar. 12, 1921. Serial No. 451,928. 2 Claims. (Cl. 220—4.)

1. The combination in a package, of two hollow tapered elements having lateral opposed flanges at their large ends, a packing implement and gasket interposed between the large ends and flanges of said elements and separating the contents of one element from the contents of the other, said packing implement and gasket having a handle disposed laterally to the package and projecting an appreciable distance therefrom, and means detachably connecting the flanges and securing the packing implement and gasket between the large ends of the elements.



1,390,785. SEWING-MACHINE. GEORGE S. HILL, Strafford, N. H., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Jan. 28, 1915, Serial No. 4,838. Renewed July 9, 1919. Serial No. 309,778. 11 Claims. (Cl. 112—252.)

1. A buttonhole sewing machine, having, in combination, a work clamp, stitch forming mechanism comprising an upper needle and a complementary under thread mechanism, rotary supports in which the stitch forming mechanism is mounted, means for severing the upper needle thread at the completion of the buttonhole, means for gripping the free end of the upper needle thread below the work during the initial stroke of the needle

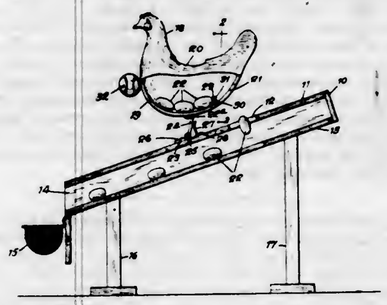


at the beginning of a buttonhole, and mechanism for relatively actuating the stitch forming mechanism and work clamp to sew about a buttonhole.

1,390,786. DOOR-HOLDER. CHARLES P. HOWARD and FRANK E. HOWARD, Hartford, Conn., assignors to James L. Howard & Company, Hartford, Conn., a Corporation of Connecticut. Filed Jan. 22, 1919. Serial No. 272,581. 16 Claims. (Cl. 292—254.)

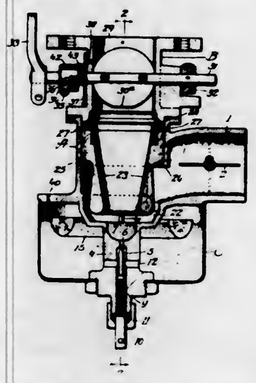
1. The combination with a door and its operating handle, of a substantially inclosed holding device adapted to hold the door at intermediate positions in its movement, including a brake bar extending into a casing carried by the door, a holding device in said casing, and connecting means between the said device and the said handle whereby the latter in the performance of its door moving functions also controls the operation of the said inclosed holding device.

1,390,787. DRILLING-MACHINE. CHARLES A. HULTQUIST, Los Angeles, Calif. Filed Aug. 26, 1918. Serial No. 251,415. 2 Claims. (Cl. 121—7.)



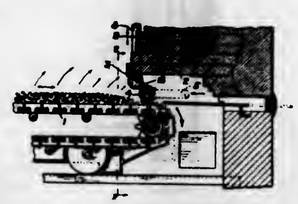
1. In a drilling machine, a head having a plunger chamber, a bushing journaled in the head and adapted to engage a drill steel, a plunger in the plunger chamber having a recess in one side thereof with a flat face, a ring journaled in the head and having an arm extending into the recess in the plunger, means to cause a step-by-step rotation of the bushing when the ring is turned, one side face of the arm and of the recess being grooved, the arm having a boss convex in cross section bearing against the flat face of the recess, a toggle having rounded edges inserted in the grooves respectively, and means to admit compressed fluid alternatively to opposite ends of the plunger chamber to reciprocate the plunger.

1,390,788. METHOD OF PREPARING GELATIN TUBES FOR MEDICINAL PURPOSES. SUMIYUKI IKEDA, Tokyo, Japan, assignor to Tomoda Goshi Kaisha, Tokyo, Japan, a Corporation of Japan. Filed Feb. 3, 1919. Serial No. 274,702. 1 Claim. (Cl. 118—58.)



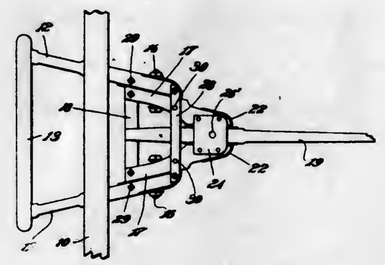
A method of preparing a hollow gelatin rod for introducing a medicinal substance into the urethra, in which a rod is oiled with castor oil and dipped into a warm gelatin solution which is then dried and the hollow gelatin body is subsequently drawn off the original rod.

1,390,789. AMUSEMENT DEVICE. ST. CHARLES JACOBS, Brooklyn, N. Y. Filed Mar. 16, 1920. Serial No. 366,233. 8 Claims. (Cl. 124—15.)



1. An amusement device, comprising a receiver, and a target having a hollow body for holding a prize as well as having an inlet and an outlet, and a spring actuated hinge yieldingly mounting the target on the receiver whereby it will when struck by a missile be tilted for causing the prize to be discharged through the outlet of the body of the target into the receiver.

1,390,790. CARBURETER. JACK W. JOHNSON, Winnetka, Ill. Filed Feb. 9, 1920. Serial No. 357,272. 3 Claims. (Cl. 261—41.)

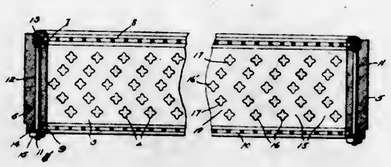


2. In a device of the character described, a constant level chamber, a mixing chamber, the floor of said chamber being substantially at the same level as the surface of the liquid in the constant level chamber, a well formed in the floor connected at its bottom with the constant level chamber, a throttle valve in the outlet of the mixing chamber, a Venturi tube in the mixing chamber with its lower end raised above the floor of the mixing chamber and surrounding the well and spaced from the walls of the mixing chamber, an auxiliary duct extending from a point adjacent the bottom of the well to a point in the outlet of the mixing chamber slightly beyond the throttle valve and an air inlet communicating with said auxiliary duct.

1,390,791. WATER-BACK FOR STOKERS. HOWARD J. KERR, Bayonne, N. J., assignor to the Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Filed Dec. 8, 1917. Serial No. 206,145. 10 Claims. (Cl. 122—4.)

1. A steam boiler furnace comprising a stoker, a bridge wall, and a plurality of water boxes set above the rear of the stoker, each upper box being placed above and in advance of the one immediately beneath it, the lower part of the upper box being below the top of the next one beneath and the distance between the boxes being such that the upper box protects the top of the lower box from the radiant heat of the fire bed.

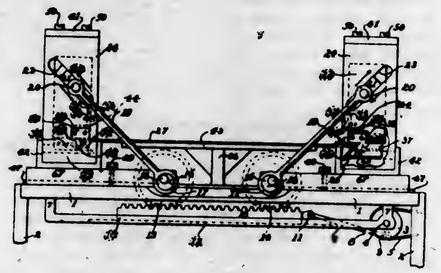
1,390,792. WAGON-TONGUE. JESSE C. KITTERMAN, Corydon, Ind. Filed Mar. 31, 1919. Serial No. 286,225. 3 Claims. (Cl. 278—86.)



1. An attachment for rigidly connecting a tongue with vehicle hounds, comprising forwardly convergent yoke sides adapted to removably and slidably receive a tongue between them, means for holding the tongue against removal, members secured transversely of the tongue and yoke sides at different points longitudinally thereof and beyond which latter they project laterally and to the upper and lower faces of which yoke sides they are respectively secured, and separate means carried by the yoke sides at points between the transverse members, for attaching the yoke sides to hound members between which they may be disposed.

1,390,793. OIL-TRAP FOR WELLS AND PIPE-LINES. JESSE T. KYLE and VERNON W. RUSSELL, Brea, Calif. Filed Mar. 15, 1920. Serial No. 366,457. 7 Claims. (Cl. 166—16.)

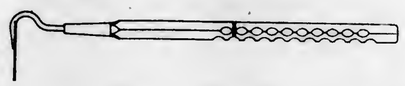
1. An oil trap for the purpose described having separable members adapted for attachment to a well tubing, and provided with a recepticle for receiving the oil and an inclined surface for draining the oil from said tubing into said receptacle.



1,390,794. AUTOMOBILE-RADIATOR. GEORGE L. LAKE, New Market, Iowa, assignor of one-half to Elmer C. Eighmy, New Market, Iowa. Filed July 15, 1920. Serial No. 396,394. 2 Claims. (Cl. 257—129.)

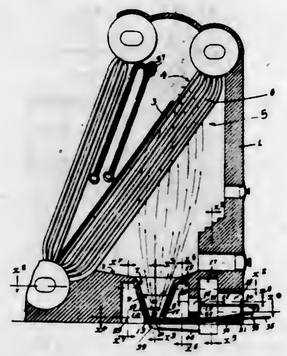
1. An automobile radiator, having a front plate, a rear plate, upright radiator tubes arranged in inclined series, each series having a central bend and angularly disposed branches, and a hollow top and a hollow bottom having communication with said tubes, side frame pieces connecting said top and said bottom, said tubes being of sheet metal and having longitudinal joints all accesible from the front and rear of the radiator upon removal of the front and of the rear plate.

1,390,795. APPARATUS FOR FORMING BOX-CORNERS BY CREASING. BERTHOLD A. LANGE, St. Louis, Mo. Filed Nov. 22, 1920. Serial No. 425,652. 14 Claims. (Cl. 93—58.)



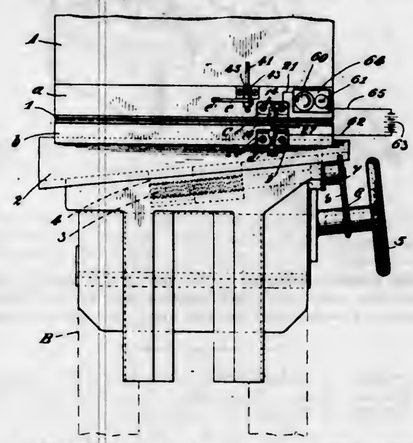
1. In a machine of the character described, the combination of a table, a carriage, guides therefor, a cradle, a block within the said cradle and bearing a female die, a vertically and slantingly movable male die having a projection, and a member adjacent to the same and containing an oblique slot in which the said projection is adapted to move.

1,390,796. PRODUCTION OF TANNIC ACIDS AND EXTRACTS. FRANK LANGFORD, Eureka, Calif. Filed Oct. 2, 1917. Serial No. 194,331. 1 Claim. (Cl. 167—4.)



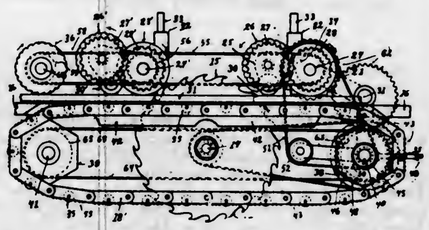
The process of extracting tannins and soluble wood substances from the wood of the *Sequoia sempervirens* and other tannin bearing woods, which process consists in making comminuted wood with pulverised aluminous earths, adding a moistening medium, injecting sulfur gases, injecting air, heating the mixture under pressure greater than atmospheric pressure, and leaching and separating the liquid portion with the material taken up thereby from the insoluble residue.

1,390,797. HOE-HANDLE. CHARLES WILLIAM LEA, Toronto, Ontario, Canada. Filed Nov. 5, 1920. Serial No. 422,071. 1 Claim. (Cl. 55—101.)



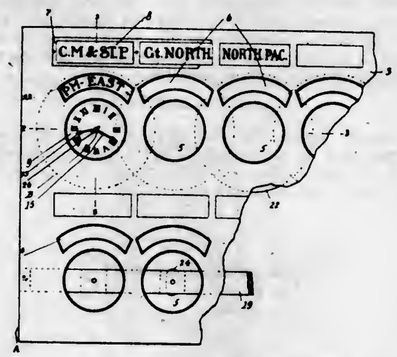
The combination with a hoe, of a handle square in cross section, as distinguished from a handle circular in cross section, with finger rests cut on three edges thereof.

1,390,798. FURNACE. HERBERT V. LEAHY, Los Angeles, Calif. Filed Mar. 15, 1920. Serial No. 365,869. 2 Claims. (Cl. 158—4.)



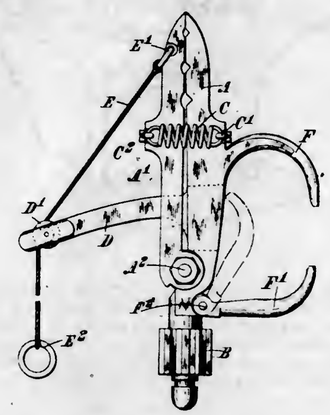
1. In a furnace, means forming a combustion chamber, burners discharging fuel upwardly into the combustion chamber, and walls between adjacent burners, the walls separating adjacent burners having their exposed faces extending aslant upwardly toward each other and there being flues between adjacent walls and that there being ports in the walls opening communication between the flues and the spaces occupied by the burners.

1,390,799. MICROMETER-ADJUSTER FOR EMBOSSING-PRESSES. JULIUS DANIEL LIPPMANN, New York, N. Y., assignor to Emil Weinheim, New York, N. Y. Filed Apr. 18, 1921. Serial No. 462,220. 3 Claims. (Cl. 101—407.)



1. Adjustable setting mechanism for presses comprising in combination relatively movable compression jaws; a pressure plate carried by each said jaw; parallel motion means for adjusting the position of one of said pressure plates relatively to a compression jaw; an abutment contact fixed relatively to one of said pressure plates; and a graduated gage having an adjustable contact adapted to coöperate with said abutment contact, said gage being fixed to said adjustable pressure plate.

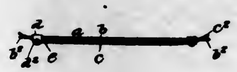
1,390,800. FEEDING MECHANISM. GEORGE LITTLEFORD, Fort Thomas, Ky. Filed Mar. 1, 1920. Serial No. 362,468. 6 Claims. (Cl. 144—246.)



1. In combination with a tool to operate upon the stock, a feed belt means on which the stock is supported and fed past the tool, means to engage the opposite face of the stock from the feed belt means to hold the stock in feeding engagement with the feed belt means, a movably mounted and positively driven reverse feed member to feed a primary stock member back in a reverse direction to an operator as soon as the primary stock member and severed stock member have been severed by the tool, and means actuated by the movements of the severed stock member to shift said reverse feed member into and out of position to engage with said primary stock member.

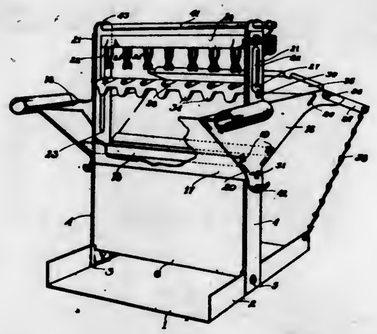
1,390,801. TIME-INDICATING DEVICE. WILLIAM A. LYONS, Litchfield, Minn. Filed Dec. 4, 1920. Serial No. 428,266. 2 Claims. (Cl. 116—131.)

2. A device of the class described, comprising, a plate, a plurality of spaced indicating devices, arranged in rows on said plate, said devices overlapping each other, each device comprising a clock dial secured over an aperture in said plate so as to be visible from in front of said plate, a spindle revoluble by hand from in front of said dial, said spindle journaled in the center of said dial and disposed perpendicular to the face thereof and extending through and beyond the rear side of the dial, clock hands held frictionally revoluble on the spindle in front of said dial, an aperture in said plate above said dial, a disk positioned concentric with said spindle to the rear of said dial and extending over said aperture, and adjustable holding means engaging said spindle and disk whereby the disk may be held positioned at any arbitrarily selected position longitudinally of said spindle.



1,390,802. ARTIFICIAL HAND. PETER MURRAY MCKAY, London, England. Filed Aug. 4, 1920. Serial No. 401,111. 3 Claims. (Cl. 3—12.)

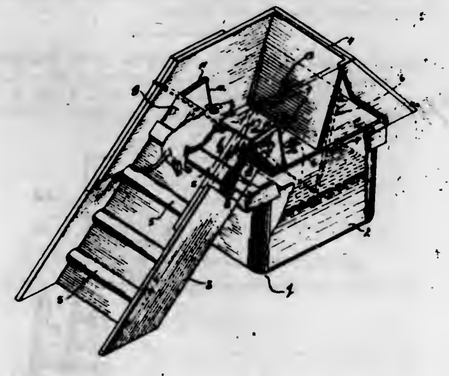
3. An artificial hand comprising in combination a socket for engagement with an artificial arm, a finger fixed thereto and extending longitudinally therefrom, a second finger hinged to the first and spring controlled to coöperate therewith, a gripping extension secured to the fixed fingers having its bearing face directed backwardly along



the limb away from the fingers, and a second gripping extension hinged to the fixed finger so as to swing in the plane of the other gripping extension its bearing face being toward that of the fixed arm and arranged so that in one limit of its movement it lies extended opposite the fixed gripping extension and forms an opening into which an article to be gripped can be introduced, and at the other limit of its movement lies in such position that the fixed gripping member is freely exposed.

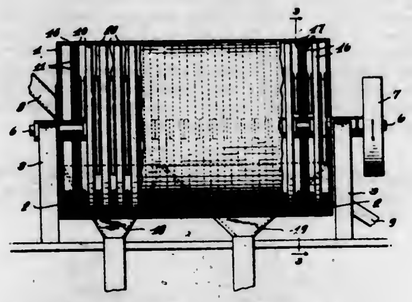
1,390,803. HAIR-CURLING DEVICE. DAVIS MARINSKY, New York, N. Y., assignor to David Horowitz, Brooklyn, N. Y. Filed Mar. 18, 1921. Serial No. 453,419. 5 Claims. (Cl. 132—41.)

5. A hair curling device of the class described comprising two strips of suitable material, a slide mounted on one of said strips and movable longitudinally thereof and to which one end of the other strip is hinged, the strip on which the slide is mounted, and said slide being provided with means at the end portions of said strip to limit the longitudinal movement of the slide, and said strips being provided with means whereby they may be engaged and disengaged at one end of the device when the slide is at or adjacent to the other end thereof.



1,390,804. CHERRY-PITTING MACHINE. CHARLES H. MARSHALL, Omaha, Nebr., assignor to Marshall Manufacturing Company, Omaha, Nebr., a Corporation of Nebraska. Filed Dec. 13, 1920. Serial No. 430,197. 13 Claims. (Cl. 146—5.)

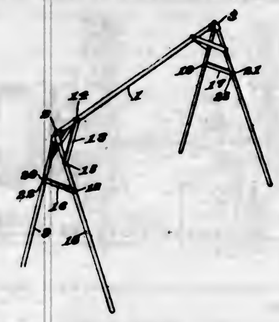
1. In a device of the class described, in combination, a pair of standards having openings therein, a channeled member positioned between said standards, a flexible strip lying within the channel of said member, and an elongated member overlying said flexible strip and having its ends extending into the openings in said standards.



1,390,805. ANIMAL-TRAP. JOSEPH MICHALCZAK, Highland Beach, N. J. Filed Aug. 11, 1920. Serial No. 402,783. 2 Claims. (Cl. 43—69.)

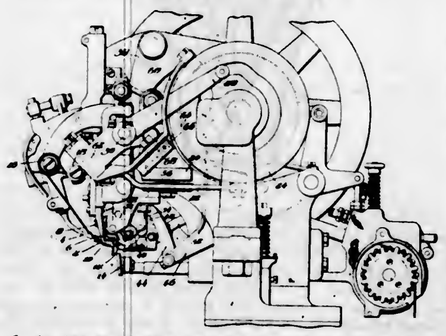
1. An animal trap comprising a tank, a frame mounted upon said tank, a trap door communicating between said frame and said tank, a ladder rising to said tank, a recess having a shoulder above the topmost step of said ladder, a plate normally resting in the mentioned recess, said plate

being pivotally attached to the top of said ladder, arms extending from said panel adjacent said pivotal attachment, and cords connecting said arms with said trap door.



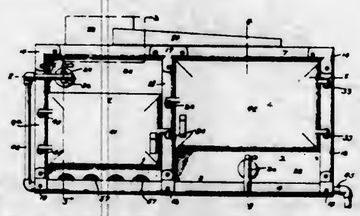
1,390,806. GRAIN-SEPARATOR. ALBERT H. MILLER, Miltona, Minn. Filed July 11, 1921. Serial No. 483,937. 9 Claims. (Cl. 130—18.)

1. A grain separator comprising a container for the grain, a shaft extending therethrough, and having an inlet at one end of said container, and an outlet at its opposite end, a plurality of disks mounted on said shaft, said disks being provided with a plurality of cylindrical recesses or pockets, each pocket having an inclined side, the disks adjacent the inlet end of the container being provided with smaller pockets than those adjacent the outlet end of the container.



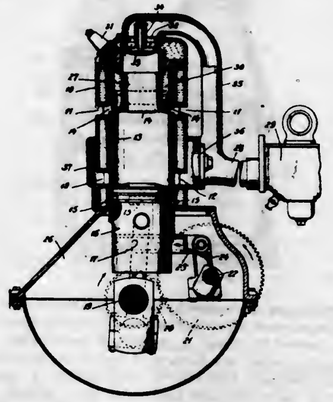
1,390,807. PORTABLE SUPPORT. HARRY MINTZ, Boston, Mass. Filed June 3, 1920. Serial No. 386,334. 3 Claims. (Cl. 5—32.)

1. In a folding hammock support, in combination, a transverse frame member, a socket member carried thereby and having a substantially circular socket, a leg detachably engaging with the socket in said socket member, and a brace member pivotally and permanently connected at its opposite extremities to said frame member and leg respectively, said socket being constructed and arranged to



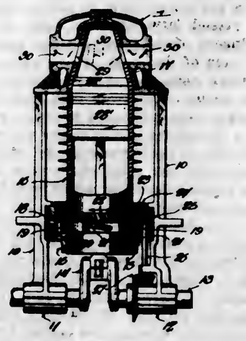
permit said leg to be withdrawn therefrom by swinging said leg in a plane parallel to that of the brace.

1,390,808. INSEAM SEWING-MACHINE. ALFRED B. MORRILL, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Mar. 23, 1918. Serial No. 224,328. 6 Claims. (Cl. 112—35.)



1. An inseam sewing machine, having, in combination, stitch forming and work guiding devices including a channel guide and a needle mounted to oscillate about an axis slightly inclined to the line of feed.

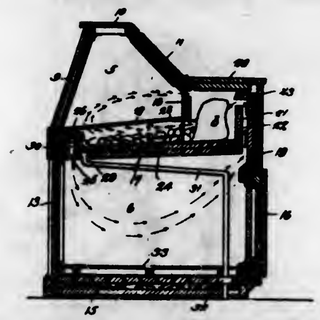
1,390,809. GAS-RANGE. ABRAM C. MOTT, Jr., and ALBERT J. MEYER, Philadelphia, Pa., assignor to Abram Cox Stove Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed July 1, 1919. Serial No. 307,980. 5 Claims. (Cl. 126—39.)



1. The combination in an overhead structure for gas ranges, of a frame consisting of bottom, top, and end plates, all having heavy rolled rims at the front and forming braces to stiffen the structure; and a central division plate of sheet metal, also having a heavy rolled rim at the front; and two cast metal plates, one plate forming part of the front of the oven structure and the other forming part of the front of the broiler structure, the said plates being located back of the vertical rims and having projections extending through the perforations in the rims; and doors hung on the projections.

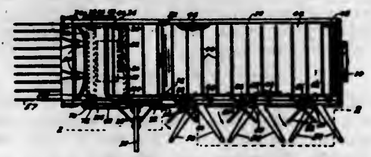
1,390,810. INTERNAL-COMBUSTION ENGINE. ALDEN E. OSBORN, New York, N. Y. Filed Aug. 7, 1917. Serial No. 184,793. 18 Claims. (Cl. 123—75.)

2. An internal combustion engine comprising a cylinder, a reciprocatory piston, a main inlet and an exhaust port in said cylinder, a sleeve valve for controlling said ports, a piston adapted to coöperate with the sleeve valve in opening said main inlet port, a cylinder head having an auxiliary inlet port adapted to be opened in advnce of the main inlet port, means for controlling the opening and closing of said auxiliary inlet port independently of the sleeve valve, and means for operating said sleeve valve from the piston to cause the sleeve valve to move over one extreme of its travel during the compression stroke of the piston, to move over the other extreme of its travel during the exhaust stroke of the piston and to pass through the intermediate parts of its travel during the suction and power strokes of the piston.



1,390,811. INTERNAL-COMBUSTION ENGINE. RALPH T. OSMAN, Ashland, Wis., assignor of one-half to Elliott W. Sparling, Ashland, Wis. Filed Nov. 9, 1920. Serial No. 422,859. 8 Claims. (Cl. 123—80.)

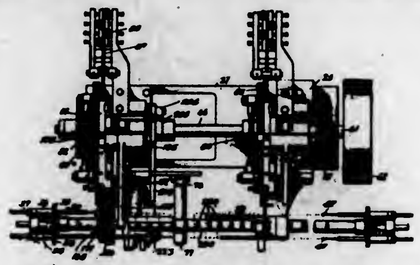
1. In an engine of the character described, a head provided with a tapered bearing, a cylinder journaled in said



bearing, means for rotating one of said members and a yieldable connection between said means and said rotated member, said connection including a cam for urging the cylinder into said tapered bearing.

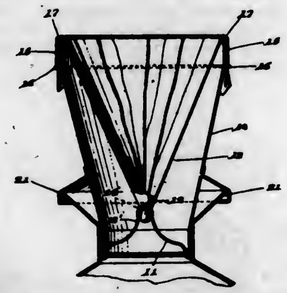
1,390,812. REFRIGERATOR-SHOWCASE. REUBEN E. OTTENHEIMER, Baltimore, Md. Filed Mar. 29, 1921. Serial No. 456,772. 1 Claim. (Cl. 62—37.)

A refrigerator show-case having upper and lower display-compartments and a refrigerant-compartment therebetween having, toward its front, a restricted water-outlet to said lower compartment, the bottom of said refrigerant-chamber being downwardly inclined to said outlet, a removable, foraminous shelf disposed above the front portion of said bottom and inclined correspondingly thereto, a vertical partition between the rear end of said shelf and the top of said refrigerant-chamber, and having an air-circulation opening at its top, affording communication between the upper chamber and said refrigerant-chamber at the rear of the latter, said refrigerant-chamber having air-circulation passages at its front and rear communicating with said lower compartment.



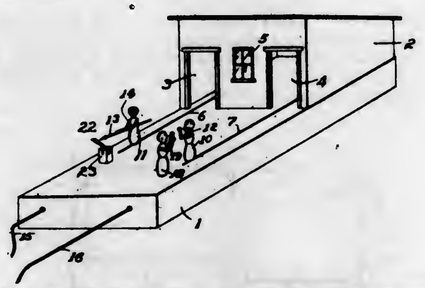
1,390,813. HARVESTER. PARKER A. PUTNAM, Tintah, Minn. Filed Aug. 9, 1918. Serial No. 249,179. 2 Claims. (Cl. 56—67.)

1. A harvester comprising a plurality of pairs of guide fingers in which the fingers of each pair diverge from each other as they extend forwardly, the forward ends of the intermediate fingers of said pairs being positioned close to each other, each of the pairs of said fingers being provided with cutting edges facing each other on their rearward portions, means coöperating with said cutting edges for cutting stalks, arms positioned to rotate over said cutting edges in a horizontal plane, means for rotating said arms in a direction to tip rearwardly the stalks which are being cut, a conveyer belt upon which such stalks are deposited, and a binding device to which said stalks are delivered by said conveyer belt.



1,390,814. SEMI-AUTOMATIC MACHINE FOR FORMING BED-SPRING FABRICS. ANTHONY RHENSTROM, Kenosha, Wis., assignor, by mesne assignments, of one-half to Charles O. Grafton, Muncie, Ind. Filed Nov. 12, 1917. Serial No. 201,436. 43 Claims. (Cl. 140—7.)

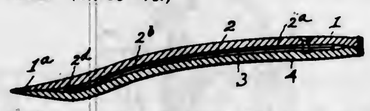
1. In a machine for forming bed spring fabrics and the like, the combination of mechanism for holding a pair of chain sections adapted and intended to form strands of the fabric extending in one direction, means for feeding straight wire into position to connect said chain sections, and mechanism for bending said straight wire to link



formation to form chains extending at right angles to said chain sections.

1,390,815. MILK-STRAINER. DONALD W. ROSS, Joliet, Ill. Filed Sept. 30, 1920. Serial No. 413,769. 2 Claims. (Cl. 210—159.)

2. A means for retaining the center of a cloth milk strainer in which is disposed a spherical object comprising a funnel and a wire secured in the smaller end of the funnel and extending transversely thereacross, the intermediate portion of the wire being formed with an upwardly directed wedge loop having a narrow entrance throat through which the portion of the cloth above the spherical member is wedged.

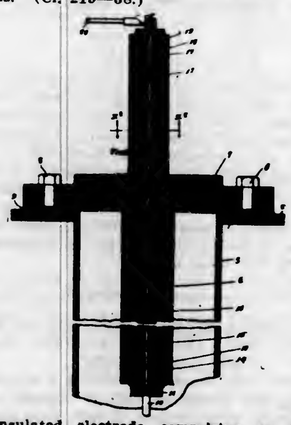


1,390,816. TOY. EDWARD G. RUEHL, Brentwood Calif Filed Oct. 2, 1919. Serial No. 327,912. 1 Claim. (Cl 46—40.)

In a toy the combination of a raised slotted platform, an inclosure over one end of the platform, a slide movable under the platform, a figure carried by a post on the slide projecting through the platform slot, a spring to draw the slide and figure normally into the inclosure, a second figure having movable parts on the platform near one end of its slot, a cord connected to the slide to draw the slide and figure carried thereby toward the second figure, and cords connected to the

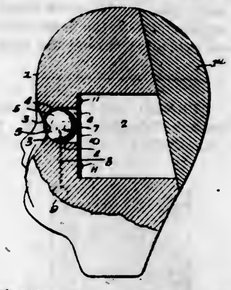
movable parts of both figures and to the first cord and platform respectively to cause both figures to make some action when the figures are close together.

1,390,817. ARCH-SUPPORT. ANTHONY RUHL, Cleveland, Ohio. Filed Mar. 22, 1918. Serial No. 284,320. 1 Claim. (Cl. 36—76.)



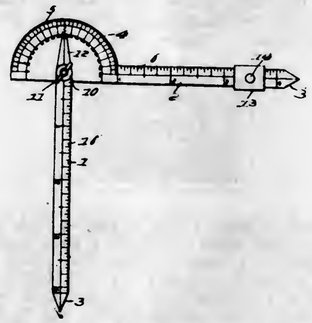
An arch support comprising two firm but flexible members which are secured together at their edges, two metal strips which overlie each other positioned between the said members, said metal strips being secured to each other and to said members at one end of the strips, the remainder of said strips being unsecured, the said strips lying in contact with each other throughout their extent and both of said strips at the unsecured ends being dished with the dished portions overlying.

1,390,818. SUMMER-HAT. SUTEKICHI SAKAGAMI, Osaka, Japan. Filed Mar. 10, 1920. Serial No. 364,755. 1 Claim. (Cl. 2—114.)



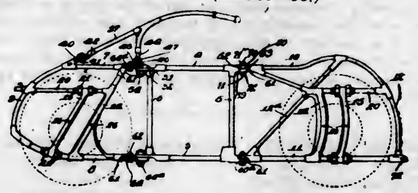
In a hat structure, a crown portion provided with a plurality of ventilating openings, a sweatband arranged in the crown portion, a net lining extending upward from the sweatband and secured at points around the upper portion of the peripheral wall of the crown portion and having a centrally disposed opening, a disk-like door having openings adapted to be moved into and out of registry with the ventilating openings of the crown, said door being supported in desired position by said lining after insertion into such position through the center opening of said lining, and means for drawing the walls of the opening of said lining together after said door has been placed in proper position.

1,390,819. INSULATED ELECTRODE. RAY VAN SANDT, Bakersfield, and WILLIAM T. WILLIAMS, Taft, Calif., assignors of sixty per cent. to William C. Rae, Pasadena, Calif. Filed Dec. 29, 1919. Serial No. 347,886. 6 Claims. (Cl. 219—38.)



1. An insulated electrode comprising an insulating casing having a longitudinal bore, and an electrode centrally supported within said bore and incased in concentric layers of different insulating materials.

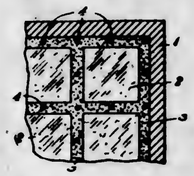
1,390,820. DOLL. HARRY E. SCHOENHUT, Philadelphia, Pa., assignor to The A. Schoenhut Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 22, 1920. Serial No. 367,960. 2 Claims. (Cl. 46—40.)



1. The combination of a substantially solid doll's head having a recess at the back, eye sockets spaced apart and extending from said recess toward the front of the head, said sockets having eye openings at their forward ends; an eye member consisting of a cross bar having a ball at each end; a representation of an eye on each ball member; a pendulum depending from the cross bar; and a disk holding the balls in the sockets so that they will turn freely therein.

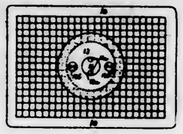
1,390,821. ANGULAR-MEASURING INSTRUMENT. RUFUS K. SEALS, California, Pa. Filed July 14, 1919. Serial No. 310,642. 2 Claims. (Cl. 33—27.)

1. An instrument of the kind described comprising a pair of beams one of which is formed with a protractor element and the other with a pointer movable over the scale of the protractor, a bolt securing the two beams together at a point concentric with the arc of the protractor, whereby the two beams may be set any desired angular distances apart as indicated by the pointer and the protractor, and a movable slide attachable to either beam and formed with a scribing point.



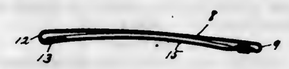
1,390,822. CYCLE. JOHANNES THEODORES SENTROP, Jr., Montreal, Quebec, Canada. Filed Feb. 8, 1918. Serial No. 216,114. 21 Claims. (Cl. 208—93.)

1. In a cycle, the combination of wheels and a frame carrying the wheels, said frame including substantially



parallel top bars on opposite sides of the wheels and in approximately the same plane at a point above the axles of the wheels and substantially parallel bottom bars on either side of the wheels and in approximately the same plane at a point below the axles, the top and bottom bars at each side of the wheels being substantially parallel and in approximately the same plane at the side of the wheels and extending beyond the said wheels.

1,390,823. BURNING OF CARBON ELECTRODES. SVEN EMIL SIBURIN, Höganäs, Sweden. Filed July 31, 1920. Serial No. 400,514. 4 Claims. (Cl. 204—65.)



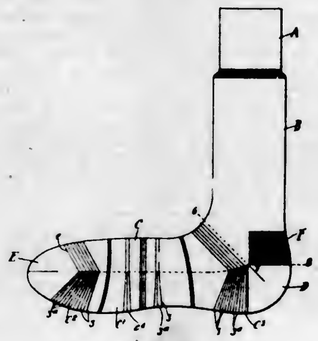
1. The process of producing a carbon electrode which consists in placing a mass of electrode forming material in an electric furnace, surrounding the same with metallic heat initiating means insulated therefrom, passing a current through said means to heat said mass to a predetermined degree, removing said heat-initiating means and continuing the heating through the instrumentality of the mass itself.

1,390,824. PLAYING-CARDS AND GAMES. JAMES R. SILLIMAN, Jr., New York, N. Y. Filed Dec. 23, 1920. Serial No. 432,656. 8 Claims. (Cl. 46—25.)

1. In games of cards, a pack of playing cards capable of being dealt into hands for playing a given game, each card consisting of a single structure and having marks associated therewith, a rotary marking device within and guided by a circular cavity in said card, whereby the cards used by the several players may be readily regrouped into their several hands after being played and mingled together.

1,390,825. HAIR-RETAINING DEVICE. CHARLES SILVERMAN, Providence, R. I. Filed May 26, 1921. Serial No. 472,745. 3 Claims. (Cl. 132—41.)

1. A hair retaining device comprising a resilient arm, an opposing extension upon one end of the arm, a resilient arm rotatable transversely of the first arm pivotally attached at one end to the extension, said arms being normally divergent at their free ends, and a hook upon the free end of one arm adapted to engage the end of the other arm.

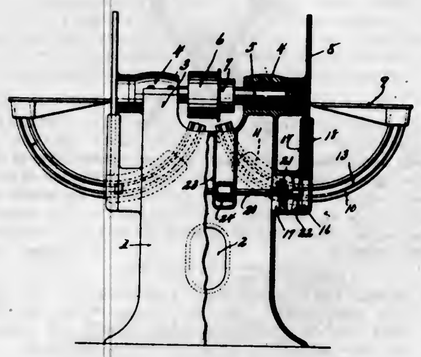


1,390,826. RIM-TOOL. FREDERICK E. SMALL, Needham, Mass. Filed June 1, 1920. Serial No. 385,402. 2 Claims. (Cl. 157—1.)

1. Rim expanding or contracting means, adapted to be either expanded or contracted by the purely expanding action of a jack, comprising a pair of unconnected rim gripping devices affording each a positive abutting surface for the usual thrust-surfaces of an interposed jack,

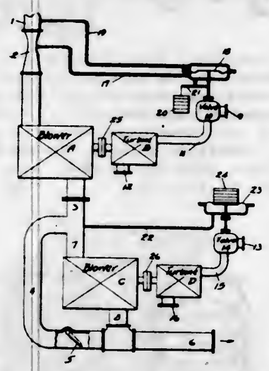
and also a surface engageable oppositely from the first-mentioned surface for contracting action and an endless flexible element capable of being looped about both said clamps and of receiving a jack within its loop.

1,390,827. SEAMLESS TUBULAR KNIT FABRIC AND PROCESS OF KNITTING THE SAME. WILLIAM E. SMITH, Milltown, N. J., assignor to The Interwoven Mills, Inc., New Brunswick, N. J., a Corporation of New Jersey. Filed May 5, 1919. Serial No. 294,784. 9 Claims. (Cl. 66—4.)



1. The herein described process of knitting a circular knit tubular fabric, which consists in feeding a continuous main knitting thread circularly and continuously in the same direction, and forming a plurality of circular courses of stitches and preventing the formation of stitches through portions of single courses located in the same segment of the fabric, to produce single partial courses of stitches in the other segment of the fabric between adjacent circular courses knit with the same thread, all the stitches of the circular and partial courses being of substantially the same size.

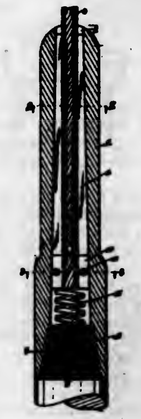
1,390,828. ABRADING-MACHINE. WILLIAM H. SMITH, Milwaukee, Wis. Filed Jan. 13, 1921. Serial No. 436,897. 1 Claim. (Cl. 51—273.)



In a device of the character described, a rotatable shaft, an abrading disk carried at each end thereof, a housing surrounding the lower portion of each disk, a bifurcated receptacle between the housings, a passageway connecting each housing with the receptacle, a second shaft extending through the furcations of the receptacle parallel to the

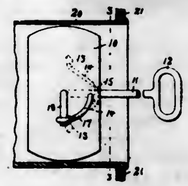
first shaft and having its ends projecting into the passageways, means on the second shaft between the furcations

for forming a driving connection with the first shaft, and a fan mounted on each end of the second shaft for blowing the dust from the disks into the receptacle.



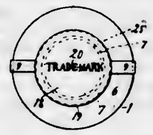
1,390,829. METHOD OF REGULATING BLOWING-ENGINES. CHARLES H. SMOOT, South Orange, N. J., assignor to Rateau Battu Smoot Engineering Corporation, New York, N. Y., a Corporation of Delaware. Filed Oct. 25, 1920. Serial No. 419,268. 2 Claims. (Cl. 103—85.)

1. The method of regulating turbo blowers operating in series which consists in regulating the first turbo blower for constant predetermined volume and regulating the second turbo blower for constant predetermined inlet pressure.



1,390,830. WIRE-ROPE SOCKET. DANIEL WILLIAM SNOW, Fillmore, Calif. Filed June 11, 1920. Serial No. 388,097. 2 Claims. (Cl. 24—136.)

2. A rope socket having a bore, slips received in said bore and engaging a rope, and coöperating clamping members received in said bore beyond said slips, said clamping members having coöperating axial recesses spirally

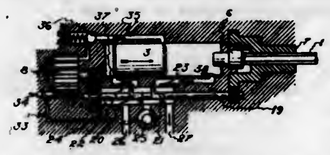


grooved to engage the strands of a rope, and means for clamping said members to the rope.

1,390,831. FLUE-CLEANER. JOHN SODERQUIST, Beloit, Wis. Filed July 29, 1920. Serial No. 399,794. 3 Claims. (Cl. 83—64.)

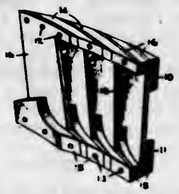
1. In a flue cleaner, a plate having a keeper secured thereto and in parallel relation therewith, and a turning rod passing through said plate and rotative through the plate and coupled therewith and having a right angled projection movable between the keeper and plate, said rod having a reverse bend at the juncture of the rod and the projection thereof, whereby the plate may be disposed substantially parallel to the longitudinal axis of the rod for passage in one direction through a flue and disposed at right angles to the rod by partially rotating the same for moving the plate in the opposite direction through the flue.

1,390,832. CLOSURE FOR BOTTLES AND OTHER CONTAINERS. THOMAS C. SPELLING, New York, N. Y. Filed Sept. 26, 1918. Serial No. 255,777. 5 Claims. (Cl. 215—92.)



1. In a closure for a bottle or other container, a seal member of rubber, underlying a cap member, or other suitable material, the seal member having a circular central section of its vertical dimension removed to render it yieldable to pressure against it underneath.

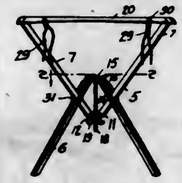
1,390,833. CLOSURE FOR BOTTLES AND OTHER CONTAINERS. THOMAS C. SPELLING, New York, N. Y. Filed Oct. 3, 1918. Serial No. 256,647. 12 Claims. (Cl. 215—64.)



1. In a closure for a bottle or other container, a bottle formed with an undercut, apertured rim, the upper side of the rim having a level outer and an upwardly slanted interior section and a trenched and notched shoulder, and, opposite the shoulder, an opening for a pivotal attachment, the aperture adapted to be fitted with an axle and the shoulder shaped and formed for locking engagement with a spur on the terminal of a binder.

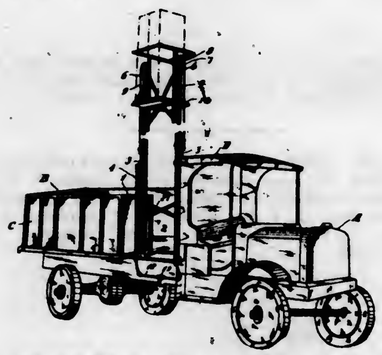
1,390,834. MOTOR-ROTATION IMPACT-TOOL. HAROLD I. STAGE, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Oct. 15, 1919. Serial No. 330,897. 15 Claims. (Cl. 121—5.)

1. In a fluid operated percussive tool of the separate motor-driven rotation type, the combination of inlet and exhaust valves operated by the rotating motor and governing means for said rotating motor controlled by the impact motor piston action.



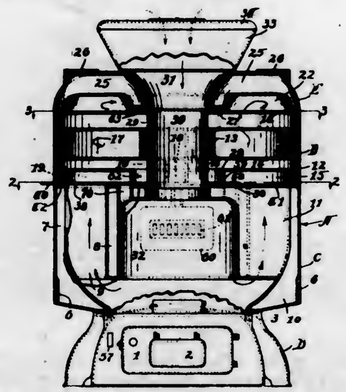
1,390,835. METHOD OF MANUFACTURING NOZZLE-DIAPHRAGMS FOR ELASTIC-FLUID TURBINES. CHRISTIAN STEENSTRUP, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Aug. 17, 1920. Serial No. 404,242. 6 Claims. (Cl. 29—23.5.)

1. The method of manufacturing a nozzle ring for elastic fluid turbines which comprises taking two rings, cutting them into prismatic blocks, shaping surfaces of said blocks to form walls of the correct contour for the nozzle passages, assembling the blocks into rings with nozzle partitions between the blocks, and permanently uniting the assembled structure by fusion of metal.



1,390,836. CAMP-STOOL. FRANK M. STOLL, Denver, Colo. Filed May 19, 1919, Serial No. 298,307. Renewed Aug. 2, 1921. Serial No. 489,204. 3 Claims. (Cl. 155—136.)

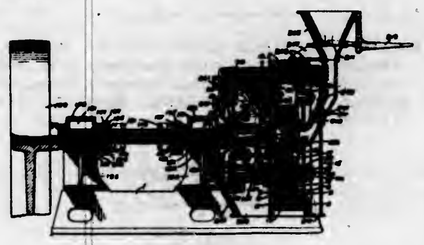
1. A camp stool comprising legs and seat supporting bars pivotally connected together intermediate their extremities, a post to which one end of the legs are pivotally connected, a block slidable upon the post and to which the seat supporting bars are pivotally connected at their normal lower extremities, a nut threaded upon the post adapted to engage with said block and forming a stop to the downward movement of the block upon the



post, and a seat connectd with the upper extremities of the said seat supporting bars, the upper extremities of said seat supporting bars adapted to be moved outwardly on the pivots of said seat supporting bars by the upward movement of said nut for placing the seat in a condition of tautness.

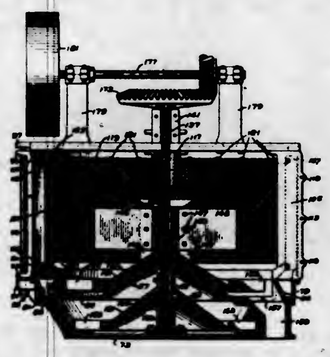
1,390,837. ELEVATOR FOR AUTOMOBILE-TRUCKS AND THE LIKE. JOHN H. STUBBE, Pittsburgh, Pa. Filed Nov. 14, 1919. Serial No. 338,027. 11 Claims. (Cl. 187—9.)

1. The combination with an automobile-truck, of an elevator carried by the body at one side thereof and adapted to form a guard for the body when lowered, and means for operating said elevator.



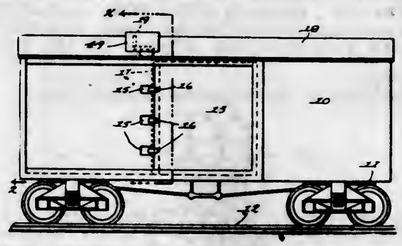
1,390,838. HEATING-BOILER. ROBERT E. STURMAN, Delano, Minn. Filed June 18, 1917. Serial No. 175,384. 4 Claims. (Cl. 122—219.)

4. In a boiler of the class described, comprising a fire box section, a top section, an intermediate section between



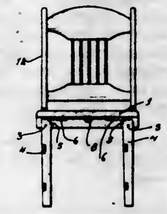
said fire box section and top section, cylindrical inner and outer water compartments formed in said fire box section, vertically and radially extending water passages connecting said inner and outer water compartments, a ring like water compartment positioned inside the upper end of said inner compartment, water passages connecting said ring like compartment with said inner compartment, smoke passageways between said last mentioned water passages and a horizontal damper having means for opening or closing said smoke passageways between said water passages connecting said inner and ring like water compartments.

1,390,839. CRUSHING-MILL. THOMAS J. STURTEVANT, Wellesley, Mass., assignor to Sturtevant Mill Company, Boston, Mass., a Corporation of Massachusetts. Filed May 1, 1919. Serial No. 293,906. 18 Claims. (Cl. 83—9.)



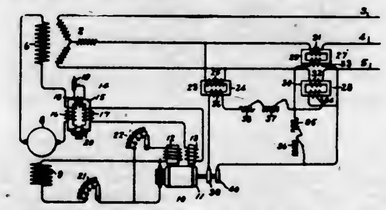
1. A crushing mill, comprising, in combination, a fixed ring having a crushing surface, a main shaft, a head carried by said shaft, rock shafts fulcrumed on and carried by said head, rolls journaled on said rock shafts and pressed toward said crushing surface by centrifugal force when given a planetary motion, an equalising member fulcrumed on said main shaft, arms projecting from said rock shafts, spring connections between said arms and equalizing member, a rotary feeder having passages to deliver material to be crushed, and means to feed the material centrally to said rotary feeder that the material may flow outward through said passages under the influence of centrifugal force.

1,390,840. MACHINE FOR REDUCING AND SEPARATING MATERIALS. THOMAS J. STURTEVANT, Wellesley, Mass., assignor to Sturtevant Mill Company, Boston, Mass., a Corporation of Massachusetts. Filed May 26, 1919. Serial No. 299,722. 10 Claims. (Cl. 83—54.)



1. A machine of the character described, comprising, in combination, a separator provided with a casing having parts hinged together on a vertical axis, a screen within said casing formed in sections and having the sections carried bysaid parts that access may be had to the screen sections and interior of the separator by swinging part of the casing outward, a cover for the separator formed in sections and carried by the casing parts, a vertical shaft having a bearing mounted on one of said casing parts, and a rotary fan secured to said shaft for producing air currents to project materials to be graded through said screen.

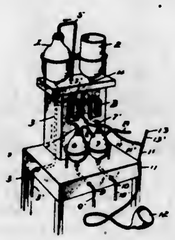
1,390,841. LOCK. ALIX SWINTI, Detroit, Mich., assignor of one-half to Joseph Moranic and Mike Zlotorowics, Detroit, Mich. Filed Jan. 21, 1921. Serial No. 438,819. 6 Claims. (Cl. 70—31.)



3. In a freight car door locking device, a locking means for opposite doors of a car, comprising two vertical bars provided with fingers adapted to engage both car doors and means for locking said locking means.

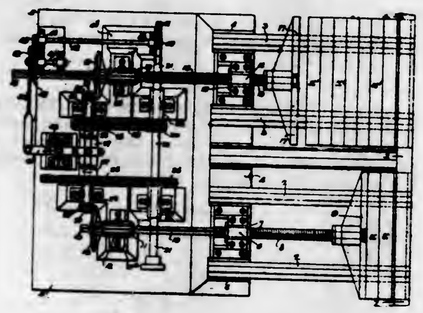
1,390,842. COLLAPSIBLE CHAIR. WOJCIECH SZOSTEK, Three Rivers, Mass. Filed June 18, 1921. Serial No. 478,514. 1 Claim. (Cl. 155—148.)

A collapsible chair comprising a seat, elements depending from opposite edges of said seat, spindles pivotally mounted in said elements, legs rigidly secured to said spindles, toothed sectors on the upper ends of said legs, rack bars in engagement with said sectors and slidably mounted on the underside of said seat, a lever pivotally mounted on the underside of said seat and having spaced apart slots therein, and pins on said bars lying in engagement with said slots.



1,390,843. REGULATING SYSTEM FOR DYNAMO-ELECTRIC MACHINES. LOUIS W. THOMPSON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed July 10, 1918. Serial No. 244,169. 7 Claims. (Cl. 171—241.)

1. The combination with an alternating current generator having an armature winding and an exciting wind-

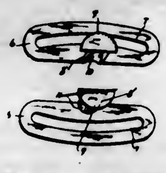


ing, of a rotary converter having its direct current side connected so as to control the current in said exciting winding and its alternating current side connected so that the voltage impressed thereon varies with an electrical condition of said armature winding, and means responsive to variations in the current in said exciting winding for retarding the variations in the direct current voltage of said converter upon variations in said electrical condition of said armature winding.

1,390,844. HYDRAULIC GASTRIC EXAMINER OR HYDRAULIC STOMACH-EXAMINING APPARATUS. KOMANOSUKE TOGAMI, Fukuoka, Japan. Filed Feb. 17, 1919. Serial No. 277,694. 2 Claims. (Cl. 128—276.)

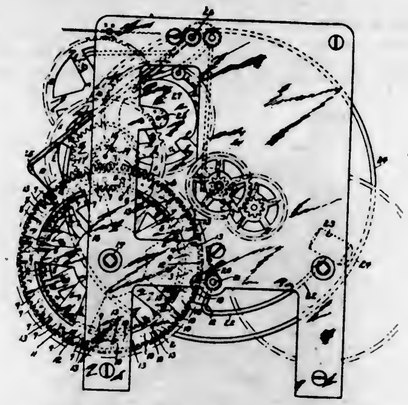
1. In a hydraulic gastric examining apparatus comprising a stand provided with superposed steps, a closed and an open vessel supported on the top step for receiving water and a wash lotion respectively, a discharge pipe and control valve therefor connected to each of said vessels, a pair of closed connected vessels supported on the lower step and communicating with the upper vessels whereby low pressure is produced in the connected vessels when the water is discharged from the upper closed vessel reducing the atmospheric pressure therein and a closed pipe having a gastric catheter communicating with one of said lower closed vessels for removing the gastric juice from the stomach of the patient as the water is discharged from the upper closed vessel.

1,390,845. BILLET-CHARGING APPARATUS. HORACE TOMLINSON, Philadelphia, Pa. Filed July 8, 1920. Serial No. 394,853. 9 Claims. (Cl. 198—24.)



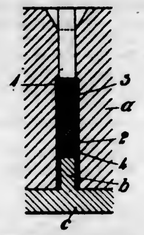
1. The combination in a billet charging apparatus of two pushers; a continuously actuated main shaft; an intermediate shaft connected to both pushers; two members driven in opposite directions from said main shaft; and automatic mechanism for alternately connecting said members to the intermediate shaft.

1,390,846. BRAKE SHOE AND HEAD. CHARLES I. WALKER, San Francisco, Calif. Filed June 1, 1920. Serial No. 385,521. 6 Claims. (Cl. 188—243.)



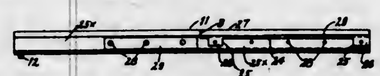
5. A combined, mutually interlocked brake shoe and head, and a pin passed through the same on a longitudinal line of the parts and means engaging the pin to restrain motion of the shoe in one direction, said means including a clip with a hook adapted to straddle the pin and having an arm to reach around one side of the shoe.

1,390,847. FLEXIBLE CLASP-BUTTON. CHARLES M. WEBB and THEODORE MILLER, Waterbury, Conn., assignors to Waterbury Buckle Co., Waterbury, Conn., a Corporation. Filed June 20, 1921. Serial No. 478,817. 3 Claims. (Cl. 24—245.)



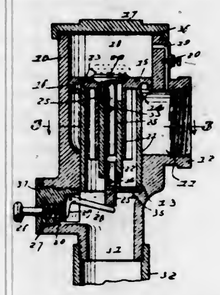
2. A two-part flexible button consisting of two one-piece independent half parts, each having a threading-base and a centrally-arranged upstanding half-shank; in combination with a flexible collet applied over the half-shanks for binding them together.

1,390,848. SHIP'S-BELLS CLOCK. FREDERICK WEHINGER, Waterbury, Conn., assignor to Waterbury Clock Co., Waterbury, Conn., a Corporation. Filed June 24, 1920. Serial No. 391,448. 4 Claims. (Cl. 58—8.)



1. A ship's bells clock having a strike-train including a pin-wheel, pins mounted therein singly and in pairs, in accordance with the divisions of ship's bells, and a hammer-operating member acted upon in sequence by all of the said pins, whereby, by arranging the bells singly and in pairs, compensatory spaces are provided between them for the reception of the hammer-operating member and mis-striking avoided.

1,390,849. METHOD OF LOADING DETONATING-CAPS. TORSTEN WENNERSTRÖM, Bofors, Sweden. Filed Apr. 15, 1919. Serial No. 290,319. 2 Claims. (Cl. 86—20.)

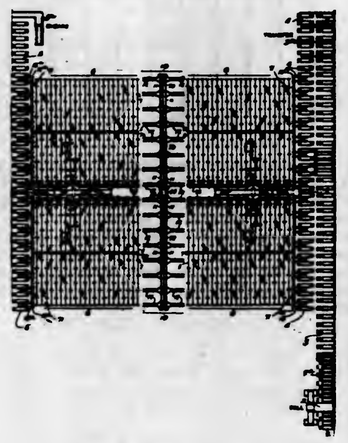


1. An improved method of loading detonating caps open at both ends thereof, which consists in inserting a cap within said open-ended cap, introducing an initial loading into said inner cap, introducing into the open-ended cap a main loading through its open bottom and subjecting the whole contents of the two caps to pressure in a single operation.

1,390,850. RAILWAY-SWITCH POINT. EARL M. WILSON, St. Paul, and EARNEST S. SHAMAN, Minneapolis, Minn. Filed May 16, 1921. Serial No. 469,854. 2 Claims. (Cl. 246—437.)

1. A railway switch point consisting of a main section pivotally jointed at one end to the main track rail and having at the other end the tread of the rail cut away and the web of rail therebelow formed with gaps having vertical edges; a second joint section comprising mainly a rail tread portion with downward lugs fitting in the said gaps, fish-plates extending one along each side of said sections and bolts having countersunk heads and extending horizontally through said fish-plates and the intermediate web and lugs, for securing the parts together; said second section being wedge-shaped toward its free end and removable upward when the bolts through its lugs are withdrawn.

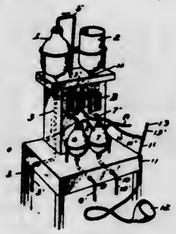
1,390,851. FLUSH-VALVE. HENRY J. WINCKLER, San Antonio, Tex. Filed Dec. 9, 1919. Serial No. 343,485. 3 Claims. (Cl. 137—93.)



3. A flush valve mechanism having an outlet valve seat, a piston valve disposed to engage the seat and having a surface exposed exteriorly thereof to valve unseating service pressure, a pressure chamber accessible to reduced service pressure and to which the opposite surface of said piston valve is exposed, said piston valve being provided with a relief port and a communicating sleeve forming an exhaust passage, a tubular guide upon which said sleeve is mounted for movement with the piston valve, a relief valve seatable to close said relief port and exposed to the pressure within said pressure chamber and having a tubular stem movable in said tubular guide, and means for operating the relief valve to unseat the same.

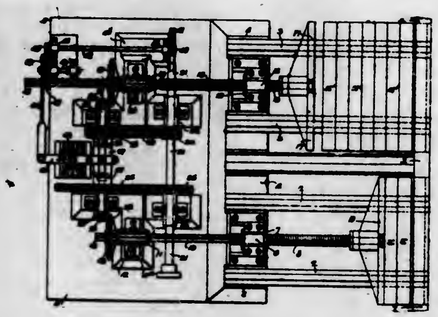
1,390,852. BUNK. ROLLIN WOOLLEY, Carlton, Oreg. Filed Aug. 4, 1920. Serial No. 401,113. 6 Claims. (Cl. 280—144.)

1. A bunk comprising a channel bar, longitudinally extending ribs carried on the inner faces of the upright faces of said channel bar above the bottom thereof, blocks slidable longitudinally of said channel bar and provided with terminals disposed beneath said ribs, the latter thus constituting tracks to guide said blocks in their movement longitudinally of the channel bar, and means carried by said blocks for holding the same in adjusted position, said holding means comprising a plate carried by each block and adapted to engage the upright flanges of the channel bar, the upright flanges of said channel bar being for this purpose provided with notches adapted to receive said plate.



1,390,853. ROLLER TRANSFER-TABLE. JOHN S. WORTH, Coatesville, Pa., assignor to Worth Brothers Corporation, Claymont, Del., a Corporation of Delaware. Filed Jan. 17, 1920. Serial No. 352,067. 10 Claims. (Cl. 80—44.)

1. The combination of a rolling mill; a table to receive the plates from the mill; a shears; a roller table for directing the plates to the shears, said tables being spaced apart; a transfer table located between the rolling mill table and the shears table, said transfer table comprising a series of rollers for supporting the plates; and means for driving said rollers.

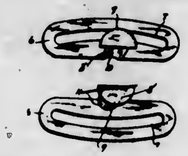


ing, of a rotary converter having its direct current side connected so as to control the current in said exciting winding and its alternating current side connected so that the voltage impressed thereon varies with an electrical condition of said armature winding, and means responsive to variations in the current in said exciting winding for retarding the variations in the direct current voltage of said converter upon variations in said electrical condition of said armature winding.

1,390,844. HYDRAULIC GASTRIC EXAMINER OR HYDRAULIC STOMACH-EXAMINING APPARATUS. KOMANOSUKE TOGAMI, Fukuoka, Japan. Filed Feb. 17, 1919. Serial No. 277,694. 2 Claims. (Cl. 128—276.)

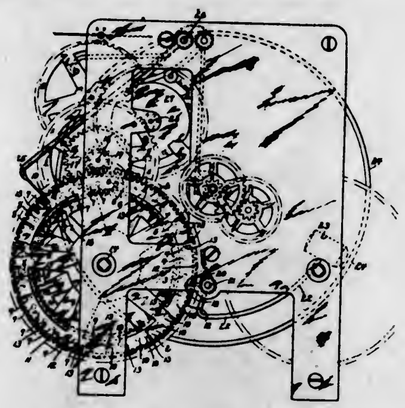
1. In a hydraulic gastric examining apparatus comprising a stand provided with superposed steps, a closed and an open vessel supported on the top step for receiving water and a wash lotion respectively, a discharge pipe and control valve therefor connected to each of said vessels, a pair of closed connected vessels supported on the lower step and communicating with the upper vessels whereby low pressure is produced in the connected vessels when the water is discharged from the upper closed vessel reducing the atmospheric pressure therein and a closed pipe having a gastric catheter communicating with one of said lower closed vessels for removing the gastric juice from the stomach of the patient as the water is discharged from the upper closed vessel.

1,390,845. BILLET-CHARGING APPARATUS. HORACE TOMLINSON, Philadelphia, Pa. Filed July 8, 1920. Serial No. 394,853. 9 Claims. (Cl. 198—24.)



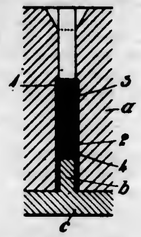
1. The combination in a billet charging apparatus of two pushers; a continuously actuated main shaft; an intermediate shaft connected to both pushers; two members driven in opposite directions from said main shaft; and automatic mechanism for alternately connecting said members to the intermediate shaft.

1,390,846. BRAKE SHOE AND HEAD. CHARLES I. WALKER, San Francisco, Calif. Filed June 1, 1920. Serial No. 385,521. 6 Claims. (Cl. 188—243.)



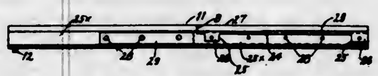
5. A combined, mutually interlocked brake shoe and head, and a pin passed through the same on a longitudinal line of the parts and means engaging the pin to restrain motion of the shoe in one direction, said means including a clip with a hook adapted to straddle the pin and having an arm to reach around one side of the shoe.

1,390,847. FLEXIBLE CLASP-BUTTON. CHARLES M. WEBB and THEODORE MILLER, Waterbury, Conn., assignors to Waterbury Buckle Co., Waterbury, Conn., a Corporation. Filed June 20, 1921. Serial No. 478,817. 3 Claims. (Cl. 24—245.)



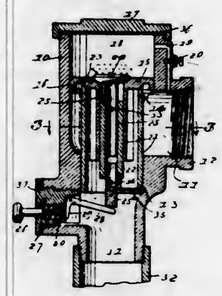
2. A two-part flexible button consisting of two one-piece independent half parts, each having a threading-base and a centrally-arranged upstanding half-shank; in combination with a flexible collet applied over the half-shanks for binding them together.

1,390,848. SHIP'S-BELLS CLOCK. FREDERICK WEHINGER, Waterbury, Conn., assignor to Waterbury Clock Co., Waterbury, Conn., a Corporation. Filed June 24, 1920. Serial No. 391,446. 4 Claims. (Cl. 58—8.)



1. A ship's bells clock having a strike-train including a pin-wheel, pins mounted therein singly and in pairs, in accordance with the divisions of ship's bells, and a hammer-operating member acted upon in sequence by all of the said pins, whereby, by arranging the bells singly and in pairs, compensatory spaces are provided between them for the reception of the hammer-operating member and mis-striking avoided.

1,390,849. METHOD OF LOADING DETONATING-CAPS. TORSTEN WENNERSTRÖM, Bofors, Sweden. Filed Apr. 15, 1919. Serial No. 290,819. 2 Claims. (Cl. 86—20.)

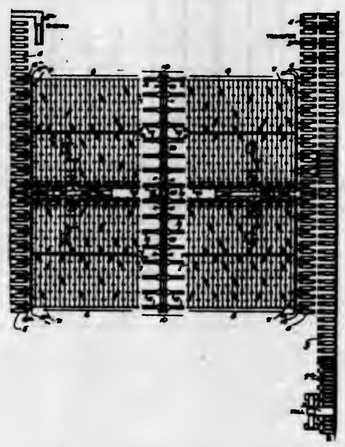


1. An improved method of loading detonating caps open at both ends thereof, which consists in inserting a cap within said open-ended cap, introducing an initial loading into said inner cap, introducing into the open-ended cap a main loading through its open bottom and subjecting the whole contents of the two caps to pressure in a single operation.

1,390,850. RAILWAY-SWITCH POINT. EARL M. WILSON, St. Paul, and EARNEST S. SEAMAN, Minneapolis, Minn. Filed May 16, 1921. Serial No. 469,854. 2 Claims. (Cl. 246—437.)

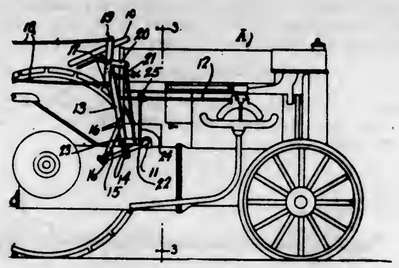
1. A railway switch point consisting of a main section pivotally jointed at one end to the main track rail and having at the other end the tread of the rail cut away and the web of rail therebelow formed with gaps having vertical edges; a second joint section comprising mainly a rail tread portion with downward lugs fitting in the said gaps, fish-plates extending one along each side of said sections and bolts having countersunk heads and extending horizontally through said fish-plates and the intermediate web and lugs, for securing the parts together; said second section being wedge-shaped toward its free end and removable upward when the bolts through its lugs are withdrawn.

1,390,851. FLUSH-VALVE. HENRY J. WINCKLER, San Antonio, Tex. Filed Dec. 9, 1919. Serial No. 343,485. 3 Claims. (Cl. 137—93.)



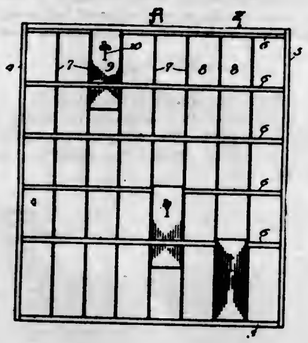
3. A flush valve mechanism having an outlet valve seat, a piston valve disposed to engage the seat and having a surface exposed exteriorly thereof to valve unseating service pressure, a pressure chamber accessible to reduced service pressure and to which the opposite surface of said piston valve is exposed, said piston valve being provided with a relief port and a communicating sleeve forming an exhaust passage, a tubular guide upon which said sleeve is mounted for movement with the piston valve, a relief valve seatable to close said relief port and exposed to the pressure within said pressure chamber and having a tubular stem movable in said tubular guide, and means for operating the relief valve to unseat the same.

1,390,852. BUNK. ROLLIN WOOLLEY, Carlton, Oreg. Filed Aug. 4, 1920. Serial No. 401,113. 6 Claims. (Cl. 280—144.)



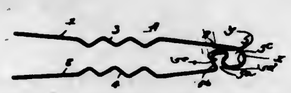
1. A bunk comprising a channel bar, longitudinally extending ribs carried on the inner faces of the upright faces of said channel bar above the bottom thereof, blocks slidable longitudinally of said channel bar and provided with terminals disposed beneath said ribs, the latter thus constituting tracks to guide said blocks in their movement longitudinally of the channel bar, and means carried by said blocks for holding the same in adjusted position, said holding means comprising a plate carried by each block and adapted to engage the upright flanges of the channel bar, the upright flanges of said channel bar being for this purpose provided with notches adapted to receive said plate.

1,390,853. ROLLER TRANSFER-TABLE. JOHN S. WORTH, Coatesville, Pa., assignor to Worth Brothers Corporation, Claymont, Del., a Corporation of Delaware. Filed Jan. 17, 1920. Serial No. 352,067. 10 Claims. (Cl. 80—44.)



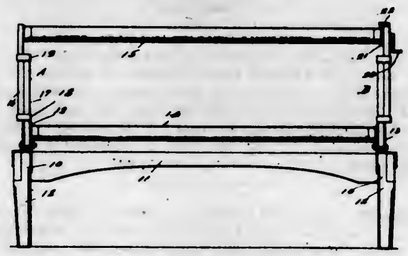
1. The combination of a rolling mill; a table to receive the plates from the mill; a shears; a roller table for directing the plates to the shears, said tables being spaced apart; a transfer table located between the rolling mill table and the shears table, said transfer table comprising a series of rollers for supporting the plates; and means for driving said rollers.

1,390,854. THROTTLE CONTROL FOR TRACTORS. HERBERT E. ABBOTT and EZRA ENZ, Oakville, Iowa. Filed Nov. 20, 1920. Serial No. 425,423. 5 Claims. (Cl. 180—77.)



1. A clutch and throttle control mechanism for tractors, comprising an upright secured to the clutch pedal, a lever fulcrumed upon the upright, flexible elements connected to the extremities of said lever, and controlling the movement of the latter, said upright being adjusted to disengage the clutch when said lever reaches a predetermined position, and a connection between said lever and the throttle whereby the latter is controlled independently of the clutch adjustment.

1,390,855. JEWELER'S TRAY. ADOLPH Y. S. ALBUM, Chicago, Ill. Filed Dec. 29, 1920. Serial No. 433,814. 3 Claims. (Cl. 211—28.)



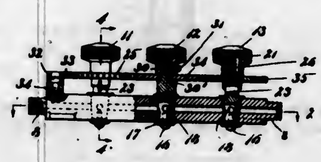
2. A tray for display cards having a bottom wall, a plurality of spaced strips extending in one direction on the tray and spaced from the bottom thereof, so positioned relative to each other and the bottom of the tray that a flexible display card may be inserted between the top of one strip and beneath an adjacent strip with one end engaging the bottom of the tray whereby said card is maintained in position due to the flexure of the same between said strips.

1,390,856. HAIRPIN. ADOLPH Y. S. ALBUM, Chicago, Ill. Filed Dec. 29, 1920. Serial No. 433,816. 11 Claims. (Cl. 132—50.)

9. A hairpin comprising a pair of tines connected together at one of their ends, one of said tines being bent adjacent the closed end of the pin to form an open-loop, said loop projecting inwardly between the tines and spaced from said other tine to provide a pocket between the loop and the closed end of the pin for receiving hair embraced by the pin, said open-loop also providing a notch between the ends thereof and opening exteriorly of the pin to receive hair lying outside of the pin, said notch having an entrance extending in the general direction of said tine and directed toward the closed end of the pin, the surface of said loop opposite the closed end of the pin and the surface of said notch nearest the open end of the pin being concaved for the purposes set forth.

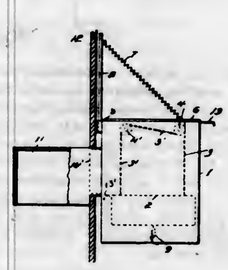
1,390,857. QUILTING-FRAME. RUFUS R. ALLEN, Clarinda, Iowa. Filed May 3, 1921. Serial No. 466,554. 1 Claim. (Cl. 45—24.)

A quilting frame of the character described comprising a base, a roller journaled thereon, and sections pivoted upon the base, each section comprising spaced parallel arms, each arm being made up of slidably associated members, a roller journaled between the corresponding members of each pair of arms, whereby the rollers of the end sections may be moved toward and away from the first mentioned roller to vary the length of the frame, means for rotating the roller of each end section, and a pawl and ratchet for each of said rollers to prevent retrograde movement thereof.



1,390,858. SYRINGE-HYDROMETER. RALPH A. AMERMAN, Scranton, Pa., assignor to Scranton Glass Instrument Company, Scranton, Pa., a Corporation of Pennsylvania. Filed Aug. 25, 1920. Serial No. 405,826. 3 Claims. (Cl. 265—45.)

1. In a syringe hydrometer, the combination of a housing having a cylindrical body portion of uniform diameter having at one end a reduced extension and outwardly flared at the other end so as to form a flange, a collapsible



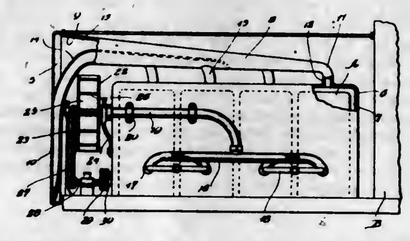
bulb connected to said reduced extension, a polygonal collar bearing against said flange, a hydrometer element within the housing having means associated therewith for maintaining said element in symmetrical relation with the walls of said body portion and a closure for the opposite end of said housing having a nossle mounted therein.

1,390,859. THREE-VALVE AUTOMOBILE GASOLENE-LOCK. STANISLAUS B. ANDRZEJEWSKI, Boston, Mass. Filed Feb. 25, 1921. Serial No. 447,851. 7 Claims. (Cl. 251—6.)

1. A gasolene lock for automobiles consisting of a pipe, a plurality of valves for shutting off the flow of gasolene through the pipe, each valve being provided with the gear normally in mesh with the gears of the other valves and having a series of marks thereon, and means for throwing the gears out of mesh, substantially as shown.

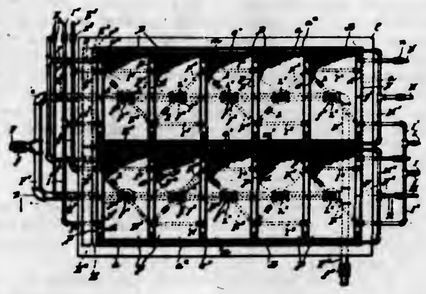
1,390,860. AUTOMATIC PRODUCTIVE-HEN-SELECTING APPARATUS. KICHIJIRO ARAKI, Kagoshima, Japan, assignor of one-fourth to Goken Nakamura, Kobe, Japan. Filed July 22, 1920. Serial No. 398,206. 1 Claim. (Cl. 119—50.)

In an automatic hen selecting apparatus, an open casing supported contiguous to an open partition, a low, rectangular breeding box vertically and freely movable within said casing and below the opening in the partition, pulleys and flexible elements trained thereon secured in the upper sides of the casing, and supporting said breeding box, a hinged cover for said casing, and connected near its forward portion to said flexible elements, a post carried by the casing, a coiled spring connecting said hinged cover to said post, a second coiled spring connecting the bottom of the breeding box to a strip in the bottom of the casing to resiliently support a hen as the hinged cover is closed, and a closure member open at its bottom within the open partition for excluding light from said breeding box and forming an exit from the casing.



1,390,861. PRODUCTION OF ANIMATED PICTURES. THOMAS ARMAT, Washington, D. C. Filed July 7, 1916. Serial No. 108,016. 7 Claims. (Cl. 88—19.5.)

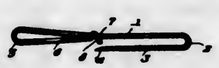
1. In the art of producing animated pictures, a film having thereon a series of picture areas with a plurality of impressions of the same object on the same area, said impressions being slightly displaced with relation to each other in the direction of movement of the object, and one



of said impressions being dominant and the other secondary in intensity.

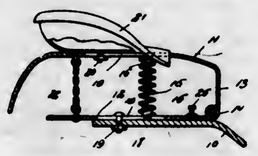
1,390,862. AIR-COOLING SYSTEM. EARL H. ARMES, Julesburg, Colo. Filed Dec. 24, 1919. Serial No. 347,237. 3 Claims. (Cl. 123—171.)

1. The combination with an internal combustion engine having multiple cylinders and a hood of an automobile open at its front, of an air cooling apparatus comprising a jacket covering the cylinders of the engine and divided into separate chambers for the respective cylinders and forming air circulating spaces about said cylinders, a longitudinally, rearwardly tapered air conduit superposed relative to the jacket and having independent air passages communicating with the respective chambers of the jacket at the location of the respective cylinders, a reticulated flared intake mouth on the conduit and arranged in the open end of the hood, and suction means for drawing off hot air from the jacket and operated by the engine.



1,390,863. APPARATUS FOR MAKING ICE. WILLIAM E. ARMISTEAD, Lagrange, Ga. Filed Dec. 20, 1917. Serial No. 208,116. 7 Claims. (Cl. 62—159.)

1. Apparatus for the manufacture of artificial ice, comprising a series of freezing units, each composed of a



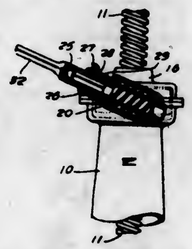
rectangular metal trough provided with a series of transversely disposed expansion chambers separating said trough into a series of freezing compartments, means for supplying ammonia under pressure to said expansion chambers and allowing it to expand therein, with means for causing the flow of the refrigerant through said expansion chambers *seriatim*, means for supplying raw water to the centers of the various freezing compartments, means for also supplying air under pressure to the centers of said compartments, and means for thawing the sides and bottoms of the completed ice cakes, substantially as described.

1,390,864. BODKIN. ANNA BAKER, Baltimore, Md., assignor of one-half to Edva Baker, Baltimore, Md. Filed Feb. 26, 1921. Serial No. 448,211. 1 Claim. (Cl. 223—38.)

As a new article of manufacture, a bodkin, formed in one piece of metal and consisting essentially of a straight body bar, a loop at one end of the body bar and having an outer arm the free end of which is pointed and is deflected slightly away from the body bar, a loop at the opposite end of the bar and having an outer arm inclined inwardly and provided at its inner end with a transverse loop straddling the body bar adjacent to the transverse center thereof, and a keeper for the pointed end of the first-named arm, carried by the transverse loop and spaced from the adjacent edge of the body bar.

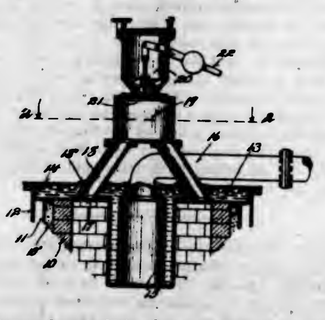
1,390,865. SEAT. PAUL M. BANGLE, San Dimas, Calif. Filed Jan. 29, 1921. Serial No. 440,929. 1 Claim. (Cl. 155—51.)

The combination with a seat standard, of a bar provided with a threaded opening and having an elongated slot formed therein, a substantially U-shaped bar hingedly connected to one end of the first mentioned bar and having an elongated slot formed therein, a chain connected to said bars, bolts slidably mounted in said slots, lugs carried by said bolts, a coil spring surrounding said lugs and exerting a pressure between said bars, an adjusting screw engaging the threaded opening in the first mentioned bar, a bolt passing through the slot in the first mentioned bar and secured to said standard, a seat, and a bolt secured to said seat and engaging said slot in the last mentioned bar.



1,390,866. TOBACCO-BOX. GIOVANNI BARAC, Falls Creek, Pa. Filed July 3, 1919, Serial No. 308,498. Renewed Apr. 16, 1921. Serial No. 461,917. 3 Claims. (Cl. 206—38.)

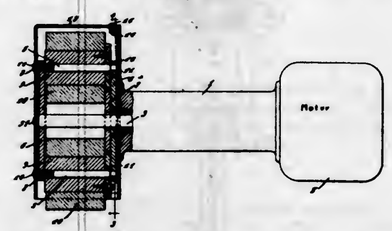
1. In a sheet metal box having the opening on its front at the bottom thereof, a receptacle arranged at its bottom having interengaging means with the box, and having an open front disposed opposite the opening in the box, a lip at the upper front end of the receptacle extended outwardly of the opening and contacting with the outer face of the box, a closer plate hingedly con-



nected to the outer portion of the lip, and a spring tongue on the plate to engage with the lower edge of the box.

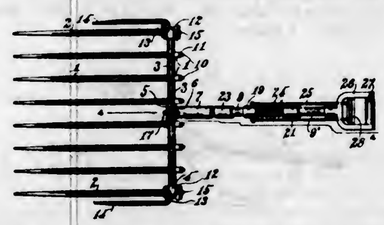
1,390,867. LIFTING-JACK. JACOB O. BARRETT, Asheville, N. C., assignor of one-half to William W. Bruce, Asheville, N. C. Filed June 22, 1920. Serial No. 390,859. 2 Claims. (Cl. 254—103.)

1. In a lifting jack, a base, an elevating screw mounted therein, a gear housing mounted on said base, a worm wheel mounted in said housing having screw threads engaging said elevating screw, a ball bearing interposed between said worm wheel and said base, a worm mounted in said housing for actuating said worm wheel, means for retaining said screw against rotation, manually operated or power means for alternatively rotating said worm and a spring clip mounted on said base for engaging either of said means for yieldingly locking the same in operative position.



1,390,868. GAS-PRODUCER. ALVIN J. BASSETT, Milwaukee, Wis., assignor to Milwaukee Reliance Boiler Works, Milwaukee, Wis. Filed July 1, 1919. Serial No. 307,957. 1 Claim. (Cl. 48—86.)

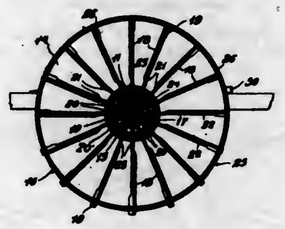
In a gas producer of the character described, the combination of a combustion chamber provided with a series



of fuel discharge openings in its top, tubes extending convergently upward from said fuel discharge openings, a cylindrical chamber having its bottom supported on and communicating with said tubes, a hopper mounted on said distributing chamber and having its diameter approximating the diameter of the distributing chamber, and having a reduced discharge mouth communicating with the top of the distributing chamber and a vertically movable valve member for closing said discharge mouth, said valve member being adapted to shed fuel into the distributing chamber whereby to facilitate passage of said fuel through the tubes.

1,390,869. SHOE-POLISHING DEVICE. JOHN BAUER, Detroit, Mich. Filed Sept. 2, 1919. Serial No. 321,042. 2 Claims. (Cl. 15—61.)

1. Shoe polishing apparatus including a handle, a motor driven shaft therein, parallel buffers at one end of the handle, means for transmitting rotary motion thereto from the shaft, and an angularly adjustable segmental housing extending from the handle and housing the buffers and power transmitting means, one of the buffers projecting through the periphery of the housing.

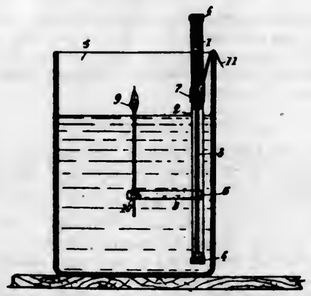


1,390,870. MANURE-LOADING FORK. HARRY BITTLE, West Alexandria, Ohio, assignor of one-half to Ira C. Albert, Lewisburg, Ohio. Filed June 28, 1920. Serial No. 392,325. 2 Claims. (Cl. 294—49.)

1. A manure fork comprising a rectangular open frame, a series of tines secured individually at two points to said frame, and end and side tines secured to the ends of said frame, said frame having supporting members united thereto from which extends a handle socket, a handle consisting of two parts one of which is supported in said socket, a socket member supporting the other part of said handle, said socket member being pivotally united to the first mentioned handle portion, and spring controlled means on the second mentioned handle portion for effecting a connection and disconnection thereof with the first named handle portion, and means for connecting a power connection with said fork.

1,390,871. WHEEL. WILLIAM Z. BLACK and DELBERT W. BUTZ, Kokomo, Ind. Filed July 29, 1919. Serial No. 314,028. 2 Claims. (Cl. 301—48.)

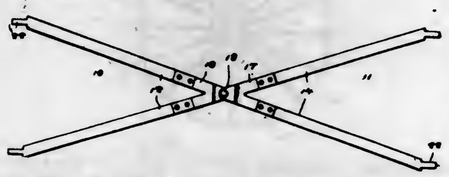
1. In a tractor wheel, the combination with the spindle of an axle, of a sleeve mounted thereon, a cam secured to the sleeve, disks surrounding the sleeve and contacting with the opposite faces of the cam, said wheel including side members which contact with the disks, a rim providing the periphery of the wheel secured to the side members thereof, and said rim having transverse openings therethrough, arms having their outer ends widened to provide cams which latter are received in



the referred to openings in the periphery of the wheel, and the inner ends of the arms contacting with the cam and disposed between the disks, a flexible element passing through all of the arms for holding the same in contacting engagement with the disk, anti-frictional guide means for each of the arms, and means for turning the sleeve on the axle spindle to arrange the cam at different relative positions with respect to the arms.

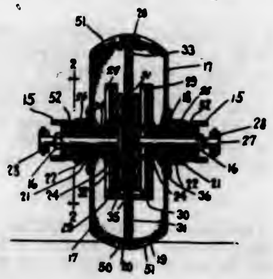
1,390,872. SEAM-RIPPING TOOL. MAYNARD J. BLAIR, Winchester, Mass. Filed Dec. 2, 1919. Serial No. 341,918. 1 Claim. (Cl. 30—9.)

A device of the character described comprising a sheet of resilient metal bent upon itself intermediate its ends and rebent to form a bead constituting a handle engageable by the fingers, said bead being elongated in cross section with one side formed convex for engagement by the fingers and the opposite side formed concave for engagement by the thumb, and the opposite edge of the sheet being hardened and sharpened to form a cutting edge.



1,390,873. ADJUSTABLE WICK-CARRIER. MODESTE BOILEAU, Suancourt-par-Morey, France. Filed Oct. 26, 1920. Serial No. 419,642. 1 Claim. (Cl. 67—35.)

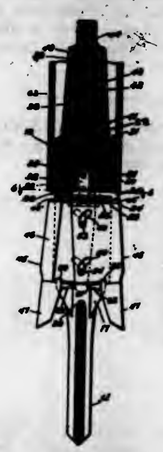
A wick carrier for coöperation with a vessel adapted to contain an inflammable fluid comprising a tube formed with a longitudinal slot, a threaded rod mounted for



rotation within the tube and operable from beyond one end of the tube, an arm having threaded connection with the rod and extending laterally of the tube through the slot therein, means on said arm to support a wick, and means slidable on the tube to engage the edge of the vessel to support the tube within and in spaced relation to the vessel.

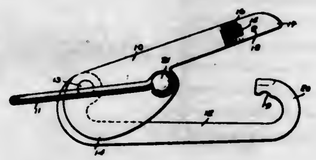
1,390,874. DRAFT-COUPLING. JOHN WYLY BRACKEN, Miami, Fla. Filed Oct. 12, 1920. Serial No. 416,422. 1 Claim. (Cl. 213—67.)

A coupling device for the purpose specified comprising a pair of hounds each formed as a V-shaped bar having converging arms terminating at their outer ends in reduced extensions, the vertex of one bar being bifurcated to define spaced knuckles arranged in a horizontal plane, the vertex of the other bar being reduced to form an extension disposed between said knuckles, offset brackets secured upon the ends of all of said bars and mounted upon the upper and lower sides thereof, the brackets on one set of bars overlapping those on the other, spacing sleeves between said bars and said brackets, and a pivot bolt passing through the brackets, through the spacing sleeves and through said knuckles and extensions.



1,390,875. GROUND-ENGAGING DRIVE-WHEEL. CHARLES JOSEPH BRITT, Willington, S. C. Filed Feb. 13, 1920. Serial No. 358,345. 4 Claims. (Cl. 301—41.)

3. A ground-engaging drive wheel comprising an annular member having internal gear teeth, hub portions, and casing sections joined to the hub portions and having inwardly directed tread portions on which are flanges joined to the annular member.



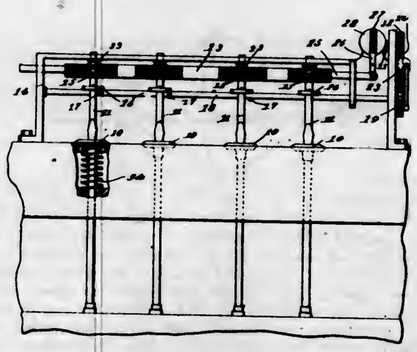
1,390,876. REAMER. JACOB S. BROWN, Los Angeles, Calif., assignor of one-half to Walter F. Eichenhofer, Los Angeles, Calif. Filed Nov. 4, 1919. Serial No. 335,739. 2 Claims. (Cl. 255—75.)

1. A drill designed to be passed through a well casing including a stock, having an integrally formed bit at the lower end thereof and having a transverse opening above the bit, reamers having upper rounded corners and having lapping flanges which are received in said opening, means between the flanges and the stock for permitting a longitudinal and lateral movement of the reamers through the opening, spring means for influencing the reamers to an outward and angular position with respect to the stock, interengaging means between the respective reamers when in such position, elements on the reamers contacting with the stock when the reamers are in such position, spring influenced laterally movable latching means for engaging said spring influenced means for locking the latter when the reamers are in such operative position, and said latching means and the rounded corners of the reamers being ar-

ranged for contact with the lower end of the casing when the stock is moved upwardly toward the casing whereby to release the latching means and to exert a downward pressure upon the rounded corners of the bit to move the latter against the influence of the spring means to bring the interengaging means therebetween out of such engagement and the contacting elements out of contact with the stock and to again seat the reamers in the opening in the stock.

1,390,877. CONNECTOR-LINK FOR CHAINS. WILLIAM ALFRED BROWN, Lincoln, Me. Filed Apr. 5, 1921. Serial No. 458,647. 2 Claims. (Cl. 24—69.)

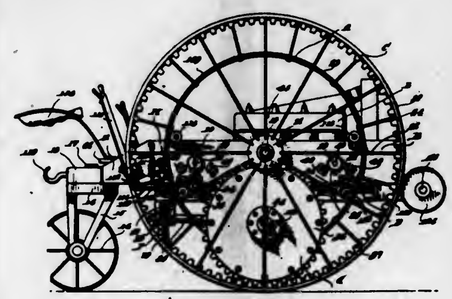
1. A link of the class described consisting of two elements pivotally connected adjacent to one end of the link, one of said elements having flat sides broadened adjacent to the pivot, and the other element being disposed between said sides, the sides of the first-mentioned element at that end of the link remote from the pivot terminating in laterally movable jaws, the adjacent end of the other element being accommodated between said jaws and there being co-engaging fastening means on said jaws and on said adjacent end of the other element.



1,390,878. WINDOW-VENTILATOR. CATHERINE M. BUHRMAN, Graceham, Md., assignor of one-fourth to Harry W. Stull, one-fourth to Reuby M. Stull, and one-fourth to Eleanor R. Stull, Rocky Ridge, Md. Filed Nov. 23, 1920. Serial No. 426,022. 1 Claim. (Cl. 98—31.)

A window ventilator comprising a screen adapted to be positioned in a window frame, a rectangular frame of a width and height greater than the screen hinged to said screen, flexible means connecting the ends of the frame and screen together, a transparent panel carried by said frame, detachable and adjustable connections between the

frame and the screen, a draining element secured to the lower portion of the frame and constructed of flexible waterproof material and having its ends extended and detachably connected to the flexible means.



1,390,879. VALVE-GRINDER. CHARLES A. BUKOVE, Ute Park, N. Mex. Filed Dec. 13, 1919. Serial No. 344,651. 1 Claim. (Cl. 51—29.)

In a valve grinder, a spindle adapted for engagement with the valve to be ground, a disk carried by said spindle, a cam shaft, a cam thereon for engaging the disk and raising the spindle, a gear wheel on said spindle, a rack bar engaging the gear wheel for rotating the latter, and means for rotating the cam shaft and reciprocating the rack bar in timed relation, said spindle having a square portion and the disk having a square aperture, permitting the elevation of the spindle, at times, independently of the disk and without discontinuing the drive through the gear wheel.

1,390,880. TRACTOR. HARRY W. BURTON, Enid, Okla. Filed Jan. 26, 1920. Serial No. 354,127. 12 Claims. (Cl. 180—17.)

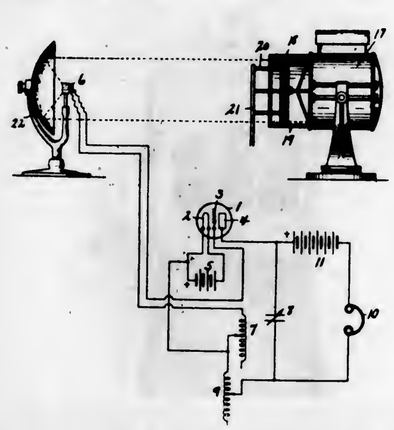
1. In a tractor, a main frame, a supplemental frame connected to the main frame for swinging movement, ground wheels carried by the main frame, internal ring gears carried by the ground wheels, a guide track carried by the ground wheels and arranged in concentric relation to the ring gears, guide rollers carried by the supplemental frame, and arranged to engage the guide tracks, a prime mover carried by the supplemental frame, a drive axle carried by the supplemental frame, means operatively connecting the drive axle with the prime mover, pinions rotatably mounted on the axle and arranged to mesh with the ring gears, sliding clutches mounted on the axle and

arranged to move into and out of engagement with the pinions, means for independently operating the clutches, and brake bands arranged to engage said guide tracks.

1,390,881. BROOM-HOLDER. SOLOMON CANTOR, New York, N. Y. Filed Nov. 11, 1920. Serial No. 423,425. 1 Claim. (Cl. 15—19.)

The combination with a broom holder, comprising a hollow casing open at its lower end, of a gate at one edge of the casing, inwardly projecting horizontal tracks at the lower portion of the casing, a double-ended broom, a metal band around the intermediate portion of the broom having a pair of webs at each side thereof adapted to receive said tracks between them when said broom is moved horizontally relative to the broom holder, and said gate operating to hold the broom against movement.

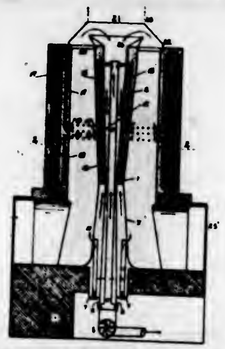
1,390,882. BROOM. SOLOMON CANTOR, New York, N. Y. Filed Nov. 11, 1920. Serial No. 423,426. 2 Claims. (Cl. 15—19.)



1. A broom, comprising a pair of brushes, each brush having the larger ends of the straw or corn compressed and secured together and the smaller ends of the straw

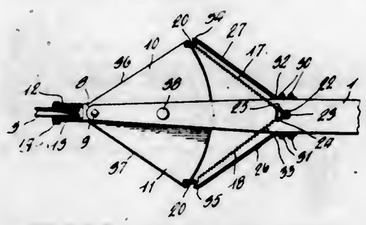
or corn flared apart, said brushes located with their larger straw ends together, a clamp comprising a pair of

metal plates secured to the adjacent ends of both brushes, and webs on the plates, said webs at the ends of the plates having interlocking engagement.



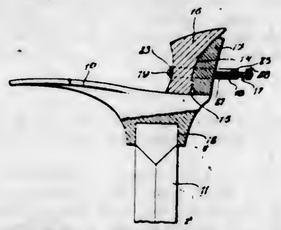
1,390,883. RADIANT-ENERGY DETECTING AND TRANSLATING DEVICE. THEODORE W. CASE, Scipio, N. Y. Filed Apr. 5, 1918. Serial No. 226,905. 2 Claims. (Cl. 250—8.)

1. An apparatus for signaling by means of light rays comprising a source of light rays, means for interrupting the passage of rays from said source, means for receiving said rays and for giving an audible signal in response thereto comprising a vacuum vessel, containing a filament, a grid and a plate, means for heating the filament, a circuit connecting the filament and grid and including a light-reactive resistance and an inductance, and a circuit connecting the filament and plate, said circuit containing a source of potential, a translating device and an inductance.



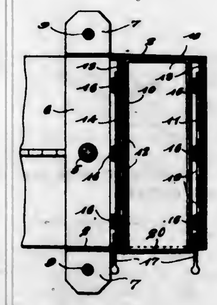
1,390,884. VERTICAL KILN. ETIENNE CHAUDIÈRE, Paris, France. Filed Aug. 28, 1919. Serial No. 320,411. 4 Claims. (Cl. 222—3.)

1. The combination with a vertical kiln or furnace, in which the material to be treated is mixed with the fuel, of a central core extending the whole length of the kiln and completely surrounded by the material and the fuel, and a duct in this core disposed to take fresh air from



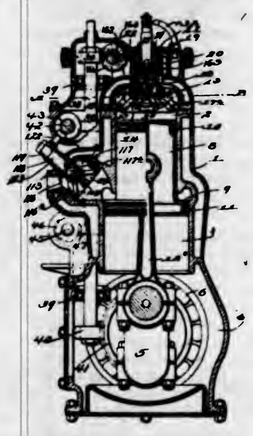
the exterior and to distribute it at different levels in the inner part of the ring formed around the core by the material to be treated mixed with the fuel.

1,390,885. SAFETY-TROLLEY. OWEN LEE CHESNUTT, Atlanta, Ga. Filed May 9, 1921. Serial No. 467,952. 4 Claims. (Cl. 191—60.2.)



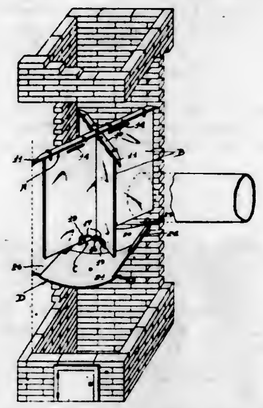
1. A safety trolley comprising a trolley pole having a bifurcated end, a sector pivoted between the forks of the bifurcated end of said pole and having its wings extending on opposite sides of the pole, resilient means connected at one end to the pole and at the other end to the outer portions of the wings in said sector and acting to normally retain the same in an initial intermediate position, and a trolley wheel carried by said sector, substantially as described.

1,390,886. SHOE-HEEL HOLDER. WILLIAM THOMAS CREED, Irving, Tex. Filed Feb. 27, 1920. Serial No. 361,791. 1 Claim. (Cl. 12—125.)



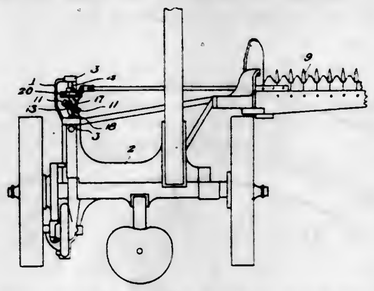
In combination with a shoe last, a vertically disposed concaved member extending from one end of said shoe last and provided with a curved recess, a substantially U-shaped member engaging said extension and having a threaded opening therein, a connecting bar provided with laterally extending spaced projections and having an opening formed therein, a tongue extending laterally from one end of said U-shaped member and adapted to engage the opening in said connecting bar, an enlarged tongue extending laterally from the opposite end of said U-shaped member and adapted to engage the spaced projections of said bar, a screw engaging the threaded opening in said U-shaped member and a knurled head secured to the outer end of said screw.

1,390,887. RADIATOR-HEATER. JOHN W. DAVIS and JOHN W. OSBORNE, Winchester, Ill., assignors of four-twelfths to said Davis, three-twelfths to said Osborne, and five-twelfths to Chester L. Williams, Chapin, Ill. Filed May 24, 1920. Serial No. 383,851. 6 Claims. (Cl. 126—350.)



6. A heating attachment for a radiator comprising a housing having front and rear heads provided with openings, a receptacle for a heating medium positioned in the housing, and separate means for controlling passage of air through the openings in the heads.

1,390,888. INTERNAL-COMBUSTION ENGINE. CHARLES DE LUKACSEVICS, Newark, N. J., assignor to Edmund Lofler, New York, N. Y. Filed June 15, 1915. Serial No. 34,243. 1 Claim. (Cl. 123—81.)

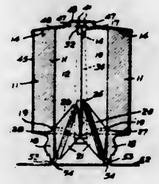


In an internal combustion engine, the combination of a rotatable conical cylinder controlling valve, an actuating member connected thereto having a recess and diametrically opposite circumferential bearing surfaces, a revoluble cam having a rib operative in said recess to reciprocate said member alternately in reverse directions, and springs acting on said bearing surfaces of said member to retain the valve on its seat.

1,390,889. DRAFT-PRODUCING DEVICE. ANTHONY PETRA DOELL, Minneapolis, Minn. Filed June 7, 1920. Serial No. 387,259. 6 Claims. (Cl. 98—30.)

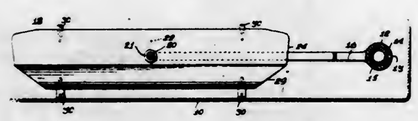
2. In a device of the class described, a hanger comprising crossed members, the ends thereof being designed to engage the walls of a flue, heat radiating plates adapted to be suspended from said hanger, opposite the pipe-opening in the flue, and arranged to divide a section of the flue into segmental compartments and a pan designed to be hung in the flue beneath said plates, said pan being adapted to direct heated gases into all of said compartments and formed to provide an opening into the clean-out chamber of the flue for the escape of cinders or the like.

1,390,890. ATTACHMENT FOR MOWING-MACHINES. WARREN DYER, Mangum, Okla. Filed Aug. 30, 1920. Serial No. 406,823. 1 Claim. (Cl. 74—14.)



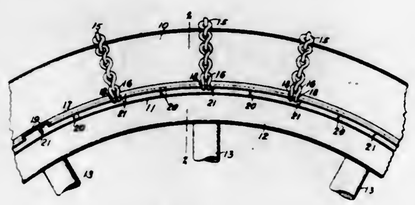
A revoluble shaft which is journaled in bearings and which has a reduced angle portion between the bearings, and inclined portions between the straight and angle portions, a two-part bearing removably secured to the angle portion of the shaft, connecting means for the sectional bearing, compressible plates between the sections, a member including a head having a stub shaft which is journaled below the bearing, upstanding arms on the head, trunnions on the bearings journaled in openings in the arms, a longitudinal finger on the head disposed centrally between the arms thereof, and an upstanding lug on the end of the finger.

1,390,891. TOY RAILWAY. CHARLES FRASER EDWARDS, Ottawa, Ontario, Canada. Filed Feb. 17, 1921. Serial No. 445,661. 13 Claims. (Cl. 104—244.)



11. In a toy railway, a car having a plurality of pairs of spaced wheels mounted to slant inwardly from their

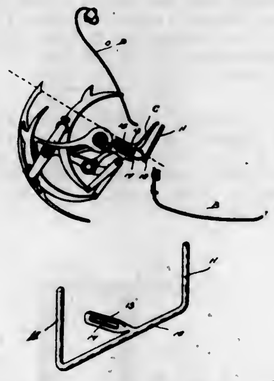
point of contact with a supporting surface, and a base providing courses for said pairs of wheels with marginal



exterior elevations confining said pairs of wheels to said courses.

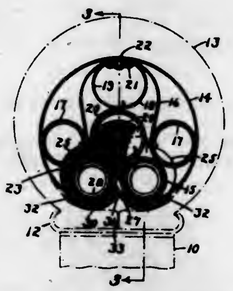
1,390,892. VALVE-CONTROL FLOAT. CHARLES EIMKE, Brooklyn, N. Y. Filed Nov. 2, 1920. Serial No. 421,359. 3 Claims. (Cl. 137—104.)

1. As a new article of manufacture, a float for controlling the supply valves of ink reservoirs constructed from Balsa wood, said float provided with spaced pins projecting from its upper and lower surfaces.



1,390,893. ANTISKIDDING DEVICE. THADDIOUS V. ELLIOTT, New York, N. Y. Filed Sept. 17, 1918, Serial No. 254,460. Renewed Dec. 17, 1920. Serial No. 431,502. 2 Claims. (Cl. 152—2.)

1. In a wheel, antiskidding members extending independent one of the other and in spaced relation across the wheel tire, each antiskidding member being provided at the ends with hooks, and a wheel rim having longitudinal channel rings at the sides with which the hooks engage, the said channel rings having spaced notches to permit the engagement of the said hooks with the channel rings and the latter having spaced lugs in the paths of the said hooks to limit the movement of the hooks in the channel rings.

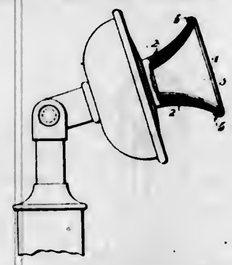


1,390,894. GRAIN-BINDER ATTACHMENT. EDUARD S. ERICKSON, De Lamere, N. D. Filed Aug. 28, 1920. Serial No. 406,536. 4 Claims. (Cl. 56—443.)

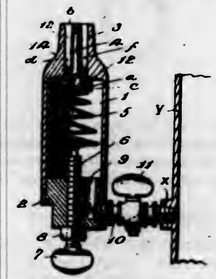
4. As a new article of manufacture, a grain binder attachment comprising a U-shaped element, an attaching lug projecting from said element and having an elongated slot, means for attaching the lug to the trip arm of the binder whereby the attachment may be moved toward and away from said arm and the parallel limbs of said element

being arranged in parallelism with said arm and at a plane at the rear thereof.

1,390,895. RESILIENT TIRE. BRUNO G. ERLER, Oak Lane, Pa., assignor of two-fifths to Taylor J. Davidson, Camden, N. J., and three-twentieths to Julius Richter, Philadelphia, Pa. Filed Nov. 15, 1920. Serial No. 424,241. 4 Claims. (Cl. 152—8.)



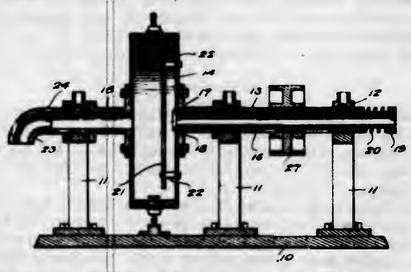
4. A resilient insert for vehicle tires comprising a supporting structure including an annular band, inwardly and radially projecting arched flat springs having eyed ends, inwardly and radially projecting inverted U-shaped flat springs and inwardly and radially projecting S-shaped flat springs carried by sail annular band, the inner ends of the arched, U-shaped and S-shaped springs having a rolling contact, apertured spacing elements having a cut-out portion on their inner edges disposed between the inner ends of said springs, contractile springs threaded continuously through the eyed ends of the arched springs and the apertures of the spacing elements, and an inner annular centrally beaded ring for maintaining the inner ends of the arched springs in spaced relation.



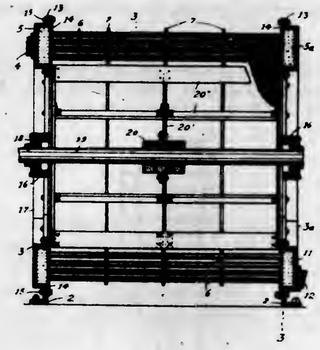
1,390,896. TELEPHONE-MOUTHPIECE DISINFECTANT. JAMES FERGUSON and WILLIAM H. BENNETT, Vancouver, British Columbia, Canada. Filed Feb. 25, 1921. Serial No. 447,748. 1 Claim. (Cl. 179—185.)

A disinfecting means for a telephone mouthpiece, comprising the combination with it of a thin lining of plaster-like absorbent material conforming to the inner surface of the mouthpiece, which lining is impregnated with an enduring antiseptic, and a ring adapted to fit the outer

edge of the mouthpiece and flanged in the plane of its outer edge to engage and retain the lining, said ring having backwardly projecting portions adapted to be bent around the outer edge and retain a hold of the mouthpiece.



1,390,897. FUEL-SAVER FOR ENGINES. ERNEST M. FLORY, Harrisonburg, Va. Filed Dec. 4, 1920. Serial No. 428,307. 3 Claims. (Cl. 251—34.)

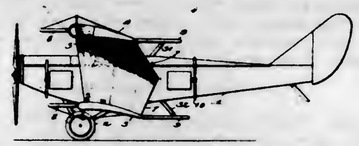


1. A device of the character specified comprising a casing having a cylindrical opening at one end, a substantially cylindrical valve body, having a cylindrical bore and also having a plurality of flat depressions of different depths and lengths about its periphery, for closing said opening, an adjusting screw threaded in the opposite end of the casing and in alinement with said valve body, a helical spring in said casing confined between the inner end of the adjusting screw and the inner end of the valve body and adapted to normally hold the latter in closed position, and a passage through the casing at the end opposite the valve body adapted to furnish communication with the intake manifold of an internal combustion engine.

1,390,898. SEPARATOR. LOVIAS F. FRASER, Shamrock, Okla. Filed May 18, 1920. Serial No. 382,307. 1 Claim. (Cl. 233—20.)

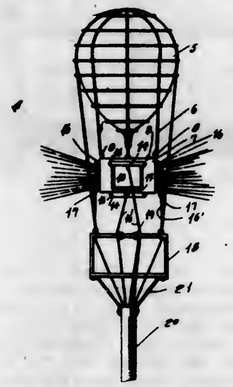
A separator comprising a rotatable drum, a sleeve extending from one end of the drum, a supply pipe extending from said sleeve and communicating with the interior of the drum and forming a bearing for said drum, a flared inner end for said pipe, a seat for said end, yieldable means for holding the flared end of the pipe upon the seat, a discharge pipe leading from the drum and automatically operated valve controlled outlet ports arranged around the periphery of the drum.

1,390,899. CIRCULAR RADIATOR. JOHN FROELICH, St. Paul, Minn., assignor to Leslie S. Hackney, St. Paul, Minn. Filed July 16, 1918. Serial No. 245,183. 5 Claims. (Cl. 257—126.)



1. A water cooling radiator comprising heads, one having an intake pipe and the other a discharge pipe, a series of water circulating tubes connecting chambers provided in said heads and baffle walls provided in said heads and separating said chambers into independent compartments and directing the flow of water back and forth through said tubes between said heads, and a fan encircled by said tubes for establishing currents of air outwardly between said tubes.

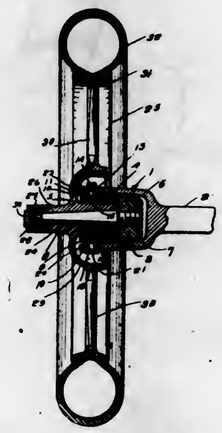
1,390,900. TIRE-TREAD. HARRY M. FRY, Johnstown, Pa. Filed Apr. 6, 1920. Serial No. 371,614. 4 Claims. (Cl. 152—17.)



1. In a device of the character described, the combination with the rim of a wheel and a pneumatic tire secured thereon, of a pair of annular flange members secured at the side thereof and provided with annular channels; a protecting tread received over said tire and provided around its inner edges with annular outwardly curved sections adapted to be received into said annular channels; and a pair of pneumatic securing tires of a diameter when deflated to be received into said channels over said annular outwardly curved sections of the protecting tread, whereby when the securing tires are inflated the inner edges of the protecting tread are clamped between the securing tires and the annular channels, to hold the protecting tread securely on the tire.

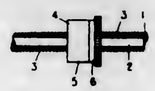
1,390,901. AEROPLANE. MARK GOLBIN, Brooklyn, N. Y. Filed Sept. 18, 1920. Serial No. 411,033. 3 Claims. (Cl. 244—5.)

1. In a device of the class described, the combination of a fuel-containing wing structure, a wing structure adapted to be inflated, and an inter-wing structure connecting the two and comprising means for utilizing fuel from the first said structure for inflating the second said structure.



1,390,902. BALLOON-SEARCHLIGHT. COLUMBUS GROOMS, East Point, Ga. Filed July 6, 1918. Serial No. 243,568. 2 Claims. (Cl. 116—18.)

1. In combination with an aerial body, a luminous signaling device loosely suspended therefrom having a plurality of bull's eyes for projection of light rays therethrough, shutters for the bull's eyes, pendant members to individually operate the shutters, and one of the members adapted to be held taut to steady the device as another cable is operated to move a shutter.

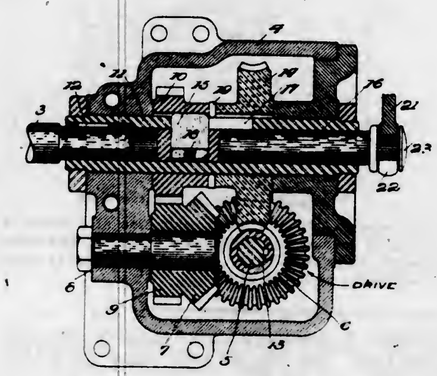


1,390,903. FRONT-WHEEL STEERING MECHANISM FOR MOTOR-VEHICLES. WILLIAM HAYLOR, Heppner, Oreg. Filed June 7, 1919. Serial No. 302,424. 1 Claim. (Cl. 280—96.3.)

A front wheel steering mechanism for a motor vehicle comprising a forked axle end, said fork having vertical openings extending through the upper and lower arms thereof, one of said openings being threaded, a socket formed around the last mentioned opening on the inner face of the upper arm of the fork, a cup-shaped member positioned in said fork and having openings in its upper and lower portions, the opening in the lower portion registering with the opening of the lower arm of the fork and being interiorly threaded, a pivot member extended through the opening in the lower arm of the fork and threaded in the threaded opening of said cup-shaped member, the opening in the upper portion of said cup-shaped member being tapered downwardly, an enlargement formed on the upper face of said cup-shaped member around the tapered opening and adapted for engagement in the socket of the upper arm of the fork, an upper pivot screw threaded in the upper arm of said fork and having a tapered end extended into the tapered opening of said cup-shaped member, a wheel hub having one end extended into said cup-shaped member, said hub being provided with an annular arcuate flange inclosing the end of the cup-shaped member and the forked axle end, a spindle extended

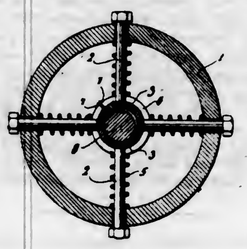
through said hub and having an inner end threaded in the thickened central portion of said cup-shaped member, and bearing means between the enlargement on said cup-shaped member and the main wall of the socket of the upper arm of the fork.

1,390,904. SLIDING MECHANISM. GEORGE HAZELTON, Portadown, Ireland. Filed Dec. 15, 1920. Serial No. 431,017. 7 Claims. (Cl. 74—40.)



1. Sliding mechanism comprising a male and a female member, wherein the male member is formed with an axial groove leaving an axial rib, transverse threads or serrations being formed on the surface of said rib, and the female member comprises two elements rotatably mounted together whereof one element has an internal rib slidably engaged in the groove of said male member, and the other element is provided with an internal rib having threads or serrations adapted, on rotation of said element, to enter into operative engagement with those of the said male member so as to lock the two members together.

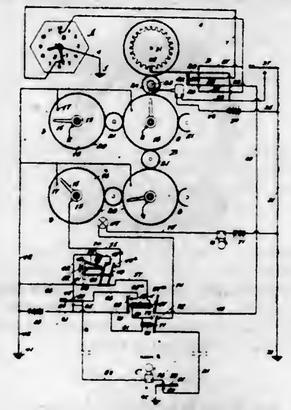
1,390,905. MULTIPLYING-GEARING. ERNEST C. HEAD, Van Wert, Ohio, assignor to Coburn Machine Tool Company, Franklin, Pa., a Corporation of Pennsylvania. Filed Nov. 10, 1917. Serial No. 201,243. 5 Claims. (Cl. 74—59.)



5. In a train of feed gearing comprising a plurality of gears operatively related to produce a plurality of feed ratios, means to multiply said feed ratios comprising alternative gear trains one of which includes a worm and worm-wheel, a gear of each of said trains being freely rotatable on a common shaft, a sliding key for

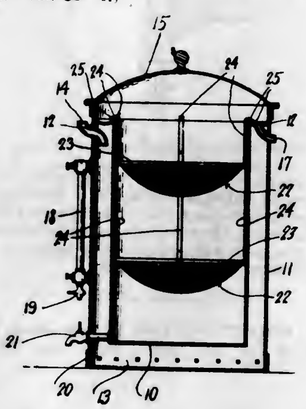
connecting either of said last-named gears with said shaft, a rack parallel to said first-named shaft and con-

nected to said sliding key, a pinion for reciprocating said rack, and an indicating hand-wheel for rotating said pinion.



1,390,906. CENTERING DEVICE. SAMUEL D. HENDERSHOT, Independence, Calif. Filed Aug. 3, 1920. Serial No. 401,022. 2 Claims. (Cl. 157—9.)

1. An expanding device of the class described comprising a hub member formed of sections, a supporting member of ring-shape, bolts slidably mounted therein and having their inner ends connected with the hub sections, springs on the bolts and arranged between the supporting member and the hub sections for holding the hub member in contracted condition and means for expanding the sections.



1,390,907. AUTOMATIC CALL SYSTEM FOR HOTELS. ALBERT H. HEYROTH, Duluth, Minn. Filed Jan. 19, 1921. Serial No. 438,514. 9 Claims. (Cl. 161—2.)

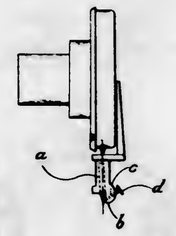
1. A call system of the class described comprising a clock, circuit-closing and opening means associated with the clock, a call-board having a plurality of call units each provided with a movable contact-carrying wheel, an adjustable contact, a twenty-four hour dial for enabling the adjustable contact to be adjusted for any desired time, a motor operatively connected with all the wheels for intermittently moving the same, an electric switch for connecting the circuit make-and-break means of the clock with the motor, and means operating in

conjunction with the contact-carrying wheels and driven by the motor to control the said switch.

1,390,908. COOKING VESSEL. FRED D. JOBE, Roundup, Mont. Filed Mar. 9, 1920. Serial No. 364,496. 2 Claims. (Cl. 53—1.)

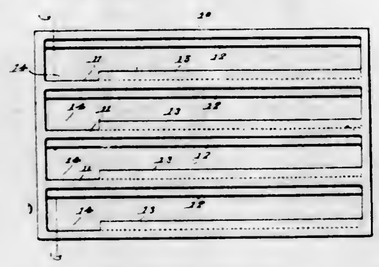
1. A cooking vessel of the class described comprising spaced inner and outer receptacles defining a water chamber by the intervening space, said receptacles joined together at the upper ends, a filling tube projecting into said chamber, a detachable cover associated with the outer receptacle, a steam escape tube projecting through said outer receptacle, a gage tube provided on said receptacle and communicating with both ends of the water chamber, an outlet having one end communicating with the inner receptacle and extending through the outer receptacle, and a valve provided on said outlet.

1,390,909. WHEEL CONSTRUCTION. OLOF H. JOHNSON, Seattle, Wash. Filed Feb. 28, 1921. Serial No. 448,511. 3 Claims. (Cl. 152—8.)



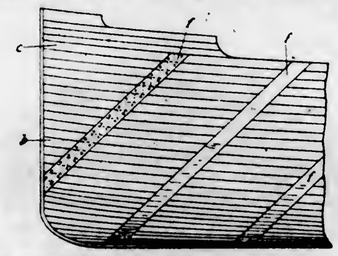
1. The combination of coiled spring means, a casing in which the spring means is inclosed, said casing having clencher flanges, a longitudinal central rim member made up of a series of sections hinged together and

connected to intermediate points of the spring means and having longitudinal channels in their sides, side rim members adapted to engage the clencher flanges and having tongues on their inner edges disposed in the said



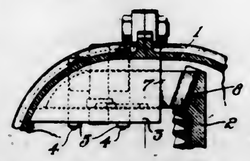
channels of the central sections, bolts extending through and connecting the central sections and the side members, and a flexible layer interposed between the central sections of the rim and the spring means.

1,390,910. TALKING-MACHINE. AUGUSTUS THEODORE JORDAN, London, England. Filed June 23, 1920. Serial No. 391,079. 8 Claims. (Cl. 274—37.)



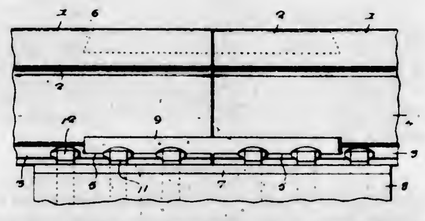
1. In talking machines, a needle-holder having a socket, a needle seated in said socket, a downward extension proceeding from the mouth of said needle holder, said extension having a threaded hole, a needle-holding screw seated in said hole and engaging the needle at a point in close proximity to the needle-point.

1,390,911. STEAMING-CRATE. JOSEPH JUDGE, Pittston, Pa. Filed Oct. 24, 1919. Serial No. 332,976. 1 Claim. (Cl. 28—7.)



A device of the class described comprising a rectangular frame, spaced horizontal partitions formed integrally therewith and extending longitudinally therein, a retaining strip formed along the upper rear edge of each partition and a second retaining strip formed along the lower front edge of each partition and terminating short of one end of said frame.

1,390,912. WOODEN SHIP CONSTRUCTION. JOSEPH T. L. LAVAGETTO, Portland, Oreg. Filed Jan. 8, 1919. Serial No. 270,208. 1 Claim. (Cl. 114—84.)

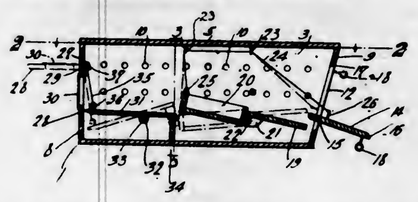


In a wooden-ship hull, the combination of a frame, a covering of planks, and metal bars extending diagonally across the outer faces of the sides of the planks, to cover the end seams of the planking.

1,390,913. AUTOMOBILE-LOCK. HARRY N. LEE, Creston, Iowa. Filed Apr. 28, 1920. Serial No. 377,286. 2 Claims. (Cl. 70—90.)

1. A differential gear lock comprising a solid body having a transversely and longitudinally curved upper surface adapting the body to be secured in the differential case in close proximity to the main or ring gear, said body being formed with a transverse bolt passage adapted to be disposed opposite the ring gear and with a bore extending therethrough at right angles to said passage in communication with the latter, a bolt slidable in said passage provided on the under side thereof with a semi-circular recess communicating with said bore, and on the outer end thereof with inclined teeth engageable with the bevel teeth of the ring gear, a lock barrel mounted in said bore and a swinging arm carried by the barrel and engaged in the recess in said bolt.

1,390,914. RAIL-JOINT. CHARLES H. LITTLE, Chicago, Ill. Filed May 28, 1921. Serial No. 473,291. 2 Claims. (Cl. 238—216.)



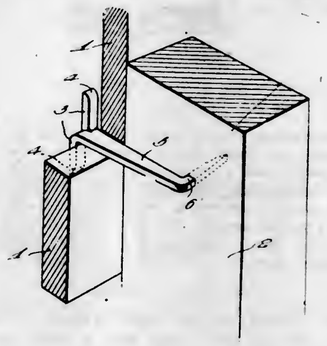
1. In a railway construction, the combination with rails and supporting ties therefor, of a plate disposed over certain of the ties, said plate having a pair of spaced longitudinal lugs which are wedge shaped in cross section, the rails having their base flanges, to the opposite sides of their webs formed with wedge slots to receive the lugs, and means passing through the plate, entering the ties, contacting the edges of the base flanges and overlying and contacting with the top of said base flanges,

1,390,915. ARTIFICIAL LIMB AND THE LIKE. JULIUS ALWIN LOTH, Utrecht, Netherlands. Filed May 7, 1918. Serial No. 233,066. 4 Claims. (Cl. 16—11.)

3. In a joint of the character described for artificial limbs, the combination of a joint part to be attached to the upper part of the artificial limb, a second joint part to be attached to the lower part of the artificial limb, the two joint parts being guided against each other by guiding grooves, one of said grooves being provided in each of the said joint parts, the groove of the first named joint part corresponding in shape to that of the rolling face of the natural bone and the groove of the second named joint part being inclined against the axis of the lower part of the artificial limb in such a manner that during the bending of the joint the said lower part is raised against the said upper part of the artificial limb, and means for holding the two parts together.

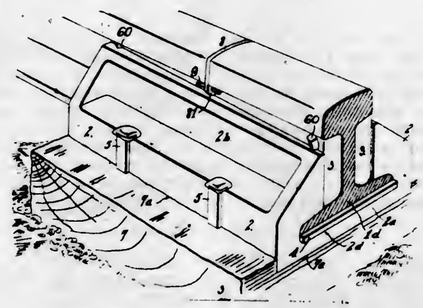
1,390,916. POULTRY-NEST. WILLIAM MARCUS LOWTHROP, Summertown, Tenn. Filed Nov. 3, 1919. Serial No. 335,279. 2 Claims. (Cl. 119—50.)

1. In a device of the class described, a casing; a downwardly swinging door mounted in one end of the casing; an upwardly swinging door mounted in the other end of the casing; a nest-carrying platform fulcrumed intermediate its ends in the casing; flexible elements extended between the inner end of the nest-carrying platform and the first specified door; a second platform mounted to swing in the casing; and a flexible connection between the second platform and the upwardly swinging door.



1,390,917. WRENCH. FREDERICK C. LYON, Sr., Horseheads, N. Y. Filed May 10, 1918. Serial No. 233,712. 1 Claim. (Cl. 81—72.)

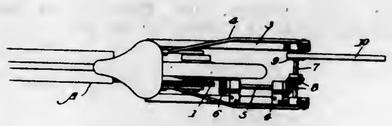
A wrench having gripping jaws, an expanding member for the jaws, said jaws and member having interengaging screw threads to maintain the jaws in proper relation within an object in addition to facilitating spreading of the jaws, one end of the jaws coöperating to form a wrench head, and gripping teeth on the exterior of the jaws terminating at the head so as to form a rest for a wrench in engagement with the head, the screw having a wrench head projecting beyond the first wrench head so that the end of the first wrench head may serve as a rest for a wrench in engagement therewith when the jaws approach gripping relation with an object, and a single



wrench coöperating with said wrench heads having an opening to receive the first wrench head and an opening to receive the second wrench head smaller than the first mentioned opening.

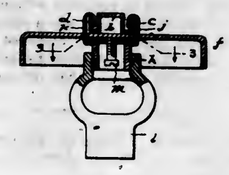
1,390,918. MOLDBOARD-ANCHOR. DANIEL J. McFARLAND, San Francisco, Calif. Filed Sept. 30, 1920. Serial No. 413,714. 3 Claims. (Cl. 85—10.)

1. A device for securing mold boards to studs comprising a shank for reception between adjacent mold boards, one end of said shank having oppositely extending arms to bear against the inner sides of the mold boards, the other end of said shank having a laterally extending prong to be driven into the stud after said arms are engaged with the mold boards, said prong being disposed at a slightly obtuse angle to said shank, whereby to draw said arms tightly against the mold boards when driving said prong.



1,390,919. RAIL-CHAIR. CHARLES MALITCH, Hamilton, Ohio. Filed June 14, 1921. Serial No. 477,596. 5 Claims. (Cl. 238—208.)

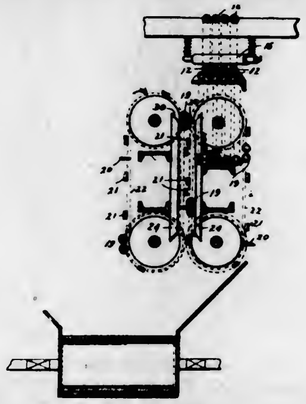
1. A rail joint comprising in combination, a base adapted for being spiked onto a tie, the said base having



a seat, a pair of opposing rail ends whose base portions are received in the chair seat, the chair having parallelly extending webs held in planes at an angle to their opposing rail web face, wooden wedge keys interposed between the chair and rail web faces, the opposite inner ends of each chair web face having a V shaped vertically extending groove and key pins square in cross section adapted for being driven into the said V shaped groove and to penetrate the wooden wedges and thereby lock them from displacement.

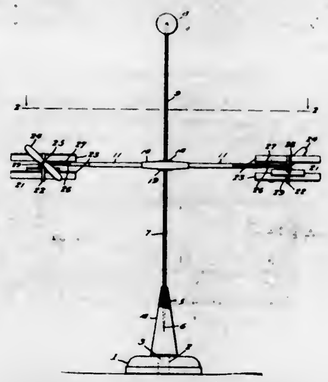
1,390,920. POWER TRANSMISSION. CHARLES K. NAGY, Gainesville, N. Y. Filed Jan. 8, 1921. Serial No. 435,941. 1 Claim. (Cl. 74—106.)

In combination with a motorcycle, a ring gear, clips for securing the same to the spokes of the rear wheel of the motorcycle, a supporting frame, means for detachably connecting the same with the motorcycle frame, a shaft journaled in said frame, a gear thereon meshing with the gear on the motorcycle wheel, a second shaft in the frame geared to the first mentioned shaft and a pulley connected with the second shaft.



1,390,921. LOOM-PLATE AND HANGER. ADOLPH OLEVIN, Detroit, Mich. Filed Jan. 28, 1920, Serial No. 354,645. Renewed Aug. 3, 1921. Serial No. 489,570. 4 Claims. (Cl. 247—20.)

1. In a device of the class described, a supporting bar in the form of an inverted U, with upwardly extending side flanges forming parallel troughs on either side, a loom plate, means for supporting a fixture positioned below said loom plate, provided with two parallel upwardly extending arms projecting through said loom plate on opposite sides of said bar, said arms being bent over at their extremities so as to overhang the side flanges of said troughs, means for tightening said loom plate against said bar.

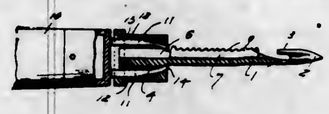


1,390,922. FIBROUS-PLANT-DECORTICATING MACHINE. FRANK O'NEILL, Jr., Philadelphia, Pa. Filed Nov. 22, 1917. Serial No. 203,374. 6 Claims. (Cl. 13—18.)

5. In a machine of the class described, an endless series of traveling rolls arranged in pairs, a frame supporting a pair of said rolls, one of the rolls of a pair being loosely mounted in said frame so that it may

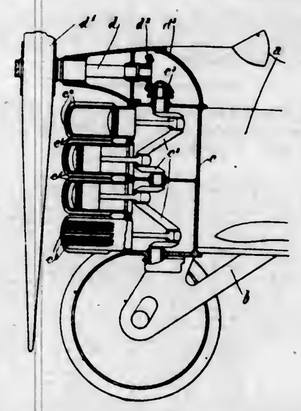
bodily change its position, and a guide controlling said loosely mounted roll.

1,390,923. TOY. EMIDIO PEPE, Derby, Conn. Filed Feb. 14, 1921. Serial No. 444,740. 1 Claim. (Cl. 46—40.)



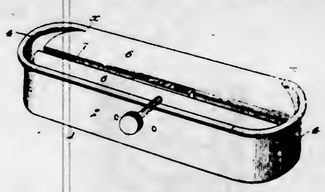
In a toy, a vertically supported spirally grooved stem, a runner thereon having a pocket on the under face thereof, a clutch element in the pocket comprising a body portion provided with a square opening through which the stem passes and having upstruck spurs designed when the weight of the runner is brought thereagainst to engage the inner wall of the pocket and by virtue of such engagement to cause one or more of the walls provided by this squared opening to be received in the groove of the stem, and to cause the runner to revolve on the stem when permitted to gravitate downwardly thereon.

1,390,924. NEEDLE. WILLIAM PHILLIPS, Auburn, Ill. Filed Mar. 24, 1920. Serial No. 368,390. 1 Claim. (Cl. 223—37.)



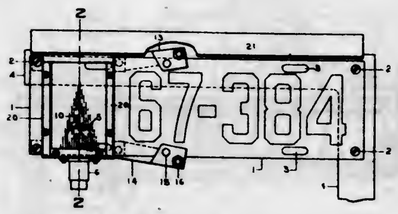
A device of the class described including a handle, a needle having a penetrating end member, means to detachably secure the needle to the handle, said needle having a slot extending inwardly from the inner end, an eye closing member slidable in the slot and removable

therefrom at the inner end of the needle, said eye-closing member being held against displacement in one direction by engagement with the said end member, said



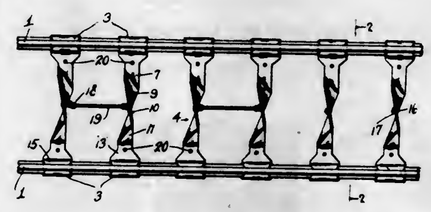
means crossing the slot, and said eye-closing member being engageable with said means to prevent accidental displacement from the slot at the inner end of the needle.

1,390,925. COMBUSTION-MOTOR. HENRY CHARLES ALEXANDRE POTEZ, Aubervilliers, France. Filed Dec. 13, 1919. Serial No. 344,528. 5 Claims. (Cl. 244—31.)



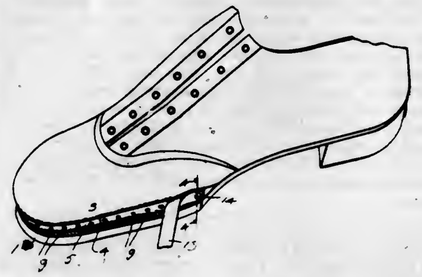
1. In an automotive vehicle, the combination of a body, an internal combustion engine mounted in the forward portion of said body, said engine including superposed cylinders having cylinder heads disposed toward the front of the vehicle, a vertically arranged crank case at the rear of said cylinders having a crank shaft mounted vertically therein, and a propeller adjacent said cylinder heads whereby the forward motion of the body and the rotation of said propeller cause a stream of air to impinge directly and initially upon said cylinder heads.

1,390,926. BALL-MARKER. WILLIAM F. REACH, Springfield, Mass., assignor to A. G. Spalding & Bros., New York, N. Y., a Corporation of New Jersey. Filed June 17, 1921. Serial No. 478,362. 8 Claims. (Cl. 101—7.)



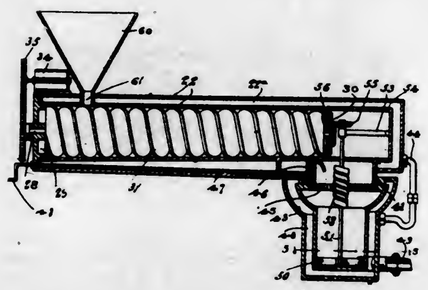
1. A ball marker consisting of a member having a guide-way for the ball, the sides of which guide-way are convergent inwardly toward the center line of the member, said sides having a space between them for receiving marking means projecting slightly above the bottom of the guide-way to contact with the ball, said marking means being held between the inner adjacent portions of said sides.

1,390,927. COMBINATION TAIL AND AUTOMOBILE-LICENSE LIGHT. CATHERINE RING, Detroit, Mich. Filed Feb. 28, 1921. Serial No. 448,572. 3 Claims. (Cl. 40—131.)



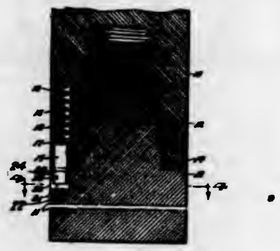
1. In combination with a license plate, a lamp carrier provided with attaching ears, said ears being perforated, screws passing from two of said ears through existing holes of the license plate, and links pivoted at one end to the other two ears and provided at their outer ends with clamps embracing the said plate.

1,390,928. TIE. JOHN WILLIAM RYAN, Springfield, Ill. Filed Feb. 21, 1921. Serial No. 446,621. 4 Claims. (Cl. 238—30.)



1. A combined tie and clamp for railway rails comprising two similarly constructed metallic members each having an outer flat end formed with a rail engaging lip, said members disposed one on the other to arrange the lips of one of the members opposite the lips of the other member in rail receiving relation, said members, intermediate of the flat ends thereof being twisted, and means connecting the twisted portions of the members.

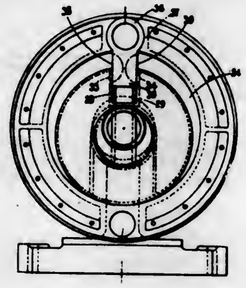
1,390,929. VENTILATED SHOE. DOMINIC SAUDINO, New York, N. Y. Filed Feb. 4, 1921. Serial No. 442,448. 2 Claims. (Cl. 36—3.)



2. A ventilated shoe having a row of openings in the lower portion of its upper, a band for covering the openings in the upper, and fastening means for detachably connecting the band to the shoe and comprising complemental parts applied to the shoe and band.

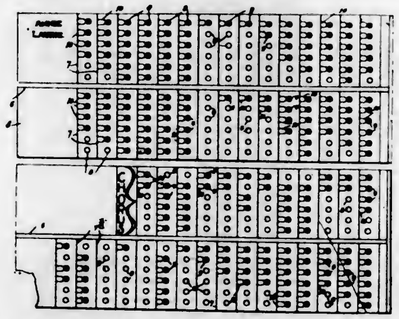
1,390,930. MACHINE FOR REPAIRING THE LININGS OF FURNACES. THOMAS T. SCOTT, Youngstown, Ohio. Filed Oct. 9, 1919. Serial No. 329,586. 10 Claims. (Cl. 91—44.)

1. A machine of the character described including a wheel mounted truck, means for projecting a coating material against the walls of a furnace, means supporting said projecting means from said truck and permitting horizontal projection of the projecting means, and means to adjust the projecting means vertically.



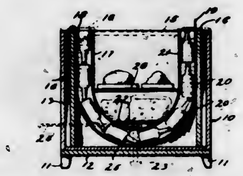
1,390,931. STEM AND BIT LOCKING DEVICE. JOHN P. SHAMBERGER, Baltimore, Md. Filed Oct. 21, 1919. Serial No. 332,136. 1 Claim. (Cl. 279—100.)

A lock for the bit and stem of a well drilling tool, each of which is provided with a cylindrical recess, the bit being formed with a longitudinal slot communicating with the recess therein and the stem being formed with a T-shaped slot communicating with the recess therein, the bottom wall of the transverse portion of said T-shaped slot being formed at opposite sides of the shank portion with notches, both of said slots being adapted to be brought into registration when the stem and bit are assembled, a longitudinally disposed spring-pressed plunger slidable and rotatable within the recess in the stem, and a pin projecting laterally from said plunger and movable along the registering slots, the pin being engageable within either of said notches whereby to hold the plunger in retracted position out of engagement with the recess in the bit.



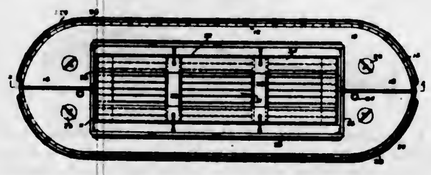
1,390,932. ROTARY PUMP. ALBERT EDWARD SHIER, London, England. Filed Sept. 14, 1920. Serial No. 410,251. 7 Claims. (Cl. 103—44.)

1. A rotary pump comprising a cylindrical pump chamber, a cylindrical piston of smaller diameter mounted therein, one of said parts provided with oppositely arranged valve faces having ports opening therethrough and forming a slideway and one of said parts being provided with a guideway, a cut off valve slidable between said valve faces and having an oscillatory support in the other



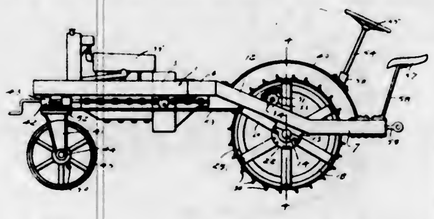
of the said parts, a tail rod on said cut-off valve working in said guideway, and means for moving the piston within the pump chamber.

1,390,933. MUSICAL TABLATURE FOR FIFES. NELSON L. SIMPSON, Corona, N. Y. Filed Oct. 31, 1919. Serial No. 334,796. 1 Claim. (Cl. 283—47.)



A chart having characters thereon in rows with the characters of each row representing the holes or ports in a musical instrument and means associated with the characters to designate those to be covered, consisting of finger representations disposed opposite said characters and in rows, the arrangement thus indicating in rows all holes to be covered at each blowing of the instrument and for successive blowings to render a complete musical selection without the study of notes.

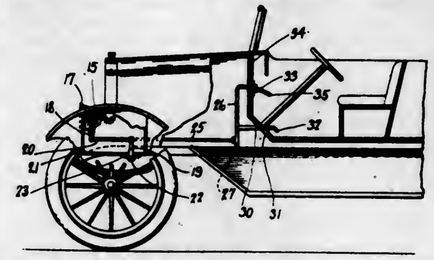
1,390,934. BOTTLE-REFRIGERATOR. RAYMOND JOHN SOUTULLO, Mobile, Ala., assignor of one-half to R. W. Shaw, Mobile, Ala. Filed May 1, 1920. Serial No. 378,324. 10 Claims. (Cl. 62—34.)



3. A refrigerator for bottled beverages or the like comprising a receptacle provided with refrigerating means, a series of U-shaped tubes within said receptacle and adapted to receive separate series of bottles therein end to end in counterbalancing relation.

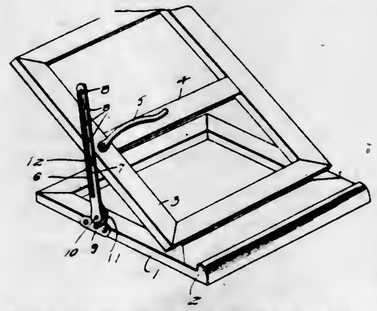
1,390,935. LIFE BOAT OR RAFT. WILLIAM STEWART, Newark, N. J. Filed Jan. 13, 1921. Serial No. 436,972. 7 Claims. (Cl. 9—11.)

1. In a reversible life boat or raft, a peripheral buoyant hull defining a central well extending therethrough, a plurality of bulkheads arranged in said hull to define independent water tight compartments, horizontal stringer plates extending through the side compartments for strengthening the structure and separating the same into upper and lower water tight chambers and stringer plate sections arranged in the end compartments for strengthening the structure.



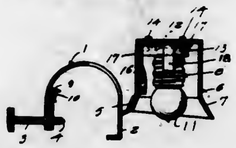
1,390,936. TRACTOR. FRED MILES STILGENBAUER, Shepherd, Mich. Filed May 7, 1918. Serial No. 233,044. 1 Claim. (Cl. 180—27.)

In a tractor, a main frame comprising side members having their relatively forward end portions extending parallel, their intermediate portions inclined outwardly and rearwardly thence downwardly and rearwardly in parallel relation, and their rear portions horizontal and parallel and in the plane of the intermediate downwardly and rearwardly parallel portions of the respective members, cross members connecting the ends of the side members, intermediate members paralleling the rear portions of the side members, and having their front end portions outwardly and forwardly inclined and secured to the rear ends of the forward parallel end portions of the side members and their rear ends secured to the rear cross bar, a steering wheel disposed in line with the space formed between the forward parallel end portions of the side members, and tractor wheels located in line with the spaces formed between the intermediate members and the rear and intermediate portions of the side members and mounted on the downwardly and rearwardly inclined portions of both members.



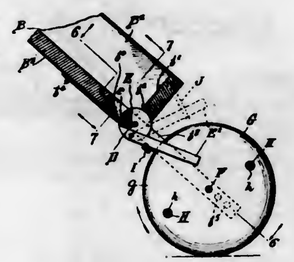
1,390,937. AUTO-LIGHT CONTROL. WILLIAM H. STOCKTON, Ashtabula, Ohio. Filed Mar. 26, 1920. Serial No. 368,946. 1 Claim. (Cl. 240—61.)

The combination with a vehicle, of a rock shaft disposed transversely of the vehicle in front of the radiator and mounted in suitable bearings upon the front mud guards, a pair of lamps secured to said shaft, a crank arm secured to one end of said shaft, a rod pivotally connected to said arm, a second crank arm pivotally connected to the rod, a short shaft journaled in suitable bearings beneath the vehicle frame and secured to the second crank arm, a third crank arm secured to the opposite end of said short shaft, a rod pivotally connected to the third crank arm, a yoke pivotally connected to the last mentioned rod, a pair of arms formed integrally with said yoke and extending through the vehicle dash



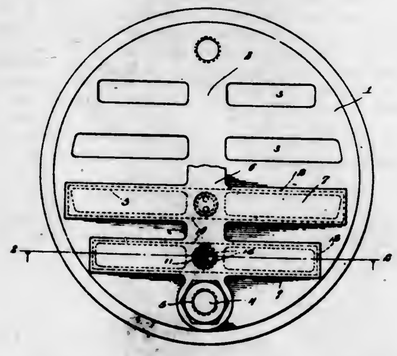
board, a handle formed upon the end of one of said arms and a foot pedal formed upon the end of the other arm for actuating said lamps aforesaid.

1,390,938. BOOK-HOLDER. STEWART T. THOMPSON, Lynn, Mass. Filed June 10, 1921. Serial No. 476,507. 2 Claims. (Cl. 45—80.)



2. A book holder comprising a base, a rack having pivotal connection therewith, a bracket attached to the base, a brace pivoted to the bracket and having a longitudinal slot and notches along one edge of the slot, an element projecting from the rack and passing through the slot of the brace and adapted to coöperate with the notches to hold the rack in adjusted position, and a spring attached to the bracket and adapted to exert a pressure on the brace to cause the notches thereof to automatically engage the element projecting from the rack.

1,390,939. MOTOR-METER LIGHT. LLOYD A. THURN, Fremont, Ohio. Filed Apr. 16, 1920. Serial No. 374,354. 1 Claim. (Cl. 240—7.)

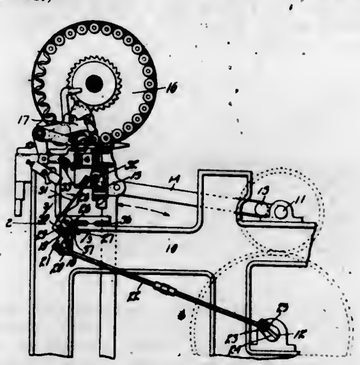


A lighting fixture of the class described, having a conducting hood, a block of insulating material, a conductor extending over the top and an end thereof and inwardly to provide a contact, the conductor extending downwardly at the other end of the block to provide a terminal, a lamp, a socket therefor to support the same in engagement with the contact having a suspending member straddling the block, means insulating the conductor from the hood and the suspending member, and means to support the block from the upper wall of the hood.

1,390,940. SEEDER. EDWARD BOOTH TIMMONS, Charlotte, N. C. Filed Feb. 21, 1921. Serial No. 446,616. 2 Claims. (Cl. 275—2.)

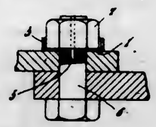
2. A seeder attachment for use with agricultural implements, comprising a cross piece adapted to be secured to the implement, a box attached to said cross piece and downwardly inclined when attached to the implement, the said box being open at its upper end and closed at its lower end, said lower end being provided with a vertically disposed slot, a feed wheel normally closing said slot, said wheel being provided with a seed pocket in its periphery, a striker arm carried by said feed wheel, a yoke projecting from the lower end of said box, and an operating wheel journaled in said yoke and adapted to roll along the ground, with lugs carried by said operating wheel adapted to engage said striker arm, means for locking said feed wheel in the closed position, and means for limiting the downward travel of said striker arm, substantially as described.

1,390,941. PLATE-VALVE. CHARLES WAINWRIGHT, Erie, Pa. Filed June 18, 1920. Serial No. 389,916. 2 Claims. (Cl. 251—119.)



1. In a plate valve construction, the combination of a seat member having a diametrical portion and alined ports at opposite sides thereof, a buffer having a body portion and arms reaching laterally from opposite sides thereof and convex at their inner sides and also having a protuberance opposed to the diametrical portion of the seat and in which are transverse channels and further having sockets in communication with said channels, means connecting the buffer with the said member, pins carried by the said member and arranged in a pair in each socket, a coiled spring disposed in each socket, and flexible plates arranged in the channels of the buffer and having apertures receiving said pins, whereby said plates are movable bodily and their end portions are free.

1,390,942. TOWING DEVICE. MALCOLM TIEPKE WATERMAN, Cedar Rapids, Iowa. Filed July 8, 1920. Serial No. 394,624. 2 Claims. (Cl. 208—27.)

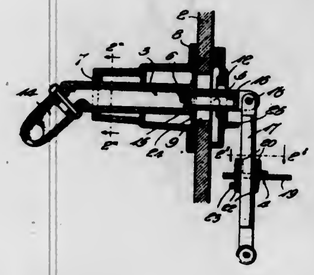


1. A towing device of the character described, comprising a pair of bars located at an angle to each other, a strap connecting said bars at one end and having an eye therein, cushioned blocks secured to the inner faces of the bars at their free ends, and bolts projecting through the blocks and bars and securing the parts together.

1,390,943. ATTACHMENT FOR LOOMS. ERNEST E. WEBB, Baltimore, Md., assignor, by direct and mesne assignments, of one-third to George D. Fryfogle and one-third to Eugene H. Timanus, Baltimore, Md. Filed Dec. 26, 1919. Serial No. 347,301. 10 Claims. (Cl. 139—85.)

1. In a filling replenishing loom, a lay, a shuttle box thereon, a reciprocating thread-catcher adapted to engage the filling between the shuttle-box and the discharged filling-carrier at the time of filling change and means permanently connected to the thread-catcher and to a working shaft of the machine to move the thread-catcher reciprocatingly toward and from the lay, substantially as set forth.

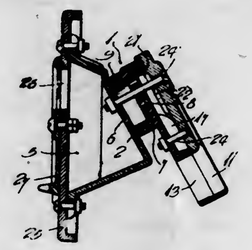
1,390,944. LOCKING DEVICE FOR THE NUTS OF BOLTS AND THE LIKE. PURCELL THOMAS WEBB, Timaru, New Zealand. Filed Dec. 23, 1919. Serial No. 346,884. 1 Claim. (Cl. 151—3.)



In a device of the kind described, a threaded bolt or stud, a nut threaded upon said bolt, a washer below said bolt, a cylindrical wall rising upward from the outer periphery of said washer and encircling said nut, a saw-cut in said cylindrical wall and the portion of said wall above said saw-cut flattened against a side of said nut to act as a spring to check said nut and means whereby said washer is prevented from rotating on said bolt, substantially as described.

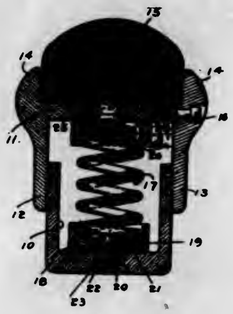
1,390,945. AUTOMATIC CHEMICAL FIRE-EXTINGUISHING APPARATUS. GUSTAVE WENNELMANN, Galesburg, Ill. Filed June 26, 1919. Serial No. 306,860 1 Claim. (Cl. 169—26.)

An automatic fire extinguishing apparatus, comprising a support, a container connected to the support for swinging to a discharge position, fusible means for holding the container upright relative to the support, a cover for the container, and a connection between the cover and support to exert a pulling action on the cover after the container has moved from the upright position toward the discharge position, whereby the inertia of the container in movement forces the cover from the container.



1,390,946. FUEL-SAVER AND SMOKE-CONSUMER. LEONIDAS DOTY WEST, Denver, Colo. Filed Aug. 4, 1919. Serial No. 315,188. 21 Claims. (Cl. 110—75.)

1. In a fuel saver and smoke consumer, an air heater adapted to be mounted in a stove or furnace in such manner as to be subjected to heat, said heater having air inlet means, an air discharge neck freely slidable through said heater and projectable therefrom, said neck having an air inlet communicating with the interior of said heater and having a hot air outlet, and means connected with said neck and adapted to extend to the exterior of the stove or furnace for projecting and retracting said neck.

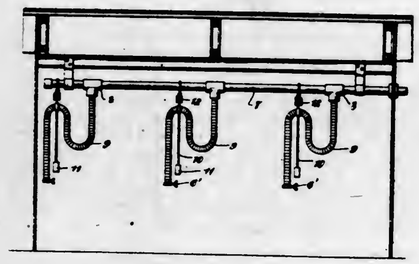


1,390,947. AIR-HEATER FOR STOVES AND FURNACES. LEONIDAS D. WEST, Denver, Colo. Filed Jan. 7, 1920. Serial No. 350,054. 3 Claims. (Cl. 110—75.)

1. A device of the class described comprising a plate having a shank and two arms diverging therefrom in the same plane therewith, the edge of said plate having a continuous flange provided with air outlet openings at the ends of said arms; said shank and the contiguous arm portions having longitudinal ribs terminating short of their outer ends and parallel with the adjacent portions of said flange; transverse ribs joining the intermediate parts of said longitudinal ribs with the portions of said flange at the inner ends of said arms, and angular transverse ribs extending inwardly from the portions of said

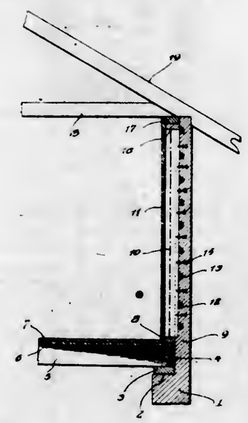
flange at the outer ends of said arms; said angular ribs extending along said arms between one end of said longitudinal ribs and the parts of said flange at the inner edges of said arms, and terminating in spaced relation with said first named transverse ribs; a cover plate secured against the edges of said flange and ribs, and an air inlet through aforesaid shank for supplying air to the several channels between the ribs.

1,390,948. SPRING-TIRE. NORMAN C. WOODWARD, Hornell, N. Y. Filed Oct. 2, 1920. Serial No. 414,170. 2 Claims. (Cl. 152—37.)



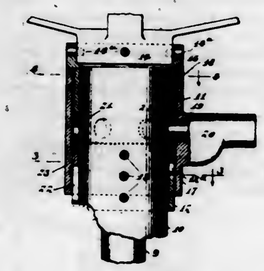
2. A spring tire comprising inner and outer channeled rim members slidably associated, a plurality of springs interposed between said rim members, means for securing the outer ends of the springs to the outer rim member, and means for securing the inner ends of the springs to the inner rim members comprising members disposed upon the outer periphery of the inner rim member at spaced intervals and each formed with a socket and threaded bore leading centrally thereinto, the innermost convolution of each spring being engaged within a socket with the terminal of the spring extending axially thereof and passing through said bore, and a screw passing through the inner rim member and threaded into said bore and having a central bore for the passage of the terminal of the spring, said extremity of the spring being threaded and the bore of said screw being threaded and engaged upon the threaded end of the spring.

1,390,949. CAM-SHAFT AND PROCESS OF MAKING THE SAME. ISIDOR YASSENOFF, Columbus, Ohio, assignor to The Universal Parts Company, Columbus, Ohio, a Corporation of Ohio. Filed Mar. 21, 1921. Serial No. 453,928. 6 Claims. (Cl. 29—148.)



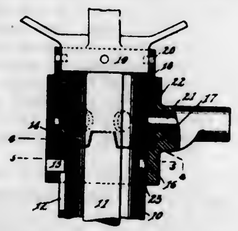
1. A cam shaft comprising a non-tempered body portion having applied thereto temperable cams.

1,390,950. EXHAUST-GAS CONVEYER. BRUCE W. AVERY, Whiting, Ind. Filed Mar. 15, 1920. Serial No. 365,888. 1 Claim. (Cl. 104—52.)



Conveyer means for the exhaust gases of automobiles in garages comprising a main pipe leading to the exterior of the building, a number of flexible pipes connected with the main pipe, means for connecting the inner ends of said flexible pipes to the outlet end of the muffler and weighted means for normally holding the flexible pipes in raised position when not in use.

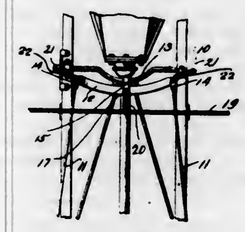
1,390,951. BUILDING CONSTRUCTION. DAVID BAUGHMAN, Pierce, Fla. Filed Feb. 7, 1920. Serial No. 356,890. 1 Claim. (Cl. 72—1.)



In a poured concrete building construction, a concrete base, a wooden sill of a less width than the base arranged on the base in a line with the inner edge thereof, a vertically arranged board resting on and in a line with the outer edge of the sill, and floor joists resting on the sill and contacting the board, a plate resting on the joists and having its outer edge in a line with the outer face of the board, vertically disposed spaced studs resting on and secured to the plate and having their inner edges disposed inwardly from the inner edge of the plate and their outer edges disposed outwardly over the outer edge of the plate, a plate having its edges flush with the inner and outer faces of the studs resting on and secured to said studs, horizontally arranged equi-distantly spaced wire members on the outer faces of the studs, means securing the wires to the respective studs, crossed nails driven in the outer face of the studs between the wire members, the sill board and plate providing inner mold members for the plastic wall built outward therefrom on the base, and the remaining inner mold members designed to be received between the spaced studs and have their outer surfaces in a line with the referred to inner permanent mold, whereby the outer portions of the studs are embedded in the concrete wall.

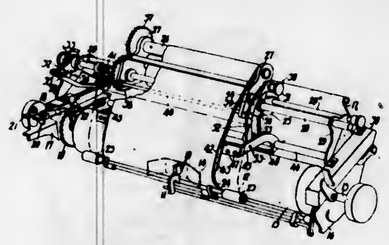
1,390,952. STEERING-WHEEL LOCK. RUSSELL T. BINDER, Orange, N. J., assignor to Russell Sales Co., Essex county, N. J., a Corporation of New Jersey. Filed Aug. 11, 1919. Serial No. 316,830. 11 Claims. (Cl. 70—129.)

3. In a steering wheel lock, a sleeve, a second sleeve mounted on the first sleeve, a third sleeve mounted on the first sleeve below the second sleeve, the second sleeve being provided with teeth, a steering wheel hub secured to the second sleeve, the third sleeve being secured to the first sleeve, a fourth sleeve disposed around the first-mentioned sleeves and having teeth for engaging the first-mentioned teeth, a pin and slot connection between the third and the fourth sleeves, and means free from the teeth for locking the fourth sleeve to the second sleeve and with the teeth in mesh.



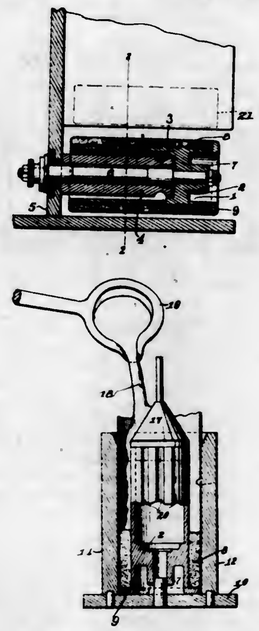
1,390,953. STEERING-WHEEL LOCK. RUSSELL T. BINDER, Newark, N. J. Filed June 21, 1920. Serial No. 390,459. 3 Claims. (Cl. 70—129.)

1. In a steering wheel lock, a sleeve normally secured against rotation relatively to a vehicle and provided with an opening, a second sleeve disposed around the first sleeve and spaced therefrom, the second sleeve having



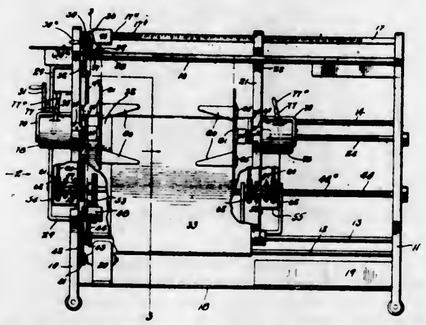
an inner shoulder with teeth, a third sleeve normally secured to a steering wheel and disposed between the first and second sleeves, the third sleeve having teeth for engaging the first teeth, and being provided with an opening, and a bolt carried by the second sleeve for disposal in the opening in the third sleeve when the teeth mesh and which may be disposed in the opening in the first sleeve when the teeth are out of mesh.

1,390,954. AUTOMOBILE CLUTCH-STABILIZER AND CONTROL-SILENCER. JOHN W. HARBAUGH, Corydon, Ind.; Cora Harbaugh administratrix of said John W. Harbaugh, deceased. Filed Feb. 24, 1920. Serial No. 360,631. 1 Claim. (Cl. 188—205.)



The combination with the cranked brake shaft of an automobile and the bifurcated brake rod clevises, of a longitudinally curved and flat bar disposed in parallel relation to the brake shaft, a loop secured centrally to the bar and loosely engaged with the crank of the said shaft, a spring secured to the loop and a portion of the automobile whereby to exert a rearward pull on the bar to maintain the brake shaft against loose play and to produce a slight cant to the bar whereby to induce a wedging action between the ends thereof and the brake rod clevises, and springs connected to the brake rods and to the automobile at the sides thereof.

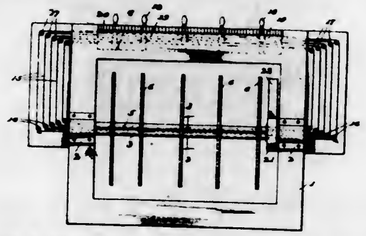
1,390,955. TYPEWRITING-MACHINE. WALTER J. HAUSMAN, St. Louis, Mo., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 10, 1919. Serial No. 329,784. 10 Claims. (Cl. 197—132.)



1. In a typewriting machine, the combination with a printing type and a platen, of a tally strip device, a shield adapted to be interposed between the tally strip and a carbon sheet, a line-space device for the platen, a connection from the line-space device to drive the tally strip, and a connection from the shield adapted to make the line-space connection ineffective when the shield is effective.

1,390,956. MEASURING-ROLLER. GREENE CARLTON HOSCH, St. Louis, Mo., assignor to The Measuregraph Company, St. Louis, Mo., a Corporation. Filed June 28, 1919. Serial No. 307,345. 2 Claims. (Cl. 33—129.)

1. In a cloth measuring machine, a measuring roller consisting of a metallic core with a molded shell of composition on the cylindrical face thereof, said shell having a rough outer face, said core having a flange at one end only operating as a stop to limit the movement of the composition shell when being placed on the core of the roller, and covering the end of the shell to prevent the edge of the cloth engaging the same when being passed into the machine and along the surface of said roller.

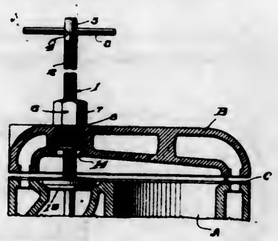


1,390,957. CLOTH WINDING AND MEASURING MACHINE. WALTER E. HOSCH, St. Louis, Mo., assignor to The Measuregraph Company, St. Louis, Mo., a Corporation of Missouri. Filed Jan. 15, 1915, Serial No. 2,345. Renewed Feb. 12, 1921. Serial No. 444,539. 21 Claims. (Cl. 242—61.)

17. In a winding machine of the class described, the combination with a pair of reels, of means for driving

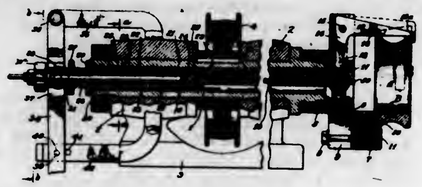
said reels, a differential gearing associated with said driving means, and means associated with said driving means having one position for driving said reels in one direction, and another position for driving said reels in the other direction.

1,390,958. ADJUSTABLE SAW. GEORGE J. HULBERT, Seattle, Wash. Filed Sept. 24, 1920. Serial No. 412,435. 4 Claims. (Cl. 143—37.)



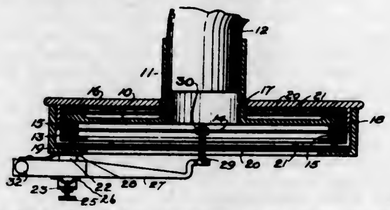
1. In an edging machine, the combination of a table, a slotted arbor rotatably mounted thereon, having a longitudinal bore formed therein, a plurality of saws slidably mounted on the arbor, and having lugs formed thereon, and extending into the slot in the arbor, a series of rings in the arbor having an annular groove therein, and a projecting lug adapted to fit in the slot in the arbor and engage the lug on said saw, disks mounted in the rings, and means for moving the disks to space the saws a predetermined distance apart.

1,390,959. SAFETY-CHECK. PAUL C. LONGMESSER, Philadelphia, Pa., assignor to William Mann Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 12, 1921. Serial No. 460,746. 2 Claims. (Cl. 283—9.)



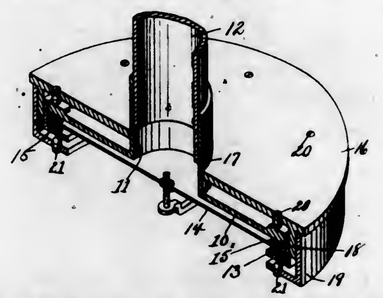
1. A check having both background and printed matter in safety ink of the same character.

1,390,960. CYLINDER-HEAD REMOVER. FRANK E. MILLER, Durand, Mich. Filed Sept. 3, 1918. Serial No. 252,436. 8 Claims. (Cl. 29—84.)



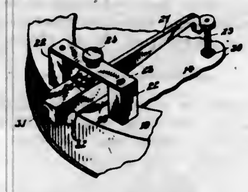
7. A tool for removing cylinder heads from cylinders comprising in combination, a threaded shank provided with a head at one end thereof, and a nut in threaded engagement on said shank, said nut provided with external screw threads and a wrench receiving formation at its end portion nearest the head of said shank.

1,390,961. CHUCK. ROBERT F. RUNGE and HENRY W. JACKSON, Philadelphia, Pa., assignors to The Hess-Bright Manufacturing Company, a Corporation of Delaware. Filed July 27, 1917. Serial No. 183,029. 12 Claims. (Cl. 279—106.)



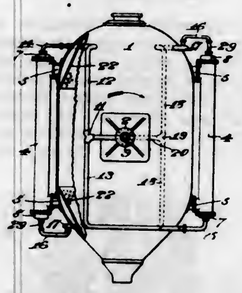
1. The combination of means for supporting the work, a movable member adapted to engage the work and hold it on the supporting means, releasable actuating means operable to move said member in a direction to release the work, and two springs arranged relatively to said actuating means to be placed under tension in succession when said actuating means is operated to release the work; whereby when said actuating means is released, the two springs in expanding will act on the movable member in succession and engage it with the work, first with a relatively light spring pressure, and then with greater spring pressure.

1,390,962. PHONOGRAPH-REPRODUCER. DAVID H. WILSON, Philadelphia, Pa. Filed June 1, 1920. Serial No. 385,800. 2 Claims. (Cl. 274—35.)



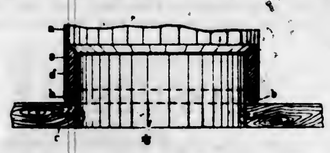
1. In a phonograph reproducer, a sound box, a casing surrounding the sound box, and a series of oppositely pointed cones having their bases fixed substantially in the same plane and their apices engaging the outside of the sound box and the inside of the casing respectively.

1,390,963. PHONOGRAPH-REPRODUCER. DAVID H. WILSON, Philadelphia, Pa. Filed July 8, 1920. Serial No. 394,730. 4 Claims. (Cl. 274—35.)



1. In a phonograph reproducer, a sound box, a casing surrounding the back and front peripheral portions of the sound box, and spaced projections carried by and extending inwardly from the casing, said projections engaging the sound box at spaced intervals adjacent its periphery.

1,390,964. STYLUS-BAR MOUNTING FOR REPRODUCERS. DAVID H. WILSON, Philadelphia, Pa. Original application filed June 1, 1920, Serial No. 385,800. Divided and this application filed Feb. 7, 1921. Serial No. 443,232. 3 Claims. (Cl. 274—35.)

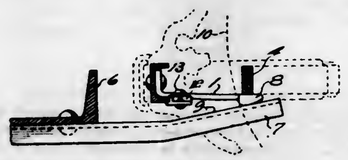


1. In a phonograph reproducer, a casing, a pair of posts extending outwardly from said casing, a bridge piece extending across the ends of said posts, a needle lever passing between said posts and beneath the bridge piece, a spring fulcrum for said lever bearing against said bridge piece and a leaf spring bearing on said lever and casing.

1,390,965. ROTARY BOILER. KARL HELLNER, Falun, Sweden. Filed June 3, 1919. Serial No. 301,552. 4 Claims. (Cl. 257—75.)

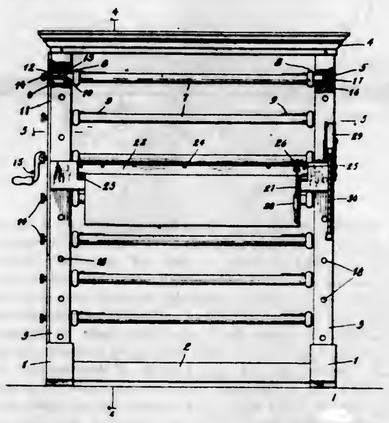
1. A rotary boiler, characterised thereby, that outside the boiler there are arranged heating elements, provided with inner pipes for the passage of steam, said elements rotating with the boiler and permitting the boiling fluid to pass freely along the heated surfaces during the rotation, in order by this rotation to obtain a favorable fluid circulation through the heating elements along the heated surfaces, thereby effecting a uniform and effective heating of the goods.

1,390,966. AIR-FILTER. WILHELM FRIEDRICH LUDWIG BETH, Lübeck, Germany. Filed Mar. 9, 1921. Serial No. 451,039. 3 Claims. (Cl. 183—73.)



1. A filtering device comprising a support provided with an aperture, a flange surrounding said aperture, a filtering element having an inturned flange telescopically engaging the first named flange and an annular weight carried within said filtering element by said elastic flange adapted to seat said elastic flange against said first named flange and said support.

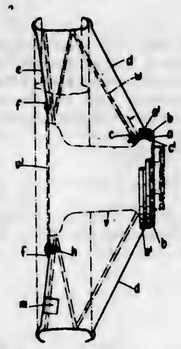
1,390,967. ANNULAR VALVE CONSTRUCTION. CHARLES DE LUKACSEVICS and EDMUND LOFFLER, New York, N. Y. Original application filed Apr. 30, 1920, Serial No. 377,986. Divided and this application filed Apr. 30, 1920. Serial No. 377,987. 3 Claims. (Cl. 123—177.)



2. A valve for a multiple cylinder engine, comprising an annular body portion having adjacent annular inlet and exhaust chambers and lateral ports affording communication severally between said chambers and the engine cylinders, a hub portion and ribs connecting said portions, adapted to create a current of air when the valve is rotated, for cooling purposes.

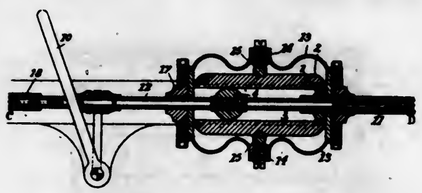
1,390,968. BRAKE-BEAM. CHARLES F. HUNTOON, Chicago, Ill. Filed Jan. 24, 1921. Serial No. 439,491. 3 Claims. (Cl. 188—214.)

1. A brake beam comprising the usual compression and tension members and the central truss, and supporting elements permanently attached to the compression member and extending therefrom to beneath the tension member but unattached thereto.



1,390,969. DISPLAY-RACK. ALBERT LEET, Bixby, Okla. Filed June 8, 1920. Serial No. 387,454. 2 Claims. (Cl. 33—130.)

1. In combination with a display rack for fabrics, including standards between which rolls carrying fabrics are

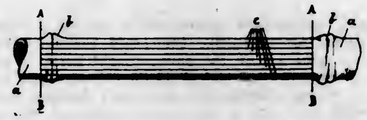


journaled, and said standards having their outer faces between the rolls provided with sockets, of a fabric cutting and measuring device for the rack, comprising a member having lugs on the inner face thereof designed to be received in the opposed pairs of sockets, said member having an angle slot entering from its lower face and providing a passage for the fabric, a spring wound tape measure on one corner of the member, and a slidable cutting element on said member.

1,390,970. WHEEL FOR ROAD-VEHICLES. SYDNEY PENNEY, London, England. Filed Jan. 11, 1921. Serial No. 436,620. 2 Claims. (Cl. 301—37.)

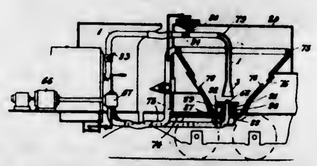
1. A detachable cover for the outer side of spoked wheels comprising a disk extending between the hub and the rim, an L-shaped ring adapted to be attached to the spokes of the wheel adjacent to the outer flange of the hub by a plurality of radially arranged clamping devices, and a nut threaded on the horizontal element of said ring and adapted to secure said disk to said ring.

1,390,971. GEARING. PIERRE SAMAIN, Cusy, France. Filed Jan. 24, 1921. Serial No. 439,651. 4 Claims. (Cl. 74—26.)



1. Gearing of the type described, comprising a supporting element, a pair of undulated resilient caps mounted on said supporting element, a pair of oppositely disposed disks having a central universal bearing against said caps, a hollow drive shaft extending through the supporting element and between the disks and provided with an annular member engaging the faces of the disks for imparting rotation thereto, a solid shaft extending between the disks having bearing in the end portion of the hollow drive shaft and the supporting element, an engaging member carried by the solid shaft and engaged by the disks, means for moving the solid shaft in an axial direction, and idler rollers adapted to be engaged by the disks carried by the supporting element.

1,390,972. OXYMERCURY NITROPHENOLATE. JAY FRANK SCHAMBERG, GEORGE W. RAIZISS, and JOHN A. KOLMER, Philadelphia, Pa., assignors to Dermatological Research Laboratories, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 21, 1920. Serial No. 375,456. 6 Claims. (Cl. 23—24.)

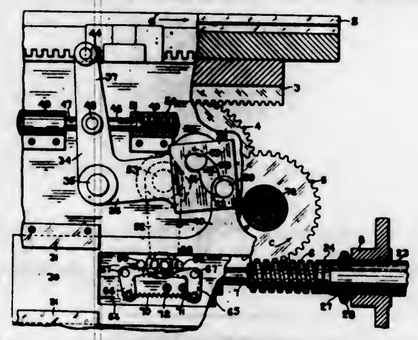


1. The new product described which is an oxymercury nitrophenolate resulting from the reaction of an alkali salt solution of nitrophenol on an excess of mercuric acetate.

1,390,973. BRISTLE FOR BROOMS AND BRUSHES. ERNST HERMANN WILHELM VON NIESSEN, Wilmersdorf-Berlin, Germany. Filed Oct. 24, 1919. Serial No. 333,118. 1 Claim. (Cl. 15—27.)

A bristle tuft made from a longitudinal section of a joint of a reed, and having at one end an integral portion of the reed knot as a head, and the remainder of the section being split longitudinally.

1,390,974. APPARATUS FOR STIRRING AND FEEDING OF PULVERULENT FUEL IN FURNACES FOR LOCOMOTIVES OR THE LIKE. KARL HJALMAR VILHELM VON PORAT, Stockholm, Sweden, assignor to Motala Verkstads Nya Aktiebolag, Motala Verkstad, Sweden. Original application filed Oct. 12, 1916, Serial No. 125,223. Divided and this application filed Jan. 21, 1918. Serial No. 213,110. 11 Claims. (Cl. 302—53.)

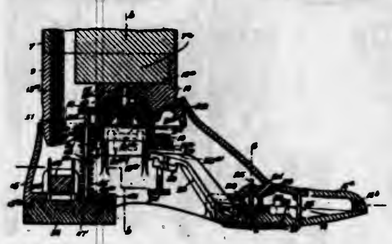


1. In apparatus for storing up and feeding pulverulent fuel for furnaces, a receptacle for the fuel mass, a fuel outlet pipe, a device for supplying a gaseous medium, such as air, into the mass in said receptacle, the discharge part of said device and the receiving opening of the fuel outlet pipe being both arranged in the lower part of the receptacle some distance above its bottom, means for preventing the fuel from falling by gravity into said opening, a second device for supplying a gaseous medium, such as air, into the mass in the receptacle, said second device opening into the interior of the receptacle at points lying at a relatively great distance from said pipe and higher than the plane in which the said fuel receiving opening is located.

REISSUES.

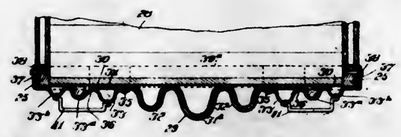
15,190. MECHANICAL MOVEMENT. WARREN F. FRASER, Westboro, Mass., assignor, by mesne assignments, to Norton Company, Worcester, Mass., a Corporation of Massachusetts. Filed Oct. 20, 1920. Serial No. 418,240½. Original No. 1,283,142, dated Oct. 29, 1918, Serial No. 207,042, filed Dec. 14, 1917. 27 Claims. (Cl. 74—98.)

1. In a machine having a reciprocable table, a reciprocating mechanism therefor, comprising a driven member operatively connected with said table, a driver therefor, driving and reversing mechanism to move the driver in opposite directions to traverse the table through a variable stroke, said driver being capable of a secondary movement which tends to neutralize its driving action



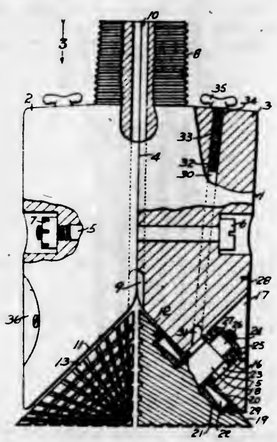
upon the driven member, and positively actuated mechanism to cause such secondary movement and start and stop the table gradually at each reversal and to permit the table to be driven at a uniform rate between reversals.

15,191. VEHICLE-WHEEL. GEORGE S. GALLAGHER and GUSTAV SCHADEE, New York, N. Y., assignors, by mesne assignments, to Emma G. Gallagher and Alice Schadee, New York, N. Y. Filed Feb. 13, 1919. Serial No. 276,848. Original No. 1,215,924, dated Feb. 13, 1917, Serial No. 68,335, filed Dec. 23, 1915. 4 Claims. (Cl. 152—33.)



1. A vehicle wheel including inner and outer rims, pneumatic tubes arranged between the same, springs and guides therefor interposed in the space between said rims and tubes, and means for regulating the tension of the springs.

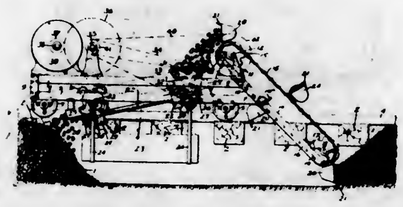
15,192. ARTIFICIAL LIMB. GEORGE E. MOORE, Paterson, N. J. Filed Mar. 10, 1921. Serial No. 451,285. Original No. 1,368,348, dated Feb. 15, 1921, Serial No. 316,032, filed Aug. 8, 1919. 6 Claims. (Cl. 3—7.)



4. An artificial limb comprising in combination an ankle member, a foot member secured thereto, a tubular bearing running transversely of said foot member intermediate the sole and in step portions thereof, a concave cylindrical bushing on said toe member to coöperate with said bearing, means for securing said bushing to said bearing an extension of said toe member rearward from said bearing and a stop carried by said foot member to cooperate with said extension to limit the movement of said toe member about said bearing.

15,193. CORRUGATED SHEET-METAL CAR END. WALTER P. MURPHY, New York, N. Y. Filed Feb. 23, 1921. Serial No. 447,347. Original No. 1,309,484, dated July 8, 1919, Serial No. 82,423, filed Mar. 6, 1916. 20 Claims. (Cl. 105—410.)

3. A sheet metal end structure for a railway car comprising metal sheets formed at the center of the end with a single corrugation of maximum depth and with a plurality of parallel vertically disposed corrugations on opposite sides thereof which become gradually shallower toward the opposite sides of the panel.



15,194. ROLLER-BIT. THADDEUS PATIN, Brea, Calif. Filed May 14, 1921. Serial No. 469,566. Original No. 1,305,488, dated June 3, 1919, Serial No. 252,959, filed Sept. 6, 1918. 4 Claims. (Cl. 255—71.)

1. In a roller bit, the combination of a cylindrical head having a plurality of angularly disposed inner flat faces, each having a bearing opening extending through the head and normal to said face, each of said openings having its bore reduced in diameter intermediate its ends, a conical cutting roller for each face having a spindle extending into a bearing opening and through the portion of the bore of reduced diameter, locking means detachably mounted on the ends of said spindles to prevent withdrawal of the latter, a detachable external closure

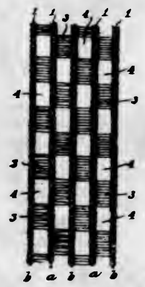


plate for each of said bearing openings flush with the cylindrical surface of the head, antifriction bearing means interposed between said head and each cutting roller to take the thrust of the latter, and a resilient closure ring interposed between each cutting roller and the flat face of said head to prevent leakage of lubricant, said head being provided with lubricant storage chambers freely communicating with each of said bearing openings.

15,195. MACHINE FOR CLEANING RAILROAD-BALLAST. HOWELL D. PRATT, Philadelphia, Pa., assignor to Link-Belt Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 27, 1919. Serial No. 333,841. Original No. 1,272,849, dated July 16, 1918, Serial No. 201,769, filed Nov. 13, 1917. 11 Claims. (Cl. 262—2.)

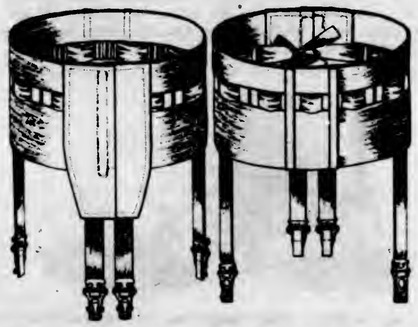
11. The combination with a machine for cleaning ballast arranged to travel in the clear space between the tracks of a double track railway, of means for guiding it along a path parallel with the track, the entire mechanism being so arranged and positioned that trains can pass on either track without interfering therewith.

15,196. ELASTIC FABRIC. MEYER W. SCHLOSS, New York, N. Y., assignor to Treo Company, Inc., a Corporation of New York. Filed July 1, 1921. Serial No. 481,934. Original No. 1,359,112, dated Nov. 16, 1920, Serial No. 297,558, filed May 16, 1919. 5 Claims. (Cl. 66—4.)

5. An elastic fabric comprising a series of parallel elastic cords spaced apart, and connected by cross threads running back and forth in close relation between each alternate cord and the next adjacent cords, the cross threads being repeatedly run back and forth a number of times in each space at one side of an alternate cord, then across that alternate cord and run back and forth a number of times in the space upon that side of that alternate cord, alternating from side to side to provide staggered open spaces between the cords, the cross thread for each alternate cord being disposed to form its groups of open spaces in staggered relation to those of the next adjacent alternate cords.

DESIGNS.

58,985. WALL-PLATE FOR LIGHTING-FIXTURES. HARRY C. ADAM, St. Louis, Mo. Filed Jan. 14, 1921. Serial No. 437,362. Term of patent 14 years.



The ornamental design for a wall plate for lighting fixtures, as shown.

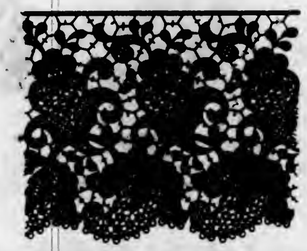
58,986. LIGHTING-FIXTURE URN. HARRY C. ADAM, St. Louis, Mo. Filed Jan. 14, 1921. Serial No. 437,363. Term of patent 14 years.

The ornamental design for a lighting-fixture urn, as shown.

58,987. LADY'S GIRDLE. AUGUST B. BECK, Jersey City, N. J. Filed Mar. 7, 1921. Serial No. 450,489. Term of patent 14 years.

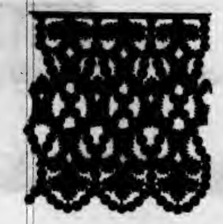
The ornamental design for a lady's girdle, as shown.

58,988. LACE. HERBERT BINCH, Glens Falls, N. Y., assignor to Thomas Wilson & Co., New York, N. Y., a Corporation of New York. Filed Apr. 27, 1921. Serial No. 464,998. Term of patent 3½ years.



The ornamental design for lace, as shown.

58,989. LACE. HERBERT BINCH, Glens Falls, N. Y., assignor to Thomas Wilson & Co., New York, N. Y., a Corporation of New York. Filed Apr. 27, 1921. Serial No. 464,994. Term of patent 3½ years.



The ornamental design for lace, as shown.

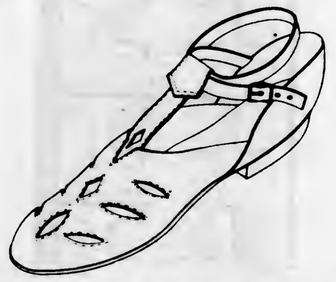
58,990. LACE. OTTO BRUGGEMANS, West Hoboken, N. J. Filed Nov. 19, 1920. Serial No. 425,283. Term of patent 3½ years.

The ornamental design for a lace, as shown.

58,991. LACE. OTTO BRUGGEMANS, West Hoboken, N. J. Filed Nov. 19, 1920. Serial No. 425,284. Term of patent 3½ years.

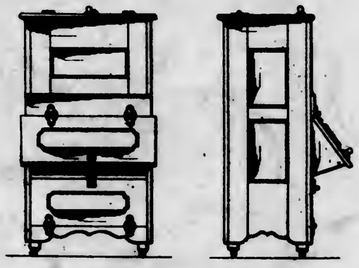
The ornamental design for a lace, as shown.

58,992. TEXTILE FABRIC. JAMES H. BUNTING, New York, N. Y., assignor to Susquehana Silk Mills, New York, N. Y., a Corporation of New York. Filed Apr. 20, 1921. Serial No. 463,047. Term of patent 3½ years.



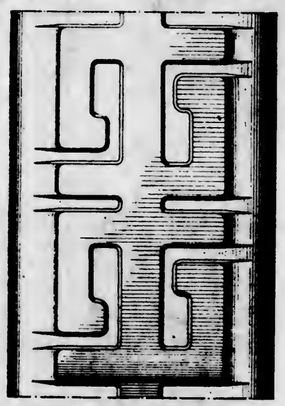
The ornamental design for a textile fabric, as shown.

58,993. APRON. MATTIE M. BURKE, Los Angeles, Calif. Filed May 26, 1921. Serial No. 472,904. Term of patent 3½ years.



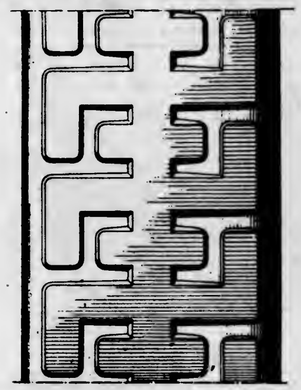
The ornamental design for an apron, as shown.

58,994. SANDAL. JAMES P. BURNS, Los Angeles, Calif. Filed Apr. 28, 1921. Serial No. 465,220. Term of patent 7 years.



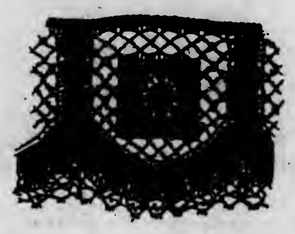
The ornamental design for a sandal, as shown.

58,995. COAL-CABINET. BYRDE CAMPBELL, Evansville, Ind. Filed Mar. 14, 1921. Serial No. 452,829. Term of patent 14 years.



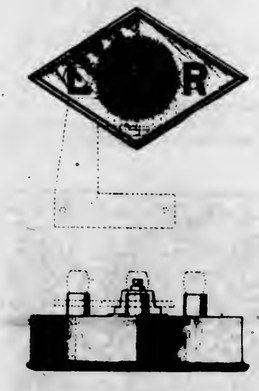
The ornamental design for a coal cabinet, as shown.

58,996. TIRE-TREAD. ROWLAND E. CARTLIDGE, Akron, Ohio, assignor to Lomer Armored Tire Company, Newcastle, Ind., a Corporation of Indiana. Filed Dec. 14, 1920. Serial No. 430,757. Term of patent 14 years.



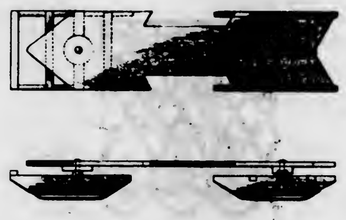
The ornamental design for a tire-tread, as shown.

58,997. TIRE-TREAD. ROWLAND E. CARTLIDGE, Akron, Ohio, assignor to Lomer Armored Tire Company, Newcastle, Ind., a Corporation of Indiana. Filed Dec. 15, 1920. Serial No. 430,979. Term of patent 14 years.



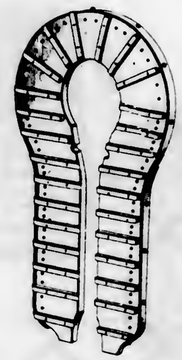
The ornamental design for a tire-tread, as shown.

58,998. LACE. MARC H. DAUDY, Philadelphia, Pa., assignor to North American Lace Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 20, 1921. Serial No. 463,049. Term of patent 3½ years.



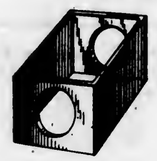
The ornamental design for lace, substantially as shown.

58,999. REAR SIGNALING DEVICE FOR AUTOMOBILES. HARRY A. DEVER, Wilmette, Ill. Filed Jan. 6, 1921. Serial No. 435,525. Term of patent 14 years.



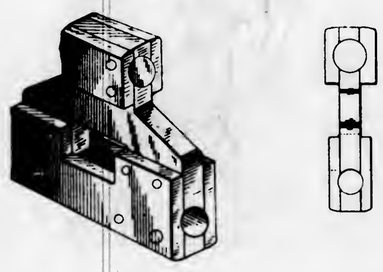
The ornamental design for a rear signaling device for automobiles, as shown.

59,000. BOB-SLED. EMORY S. ENSIGN, Jamaica, N. Y. Filed Feb. 12, 1920. Serial No. 358,152. Term of patent 7 years.



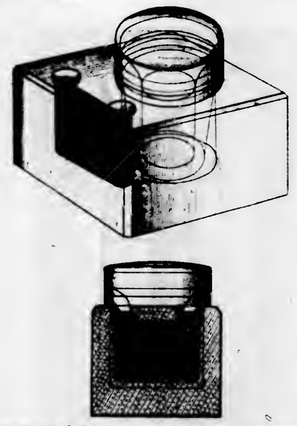
The ornamental design for a bob-sled, as shown.

59,001. SIGNBOARD FOR WEIGHING-SCALES. KENNETH GRAY FISHER, Tacoma, Wash. Filed Jan. 20, 1921. Serial No. 438,756. Term of patent 14 years.



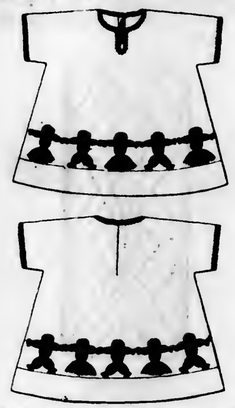
The ornamental design for a sign board for weighing scales, as shown.

59,002. PROTECTIVE COVER FOR A LOOM-PICKER. MAURICE B. FREDERICKS, Waltham, Mass., assignor to The Fiberbone Company, Waltham, Mass., a Corporation of Massachusetts. Filed Apr. 13, 1921. Serial No. 461,101. Term of patent 3½ years.



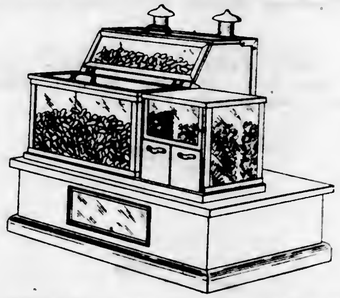
The ornamental design for a protective cover for a loom picker, as shown.

59,003. PICKER FOR A LOOM. MAURICE B. FREDERICKS, Waltham, Mass., assignor to The Fiber-Bone Company, Waltham, Mass., a Corporation of Massachusetts. Filed Apr. 13, 1921. Serial No. 461,102. Term of patent 3½ years.



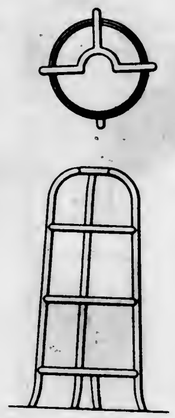
The ornamental design for a picker for a loom, as shown.

59,004. INKWELL. ELI B. GOLDSTEIN, Chicago, Ill. Filed Feb. 26, 1921. Serial No. 448,249. Term of patent 14 years.



The ornamental design for an inkwell, as shown.

59,005. CHILD'S BLOUSE. PEARL B. HANNAFORD, Los Angeles, Calif. Filed June 6, 1921. Serial No. 475,438. Term of patent 3½ years.



The ornamental design for a child's blouse, as shown.

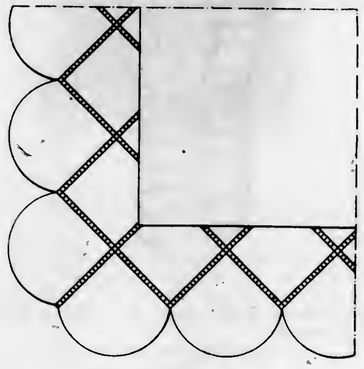
59,006. VENDING-CABINET. JAMES I. HOLCOMB and JACOB F. HOKE, Jr., Indianapolis, Ind. Filed Nov. 1, 1920. Serial No. 421,192. Term of patent 14 years.

The ornamental design for a vending cabinet, as shown.

59,007. STAND. JOSEPH D. HOLMES, New York, N. Y. Filed Jan. 15, 1921. Serial No. 437,600. Term of patent 7 years.

The ornamental design for a stand, as shown.

59,008. TIRE-TREAD. JOSEPH F. JAMROWICZ, Detroit, Mich. Filed Mar. 17, 1921. Serial No. 453,151. Term of patent 7 years.

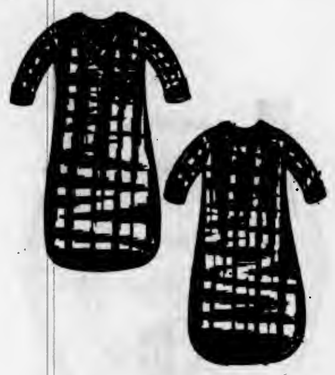


The ornamental design for a tire tread, as shown.

59,009. SOFT-COLLAR CLASP. HERMAN KAPOTKIN, New York, N. Y. Filed Mar. 25, 1921. Serial No. 455,639. Term of patent 7 years.

The ornamental design for a soft collar clasp as shown.

59,010. TRIMMING FOR FABRICS AND LIKE MATERIALS. RUDOLF KEHR, Weehawken, N. J. Filed Apr. 21, 1921. Serial No. 463,405. Term of patent 3½ years.

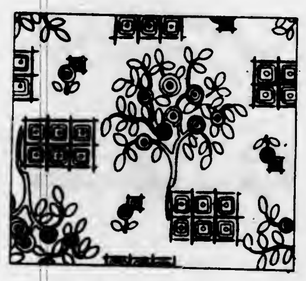


The ornamental design for trimming for fabrics and like materials, as shown.

59,011. TOY MONKEY. WILLIAM F. KELLER, Detroit, Mich. Filed Apr. 11, 1921. Serial No. 460,486. Term of patent 14 years.

The ornamental design for a toy monkey, as shown.

59,012. NIGHT-SHIRT. IDA N. KELLY, Long Beach, Calif. Filed Mar. 24, 1921. Serial No. 455,160. Term of patent 14 years.



The ornamental design for a night shirt as shown.

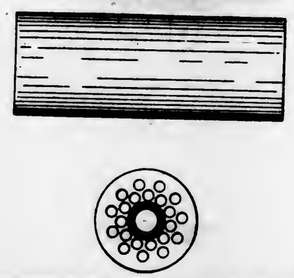
59,013. PENCIL-CAP. ELWOOD E. KNISELY, Springfield, Ill., assignor to George R. Shanklin, Springfield, Ill. Filed Mar. 8, 1921. Serial No. 450,637. Term of patent 14 years.

The ornamental design for a pencil cap, as shown.

59,014. TEXTILE FABRIC. ELLA KRUPICKA, New York, N. Y., assignor to Susquehanna Silk Mills, New York, N. Y., a Corporation of New York. Filed Apr. 20, 1921. Serial No. 463,056. Term of patent 3½ years.

The ornamental design for a textile fabric, as shown.

59,015. FLAG, BANNER, OR ARTICLE OF A SIMILAR NATURE. HELEN PHILLIPS LANE, Boston, Mass. Filed May 16, 1918. Serial No. 235,050. Term of patent 3½ years.



The ornamental design for a flag, banner, or article of a similar nature as shown.

59,016. VASE. FRANK H. LA PIERRE, East Orange, N. J. Filed Feb. 18, 1921. Serial No. 446,189. Term of patent 7 years.

The ornamental design for a vase as shown.

59,017. INKING-ROLLER. LEE LA TOUR and ALTON F. MUNNELL, Omaha, Nebr., assignors, by direct and mesne assignments, to Progress Roller Company, Omaha, Nebr., a Corporation. Filed Dec. 22, 1919. Serial No. 346,797. Term of patent 14 years.

The ornamental design for an inking roller, as shown.

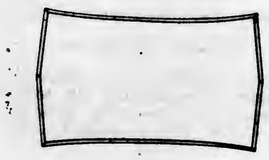
59,018. QUILT. FREDERICK G. LENTZ, Langhorne, Pa., assignor to The Quaker Mills, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 4, 1919. Serial No. 269,702. Term of patent 3½ years.

The ornamental design for a quilt, as shown.

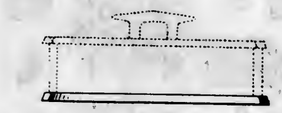
59,019. BANK-NOTE. ALFRED S. MAJOR, New York, N. Y., assignor to American Bank Note Company, New York, N. Y., a Corporation of New York. Filed Mar. 7, 1921. Serial No. 450,495. Term of patent 14 years.

The ornamental design for a bank note as shown.

59,020. PIN. MOISE MANFREDY, Brooklyn, N. Y. Filed Jan. 26, 1921. Serial No. 440,234. Term of patent 3½ years.

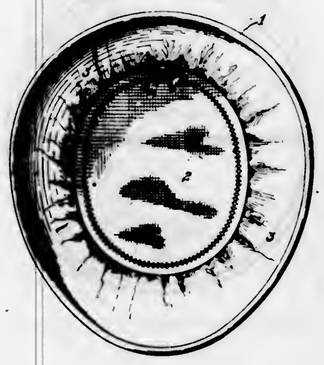


The ornamental design for a pin, as shown.



59,021. STORAGE-BATTERY TERMINAL. PAUL M. MARKO, Brooklyn, N. Y. Filed Apr. 12, 1921. Serial No. 460,815. Term of patent 14 years.

The ornamental design for a storage battery terminal, as shown.



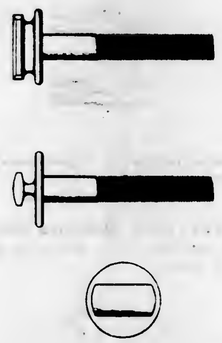
59,022. TOP, BOTTOM, OR THE LIKE FOR A TOILET-RECEPTACLE. HARRY DANIEL MOSAUER, New York, N. Y., assignor to Tuskeloid Company, Inc., New York, N. Y., a Corporation of New York. Filed Nov. 29, 1920. Serial No. 427,235. Term of patent 7 years.

The ornamental design for a top, bottom, or the like for a toilet receptacle, as shown.

59,023. HAT-LINING. JOSEPH W. MASON, Cleveland, Ohio, assignor to The Hart & Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 21, 1921. Serial No. 454,291. Term of patent 14 years.

The ornamental design for a hat lining, substantially as shown and described.

59,024. TIRE-CORE. CHARLES D. MCCOLLOUGH, Des Moines, Iowa. Filed Apr. 3, 1920. Serial No. 371,160. Term of patent 14 years.



The ornamental design for a tire core, as shown.

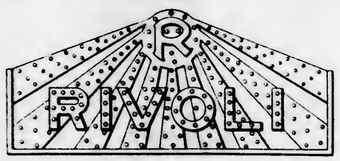
59,025. COMBINED WATCH AND KEY-RING STRAP. DAVID RUSH MCCULLOUGH, Oakland, Calif. Filed Mar. 2, 1921. Serial No. 449,227. Term of patent 3½ years.

The ornamental design for a combined watch and key ring strap, substantially as shown.

59,026. ANCHOR FOR SAFETY-HARNESS. GEORGE F. MINNIS, Chicago, Ill., assignor to National Safety Window Device Company, a Corporation of Illinois. Filed Nov. 1, 1920. Serial No. 421,187. Term of patent 14 years.

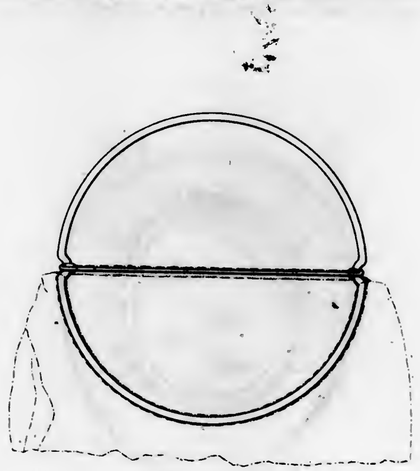
The ornamental design for an anchor for safety harness, as shown.

59,027. ANCHOR FOR SAFETY-HARNESS. GEORGE F. MINNIS, Chicago, Ill., assignor to National Safety Window Device Company, a Corporation of Illinois. Filed Nov. 1, 1920. Serial No. 421,188. Term of patent 14 years.



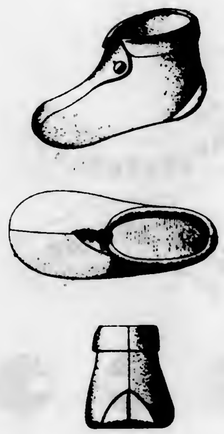
The ornamental design for an anchor for safety harness, as shown.

59,028. HOLDDOWN-PLATE FOR BATTERIES. PAUL E. NORRIS, Forest Hill borough, Pa. Filed Apr. 23, 1921. Serial No. 463,964. Term of patent 14 years.



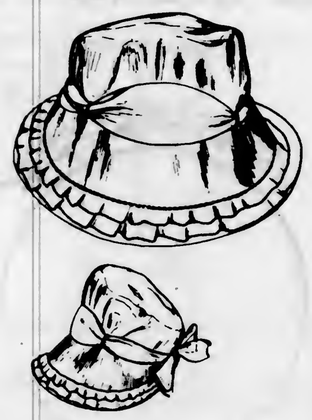
The ornamental design for a holddown plate for batteries, as shown.

59,029. ELECTRIC SIGN. MORTIMER NORDEN, New York, N. Y. Filed Apr. 20, 1921. Serial No. 463,063. Term of patent 14 years.



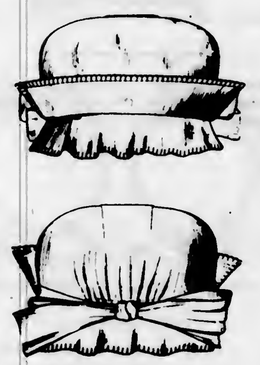
The ornamental design for an electric sign, as shown.

59,030. BAG-FRAME. ERNEST NORMAN and RAYMOND R. AMES, New York, N. Y. Filed Nov. 2, 1920. Serial No. 421,422. Term of patent 3½ years.



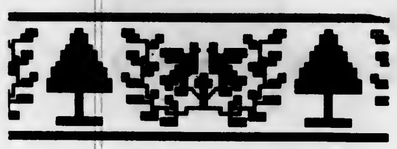
The ornamental design for a bag frame, as shown.

59,031. SHOE. FRANK PHILLIPS, Brooklyn, N. Y. Filed Nov. 18, 1920. Serial No. 425,010. Term of patent 14 years.



The ornamental design for a shoe, as shown.

59,032. BONNET. KATHLEEN M. POLHAMUS, South Pasadena, Calif. Filed Apr. 11, 1921. Serial No. 460,501. Term of patent 3½ years.



The ornamental design for a bonnet, as shown.

59,033. SUNBONNET. KATHLEEN M. POLHAMUS, South Pasadena, Calif. Filed May 11, 1921. Serial No. 468,751. Term of patent 3½ years.

The ornamental design for a sunbonnet as shown.

59,034. TEXTILE FABRIC OR SIMILAR ARTICLE. HARRY L. RANSOM and JEROME EVERETT EMERSON, Lockport, N. Y., assignors to Niagara Textile Company, Lockport, N. Y. Filed Apr. 16, 1921. Serial No. 462,041. Term of patent 3½ years.

The ornamental design for a textile fabric or similar article, as shown.

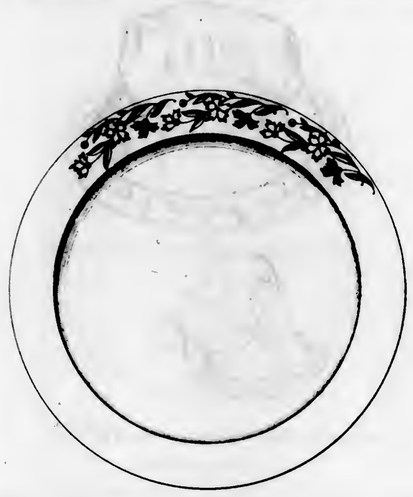
59,035. PENCIL. WALTER A. SHEAFFER, Fort Madison, Iowa. Filed Apr. 10, 1919. Serial No. 289,143. Term of patent 14 years.

The ornamental design for a pencil, as shown.

59,036. VASE. MAX SHERMAN, Brooklyn, N. Y., assignor to Blue Ribbon Silver Manufacturers, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 16, 1921. Serial No. 452,765. Term of patent 7 years.

The ornamental design for a vase as shown.

59,037. CHILD'S FROCK. DORIS M. SMITH, Oakland, Calif. Filed Aug. 31, 1920. Serial No. 407,271. Term of patent 3½ years.



The ornamental design for a child's frock, as shown.

59,038. CROCKERY AND CHINAWARE. RALPH E. STUART, Buffalo, N. Y., assignor to Kniffin & Demarest Co., a Corporation of New York. Filed May 12, 1921. Serial No. 469,051. Term of patent 14 years.

The ornamental design for crockery and chinaware, as shown.

Particular description of goods.—Dyestuffs.
Claims use since 1903.

146,645. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) THE B. F. GOODRICH COMPANY, New York, N. Y. Filed Sept. 22, 1920. Serial No. 137,468.

AKRON

Particular description of goods.—Gun Recoil-Pads for Hand-Arms—Namely, Rifles and Shot Guns—and Made of Rubber and Leather.
Claims use since about 1906.

146,646. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) GRAF BROS., INC., New York, N. Y. Filed June 30, 1921. Serial No. 149,851.

DeLuxe

Particular description of goods.—Hair-Nets.
Claims use since 1915.

146,647. (CLASS 43. THREAD AND YARN.) GUDEBROD BROS. SILK CO., New York, N. Y., and Philadelphia, Pa. Filed Sept. 29, 1920. Serial No. 137,730.

CANTON SILK • BEST A QUALITY •

Particular description of goods.—Spool-Silk.
Claims use since May, 1904.

146,648. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NON-METALLIC TIRES.) THE INDIA TIRE AND RUBBER COMPANY, Akron and Mogadore, Ohio. Filed Apr. 6, 1921. Serial No. 145,785.

INDIA

Particular description of goods.—Resilient Tires for Vehicles, Composed of Rubber or Rubber and Fabric, Inner Tubes, and Tire-Repair Materials and Accessories—Namely, Rubber-Impregnated Tire Building and Rebuilding Fabrics, Hook-On Boots, Lace-On Boots, Flaps, and Tire-Repair Air-Bags; Fabric and Rubber Repair-Patches, Tube-Patches in Sheet and Patch Form, and Reliners; Tire-Repair Gum Materials in Sheet Form—Namely, Tread-Gums, Cushion-Gums, Tube-Gums, Camel-Back Tread-Gums, and Combination-Gums.
Claims use since May 2, 1917.

146,649. (CLASS 34. HEATING, LIGHTING, AND VENTILATING APPARATUS NOT INCLUDING ELECTRICAL APPARATUS.) INTERNATIONAL HEATER COMPANY, Utica, N. Y. Filed Mar. 5, 1921. Serial No. 144,331.

ONEPIPE

Particular description of goods.—Warm-Air Heaters and Furnaces.
Claims use since Oct. 1, 1915.

146,650. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) H. B. JAEGER BARBER SUPPLY CO., Jacksonville, Ill. Filed Feb. 4, 1921. Serial No. 143,171.

TONIQUE DeRoma

Particular description of goods.—Hair-Tonics.
Claims use since Apr. 27, 1918.

146,651. (CLASS 1. RAW OR PARTLY-PREPARED MATERIALS.) JOHN OLIVER JOHNSON, Chicago, Ill. Filed June 3, 1921. Serial No. 148,597.

SHADY-PLACE

Particular description of goods.—Lawn-Grass Seeds.
Claims use since Mar. 1, 1907.

146,652. (CLASS 45. BEVERAGES, NON-ALCOHOLIC.) LIME COLA CO., Montgomery, Ala. Filed June 21, 1920. Serial No. 133,975.

LIME COLA

Particular description of goods.—Non-Alcoholic, Maltless Extract and Syrup for Making Soft Drinks.
Claims use since Sept. 1, 1915.

146,653. (CLASS 45. BEVERAGES, NON-ALCOHOLIC.) JOB R. MANLEY, East Liverpool, Ohio. Filed Apr. 5, 1920. Serial No. 130,680.

DURBUR

Particular description of goods.—Non-Alcholic Drink Made from Herbs, Roots, Barks, Fruits, and Pepsin.
Claims use since Apr. 1, 1911.

146,654. (CLASS 19. VEHICLES, NOT INCLUDING ENGINES.) LEONARD C. MYERS, Los Angeles, Calif. Filed June 10, 1919. Serial No. 119,420.

Neverleke

Particular description of goods.—Automobile-Windows.
Claims use since Jan. 1, 1918.

146,655. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) NATIONAL BISCUIT COMPANY, New York, N. Y. Filed Apr. 7, 1921. Serial No. 145,842.

Which is lined to indicate red and yellow borders, the words "Royal Lunch" appearing in white on a red background, the words "National Biscuit Company" in gold and white being on a black background, the shield having a yellow border, and the strip at the sides and bottom between the black portion on the inside and the yellow and red borders on the outside being of gold.
Particular description of goods.—Biscuit and Crackers.
Claims use since Oct. 10, 1911.

146,656. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NON-METALLIC TIRES.) NO-LEAK-O PISTON RING COMPANY, Baltimore, Md. Filed June 3, 1921. Serial No. 148,612.

50¢ and up

Particular description of goods.—Piston-Rings.
Claims use since May 1, 1920.

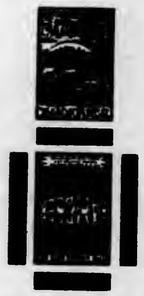
146,657. (CLASS 45. BEVERAGES, NON-ALCOHOLIC.) ORANGE NECTAR CO., Brooklyn, N. Y. Filed Apr. 12, 1921. Serial No. 146,083.

O. U.
ORANGE NECTAR

Particular description of goods.—Non-Cereal, Maltless Beverage Sold as a Soft Drink.
Claims use since March, 1920.

146,658. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) JOSEPH PAGNOTTA, Latrobe, Pa. Filed Jan. 25, 1921. Serial No. 142,767.

NOT-A-PAIN



Particular description of goods.—Antiseptic Powder for Relieving Burns.
Claims use since December, 1919.

146,659. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) RICE-STIX DRY GOODS COMPANY, St. Louis, Mo. Filed Feb. 9, 1920. Serial No. 128,170.

The shade-lines indicate the colors gold, red, white, and blue.
Particular description of goods.—Cotton Piece Goods.
Claims use since Feb. 1, 1910.

146,660. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) THE UNITED STATES PLAYING CARD COMPANY, East Norwood, Cincinnati, Ohio. Filed May 25, 1920. Serial No. 132,954.

Particular description of goods.—Playing-Cards.
Claims use since 1888.

146,661. (CLASS 34. HEATING, LIGHTING, AND VENTILATING APPARATUS NOT INCLUDING ELECTRICAL APPARATUS.) WASHBURN & GRANGER, INC., New York, N. Y. Filed Jan. 28, 1921. Serial No. 142,914.

DEAN

Particular description of goods.—Grates and Incinerators.
Claims use since Sept. 28, 1906.

146,662. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) WESTINGHOUSE ELECTRIC & MANUFACTURING COMPANY, East Pittsburgh, Pa. Filed Sept. 21, 1920. Serial No. 137,437.

Westinghouse

Particular description of goods.—Certain Named Electrical Apparatus.
Claims use since 1888.

DECISIONS

OF THE

COMMISSIONER OF PATENTS

AND OF

UNITED STATES COURTS IN PATENT CASES.

DECISIONS OF THE U. S. COURTS.

U. S. Circuit Court of Appeals—Second Circuit.

SCHEY *v.* GIOVANNA.

Decided May 18, 1921.

[278 Fed. Rep., 515.]

1. PATENTS—INFRINGEMENT AFTER DECREE AND INJUNCTION PUNISHABLE AS CONTEMPT.
A change on an infringing device by a defendant after decree and injunction against him *Held* merely colorable, and his use or sale of the changed device punishable as a contempt.

2. SAME—SUBSTITUTION OF EQUIVALENTS.
The substitution of either a spur or a gear device for a chain drive *Held* to be within the narrowest range of mechanical equivalence.

APPEAL from the District Court of the United States for the Southern District of New York.

Suit in equity by Max Schey against George Giovanna. From an order finding him in contempt, defendant appeals. Affirmed.

STATEMENT OF THE CASE.

Giovanna had been sued in ordinary form as an infringer of United States Patent No. 902,724, and final decree had passed against him, pursuant to which injunction issued restraining him, his "servants and agents," from "directly or indirectly making or causing to be made, using or causing to be used, or vending to others to be used, or contributing to the making, using, or vending of any apparatus" covered by the claims of said patent. The contempt found consisted in selling alleged infringing articles and making such sales in the name of a relative bearing the same name as himself.

Mr. Henry J. Lucke for appellant.

Mr. O. Ellery Edwards, Jr., for appellee.

Before WARD, ROGERS, and HOUGH, Circuit Judges.

HOUGH, *Cir. J.*:

The patent for infringement of which Giovanna had been condemned covers his own invention, and is No. 902,724, for an apparatus for broiling meats and the like. He is said to have infringed claims 1, 2, 3, and 6.

The device which ordinarily embodies the patent is called a rotisserie, and Giovanna, before the suit resulting in the injunction aforesaid, had assigned to plaintiff both the patent and the good-will of a business which included or consisted in the sale of rotisseries and parts thereof. For the purposes of this case, and without making any holding on the subject, we shall assume that such a defendant stands in no other relation to such a patent injunction as this, than does any infringing stranger.

We see no reason to depart from the rule laid down in *Frank F. Smith, Etc., Co.*, v. *Yates*, (244 Fed., 793; 157 C. C. A., 241.) to the effect that the question of infringement by a device, which has been modified after decree and injunction, will not be tried on a motion to punish for contempt, if the change so made is substantial, but it may be so dealt with where the change is colorable only.

Infringement after final decree and in violation of injunction is just as much infringement as is the same act committed before suit brought; all infringers are tort-feasors, and a plurality of infringers are joint tort-feasors, and are also liable severally. (*Featherstone* v. *Ormonde, Etc., Co.*, (C. C.,) 53 Fed., 110.) The court below has found in substance that appellant merely used the name of his relative as a cover for his own transactions, and we see no reason to disagree with that finding. While, therefore, he would be liable jointly with his relative of the same name, if he knowingly assisted in that relative's infringement, this case does not require any consideration of the question as to how far this particular Giovanna acted as a mere servant, without intent or knowledge of personal wrongdoing.

The substance of the patent invention is the provision in a roasting or broiling device of a plurality of spits, each provided with a sprocket-wheel capable of meshing with some form of endless driving device, to the end that all the spits may be simultaneously driven by one actuating power. The novelty and utility of the patented machine arose from the ready and independent detachability of any one spit without disturbing the continued rotation of the others. It is not necessary to quote at length the claims declared valid and infringed by appellant; it suffices to say that all but claim 6 do not specify the "driving means" further than by the use of that phrase. The sixth claim is limited to an endless driving-chain meshing with the sprocket-wheel on each spit. There was nothing new about this; the inventive thought lies in the ready detachability of any one of a plurality of spits without interfering with the continued rotation of the others.

(2) We are satisfied with the court below that appellant, in selling rotisseries after injunction, has made no change in the patented device, except by the substitution of either a worm or a spur gear device for the chain drive specified in claim 6 and shown in the drawings attached to the specification. Such substitution plainly does not affect claims 1, 2, and 3; and when (in a rotisserie) a spur or worm device is substituted for a chain drive, the attempted evasion is within the narrowest range of mechanical equivalence.

Consequently appellant's evasion is merely colorable, was properly punished in contempt proceedings, and the order appealed from is affirmed, with costs.

Bulgarian Patent Law.

AMERICAN CONSULATE,
Sofia, Bulgaria, August 17, 1921.

[Subject: Transmitting Translation of Bulgarian Patent Law.]

The honorable the Secretary of State,
Washington, D. C.

SIR: I have the honor to inclose herewith a copy of the patent law recently passed by the Bulgarian National Sobranie. This is the first law of its kind in Bulgaria. It is said to be largely based on the French patent law, borrowing slightly also from the Greek law. It is understood that regulations for the putting into effect of the patent law are now in course of preparation.

I have the honor to be, sir, your obedient servant,

GRAHAM H. KEMPER,
American Consul.

(Translation.)

Patent law passed by the Bulgarian National Sobranie on July 8, 1921, and published in the Official Gazette of July 29, 1921.

GENERAL PROVISIONS.

ARTICLE 1. Patents are granted for new inventions, applicable to industrial uses. Patents may be basic or supplementary.

ART. 2. The following are excluded from patents:

1. Inventions whose use would be against the laws and good morals;

2. Inventions of nutritive and curative articles of any kind.

ART. 3. Those inventions which at the time of making the application for patent are either well known in Bulgaria, or described in drawings and available printed publications published in or imported into Bulgaria, will not be considered as new inventions. They may be put to practical use by any individual who possesses the necessary technical knowledge.

ART. 4. A patent may cover only one invention.

ART. 5. Any person has the right to obtain a patent who has first filed an application for the invention, in conformity with this law.

No official of the Commercial and Industrial Division of the Ministry of Commerce, Industry, and Labor, may acquire a patent for inventions either direct or through another person until one year after his separation from the service.

ART. 6. A patent gives to its owner, or to his assignees, the exclusive right to exploit, use, sell or trade the article invented.

If a patent has been granted for a means of production the patent covers also the goods produced thereby.

ART. 7. A patent cannot be advanced against conscientious persons, who at the time of the filing of the application have already exploited the invention in Bulgaria or have made the necessary preparations for the purpose of exploiting it. They may make use of the invention in their own enterprises, shops, or in the shops owned by other persons. The right may be transferred by inheritance or in some other manner only together with the enterprise.

A patent is not valid, when by a decision of the Council of Ministers, approved by a King's decree, the invention is necessary for the common weal. But in such a case the owner of the patent has the right to receive from the Government a suitable indemnity, the amount of which is to be fixed by the courts.

A patent also is not valid when it relates to appliances for means of transportation which only temporarily stay in the country.

ART. 8. A basic patent is valid for a period of 15 years; this period begins the day the application is filed.

ART. 9. A tax of 60 gold leva is paid for each basic patent. In addition to this, at the beginning of the second year, an annual tax is paid on each patent, as follows:

2nd year	120	gold leva
3rd year	180	" "
4th year	240	" "
5th year	300	" "
6th year	360	" "
7th year	420	" "
8th year	480	" "
9th year	540	" "
10th year	600	" "
11th year	660	" "
12th year	720	" "
13th year	780	" "
14th year	840	" "
15th year	900	" "

The annual tax must be paid during the first three months following the close of the year. Taxes for several years may be paid at one time. If the patent is declared invalid or is taken away, or is given up, the taxes paid in advance are refunded to the proper person.

ART. 10. A patent becomes void:

a. When its owner disclaims it; the disclaimer is in the form of a written application addressed to the Ministry of Commerce, Industry, and Labor, and becomes effective at the time it is handed to the chief of the Division for Trade and Industry. It is published.

ART. 11. After the expiration of three years from the time the patent was acquired, any person who has a legal interest, may file a claim for annulling the patent, if its owner has neglected, without any good reason, to exploit in Bulgaria to a sufficient extent the patented invention, or at least has not taken the steps necessary to assure such an exploitation.

ART. 12. All patents become null and void:

a. If the inventions covered thereby do not comply with articles 1 and 2 of the present law;

b. If the invention is covered by a patent granted to a prior applicant;

c. If the applicant has omitted intentionally, when describing the invention, mentioning a certain part of his secret, or has described it in an inaccurate manner;

d. If the substantial subject matter of the application is taken from the description, drawings, models, instruments or appliances of another person, or some method used by him, without the consent of such person.

If the reason for annulling a patent affects only a part of the patented invention, the patent is correspondingly limited, provided that the integrity of the invention be preserved.

A petition to annul a patent may be presented before the District Court of Sofia by any person who has a legal interest therein.

ART. 13. The owner of a basic patent, who makes a change in the already patented invention, may, by paying a tax of only 60 gold leva, acquire a supplementary patent, which shall expire together with the basic patent.

Supplementary patents, issued to the owner of a basic patent, may be used by all individuals who make use of the basic patent, provided no conflicting agreement exists.

Supplementary patents are subject to the fate of the basic patents, the right being reserved, however, to have them changed into basic patents according to article 11 of this law.

ART. 14. Supplementary patents may at any time be changed into basic patents, if they comply with all conditions provided for by this law. The life of such patents is considered to have begun from the day on which they were granted as supplementary patents. The tax for the first year on these patents is equal to the last year's tax for the basic patent, the date of payment falling before the date the change has taken place.

ART. 15. A supplementary patent expires together with the basic patent to which it has been added.

If the basic patent has been annulled, or if, either as the result of a court decision or on account of a private disclaimer, it is so limited that supplementary patents can not be granted, the latter expire at the end of three months from the day of final decision or the date of the filing of the disclaimer, if the owner has not requested to have them, or some of them, changed into basic patents, with respect to which those remaining shall serve as supplementary patents.

ART. 16. No person to whom a patent has been granted for an invention which is related to the subject matter of some other patent, can without the consent of the owner of the first patent use the original invention.

Also the owner of the first patent can not use an invention forming the subject matter of the new patent, without the consent of the owner of the latter.

ART. 17. Three years after the filing of the application for the first patent, the owner of a patent who does not find it possible to exploit his invention without using an earlier patent of another person, has the right to demand from the owner of the first patent the right to use that patent, provided the new invention is a technical improvement over the earlier one.

In like manner, if such right has been granted, the owner of the first patent may demand the right to use the second patent, which will permit him to exploit it, provided the latter patent is in its subject matter directly related to the first.

In the absence of a voluntary agreement, the district court shall fix the amount of the indemnity and the securities which must be given.

ART. 18. The right to acquire a patent and the rights issuing from the patent, are transferred to the heirs and may be transferred wholly or in part by assignment or by will.

ART. 19. The owner of a patent may grant to another person the right to use the invention.

If a patent belongs to several individuals, one of the joint-owners cannot without the consent of the others transfer his rights to use it and cannot exercise the rights issuing from the patent; however, each and every one of them may prefer a claim for infringement of the patent and dispose of his part.

A person who has acquired the right of use, cannot transfer such right to any other person, unless this right is transferred together with the enterprise to which its use has been granted. The right of use cannot be transferred because of death, except when the new owner continues the enterprise to which this right has been granted.

ART. 20. If by means of a Decree, issued by an order of the Council of Ministers, the patented invention has been declared of general utility, the owner of the patent is obliged to surrender his rights for an indemnity. If he does not agree to such disposition, then the Ministry of Commerce, Industry and Labor may order such disposition. The person who receives it is obliged to pay the indemnity, which in the absence of a mutual agreement between the persons concerned is decided by the court.

The owner of a patent may always declare that he agrees beforehand to surrender his rights for an indemnity, which may be determined by mutual agreement or by the court in case such an agreement has not been reached.

Such decision is noted on the patent and is published in the papers.

ART. 21. The cancellation of a patent also cancels the right of use. The owner of a patent must refund the sums received in payment for the right of use, or he may in any event request that an account be kept of the proceeds realised by the person who has had the right of use and a proportionate decrease in the sum to be refunded.

ART. 22. A person who is not a resident of the Kingdom may apply for a patent only through an attorney in Bulgaria. The attorney represents him in all actions necessary to be taken in conformity with this law and procedure concerning a patent.

The provisions of the present article shall apply also when the owner of the patent leaves the country, or assigns it to someone living abroad.

ART. 23. Persons who have filed an application for patent or have obtained such patent abroad and wish to obtain a patent for the same invention in Bulgaria may take advantage of the right of priority of 12 months beginning with the date the application has been filed for acquiring the foreign patent, on condition of reciprocity and safeguarding the rights of third persons.

Any person who wishes to take advantage of this right of priority must present with his application for a Bulgarian patent, aside from the necessary papers required by the present law, a certificate of a competent foreign authority as to the date and contents of application filed, or if a patent has already been granted—a certified copy thereof.

GRANTING OF PATENTS.

ART. 24. Any person who wishes to obtain a patent for an invention, must file an application either in person or through a special attorney, to the Chief of the Division of Commerce and Industry at the Ministry of Commerce, Industry, and Labor:

a. Stating in writing his full name, citizenship, place of residence and profession as well as those of his attorney. The application must contain a brief but exact description of the type of invention and the nature of the article for which a patent is desired;

b. Giving an exact and detailed description of the invention, which will enable one skilled in the art, to which it pertains, to make and use it, and in addition the description must contain a brief enumeration of the essential elements of the invention;

c. With drawings, figures, patterns, or models necessary for understanding the description;

d. With a receipt showing that the tax of 60 leva has been paid; this sum covers the first year's tax in conformity with article 28; and

e. With a memorandum of the parts and articles deposited.

If the application has been filed by an attorney, the power of attorney should be inclosed.

ART. 25. All documents, which are required by article 24, must be written in the Bulgarian language. The description must contain no erasures or insertions. The words which have been deleted must be counted, the pages and the annotations must be numbered. The weights and measurements must be expressed in the metric decimal system, and the drawings must be inked in in a prescribed manner.

All documents must be signed by the applicant or by his attorney, who must have a secondary or special education.

ART. 26. Immediately after the required documents have been deposited with the chief of the Division of Commerce and Industry, a protocol is made without any fee, which is recorded in a special register for that purpose; the protocol is signed by the applicant or his attorney and by the chief of the division. This protocol certifies the date and the hour of filing the application; a copy of it is given to the interested person for a tax of 10 leva.

ART. 27. If an application relates to an invention unfit for industrial use or which cannot be patented in conformity with article 2 it is left without any further action on the basis of a decision with reasons stated. If the Ministry of Commerce, Industry, and Labor find that the invention is not a new one, the applicant is so informed, who may maintain, amend, or withdraw his application.

ART. 28. If an application is not accompanied by the documents required by article 24, and if in writing up the description or in filing of the documents and parts, the provisions of articles 24 and 25 have not been fulfilled the application is left pending. The applicant is invited by the Ministry of Commerce, Industry, and Labor to present within a specified time limit the documents and parts required by articles 24 and 25. If he does not furnish them, the ministry rejects the application, giving the reasons therefor.

ART. 29. The Ministry of Commerce, Industry, and Labor must act on a filed application for patent within a period of two months.

In case an application has been left without further action thereon, or has been rejected, (see articles 27 and 28), the applicant has the right to file a complaint against the decision of the ministry within a time limit of two months from the date of the notice of rejection with the Sofia Court of Appeals, which before giving its decision may hear the opinion of experts.

In no case whatever will the first tax paid be refunded.

ART. 30. When an application relates to an invention of general public utility, the Ministry of Commerce, Industry, and Labor transmits the specification to the proper ministry, which must within a time limit of three months decide whether or not it intends to use the invention after properly compensating the applicant.

If within the above time limit the ministry does not reply, such action will be construed to mean that it does not wish to use the invention.

ART. 31. Patents are granted without a previous examination and without a government guarantee for the existence, novelty, operation, or the nature of the invention, or its correspondence to the specification filed by the applicant.

Patents are granted by a decree of the Ministry of Commerce, Industry, and Labor, establishing the regularity of the application; to the decree are attached: the original specification, drawings, and other accessories enumerated in article 24.

ART. 32. The Division of Commerce and Industry keeps a register of the patents showing the subject of the invention, the name, profession, and place of residence of the owner of the patent or his attorney, the date and the hour of filing the application and every change affecting the ownership of the patent and its existence.

In the same register there is recorded the cancellation, or annulling of the patent, enacted through a decision of the court, as well as the rights of use acquired through court proceedings, after notification that the court decision has entered into force.

Clerks of the court are obliged to send to the Ministry of Commerce, Industry, and Labor, without revenue stamps certified copies of the decision on all questions affecting patents immediately after they go into effect.

ART. 33. After recording it in the register, the Ministry of Commerce, Industry, and Labor, publishes the subject matter of the patent according to serial number with the date, name, profession, place of residence of the owner of the patent, as well as of his attorney. It also publishes in the same manner each cancellation or revocation of the patent, as well as each change affecting the ownership of the patent.

The ministry may print and sell at reasonable rates the specifications of the patented inventions together with the necessary drawings and charts. This printing and sale of the specification of the patented invention may upon the request of the owner be postponed for a period of one year. In such a case the provisions of article 35 shall not apply.

ART. 34. The publications provided for by the present law are made in a bulletin which is issued periodically by the Ministry of Commerce, Industry, and Labor.

ART. 35. Any person may be furnished information and copies of the specifications, drawings, models, etc., which are the grounds for the granting of the patent, with the exception of the cases provided for by article 33.

The expenses and rates for copies and other parts will be fixed according to rules.

ART. 36. Each transfer of right to use as well as every change affecting the existence of ownership and use of a patent, must be recorded briefly in the special register of the Division of Commerce and Industry within three

months beginning from the day such action was taken. If these transfers have not been recorded they will be considered as null and void with respect to other rightful owners.

Each recording is subject to a tax of 25 leva.

PENAL PROVISIONS.

ART. 37. ANY person who either intentionally or through gross negligence utilises an invention infringing the provisions of articles 6 and 7 of the present law, is hereby compelled to pay for the loss suffered by the patentee.

If an invention relates to some means for the manufacture of a new product, any product of the same nature will be considered, unless the contrary is proven, as made according to the patented means.

ART. 38. Any person who intentionally uses an invention infringing articles 6 and 7 of the present law, is punishable by a fine not to exceed 5,000 leva and by imprisonment up to 6 months, or by one only of the two penalties.

ART. 39. A criminal prosecution may be instituted by a petition from the injured person.

A suit may be withdrawn at any time.

ART. 40. Civil cases according to the present law must terminate within a time limit of three years for each separate case.

ART. 41. The criminal court, in deciding cases concerning infringements of articles 6 and 7 of the present law, renders its decision also on the objections made by the individual accused and based on the abolishment, revocation, or the ownership of the patent, which is the subject of the dispute.

Such decisions concern only the criminal liability.

ART. 42. The court with which a civil or criminal suit has been filed for infringements of a patent, may order the taking of proper protection measures.

It may specially enact that a detailed description be prepared of the products which are stated to have been manufactured as an infringement of the provisions of this law, of the installations, machines, implements, methods, etc., which have been used for that purpose; it may also issue an injunction or sequestration with regard to these various articles in conformity with article 557 of the civil law and the following articles.

In the latter case the court may require the plaintiff to present a fixed guarantee in advance.

ART. 43. In case of a civil or criminal sentence, the court may order the confiscation and sale or destruction of the products made by infringing the provisions of the present law, as well as the destruction of the installations, machines, implements, materials, etc., which have served for that purpose.

From the sum realised from the sale, shall be deducted the fine and court expenses, the balance shall be applied toward paying the damages, and any excess shall be turned over to the owner of the mentioned articles.

Even in case of acquittal the court may, if it finds it necessary, order the destruction of the installations, machines, implements, and materials, which have served exclusively for infringing the provisions of the law.

ART. 44. Goods or products, which have been made by infringing the provisions of the present law, as well as the installations, machines, implements, materials, etc., which have served exclusively for carrying on the criminal act, may be ordered by the criminal court to be given to the injured party, provided the convicted person is their owner and if the injured person has instituted a civil suit for damages and agrees to accept the above said articles as a full or partial payment of such damages.

ART. 45. Any person who places on the products, or their wrappers, on commercial papers of any kind, intended to be used by a great number of people, or on other means of advertising and publicity, signs which may create a false belief that the objects described thereby are protected by a patent, is punishable by a fine up to 1000 leva and by imprisonment up to 1 month or by only one of these two punishments.

ART. 46. All suits for damages instituted under the present law are under the jurisdiction of the District Court at Sofia and are heard according to the short method of Court procedure.

SPECIAL PROVISIONS.

ART. 47. All privileges or patents granted under a special law, may, during the period of protection, be confirmed by patent, in conformity with the provisions of this law.

If such confirmation has not been requested within a period of one year from the publication of this law, the above mentioned privileges and patents shall be considered null and void.

The period of protection starts with the going into effect of the corresponding special laws. For payment of taxes the first year shall begin with the date of the filing of the application made according to the provisions of this law.

ART. 48. For the execution of the present law there shall be created at the Ministry of Commerce, Industry, and Labor a Bureau of Industrial Property, the positions in which shall be fixed in the budget according to the needs. This bureau shall also be charged with service of registering trademarks.

ART. 49. The manner of filing, the form, the size of the papers and the memoranda, the presentation of other parts, besides those mentioned in the present law will be established in a special regulation, and if it be necessary, the manner of writing up the descriptions and advertising the patents, and, in general, all that refers to the execution of the present law.

Patents Nos. 1,390,975 to 1,391,657.

THE
OFFICIAL GAZETTE
OF THE
United States Patent Office.

Vol. 290—No. 3. TUESDAY, SEPTEMBER 20, 1921. Price—$5 per year.

[PUBLISHED SEPTEMBER 20, 1921.]

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.

Printed copies of patents are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

Nolan Act—Reciprocity of the Laws of the Kingdom of the Netherlands Recognized.

(ORDER No. 2,693.)

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., September 19, 1921.

Notice is hereby given that the laws of the Kingdom of the Netherlands are recognized as affording to citizens of the United States privileges substantially reciprocal to the privileges accorded by the Nolan Act of March 3, 1921, (41 Stat. L., 1313,) and that consequently the privileges specified in said act will be extended to subjects of the Kingdom of the Netherlands, subject to the limitation that extensions will not be granted to relieve defaults falling under section 2 of the act for a longer period than seven years and two months.

THOMAS E. ROBERTSON,
Commissioner.

Nolan Act—Reciprocity of the Laws of the Grand Duchy of Luxemburg Recognized.

(ORDER No. 2,694.)

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., September 19, 1921.

Notice is hereby given that the laws of the Grand Duchy of Luxemburg are recognized as affording to citizens of the United States privileges substantially reciprocal to the privileges accorded by the Nolan Act of March 3, 1921, (41 Stat. L., 1313,) and that consequently the privileges specified in said act will be extended to subjects of the Grand Duchy of Luxemburg, subject to the limitation that extensions will not be granted to relieve defaults falling under section 2 of the act for a longer period than seven years and two months.

THOMAS E. ROBERTSON,
Commissioner.

Interference Notice.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., September 20, 1921.

The American Perfumer Company, their assigns or legal representatives, take notice:

An interference having been declared by this Office between the applications of Hersey P. Barnes, of 156 Jamestown street, Manayunk, Philadelphia, Pa., for registration of a trade-mark and trade-mark registered May 1, 1906, No. 51,958, to The American Perfumer Company, of 15 Taylor street, Springfield, Mass., and a notice of such declaration sent by registered mail to The American Perfumer Company at the said address having been returned by the post-office undeliverable, notice is hereby given that unless The American Perfumer Company, their assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS E. ROBERTSON,
Commissioner.

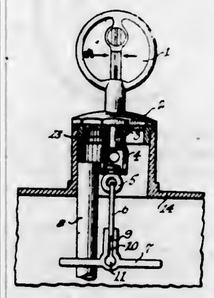
TRADE-MARK SECTION OF THE OFFICIAL GAZETTE.

In response to the public demand a section of the Official Gazette containing all matter relating to Trade-Marks may be procured separately beginning with volume 290, September 6, 1921.

The Trade-Marks section will include: Trade-Marks published under the Act of 1905; Trade-Marks registered under the Act of 1905 and under the Act of 1920; Labels and Prints; the indexes, and decisions from time to time in Trade-Mark cases.

The cost will be five cents each number, or $2.50 for annual subscriptions, to which must be added $2.00 to cover postage to subscribers in foreign countries.

Condition of Applications Under Examination at Close of Business September 10, 1921.



Room No.	Divisions, Examiners, and subjects of inventions. (Oldest new case, Sept. 20; oldest amended, Dec 1.)	Oldest new application and oldest action by applicant awaiting office action. New.	Amended.	No. of applications awaiting action.
314	1. LOEFFLER, F. S., Closure Operators; Fences; Gates; Harrows and Diggers; Plows; Planting; Scattering Unloaders.	Mar. 28	Apr. 14	724
128	2. BALDWIN, M., Bee Culture; Dairy; Medicines; Pneumatics; Preserving; Presses; Tents, Canopies, Umbrellas, and Canes; Tobacco; Trees, Plants and Flowers.	Dec. 2	Feb. 4	1,641
175	3. RICH, WM. J., Electric Heating and Rheostats; Electrochemistry; Heating; Metal-Founding; Metallurgical Apparatus; Metallurgy; Metal Treatment; Plastic Metal Working.	Dec. 18	Dec. 24	786
234	4. MERRITT, A. D., Conveyers; Conveyers, Fluid-Current; Excavating; Handling—Hand and Hoist-Line Implements; Hoisting; Material or Article Handling; Pushing and Pulling Implements; Railway Mail Delivery; Traversing Hoists.	Sept. 20	Mar. 16	1,667
167	5. MACNAB, J. F., Book-Making; Books, Strips and Leaves; Harvesters; Jewelry; Manifolding; Music; Printed Matter; Tying Cords or Strands.	Oct. 19	Jan. 4	880
318	6. LEWERS, A. M., Bleaching and Dyeing; Chemicals; Explosive, Pyrotechnic and Match Compositions; Fertilizers; Liquid Coating Compositions; Plastic Compositions; Substance Preparation.	Mar. 7	May 24	1,039
312	7. JARBOE, C. G., Games and Toys; Optics; Photography; Velocipedes	Mar. 2	Apr. 20	1,801
131	8. CLIFT, J. W., Beds; Chairs and Seats; Flexible-Sheet Securing Devices; Furniture; Kitchen and Table Articles; Store Furniture; Supports.	May 21	June 7	734
221	9. TRYON, F. M., Air and Gas Pumps; Hydraulic Motors; Injectors and Ejectors; Motors, Fluid; Motors, Fluid-Current; Pumps.	Nov. 3	July 12	927
235	10. MITCHELL, T. H., Land-Vehicles; Land Vehicles, Animal Draft Appliances; Land-Vehicles—Bodies and Tops; Land-Vehicles—Dumping; Land-Vehicles, Wheel Substitutes; Motor Vehicles.	Feb. 5	June 15	1,250
154	11. ARMSTRONG, H. C., Boot and Shoe Making; Boots, Shoes, and Leggings; Button, Eyelet, and Rivet Setting; Harness; Leather Manufactures; Nailing and Stapling; Whips and Whip Apparatus.	June 1	June 11	434
222	12. PIERCE, P. F., Machine Elements	Jan. 29	May 28	1,134
329	13. NIXON, G. A., Bolt, Nail, Nut, Rivet, and Screw Making; Chain, Staple, and Horseshoe Making; Driven, Headed, and Screw-Threaded Fastenings; Gear Cutting, Milling, and Planing; Metal Drawing; Metal Forging and Welding; Metal Rolling; Metal Tools and Implements, Making; Metal Working; Needle and Pin Making; Turning.	Nov. 16	June 10	1,617
323	14. BRUMBAUGH, N. J., Compound Tools; Cutting and Punching Sheets and Bars; Farriery; Metal-Bending; Sheet-Metal Ware, Making; Tools; Wire Fabrics and Structure; Wire-Working.	Nov. 17	June 25	850
308	15. REDROW, W. L., Bread, Pastry, and Confection Making; Glass; Laminated Fabrics and Analogous Manufactures; Paper-Making and Fiber Liberation; Plastic Block and Earthenware Apparatus; Plastics.	Sept. 30	Feb. 7	1,668
111	16. BACKUS, C. D., Radiant Energy; Telegraphy; Telephony	Oct. 8	Feb. 7	1,717
307	17. RAFTER, G. S., Coating, Label Pasting and Paper Hanging; Nut and Bolt Locks; Ornamentation; Paper Manufactures; Printing; Type Casting; Sheet Material Associating or Folding; Sheet Feeding or Delivering; Type Setting.	Jan. 27	May 3	936
229	18. PORTER, M. E., Liquid Heaters and Vaporizers; Motors, Expansible Chamber Type; Power Plants; Speed Responsive Devices; Steam and Vacuum Pumps.	Nov. 4	Feb. 4	1,669
236	19. GLASCOCK, E. S., Automatic Temperature and Humidity Regulation; Furnaces; Heating Systems; Stoves and Furnaces; Domestic Cooking Vessels; Thermostats and Humidostats.	Oct. 21	Mar. 19	984
179	20. WRIGHT, H., Artificial Body Members; Miscellaneous Hardware; Closure-Fasteners; Cutlery; Dentistry; Locks and Latches; Safes; Undertaking.	Apr. 4	Apr. 25	1,391
212	21. THURBER, W. L., Brakes and Gins; Carding; Cloth-Finishing; Continuous-Strip Feeding; Cordage; Felt and Fur; Knitting and Netting; Silk; Spinning; Weaving; Winding and Reeling.	Jan. 13	May 27	632
249	22. COLWELL, J. H., Aeronautics; Firearms; Ordnance; Ammunition and Explosive Devices; Ammunition and Explosive Charge Making.	May 13	June 15	519
217	23. GROESBECK, W. D., Acoustics; Coin-Handling; Horology; Recorders; Registers; Sound Recording and Reproducing; Time-Controlling Mechanism.	Dec. 31	May 27	825
144	24. DARBY, J. J., Apparel; Apparel Apparatus; Garment Supporters; Sewing-Machines	Jan. 10	May 4	997
315	25. LIGHTFOOT, J. H., Agitating; Butchering; Centrifugal Bowl Separators; Mills; Threshing; Vegetable Cutters and Crushers; Gas Separation.	June 29	June 10	275
105	26. HODGES, J. S., Electricity, Generation; Motive Power; Prime Mover Dynamo Plants	Feb. 3	Apr. 7	807
214	27. ANDERSON, L. S., Abrading; Brushing and Scrubbing; Laundry; Washing Apparatus	Mar. 25	May 27	1,268
225	28. BENSON, A. R., Internal-Combustion Engines	Jan. 14	Apr. 9	1,402
147	29. MORRIS, B., Boring and Drilling; Button Making; Chucks or Sockets; Coopering; Tool Handle Fastenings; Wheelwright-Machines; Wood-Sawing; Wood-Turning; Woodworking; Woodworking-Tools.	Jan. 20	June 20	733
152	30. SULLIVAN, M. R., Illuminating-Burners; Illumination; Liquid and Gaseous Fuel Burners; Type-Writing Machines.	Feb. 7	June 23	1,311
172	31. HOLMES, W. N., Alcohol; Ammonia, Water, and Wood Distillation; Charcoal and Coke; Fuel and Igniting Devices; Gas, Heating and Illuminating; Hides, Skins, and Leather; Hydraulic Cement and Lime; Mineral Oils; Oils, Fats, and Glue; Sugar and Salt.	Oct. 25	Dec. 1	2,048
278	32. BANCROFT, J. F., Gas and Liquid Contact Apparatus; Heat Exchange	Nov. 13	June 6	1,019
70	33. COWLES, W. A., Bridges; Hydraulic and Earth Engineering; Masonry and Concrete Structures; Metallic Building Structures; Roads and Pavements; Roofs.	Mar. 14	Apr. 14	725
304	34. SIMPSON, G. R., Electricity-Transmission to Vehicles; Pneumatic Despatch; Railways; Railway Rolling-Stock; Railway Switches and Signals; Railways, Surface Track; Railway Wheels and Axles; Store Service; Track-Sanders; Vehicle-Fenders.	June 21	July 17	351
57	35. REYNOLDS, E. C., Buckles, Buttons, Clasps, Etc.; Card, Picture, and Sign Exhibiting; Signals and Indicators; Toilet.	June 8	July 25	724
204	36. MORTON, G. L., Automatic Weighers; Driers; Geometrical Instruments; Measuring Instruments; Force Measuring.	Mar. 19	Mar. 14	1,630
107	37. TAYLOR, E. C., Electricity, Circuit Makers and Breakers; Electricity, General Applications	Jan. 17	Feb. 2	2,249

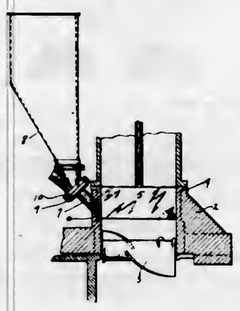
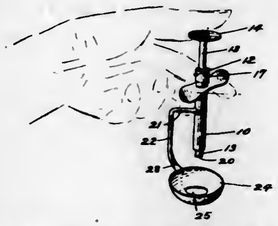
PATENTS



GRANTED SEPTEMBER 20, 1921.

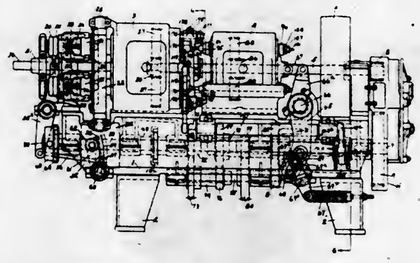
1,390,975. MOTOMETER-ANCHOR. WILLIAM JAMES ASHTON, Dallas, Tex. Filed Jan. 10, 1921. Serial No. 436,261. 2 Claims. (Cl. 220—39.)

1. A motometer anchor, consisting of a metal bar, with a centrally located right angle arm; in said arm a slot terminating in a circular aperture at its lower extremity.



1,390,976. MACHINE FOR TREATING RUBBER AND OTHER HEAVY PLASTIC MATERIAL. FERNLEY H. BANBURY, Ansonia, Conn., assignor to Birmingham Iron Foundry, Derby, Conn., a Corporation. Filed Sept. 4, 1920. Serial No. 408,330. 1 Claim. (Cl. 18.2.)

In a machine of the class specified, the combination with a casing formed with a neck of a vertically movable weight therein, said neck formed on one side with a hole in line with the weight when in its depressed position, and a hopper discharging into said hole whereby the flow of material through the hole is controlled by the weight.



1,390,977. KITCHEN UTENSIL. HENRIETTA BEHR, Philadelphia, Pa. Filed July 1, 1921. Serial No. 481,743. 4 Claims. (Cl. 146—5.)

1. A device of the character stated comprising a barrel provided with a finger-piece, a spring-pressed plunger mounted within said barrel one end of which is provided with a thumb piece and the other end with a fruit pene-

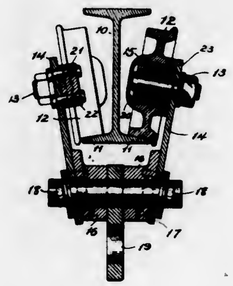
trating and stone impelling portion and a dish-shaped receptacle carried by said barrel which receptacle is provided with an aperture in alinement with said plunger.

1,390,978. METAL-WORKING MACHINE. WILLIAM HOY BRADLEY, Springfield, Ohio, assignor to The Automatic Metal Products Company, Springfield, Ohio, a Corporation of Ohio. Filed Jan. 2, 1920. Serial No. 348,887. 15 Claims. (Cl. 82—3.)

1. In a machine of the character described, a plurality of feeding devices for a plurality of bars of stock, one set of feeding devices being associated with each bar of stock, a plurality of tools, one set being associated with each bar of stock, a main operating shaft centrally located with reference to the tools, an auxiliary supporting shaft similarly located with reference to the feeding devices, the said shafts being substantially in alinement, and an actuating device common to all of said feeding devices, said actuating device being operated by the main operating shaft and being supported upon said auxiliary shaft.

1,390,979. TICKET-HOLDER. WILLIAM BRAUNSDORF, New York, N. Y. Filed Feb. 26, 1920. Serial No. 361,549. 1 Claim. (Cl. 206—39.)

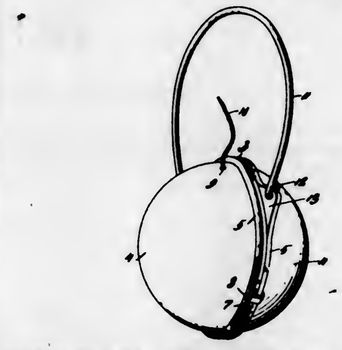
A ticket holder comprising a casing having one top wall spaced inward from the end, an enlarged portion at said



end consisting of an abutment wall having a curved edge spaced from said top wall, a curved lip extending laterally from said top wall in the spaced relation to the abutment wall to define a curved opening to impart a transverse curvation to the issuing strip of tickets, and a table wall formed with said enlarged portion forming a continuation of said top wall and having a transverse convex curvature and a sharpened edge upon which to sever the strip.

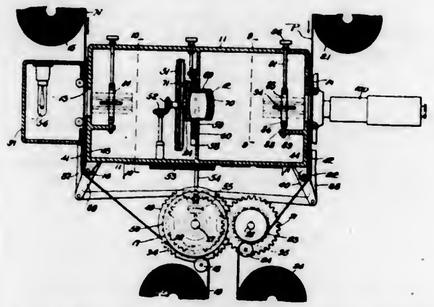
1,390,980. CONNECTING DEVICE. EDWARD H. BUDBOW, Meriden, Conn., assignor to The Steel Products Company, Hartford, Conn., a Corporation of Connecticut. Filed Dec. 28, 1918. Serial No. 268,717. 4 Claims. (Cl. 24—232.)

3. A connecting device having two hooks and having recesses in the opposite lateral faces of the respective bills of the hooks, in combination with resilient keepers mounted pivotally on said device between said hooks and normally held by their resiliency in the respective recesses, the tips of the bills of said hooks being so spaced from each other with relation to the dimensions of said keepers, their form and their location that but one keeper at a time may be moved to full open position between the tips of said bills.



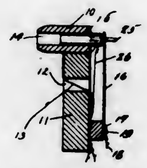
1,390,981. HOIST-TROLLEY. HARRY R. BUTLER, Pelham Manor, N. Y., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Filed Jan. 18, 1921. Serial No. 438,156. 6 Claims. (Cl. 105—154.)

1. In a hoist trolley, the combination of side frames or plates each having a stub axle for a track wheel, a wheel mounted on each axle and unsecured thereto whereby it is free to be moved in the direction of the length of the axle, the end of the hub of the wheel adjacent the free end of the axle being closed to prevent the entrance of dust.



1,390,982. RECEPTACLE FOR CROCHET-THREAD AND THE LIKE. EDNA M. CHRISTENSEN, Winner, S. D. Filed Oct. 11, 1920. Serial No. 416,259. 1 Claim. (Cl. 242—146.)

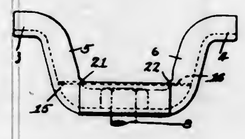
A receptacle for crochet thread and the like including a pair of semi-spherical members, the margins of which are turned outwardly at right angles to provide flanges, a clasp for holding the flanges together comprising a strap one end of which is secured to one of the flanges and the



opposite end flexed over the other flange and having a portion thereof extended to provide a finger piece, and a handle secured to one of said right angled flanges.

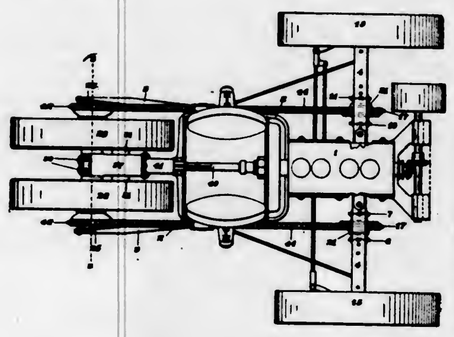
1,390,983. COLOR-CINEMATOGRAPHY. DANIEL F. COMSTOCK, Brookline, Mass., assignor to Kalmus, Comstock & Wescott, Incorporated, Boston, Mass., a Corporation of Massachusetts. Filed Dec. 11, 1916. Serial No. 136,137. 18 Claims. (Cl. 88—16.4.)

5. The method of printing an image in accurate position upon sensitized means comprising projecting a beam of light through the image and thence through a focusing lens to form a projected image on the sensitized means, and deflecting the beam intermediate the lens and one of said images to secure said accurate positioning.



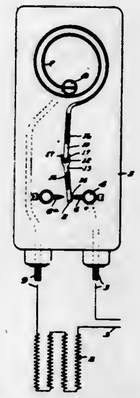
1,390,984. CIRCUIT-CLOSER FOR MUSICAL INSTRUMENTS. RALPH CONOVER and LEO HULL, Terre Haute, Ind. Filed Apr. 26, 1919. Serial No. 292,953. 1 Claim. (Cl. 175—335.)

In a circuit closer for musical instruments, a body having air controlled apertures therein, bushings in said apertures projecting beyond the surface of the body, the said bushings being conductors of electricity, a contact post



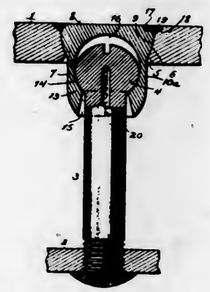
secured to the body adjacent to each bushing and having an inturned end overlying the bushing, a vibratory tongue capable of conducting electricity, means for anchoring one end of the tongue to the body and having the free end interposed between the bushing and the end of the contact normally out of engagement with either the bushing or the contact, a conductor of electricity electrically connected to the contact, a conductor of electricity connecting the means of anchorage of the tongues, and means for establishing a circuit through the circuit closer to a source of electricity and through an element for utilizing the pulsations of the circuit.

1,390,985. HANGER FOR USE IN CONCRETE CEILINGS. HARRY H. CRAWFORD, Chicago, Ill. Filed June 30, 1919. Serial No. 307,520. 4 Claims. (Cl. 72—105.)



1. A hanger embodying therein a metal channel member of substantially the same cross-sectional size throughout and having its lower central portion provided with a bolt hole, continuations thereof which incline upwardly from each end of the lower central portion, a bolt having its head on one side of the channel and its shank extending through said hole, and a cover member positioned over the lower central portion, engaging the side walls of the channel and having end portions that extend into wedging engagement with said upwardly inclined continuations thereby forming a housing for said bolt.

1,390,986. TRACTOR. JOSEPH DAIN, Moline, Ill., assignor to Deere and Company, Moline, Ill., a Corporation of Illinois. Filed July 12, 1915, Serial No. 39,465. Renewed Feb. 10, 1921. Serial No. 444,023. 22 Claims. (Cl. 180—70.)

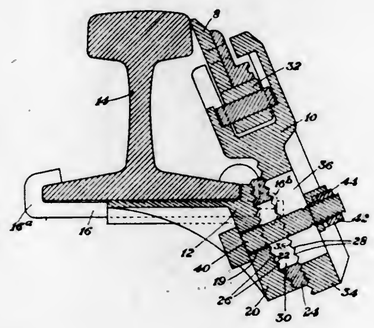


1. A tractor having in combination a forward rotatable supporting element and a rearward rotatable supporting element, a motor, means to rotate one of said elements to move the tractor by power from the motor, the other element rotating by contact with the ground, both of said elements adapted to move over the ground normally at the same speed, and means to automatically rotate said other element by power from the motor when the power driven element slips in rotating.

1,390,987. THERMOSTATIC SWITCH. FREDERICK S. DENISON, Minneapolis, Minn., assignor to Minneapolis Heat Regulator Company, Minneapolis, Minn., a Corporation. Filed Mar. 26, 1917. Serial No. 157,309. 4 Claims. (Cl. 200—137.)

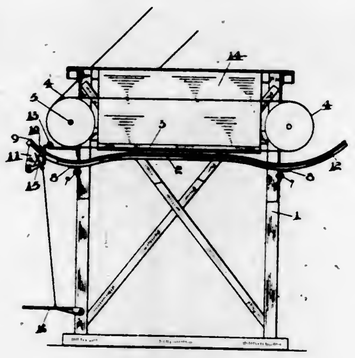
4. A device of the class described comprising a thermostatic bar, a tongue pivoted at one end of said bar, contact points between which said tongue is movable and a spring mounted on said bar and tongue and bridging the pivot of said tongue and adapted to move said tongue quickly away from one of said contact points when said spring is moved past the center of the pivot of said tongue through the oscillation of said bar.

1,390,988. STAYBOLT STRUCTURE. ETHAN I. DODDS, Pittsburgh, Pa., assignor to Flannery Bolt Company, Pittsburgh, Pa. Filed Nov. 25, 1919. Serial No. 340,489. 1 Claim. (Cl. 85—1.5.)



A mounting for a staybolt comprising a hollow member having its outer end permanently closed and open at the other end, said member having an enlarged portion at its closed end provided with a peripheral transversely curved face, whereby said member may have universally movable mounting in a boiler sheet, said member having an exterior portion at its inner end portion rounded lengthwise of said member and having an interior seat for the head of a staybolt, the wall of the opening at the inner end of said member being flaring.

1,390,989. ADJUSTABLE DETECTOR-BAR SUPPORT. CHARLES A. DUNHAM, St. Paul, Minn. Filed Mar. 25, 1920. Serial No. 368,529. Renewed Nov. 29, 1920. Serial No. 427,204. 8 Claims. (Cl. 246—151.)



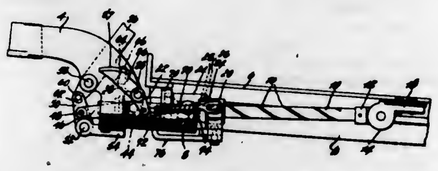
1. A support for a railway detector bar comprising a member fixed to a rail, a block having an inner surface

adapted to coöperate with the outer surface of said member for upward and downward movement thereover, one of said surfaces being concaved and the other being

convexed, a bracket supported by said block, and means for securing said block to said member in adjusted position.

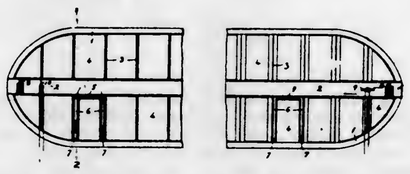
1,390,990. APPARATUS FOR REMOVING EXCESS SPELTER FROM HOT GALVANIZED ARTICLES. CHARLES G. ERICSON, Toronto, Ontario, Canada. Filed Feb. 7, 1921. Serial No. 443,271. 10 Claims. (Cl. 91—59.1.

1. Aparatus for removing excess spelter from galvanized articles comprising a surface over which a portion of an article may be rolled; and a traveling surface cooperating with said first mentioned surface to effect said rolling movement.



1,390,991. SHOE-CLOSURE. THEODOR FOTCHUK, Toronto, Ontario, Canada. Filed May 7, 1921. Serial No. 467,617. 3 Claims. (Cl. 24—140.)

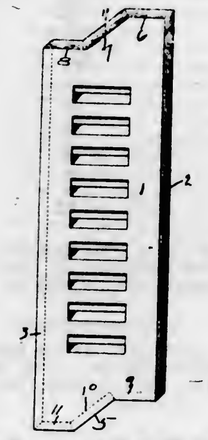
3. An auxiliary shoe lacing device of the class described comprising a movable perforated member through which the shoe laces are passed on one side of a shoe, a casing secured to the shoe at the opposite side thereof, a slotted cover for said casing, a flanged rivet traveling in the slot of said cover, a toothed plate at the end of said member adapted to be introduced into said casing, a leaf spring normally resting upon the flange of said rivet above said toothed plate, and adapted to engage with its hooked end the teeth of said plate upon the displace-



ment of said rivet in the slot of the cover, means for securing said casing to the shoe at the seam of the shoe uppers and means for securing the ends of the laces.

1,390,992. ELEVATING-TRUCK. DANIEL E. HENNESSY, Holyoke, Mass., assignor to Herbert W. Cowan, J. Lewis Wyckoff, and Edward N. White, trustees, doing business as The Cowan Truck Company. Filed Jan. 11, 1918. Serial No. 211,334. 7 Claims. (Cl. 254—2.)

1. In an elevating truck, the combination with a base having supporting and steering wheels and an elevating support movable up and down upon said base, of means for effecting the up and down movement, comprising a step-by-step jacket arranged and operating lengthwise of said base and a series of multiplying levers having their long arms projecting upward and swinging in front of said elevating support at the forward end of said truck and having their fulcra vertically spaced, said series of levers having a positive connection with said jack through which the oscillations of said levers are transmitted to said jack to effect the step-by-step movement thereof.

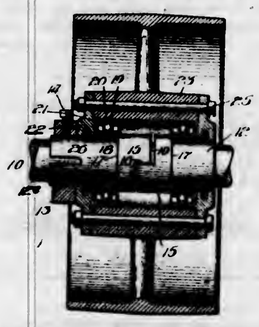


1,390,993. AIRSHIP. JEAN HEPPEL, Newark, N. J. Filed Sept. 26, 1918. Serial No. 255,763. 5 Claims. (Cl. 244—3.)

1. An airship comprising a rigid frame structure divided into a plurality of longitudinally arranged compartments and having an air well extending centrally and

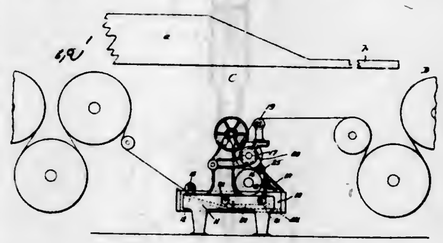
longitudinally therethrough, bags within each compartment and arranged about the air well for containing a buoyant fluid and pockets arranged about each of said compartments for maintaining a charge of heavy fluid within each pocket to ballast the ship, means for admitting the heavy fluid within the pockets and means for releasing said fluid.

1,390,994. VENTILATED SILO-STAVE. HARRY B. JONES, Chicago, Ill., assignor to Permanent Products Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 26, 1920. Serial No. 406,055. 1 Claim. (Cl. 72—6.)



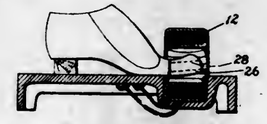
A ventilated stave comprising a slab of molded concrete, said slab having a plurality of ribs, there being openings through the stave intermediate said ribs, the upper wall of each rib being slanted downwardly and outwardly whereby the space intermediate said ribs is wide at the one surface of the slab and narrow at the other.

1,390,995. DISSOLVING CELLULOSE. ISIDOR KITSEE, Philadelphia, Pa. Filed Oct. 18, 1919, Serial No. 331,581. Renewed Aug. 4, 1921. Serial No. 489,903. 12 Claims. (Cl. 106—40.)



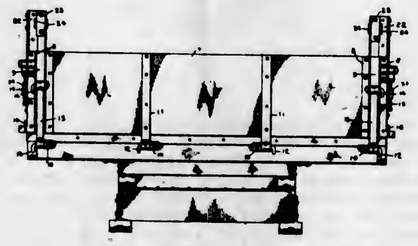
1. The process of dissolving cellulose which consists in subjecting the cellulose to be dissolved to a rubbing action in conjunction with copper in the presence of ammonia.

1,390,996. BALL-BEARING PULLEY. FREDERICK J. LEMLEY, Chicago, Ill. Filed Dec. 18, 1919. Serial No. 345,688. 10 Claims. (Cl. 64—17.)



1. In a loose pulley, the combination of a shaft, sleeve sections mounted on the shaft and adjustable toward and from one another and having an interlocking engagement, a hub, concentric ball bearing runways interposed between the hub and the sleeve sections and flanges on the hub, bearing exteriorly against the outer runways.

1,390,997. PAPER-FEEDING MEANS FOR SIZE-TUBS. ARTHUR L. LITTLE and GEORGE W. VEROW, Brewer, Me., assignors to Eastern Manufacturing Company, Boston, Mass., a Corporation of Massachusetts. Filed Jan. 4, 1921. Serial No. 435,047. 4 Claims. (Cl. 91—31.)

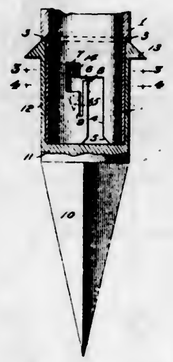


1. The combination with the first and second driers, and an intermediate sizing apparatus including squeeze rolls, of means for receiving the end of a sheet of paper and automatically carrying it under one of the squeeze rolls and presenting it to the nip of said rolls.

1,390,998. SHOE-HEATING DEVICE. THOMAS LUND, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Feb. 19, 1920. Serial No. 359,983. 10 Claims. (Cl. 219—21.)

1. A last comprising a short circuited electrical conductor constructed and arranged to act as a transformer secondary.

1,390,999. TAIL-GATE FOR VEHICLES. OTTO MARKLEIN, Brooklyn, N. Y., assignor to William Oscar Shadbolt, New York, N. Y. Filed Feb. 15, 1921. Serial No. 445,068. 3 Claims. (Cl. 296—51.)



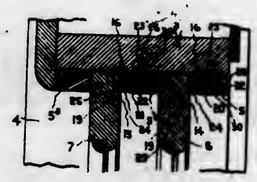
1. The combination with a vehicle carrying body; of a tail gate therefor and means adapted to pivotally secure said tail gate to said body; said means comprising swinging arms adapted to be pivotally attached at one end to said tail gate at a point above the lower edge thereof and to be pivotally attached at the other end to said carrying body at a point in or near the plane of the floor thereof or to be swung upward and pivotally attached to said body at a point substantially above the carrying floor thereof.

1,391,000. HYDROMETER. VERNON H. MEYER, Cleveland, Ohio. Filed Nov. 29, 1920. Serial No. 427,072. 3 Claims. (Cl. 265—45.)

2. The combination with a hydrometer barrel, bulb and float, of a cushion liner in the barrel, of sufficient extent to obscure a portion of the float and to prevent contact of the float with the wall of the barrel, said liner having holes through the same through which the position of the float may be seen.

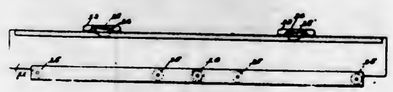
1,391,001. SIGNPOST. JOHN JOSEPH MOORE, South Charleston, Ohio. Filed Apr. 10, 1920. Serial No. 372,841. 4 Claims. (Cl. 189—28.)

4. In a sign post the combination with a base member adapted to be driven into the ground and having a socket in its upper end, a keyhole in said socket, a detachable tubular post having its lower end fitted in said socket, interlocking means carried by the base member and post and concealed and inclosed within said socket and the lower end of said post, said means serving to lock the post to said base member, and means whereby said interlocking means may be released by a key inserted in the key hole.



1,391,002. FISHING-SIGNAL. FRANK Z. MORIN, Sanford, Me. Filed Apr. 26, 1921. Serial No. 464,502. 2 Claims. (Cl. 43—17.)

2. In a fishing device and signal, a body, the said body having a chamber in its upper end and a reduced extension thereof, a rod guided in the extension and projecting through the chamber, a head carried by the rod, a spring for projecting the head and rod outwardly, a curved pin on the head, a latch having a looped portion to receive the pin, the said latch having an extension

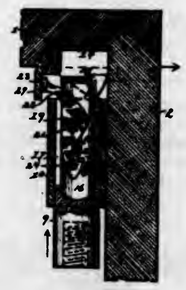


terminating in a hook, a line anchored to the body and having a portion looped over the hook whereby pull on the hook disengages the latch from the pin and releases the signal.

1,391,003. WEATHERPROOFING MEANS FOR WINDOW-SASHES. EDWARD A. NIX, Montreal, Quebec, Canada. Filed Nov. 21, 1919. Serial No. 339,593. 2 Claims. (Cl. 20—69.)

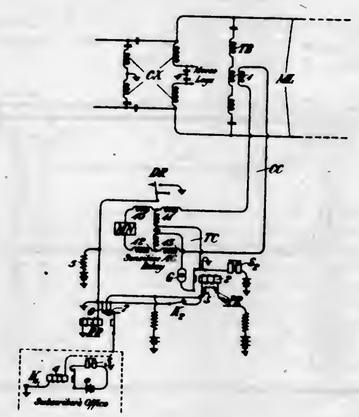
1. The combination with a wind frame including side posts, vertical window-stops removably secured to said posts, and a window sash slidably mounted within the frame and between the stops, of weather-proofing means consisting of a pair of strips one side edge of each of which is bent back upon itself in hook form to present a channel adapted to receive the bent-back edge of the other strip, means securing one strip upon the window sash and means securing the other strip on one of said stops, said strips being constructed and arranged to permit the removal of said stop and its strip as a unit without disturbing the means securing either of the strips in place and irrespective of the position of the window sash.

1,391,004. EXTENSION DRAWER-SLIDE. ENOCH OHNSTRAND, Mohawk, N. Y., assignor to Library Bureau, Cambridge, Mass., a Corporation of New Jersey. Filed July 21, 1920. Serial No. 398,020. 10 Claims. (Cl. 45—77.)



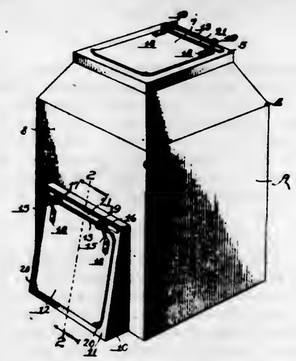
1. An extension drawer slide comprising a fixed slide member, an extension slide member of sheet material of substantially channel-like cross section telescoping within the fixed slide member and capable of being extended beyond the end thereof in either direction; and a drawer slide member movable on the extension slide member and capable of being extended beyond the end thereof in either direction.

6. An extension drawer slide comprising a fixed slide member, an extension slide member movable on the fixed slide member and capable of being extended beyond the end thereof in either direction, a drawer slide member movable on the extension slide member and capable of being extended beyond the end thereof in either direction, and hook members upon the drawer slide adapted to carry the extension slide with the drawer slide when the latter is returned from extended position to normal position, the hook members being disengaged from the extension slide in the normal position.



9. An extension drawer slide comprising a fixed slide member, an extension slide, and a drawer slide, the fixed slide member comprising an outwardly faced channel shaped member adapted to be attached to a desk and carrying horizontal rollers in the lower portion of the channel, the extension slide comprising an outwardly faced channel shaped member adapted to fit within the fixed slide and rest upon the rollers carried thereby, and being adapted to move upon the rollers in either direction so as to be extended beyond either end of the fixed slide, and the drawer slide comprising an inwardly faced channel member adapted to interfit with the extension member, and being movable upon the extension member in either direction so as to be extended beyond the end thereof in either direction.

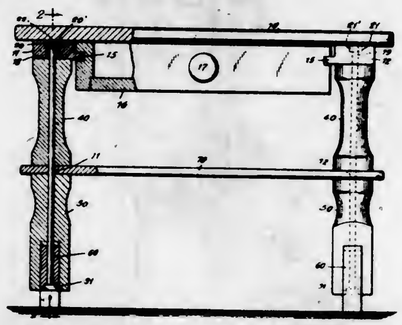
1,391,005. DOOR-LOCK. CHARLES G. PALMER, Newark, N. J. Filed Mar. 26, 1919. Serial No. 285,189. Renewed Mar. 14, 1921. Serial No. 452,231. 4 Claims. (Cl. 292—92.)



1. The combination with a door and its frame, a rod or bar adapted to be mounted on the door, a lever pivotally connected to said rod or bar for moving the said rod from its normal position, housings secured to the door, a bolt provided with a recess slidably arranged within one of said housings and connected with said rod at one end thereof, said bolt being provided with an integral laterally arranged lock bolt, a trigger pivotally secured and located within the recess of said bolt, a socket member for the bolt provided with an open end, said socket member being provided with a downwardly extending lug to be engaged by one end of said trigger, and provided further with two downwardly extending lugs designed to have holding and locking engagement with the said lock bolt, whereby the movement of the rod in one direction causes the lock bolt to become disengaged from the holding lugs to withdraw the same from said socket member.

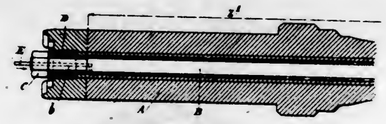
1,391,006. HALF-DUPLEX ALTERNATING-CURRENT TELEGRAPH SYSTEM. RALZEMOND D. PARKER, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Sept. 8, 1919. Serial No. 322,268. 3 Claims. (Cl. 178—71.)

1. In a signaling system, a transmission circuit, means for signaling by carrier currents over said circuit, comprising a differential receiving relay, a transmitting circuit including a source of carrier current, said transmitting circuit being so arranged that transmitted energy does not affect the differential receiving relay, a subscriber's loop, a transmitting key therein, a sounder associated therewith and controlled by said receiving relay, a pole changing relay responsive to said key, for controlling said carrier currents, and means to prevent the actuation of said pole changing relay by said receiving relay, in response to received signals.



1,391,007. DOOR-HINGE. PAUL PERSSON, Chicago, Ill., assignor to Sanitary Garbage Box Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 17, 1920. Serial No. 431,340. 1 Claim. (Cl. 16—128.)

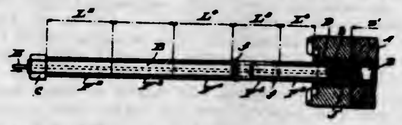
A hinge construction for attaching a door to a receptacle consisting of a flat bar engaging the face of said receptacle adjacent to said door, companion I-bolts passing through said bar and through the wall of said receptacle and being held in place by means engaging the inner face



of the receptacle, the eye of said bolts engaging against said bar, a hinged rod extending parallel to the upper edge and substantially the full width of said door and passing loosely through said I-bolts and having its ends bent downwardly and secured to the door.

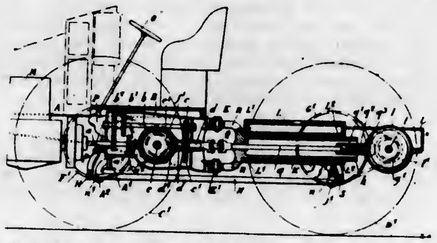
1,391,008. CHILD'S TABLE. HENRY E. RICHMOND, Bennington, Vt. Filed Apr. 27, 1920. Serial No. 376,898. 5 Claims. (Cl. 45—31.)

1. In a structure of the class described, a top portion, drawer supporting means secured to the underside thereof, a nut rigidly secured in a socket of said drawer supporting means, a leg for said structure, and a metallic rod in said leg, said rod having a threaded portion adapted to engage said nut and having a head portion fitting a socket in said leg and rotatable by said leg.



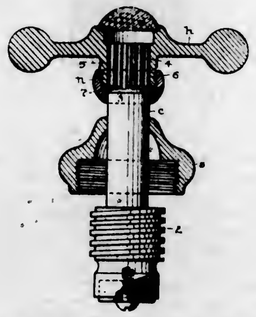
1,391,009. PROCESS AND APPARATUS FOR THE MANUFACTURE OF METAL TUBES BY THE SELF-HOOPING PROCESS. EUGÈNE SCHNEIDER, Paris, France, assignor to Schneider & Cie., Paris, France, a Limited Joint-Stock Company of France. Filed Mar. 31, 1919. Serial No. 286,501. 20 Claims. (Cl. 29—1.11.)

1. The process of treating metallic tubes to shape and to strengthen the wall thereof, consisting in subjecting the interior of the tube to successive charges of reforming fluid-pressure initially introduced in one end of the tube and progressively increasing the areas of application of the successive charges toward the other end of the tube, the fluid of each preceding charge being retained in the tube and the fluid of the succeeding charge added thereto.



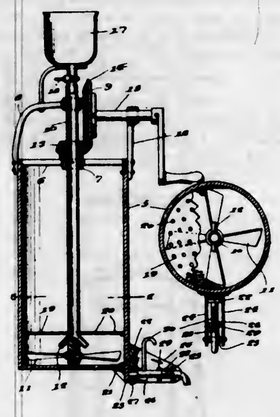
1,391,010. APPARATUS FOR THE MANUFACTURE OF METAL TUBES BY THE SELF-HOOPING PROCESS. EUGÈNE SCHNEIDER, Paris, France, assignor to Schneider & Cie., Paris, France, a Limited Joint-Stock Company of France. Original application filed Mar. 31, 1919, Serial No. 286,501. Divided and this application filed Nov. 3, 1920. Serial No. 421,468. 9 Claims. (Cl. 29—1.11.)

1. An apparatus for treating metallic tubes to shape and to strengthen the same comprising means for closing one end of the tube to be treated, means for charging fluid-pressure into the closed end of the tube, a head movable in the tube in advance of the fluid-pressure to confine the latter to a predetermined zone of application, a mandrel entering the tube and carrying the movable head, and a series of displaceable sleeves carried by the mandrel outside of the tube and coöperating with a holding means and the mandrel to hold the head against the



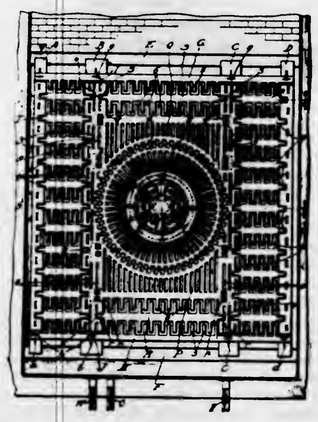
thrust of a fluid-pressure charge, the displacement of the sleeves from the mandrel controlling the advance of the head and the length of a displaced sleeve determining the advance of the head in the next charge of fluid-pressure.

1,391,011. TRACTOR HAVING TWO PAIRS OF DRIVING-WHEELS. EUGÈNE SCHNEIDER, Paris, France, assignor to Schneider & Cie., Paris, France, a Limited Joint-Stock Company of France. Filed Mar. 26, 1921. Serial No. 455,948. 5 Claims. (Cl. 180—50.)



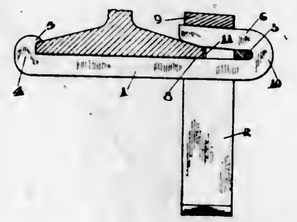
1. A tractor comprising a pair of trucks provided with driving wheels, means pivotally and slidably connecting said trucks and providing for relative movement therebetween, and means for maintaining a constant distance between the axles of said trucks on relative movement of the latter.

1,391,012. COCK OR FAUCET. FRED SCHULDER, Cleveland, Ohio, assignor to United Brass Manufacturing Company, Cleveland, Ohio, a Partnership composed of Wm. J. Schoenberger and Benjamin F. Klein. Filed Oct. 11, 1920. Serial No. 416,163. 2 Claims. (Cl. 251—45.)



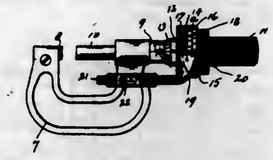
1. In a cock or faucet, a valve stem having a fluted extremity and an annular groove below its fluted portion, a handle adapted to be rotatably adjusted on said stem and having a hub with external screw threads at its bottom, a split ring in said groove and a nut engaging said ring from below and screwed on to said hub avove said ring, whereby said stem and handle are locked rigidly together.

1,391,013. MIXING-MACHINE. JOSEPH W. SCHWAGER, Utica, Minn. Filed Mar. 3, 1921. Serial No. 449,290. 2 Claims. (Cl. 259—23.)



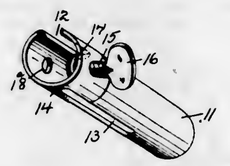
1. A mixing apparatus comprising a container, a hollow shaft rotatably mounted vertically within the container and having discharge spouts near its lower end, mixing blades carried by the shaft below the discharge spouts and constructed to direct streams upwardly, a perforated partition for the container disposed horizontally above the spouts and means for rotating the shaft.

1,391,014. FURNACE-GRATE. JOHN T. SIMPSON, Chicago, Ill., assignor to Economy Sales Company, Chicago, Ill., a Corporation of Illinois. Original application filed Sept. 23, 1916, Serial No. 121,709. Divided and this application filed Aug. 19, 1918. Serial No. 250,467. 7 Claims. (Cl. 126—176.)



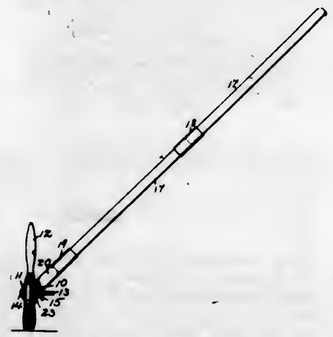
5. In a furnace grate, the combination of parallel rows of rocking bars, stationary means forming part of the grate surface and having four portions extending in opposite directions therefrom, provided with bearings for said rocking bars, a single rocking bar between two of said portions, a single rocking bar between the other two portions, stationary bars forming bearings for the outer ends of said rows of rocking bars, and stationary bars extending transversely of said rows, said stationary bars being all connected to form a rectangular outer frame for the grate.

1,391,015. CLAMP. FREDERICK L. H. SIMS, Toronto, Ontario, Canada. Filed Feb. 12, 1921. Serial No. 444,511. 9 Claims. (Cl. 238—324.)



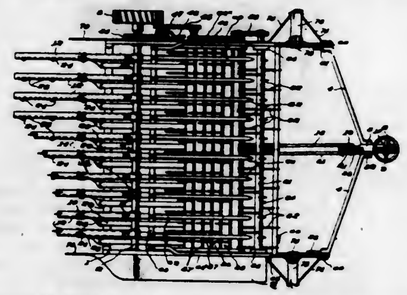
1. A clamp comprising a reach bar adapted to span the flange of a structural steel member; a cramp bar guided on the reach bar and extending in a direction normal to the surface of the flange of said structural member to serve as an abutment member, said cramp bar having a notch formed therein adapted to wedge over an edge of the aforesaid flange; and means engaging the reach bar adapted to force the cramp bar into engagement with the said flange.

1,391,016. MICROMETER. WILLIAM T. SLIDER and HAROLD R. SLIDER, Indianapolis, Ind. Filed Jan. 5, 1921. Serial No. 435,078. 7 Claims. (Cl. 33—166.)



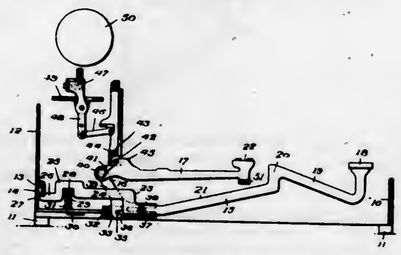
1. A micrometer gage frame having a graduated sleeve, a spindle adjustably mounted in the sleeve and having a sleeve with an index scale coöperating with the graduations of the sleeve on the frame, a graduated ring adjustably mounted on and surrounding the sleeve of the spindle and having a circumferential scale, a second graduated ring adjustably mounted on the first ring, and an index blade mounted on the frame and coöperating with both graduated rings without obscuring the graduations of the sleeve on the frame or the index scale of the sleeve of the spindle.

1,391,017. BRUSH-HOLDER. FRIEDRICH SOHNLE, Newark, N. J. Filed July 19, 1920. Serial No. 397,500. 1 Claim. (Cl. 306—2.)



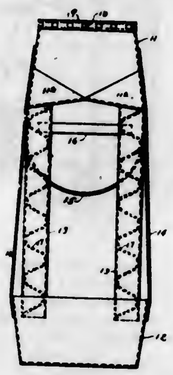
A brush holder comprising a tubular member having a narrow slot in one side extending from one end part way of the length of the member and having a long narrow slot on the side opposite the first slot, the second slot terminating short of the end of the member and extending a material distance beyond the inner end of the first slot, and a binding screw screwed through one wall of the member and adapted to press against the handle of a brush held in the slots.

1,391,018. BRUSH-HOLDER. FRIEDRICH SOHNLE, Newark, N. J. Filed July 19, 1920. Serial No. 397,501. 2 Claims. (Cl. 15—54.)



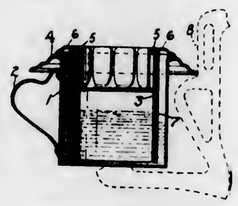
1. A brush holder comprising a rear plate having its lower edge sharpened, a front plate, a bolt passing through both plates, a wing nut on the bolt to clamp the plates together, and a handle secured to the rear plate and inclined upwardly therefrom, the plates forming a clamp for a brush, and when assembled without a brush forming a scraper.

1,391,019. STRAW-SPREADER. HENRY A. SORENSON, Harvey, N. D. Filed Mar. 24, 1919. Serial No. 284,692. 11 Claims. (Cl. 198—88.)



1. In a straw spreader, the combination of carrying means, means for receiving the straw from the carrying means, adjustable means slidably carried by the carrying means for feeding the straw from said carrying means to said receiving means.

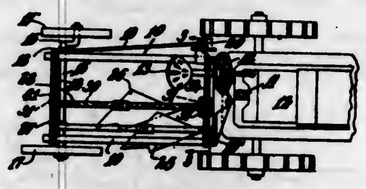
1,391,020. TYPEBAR-ACTION. CHARLES SPIRO, New York, N. Y., assignor to Gourland Typewriter Corporation, New York, N. Y., a Corporation of New York. Filed Jan. 4, 1919. Serial No. 269,604. 9 Claims. (Cl. 197—22.)



1. A type bar action comprising a key lever pivoted adjacent the rear of the typewriter, a type bar pivotally mounted at a point above said key lever, a bell crank lever swinging about a fixed pivot positioned below said key lever, a pin and slot connection between said key lever and one arm of said bell crank lever, and a pin and slot connection between the other arm of said bell crank lever and said type bar, whereby the height of said type bar action is materially decreased.

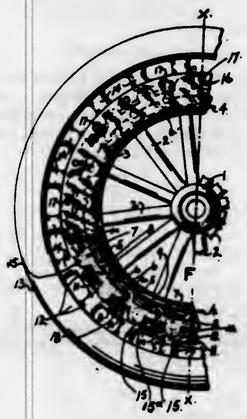
1,391,021. FEED-BAG FOR HORSES. LAKE H. SPRINKLE, Brooklyn, and MORRIS GREENMAN, New York, N. Y. Filed Oct. 1, 1920. Serial No. 414,078. 2 Claims. (Cl. 119—65.)

1. A feed bag for horses comprising an upper receptacle for the feed, adapted to rest on the crest of the horse's head, a lower receptacle suspended from said upper receptacle and adapted to reach to the mouth of the horse thereunder, a means for securing said upper receptacle in place on the crest of the horse's head and a means for passing the feed from said upper receptacle to said lower receptacle.



1,391,022. LIQUID-FUEL BURNER. AUGUST C. STORCK, St. Louis, Mo. Filed Jan. 27, 1921. Serial No. 440,411. 2 Claims. (Cl. 158—72.)

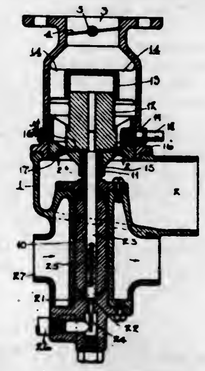
1. A liquid-fuel burner comprising an open top container, a central tubular member spaced from the wall of the container and open at the top, said central member being provided with an annular flange disposed over the container, the central member being further provided with heating chambers arranged on the inside thereof, and a series of burner openings disposed above the space between said member and container, and a tubular wick wrapped about the central member.



1,391,023. AGRICULTURAL IMPLEMENT. STEPHEN SZUCS, Homestead, Pa., assignor of one-third to Andrew Dudas, Homestead, Pa. Filed Oct. 5, 1920. Serial No. 414,847. 3 Claims. (Cl. 97—36.)

1. In an agricultural implement, a plow, a longitudinal bar on which said plow is fixed, a shaft passing freely through said bar from end to end thereof, gear pinions on the ends of said shaft, transverse racks upon which said gear pinions rest, transverse guide elements adjacent said racks, oppositely extending lugs on the said bar adapted to

engage said guide elements, a pair of oppositely facing ratchet wheels on said shaft, and a lever loosely fulcrumed on said shaft and having a pair of pawls mounted thereon to engage the said ratchet wheels.

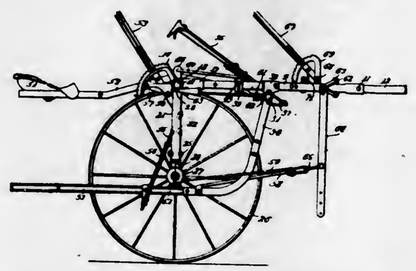


1,391,024. CUSHIONED VEHICLE-WHEEL. JOHN EDWARD THEBAUD, Buffalo, N. Y., assignor to S. Johnstone and Company, Inc., Buffalo, N. Y., a Corporation of New York. Filed July 5, 1919. Serial No. 308,746. 5 Claims. (Cl. 152—29.)

1. A vehicle wheel comprising three coöperating portions, each occupying a zone in said wheel concentric with its center, the innermost portion being rigid the outermost portion being flexible and the intermediate portion being more flexible than the outermost portion, said intermediate portion having toothlike parts fitting into corresponding notches in the periphery of the said innermost portion, and also having toothlike portions fitting corresponding notches in the outermost portion, said intermediate portion being made up of a series of linked parts adapting the said parts to be transversely separated or assembled, and means inclosing said intermediate portion and attached to one of the remaining portions whereby any transverse strain on said wheel tending to distort the parts is resisted.

1,391,025. CARBURETER. JAMES J. TRACY and LAWRENCE H. MORSE, Cleveland, Ohio; said Morse assignor to said Tracy. Filed Apr. 23, 1917. Serial No. 163,770. 6 Claims. (Cl. 261—44.)

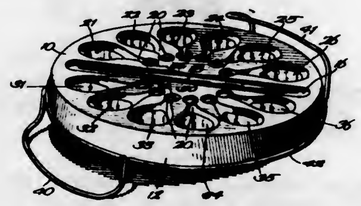
1. In a device of the character described, the combination of a tubular casing having an air inlet opening; a fuel suply duct with a nozzle rising centrally within said casing; an annular, vertically adjustable valve seat fitted within said casing; and a central, vertically reciprocable valve slidably fitting within said annular valve seat and adapted to be raised by the suction of the engine, said seat being adjustable without affecting the normal position of



said valve and the latter being recessed in its under face to fit around said nozzle and having radial discharge passages communicating with such recess.

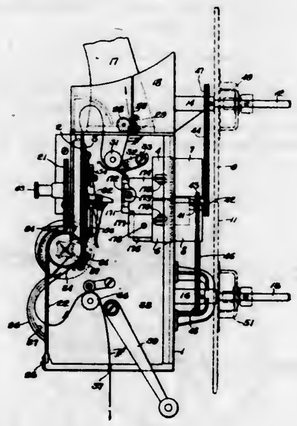
1,391,026. SCREENING AND CONCENTRATING DEVICE. HERBERT B. WALLING, Salt Lake City, Utah. Filed June 2, 1920. Serial No. 385,912. 3 Claims. (Cl. 83—56.)

1. A screening device of the class described comprising a floor having a plurality of openings therein, agitating plates pivotally carried below said openings, means for oscillating said plates, and means for vertically adjusting the pivot point of said plates.



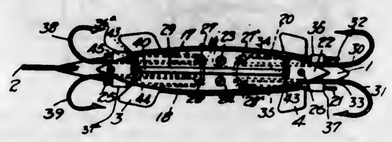
1,391,027. CULTIVATOR. LEWIS E. WATERMAN, Rockford, Ill., assignor to Emerson-Brantingham Company, Rockford, Ill., a Corporation of Illinois. Filed Oct. 10, 1917. Serial No. 195,684. 10 Claims. (Cl. 97—35.)

1. In a cultivator, the combination of a frame, a wheel arch, a wheel connected with each depending upright portion of the wheel arch in such manner as to be capable



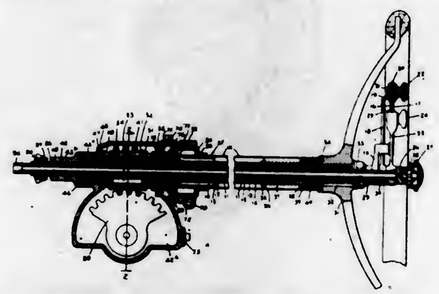
of turning about the upright axis thereof and to be movable forwardly and backwardly with respect to the frame about the horizontal axis of said arch, a cross bar mounted upon and slidable laterally with respect to the frame in front of the wheel arch, shovel gangs attached to the cross bar so as to be movable laterally therewith, a connection between each depending portion of the wheel arch and the adjacent end portion of the cross bar for angling the wheels when the cross bar is moved laterally and permitting the wheels to be moved forwardly and backwardly independently of movement of the cross bar, a connection between the shovel gangs and wheels for moving the latter forwardly and backwardly upon lowering and raising the shovel gangs, means for moving the cross bar laterally, and means for raising and lowering the shovel gangs.

1,391,028. ARTIST'S COLOR-BOX. CARL N. WERNTZ, Chicago, Ill. Filed May 2, 1919. Serial No. 294,305. 8 Claims. (Cl. 41—5.)



1. A color box having on its working surface a plurality of paint receptacles and their correlated larger mixing wells so arranged that when half of the receptacles are stocked with warm colors and the other half are stocked with cool colors, each group is on one side of a given line and the complementary colors in each group are opposite each other.

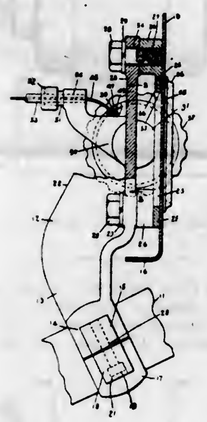
1,391,029. CINEMATOGRAPHIC MULTIPLEX PROJECTION, &c. WILLIAM BURTON WESCOTT, Wellesley Hills, Mass., assignor to Kalmus, Comstock & Wescott, Incorporated, Boston, Mass., a Corporation of Massachusetts. Filed Feb. 20, 1917. Serial No. 149,791. 6 Claims. (Cl. 88—16.4.)



1. Cinematographic apparatus comprising a film passage having a plurality of picture apertures in longitudinal alinement therealong, runners engaging one side of the film near the edges throughout the region of the apertures, and means intermediate the apertures for yieldingly urging the runners against the film, thereby to maintain the film against one side of the film passage throughout the said region.

1,391,030. FISH-DECOY BAIT. GEORGE WASHINGTON WHEELER, LEFROY, Ontario, Canada. Filed Oct. 10, 1919. Serial No. 329,847. 7 Claims. (Cl. 43—35.)

4. In a decoy fish bait, the combination with the decoy body, of a pair of fish hook members swung at their inner ends upon the body of the decoy fish bait at one side of its longitudinal center, resilient means tending to swing the fish hooks from a position in longitudinal alinement with the decoy bait body to a position at right angles to the decoy bait body, means extending longitudinally of the decoy body and protruding from the face of the body for locking the hooks in their longitudinal alined position against the resilient pressure, and means for releasing such locking means operated by the gripping of the decoy in the jaws of the fish.

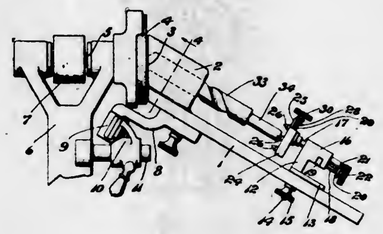


1,391,031. STEERING MECHANISM FOR MOTOR-VEHICLES. D'ORSAY MCCALL WHITE, Indianapolis, Ind., assignor to La Fayette Motors Company, Indianapolis, Ind., a Corporation. Filed Feb. 24, 1920. Serial No. 360,895. 2 Claims. (Cl. 74—39.)

2. In a steering mechanism for motor vehicles and the like the combination with a steering mast, a steering column tube concentric therewith and surrounding said mast, and a housing positioned adjacent the base of said mast and tube and surrounding the end thereof, of a nut secured in said housing and concentric with said mast and tube and surrounding the same, a pair of of annular bearings engaging said tube to center the same, a sleeve positioned between said tube and said nut bearing, and a second sleeve positioned between said tube and said mast within said bearings, said tube and said sleeves being provided with registering openings and said nut bearing and the inner of said sleeves being provided with concentric annular channels, said channels communicating with said registering openings, and said sleeve channel discharging adjacent said mast to lubricate the same.

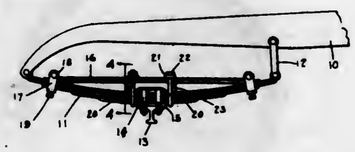
1,391,032. AUXILIARY AIR CONTROL. D'ORSAY MCCALL WHITE, Indianapolis, Ind., assignor to La Fayette Motors Company, Indianapolis, Ind., a Corporation. Filed Feb. 24, 1920. Serial No. 360,897. 5 Claims. (Cl. 180—77.)

1. An auxiliary air controlling mechanism including in combination an instrument board, a supporting bracket for said mechanism positioned upon said board and adjacent slot therein, an annular actuating disk rotatably mounted upon said supporting bracket, said disk having a portion of its periphery extending forwardly through



said slot exposed for actuation, and means associated with said rotatable disk and supported by said bracket for controlling the auxiliary air supply to an internal combustion engine or the like.

1,391,033. KNITTING-NEEDLE UNIT. J. FRANK WILCOMB, Norristown, Pa., assignor, by mesne assignments, to Spartan Needle Company, Providence, R. I., a Corporation of Rhode Island. Filed Apr. 12, 1919. Serial No. 289,691. 30 Claims. (Cl. 66—5.)

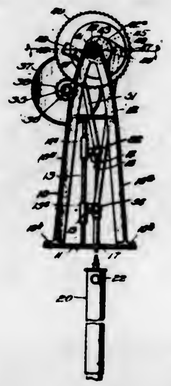


1. A knitting instrument comprising a hooked yarn drawing element, and a loop spreading element, the latter having a point to penetrate the loop at the back of the hooked yarn drawing element, and there initiate the spreading of the loop for casting over the hook, substantially as described.

1,391,034. DRILL-HOLDER. ARTHUR WILLIAMS, Grand Rapids, Mich., assignor to Wilmarth & Morman Company, Grand Rapids, Mich., a Corporation of Michigan. Filed Sept. 7, 1920. Serial No. 408,496. 5 Claims. (Cl. 51—219.)

1. A drill holder comprising an elongated supporting bar formed at one end with angular disposed sides making a V-shaped trough to receive the end of the drill to be ground, a bracket slidably mounted on the bar adjacent the other end thereof, a rod passing through the bracket above the bar, means to adjust said rod lengthwise to different positions, a guide block on the inner end of the rod, a slide adjustably mounted on the guide block and adjustable vertically with respect thereto, means for adjusting the slide to different positions, and a plurality of spaced apart centers extending one over the other from the slide, said guide block at one side of the slide carrying a measuring scale for directing the extent of adjustment of the slide, and said slide being provided with an indicating mark for use in relation to said scale, substantially as and for the purposes described.

1,391,035. SHOCK-ABSORBER. JAMES WOOD, Noblesville, Ind. Filed Jan. 30, 1920. Serial No. 355,129. 1 Claim. (Cl. 267—45.)

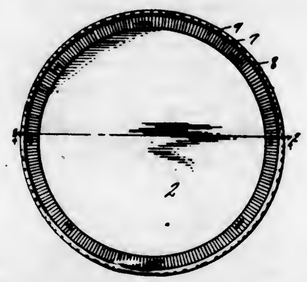


In combination with a shock absorber for a vehicle including a semi-elliptic body spring, and an auxiliary spring positioned adjacent the body spring for opposing the rebound thereof, and means for securing the central portion of said springs together, of a clamp for securing the opposite ends of said auxiliary spring to the body spring, including a roller bearing mounted in said clamp for permitting the longitudinal movement of said auxiliary spring with respect to said vehicle spring, and an adjustable lock bolt adapted to screw through the opposite end of said clamp from said roller into engagement with the vehicle spring for rigidly clamping said clamp thereto, whereby said clamp may be adjustable to vehicle springs of varying thicknesses.

1,391,036. POWER-DRIVEN PUMP. DE WITT EDWARD YATES, Chippewa Falls, Wis. Filed May 16, 1919. Serial No. 297,612. 11 Claims. (Cl. 103—82.)

1. The combination in a pump, of a rotary driving element, a controlling element mounted adjacent said driving element and adatped to rotate about an axis eccentric to said driving element, and a driven element having a slid-

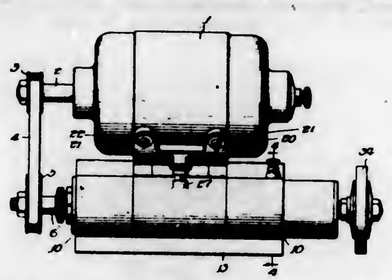
ing connection with said driving element and adapted to have its position varied with respect to the axis of said



driving element by the operation of said controlling element.

1,391,037. SOAPSTONE EQUIVALENT. EVERETT TOWNSEND YOUNG, Peekskill, N. Y. Filed June 29, 1920. Serial No. 392,791. 3 Claims. (Cl. 106—10.)

1. Blocks for self-cookers composed of a kaolin blended with a pulverized fired kaolin and fired at a high temperature, having the heat retaining qualities of soapstone.

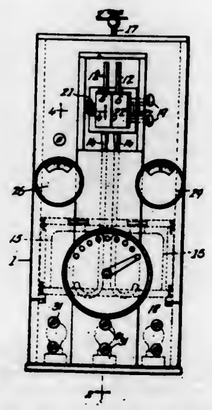


1,391,038. BOX. ERNEST ZEIDLER, Marshfield, Wis. Filed Feb. 7, 1921. Serial No. 443,024. 2 Claims. (Cl. 217—5.)

1. The combination with a cylindrical box comprising a body portion and a cover, said cover having its flange secured thereto by means of a metallic band substantially right angularly shaped and having one of its flanges secured to the upper surface of the cover and the other flange secured to the cover flange, of an annular bead formed at the angling point of the metallic band and extending upwardly, said annular bead being of substantially the same interior diameter as the diameter of the bottom of the box, and adapted to receive the bottom of a superimposed box and hold the same against lateral displacement while in transit.

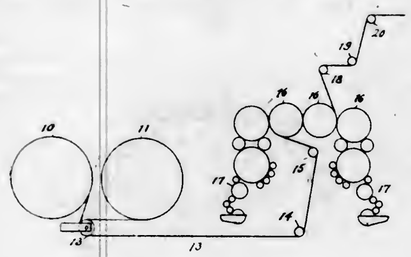
1,391,039. ELECTRIC GRINDER. CHESTER H. BEACH, Racine, Wis., assignor to Wisconsin Electric Company, a Corporation of Wisconsin. Filed May 23, 1919. Serial No. 299,315. 12 Claims. (Cl. 51—259.)

1. A universal grinder comprising a housing, a grinder spindle rotatably mounted therein, and an electric motor mounted to swing about said housing whereby it may be



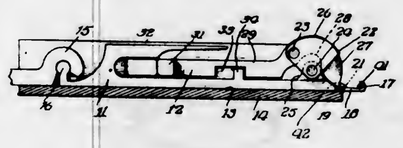
adjusted to different radial positions with reference thereto.

1,391,040. OIL-PAN HEATER. ALBERT E. BERDON, Detroit, Mich., assignor to Dodge Brothers, Detroit, Mich., a Corporation of Michigan. Filed July 29, 1920. Serial No. 399,800. 3 Claims. (Cl. 184—104.)



3. An oil pan heater adapted for use in internal combustion engines, said heater having an outer shell and an inner shell, the outer shell being closed at its inner end and connected with the heat supply at its outer end, the inner shell having an open end terminating short of the inner end of the outer shell, the outer end of the inner shell being open to the atmosphere, and a valve controlling a supply of heat to said outer shell.

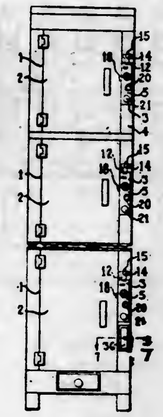
1,391,041. SIZING-TESTER. HENRY G. BOON, Appleton, and CHARLES ALBERT FOURNESS, Neenah, Wis., assignors to Kimberly-Clark Company, Neenah, Wis., a Corporation of Wisconsin. Filed Aug. 23, 1920. Serial No. 405,506. 5 Claims. (Cl. 175—183.)



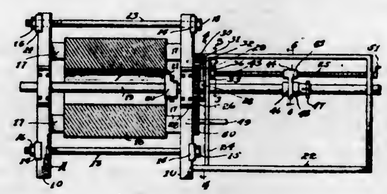
2. The method of testing paper and like material which comprises clamping the paper in a block, introducing a separate charge of liquid into the block at each side of the paper, passing an electrical current through a circuit in which the paper and two charges of liquid are interposed, and measuring the current flowing in the circuit.

1,391,042. PAPER-MEASURING ATTACHMENT FOR PRINTING-PRESSES. BASIL BREWER, Cleveland, Ohio. Filed Mar. 6, 1920. Serial No. 363,679. 3 Claims. (Cl. 101—220.)

1. The combination with a printing press adapted to accommodate paper in roll form, and having a plurality of rolls around which the paper passes as it travels through the press, including a yieldable roll which may yield under varying tension of the paper, of a measuring attachment operatively connected to such roll.



1,391,043. NEEDLE FOR KNITTING-MACHINES. WILSON WORTH BURSON, Rockford, Ill., assignor to B. Z. B. Knitting Co., Rockford, Ill., a Corporation of Illinois. Filed Aug. 4, 1917. Serial No. 184,408. 9 Claims. (Cl. 66—5.)

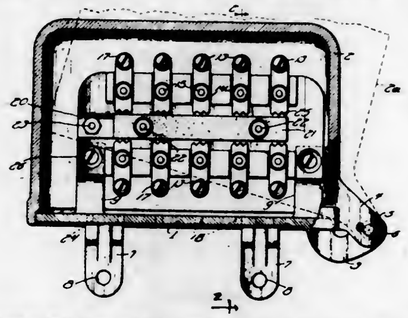


1. A needle for knitting machines, comprising a knitting hook and a lifting hook and a pivot arm connecting the two, said pivot arm lifting the lifting hook as the knitting hook moves on its knitting stroke to raise the old loop above and over the new.

1,391,044. LOCKER. RALEIGH B. BUZZAIRD, Washington, D. C., assignor, by mesne assignments, to Davis Automatic Equipment Corporation, New York, N. Y., a Corporation of New York. Filed July 17, 1920. Serial No. 397,121. 3 Claims. (Cl. 45—37.)

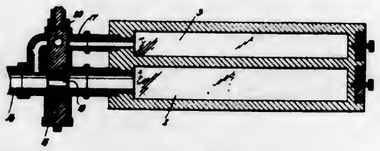
1. In a locker, the combination with a structure forming a vertical row of compartments with doors, and locks for said doors mounted removably in the frame of the structure at one side of the door openings, of individual catches in the frame for holding said locks in place, a common rod separate from the catches for holding and releasing the same, and a lock controlling said rod.

1,391,045. PORTABLE BORING-BAR. WALTER F. CHELLBERG, Chicago, Ill. Filed Nov. 2, 1918. Serial No. 260,803. 3 Claims. (Cl. 77—2.)



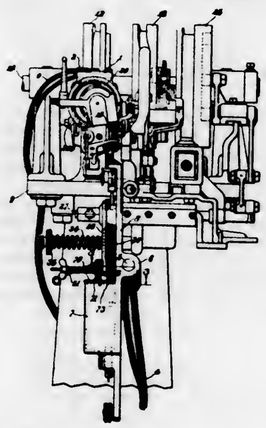
1. In a machine of the type described, the combination with a power wheel, a main shaft therethrough and carrying a tool, a feed screw, and connections between the screw and shaft for advancing the tool with respect to the work; of a ratchet gear fast on the screw, a rock shaft means for oscillating it by the rotation of said wheel, crank on said shaft, a head connected therewith and having an axial bore and a longitudinal slot intersecting the bore and provided with lateral notches, a dog reversibly mounted within said bore and having a beveled tip, and a lug on the dog engaging said slot and notches, as described.

1,391,046. LIGHTNING-ARRESTER. WALLACE L. COOK, Chicago, Ill. Filed Sept. 2, 1919. Serial No. 321,129. 8 Claims. (Cl. 175—30.)



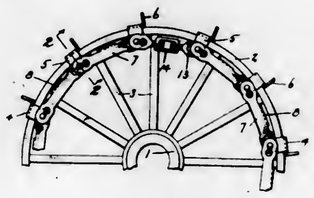
1. A device of the character described comprising an insulating member, a plurality of rows of discharge plates arranged side by side carried thereby, and a base member supporting the insulating member, said base member

having a row of openings therein in line with said discharge plates to space and position a plurality of wires



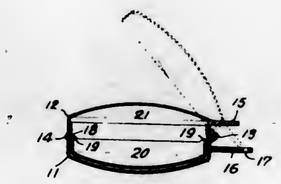
and maintain them in respective positions relatively to the discharge plates.

1,391,047. DOUBLE OIL-BURNER. FERNANDO COTERA, Central Feliz, Cuba. Filed July 5, 1919. Serial No. 308,900. 7 Claims. (Cl. 158—75.)



2. In an oil burner, a plurality of independent compartments of varying capacity for the discharge of fuel, means for creating an injector action in said compartments, and means arranged outside of said fuel compartments for selectively placing said fuel compartments in operation.

1,391,048. HEATING SYSTEM FOR WAX-THREAD SEWING-MACHINES. STEPHEN A. DOBYNE, St. Louis, Mo., assignor to Champion Shoe Machinery Company, St. Louis, Mo., a Corporation of Missouri. Filed Feb. 10, 1917. Serial No. 147,941. 7 Claims. (Cl. 112—41.)



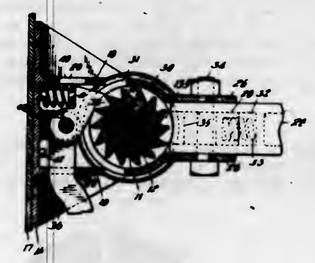
1. In a wax-thread sewing machine, having a machine ad and having thread controlling mechanism including a take-up member having a thread-engaging part, the employment of a metallic carrier mounted on said head and supporting said member, said member having a linearly sliding thermal contact with said carrier, and electrical resistance heating means mounted on and in thermal contact with said carrier and adapted to heat said member through its sliding contact with said carrier.

1,391,049. GROUTER DEVICE FOR TRACTOR-WHEELS. FRED EVANS, Summit, N. J., assignor, by mesne assignments, to Bethlehem Steel Company, Bethlehem, Pa., a Corporation of Pennsylvania. Filed Apr. 2, 1919. Serial No. 286,922. 3 Claims. (Cl. 301—40.)

1. In a grouter attachment for wheels, a plurality of body members engaging the thread of the wheel and having earth-gripping elements extending outwardly therefrom, laterally extending pins carried by said body members and provided with heads thereon and links provided with slots receiving said pins, said slots being enlarged at an end thereof whereby said links may be detachably and loosely connected to said body members.

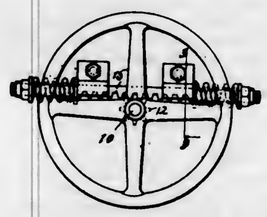
1,391,050. VANITY-CASE. FRANCIS A. FAIRBAIRN, Montreal, Quebec, Canada, assignor to Palmers Limited, Montreal, Quebec, Canada. Filed Feb. 2, 1920. Serial No. 355,675. Renewed Mar. 31, 1921. Serial No. 457,422. 2 Claims. (Cl. 220—36.)

1. In a device of the class described, a receptacle having an internal groove, a removable pan within the receptacle, having outwardly projecting ears to engage the groove and hold the pan within the receptacle, said receptacle being compressible to effect releasement of the ears from the groove and permit removal of the pan.



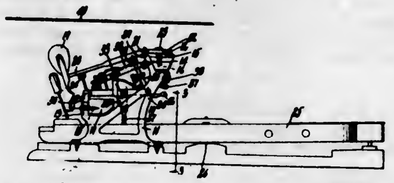
1,391,051. ROTARY BRUSH. CLINTON E. FROST, East Cleveland, Ohio, assignor to The Cleveland-Osborn Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 24, 1918. Serial No. 241,462. 3 Claims. (Cl. 15—37.)

1. A rotary brush section comprising a base ring, brush material looped upon said ring, two other rings of larger diameter than and concentric with said base ring and contacting with said material on the respective sides thereof radially beyond and wholly clear of said base ring, and means passing through said material at spaced intervals



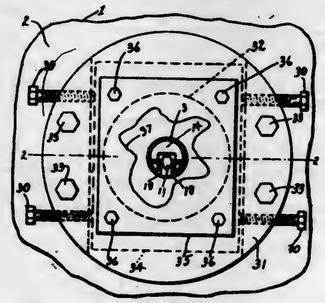
and locking said last-named rings together, whereby the loops of material are tied together and secured in place on said base ring.

1,391,052. REVERSIBLY-OPERABLE HAND-BRAKE. WILLIAM A. GEIGER, Chicago, Ill., assignor to William H. Miner, Chazy, N. Y. Filed July 12, 1920. Serial No. 395,429. 4 Claims. (Cl. 74—115.)



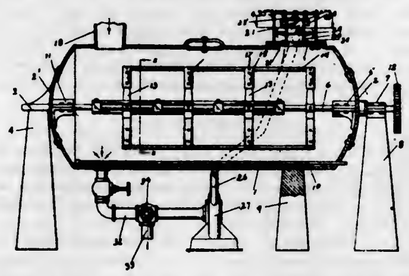
1. In a hand brake, the combination with an element adapted to be rotated to effect tightening of the brake chain; of a ratchet wheel associated with said element and adapted to be positioned with respect thereto to have the ratchet teeth thereof face in either direction; of a pawl coöperable with said ratchet wheel, the operative position of the pawl being also reversible; a supporting bracket; and a locking dog mounted on the bracket and cooperable with the ratchet wheel, the operative position of said locking dog on the bracket being also reversible.

1,391,053. STEERING-GEAR ATTACHMENT. ANTON F. GREINER, Cleveland, Ohio, assignor to The Cleveland Tractor Company, Euclid, Ohio, a Corporation of Ohio. Filed July 2, 1920. Serial No. 393,582. 3 Claims. (Cl. 74—33.)



1. The combination with the rotatable steering post of a motor vehicle, of a gear secured thereto, a rack bar mounted to slide endwise in engagement with said gear, and opposed springs acting on said rack bar to move it endwise and return it to the position in which the springs balance each other.

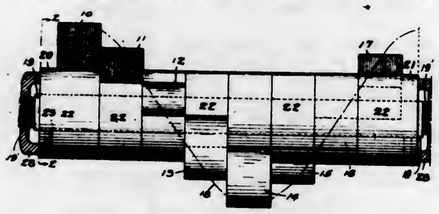
1,391,054. BRACKET FOR GRAND-PIANO ACTIONS. CHARLES W. HALL, Wakefield, and FRANK E. WHEELER, Belmont, Mass., assignors to Henry F. Miller & Sons Piano Company, Boston, Mass., a Corporation of Massachusetts. Filed Jan. 15, 1921. Serial No. 437,384. 5 Claims. (Cl. 84—250.)



1. A bracket for a grand piano action embodying a horizontally and forwardly extending arm at the upper end and front thereof and a vertically extending arm adjacent the lower end and rear thereof, a hammer flange rail fast to the underside of said forwardly extending arm and a wippen rail fast to the front edge of said vertically extending arm.

1,391,055. DIE-MAKING MACHINE. ROBERT LLOYD HAWKES, St. Catharines, Ontario, Canada. Filed Apr. 13, 1920. Serial No. 373,621. 7 Claims. (Cl. 29—76.)

1. In a die cutting machine, a die holder supported to have free horizontal movement, a master templet and a die blank each carried horizontally by the die holder one vertically above the other, a cutting element engaging the die blank and guiding means co-acting with the master templet for controlling the relative movement of the master templet and die blank with respect to the cutting element.



1,391,056. PAPER-STOCK-TREATING MACHINE. WILLIAM J. HERRBOLD, Kalamazoo, Mich. Filed June 19, 1920. Serial No. 390,122. 11 Claims. (Cl. 92—20.)

1. In a stock treating machine, the combination of a tank, a chamber provided with an internal spiral, a top

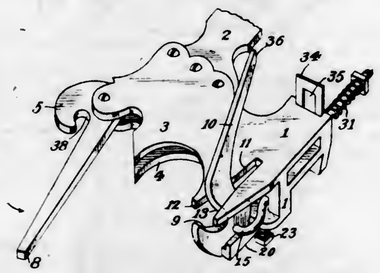


plate for said chamber movably mounted to permit the escape of material from the top of the chamber, said top member having a downturned flange at its outer edge, a pressure means for said top plate, a concave deflector member mounted on the outer side of said chamber below said top plate, a nozzle disposed to deliver upwardly within said chamber, a housing embracing said chamber and open at its lower end to discharge into said tank, and a pump having a discharge connection to said nozzle and an intake connection to the bottom of said tank.

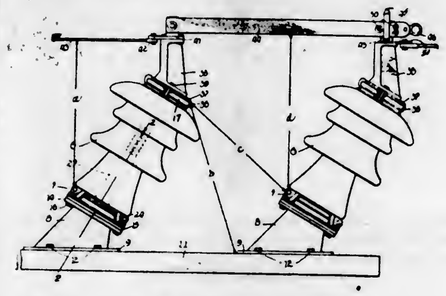
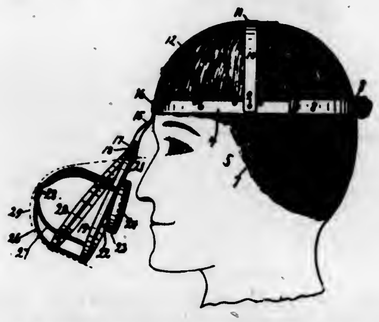
1,391,057. SPRAYER PADDLE-WHEEL. AXEL HOLMSTRÖM, Wiggbyholm, Sweden. Filed Mar. 10, 1920. Serial No. 364,708. 8 Claims. (Cl. 259—134.)

1. A paddle wheel for spraying or surface stirring of liquids, comprising a shaft, a plurality of sections upon the shaft, means for holding the sections against longitudinal and circumferential movement about the shaft, and separate blades upon the different sections having recessed faces on one side of each blade, recessed through the blades and having convex trailing surfaces about the recess.



1,391,058. PLOW SAFETY-HITCH. ALBERT B. HULSEBOS and GERRIT DEN BESTEN, Holland, Mich., assignors to Safety Release Clevis Co., Holland, Mich., a Corporation of Michigan. Filed Dec. 30, 1920. Serial No. 433,974. 16 Claims. (Cl. 213—67.)

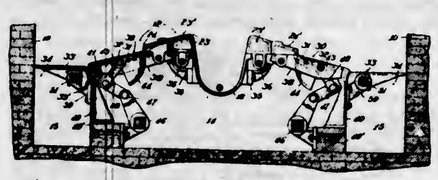
1. An automatic release comprising a main body portion, a hook pivotally attached thereto, spring actuated means to hold said hook in a closed position which means release it at a predetermined pull, means to hold the released parts in position to be automatically reëngaged when pressure is exerted against said hook in a reverse direction.



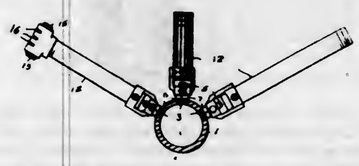
1,391,059. DISCONNECTING-SWITCH. ERNEST H. JACOBS, Chicago, Ill., assignor to Electrical Engineers Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed July 15, 1918. Serial No. 244,830. 11 Claims. (Cl. 200—48.)

4. The improvement herein described comprising an insulator support, a pair of petticoat insulators arranged at an angle of substantially 45 degrees to the support, a switch pivotally mounted on the top of one insulator for opening and closing a circuit, and a cooperating switch terminal mounted upon the top of the other insulator, said switch having a substantially uniform break down strength and being adapted for either horizontal or vertical mounting.

9. In a switch, a pair of terminal clips, a pair of parallel switch blades pivoted to one of said clips and having limited yielding movement at their outer ends, said other clips comprising a non-yielding contact adapted to engage between the blades, and yielding guiding members secured on each side of said latter clips, the end of said guiding members being diverged to guide each blade between the terminal clip and adjacent member and to sustain any arc which might be drawn by opening the switch.



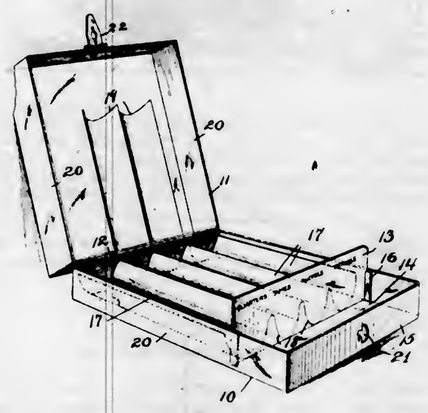
1,391,060. MASK FOR INHALATION. WILFRED J. JANDRON, Minneapolis, Minn. Filed Mar. 17, 1920. Serial No. 366,539. 3 Claims. (Cl. 128—195.)



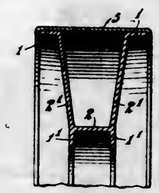
1. In a device of the kind described, a head gear adapted to be secured on a person's head and having at its front a depending arm, two yokes pivotally clamped on the end of said arm and adapted to hold a cloth pinched between them, one of the yokes having arched wires by which to form the cloth into a bowl, a special arm detachably secured on the pivot with the yokes, and a perforated box detachably held on the special arm and adapted to hold a medicated element.

1,391,061. STOKER. THOMAS JENNINGS, Cincinnati, Ohio, assignor to The Underfeed Stoker Company of America, Chicago, Ill., a Corporation of New Jersey. Filed Feb. 18, 1918. Serial No. 217,929. 4 Claims. (Cl. 110—47.)

2. In an underfeed furnace, the combination with a retort having a substantially horizontal mouth, force-feed means for supplying fuel to the retort, and a side-dump closure at a lower level than the retort-mouth, of a floor structure down-sloping from the retort-mouth to the side-dump closure and including a fixed floor structure having plate-receptive openings, plates in said openings pivoted near their outer edges adjacent the floor-level and tiltable to elevate their inner edges to load-avalanching position, these plates having a common pivotal axis substantially paralleling the side of the retort, and means for pivotally moving said plates to load-avalanching angle.



1,391,062. GAS-BURNER. DAVID P. JUDSON, Parnassus, Pa. Filed Jan. 3, 1920. Serial No. 349,211. 5 Claims. (Cl. 158—106.)

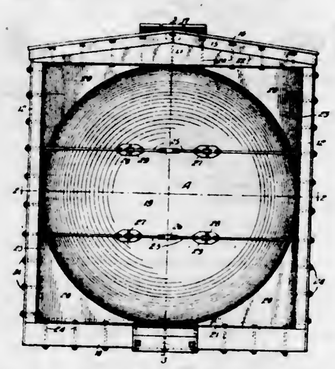


1. A gas burner comprising a hollow cylindrical element adapted to be connected with a gas supply and having a plurality of openings, a vertically disposed and a plurality of upwardly inclined mixer elements secured in said openings, and a burner tube mounted in each of the mixer elements and extending in the same direction throughout as its respective mixer element.

1,391,063. COIN-BOX. CHESTER C. KASKELL, Newark, N. J., assignor to L. Bamberger & Company, Newark, N. J. Filed Dec. 11, 1920. Serial No. 429,907. 3 Claims. (Cl. 133—11.)

1. A coin box comprising two lids hinged together, the inner face of one lid having a set of grooves including a pair of central grooves and end grooves, and a corrugated sheet forming grooves arranged on the other lid to register with the central grooves on the first mentioned lid, each lid having marginal flanges to abut when the lids are closed.

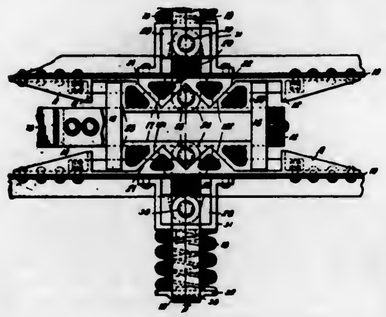
1,391,064. METAL WHEEL. MAURICE LACHMAN, New York, N. Y., assignor, by mesne assignments, to Bethlehem Steel Company, Bethlehem, Pa., a Corporation of Pennsylvania. Filed Nov. 17, 1919. Serial No. 338,420. 17 Claims. (Cl. 301—66.)



1. A metal wheel consisting of a channel bar formed with flour flanges, the two inner flanges of which together with the intermediate portion of base are bent to form the hub while the spoke part consists of the remaining portion of the base and flanges divided and bent up to form separate spokes terminating at the rim in divided portions of flanges.

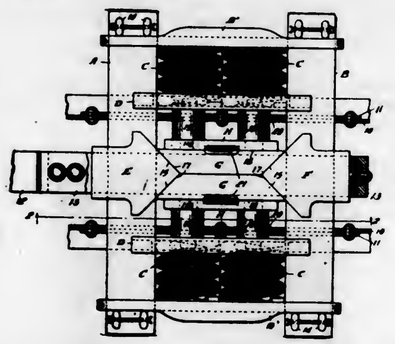
1,391,065. FOOD PRODUCT MADE FROM CORN AND METHOD OF MANUFACTURING THE SAME. ADOLPH W. H. LENDERS, Cedar Rapids, Iowa, assignor, by mesne assignments, to Penick & Ford, Ltd., Incorporated, a Corporation of Delaware. Filed Nov. 7, 1918. Serial No. 261,469. 10 Claims. (Cl. 99—10.)

5. Method of manufacturing a product from corn which consists in removing from the corn the germ and substantially all of the hull and fiber, comminuting the remaining portions of the corn and subjecting the same to a treatment which modifies the starch without converting any substantial amount thereof into dextrin or sugar.



10. A dry, flour-like product consisting of corn starch modified to a sub-dextrin stage in a mixture with corn protein, which mixture remains stable when the material is suspended in water.

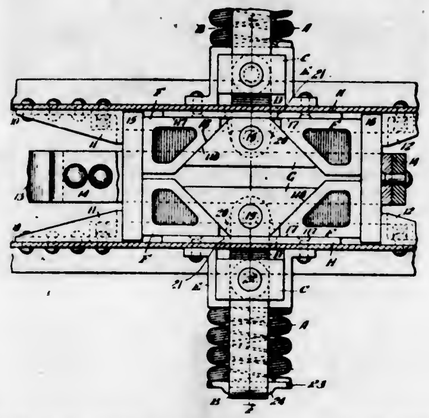
1,391,066. BOX-CAR END. WILLIAM H. MINER, Chazy, N. Y. Filed Mar. 1, 1919. Serial No. 279,977. 3 Claims. (Cl. 105—410.)



1. In a device of the character described, the combination with a box car having side walls, roof and underframe, of a sheet metal end having a substantially spherical inwardly dished central portion and substantially triangular-shaped flat corner portions, said end having also outwardly extended edge flanges secured to adjacent parts of the car, tension rods extending across said wall on the outer side thereof and having their ends secured to portions of the car, and struts interposed between said tension rods and said dished portion of the end.

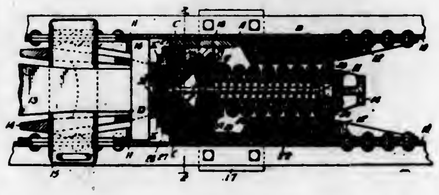
1,391,067. RAILWAY DRAFT-RIGGING. WILLIAM H. MINER, Chazy, N. Y., and JOHN F. O'CONNOR, Chicago, Ill.; said O'Connor assignor to said Miner. Filed Mar. 15, 1920. Serial No. 365,798. 6 Claims. (Cl. 213—64.)

1. In a railway draft rigging the combination with draft sills having stationary sets of inclines on their inner faces; of laterally inward and longitudinally movable friction shoes coöperable with said inclines; spring resistances disposed outside of the sills; connecting means between said spring resistances and shoes; followers at the ends of said shoes in engagement therewith; and stops with which said followers are adapted to coöperate.



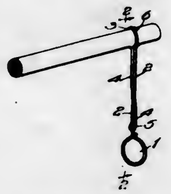
1,391,068. RAILWAY DRAFT-RIGGING. JOHN F. O'CONNOR, Chicago, Ill., assignor to William H. Miner, Chazy, N. Y. Filed Mar. 15, 1920. Serial No. 365,757. 4 Claims. (Cl. 213—64.)

1. In a railway draft rigging, the combination with draft sills; of spring resistances on the outer sides of said sills; front and rear stationary members extending laterally outward from each sill; a member extending longitudinally of the sill sustained on the outer ends of each set of stationary members, said longitudinally extending members forming abutments for the outer ends of the spring resistances; and means, adapted to be operated upon movement of the draw bar, including laterally movable elements for compressing said spring resistances.



1,391,069. RAILWAY DRAFT-RIGGING. JOHN F. O'CONNOR, Chicago, Ill., assignor to William H. Miner, Chazy, N. Y. Filed Mar. 25, 1920. Serial No. 368,667. 4 Claims. (Cl. 213—64.)

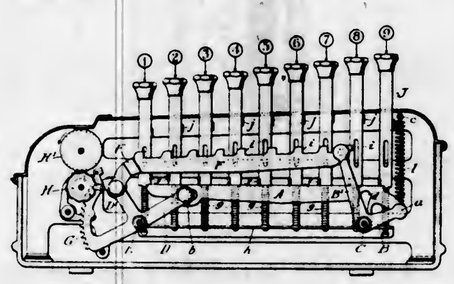
1. In a railway draft rigging, the combination with the draft sills; of laterally compressible spring resistances on the outer sides of the sills; fixed abutments secured to the sills against which the inner ends of the spring resistances bear; friction shoes laterally inwardly movable relatively toward each other during the compressive action of the draft rigging and having wedge shaped ends, said



shoes being disposed between the sills; connecting means interposed between each shoe and the spring resistance outside of the adjacent sill adapted to compress the spring resistances upon relative lateral inward movements of said shoes; and end sets of wedges longitudinally movable and coöperable with said shoes to actuate the latter.

1,391,070. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor to William H. Miner, Chazy, N. Y. Filed Oct. 4, 1920. Serial No. 414,666. 10 Claims. (Cl. 213—64.)

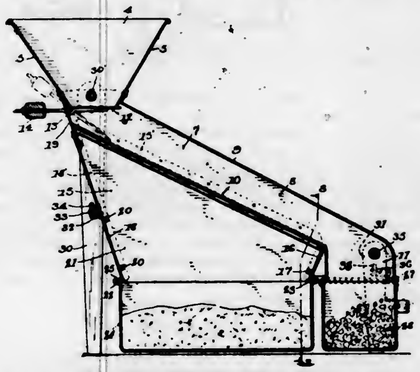
1. In a friction shock absorbing mechanism, the combination with a friction shell; of friction shoes coöperable with the shell; a spring; a spring follower; a compound multiple-part wedge; and levers each having bearing contact with said spring follower, a shoe, and a wedge part.



1,391,071. CIGARETTE-HOLDER. DAVID PALMER, Chicago, Ill. Filed June 28, 1920. Serial No. 392,255. 2 Claims. (Cl. 131—51.)

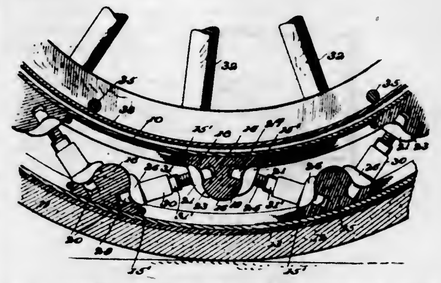
2. A cigarette holder comprising an elongated piece of metal bent intermediate its ends to provide a resilient loop

to receive the cigarette, the metal forming the loop having flattened areas to increase the resiliency of the loop, the portions of the metal extending from the loop forming respectively a standard providing means whereby the device may be held by the smoker, and an arm having a latch element whereby the same may be engaged with the standard to retain the article in the loop.



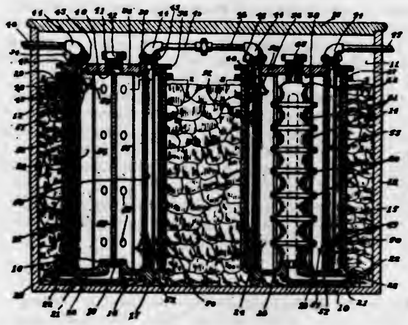
1,391,072. ADDING-MACHINE. WALTER J. PASINSKI, Detroit, Mich., assignor to Burroughs Adding Machine Company, Detroit, Mich., a Corporation of Michigan. Filed Oct. 1, 1915. Serial No. 53,591. 25 Claims. (Cl. 235—82.)

1. In a calculating machine, an approximately horizontal column-actuator or lever mounted at one end upon a vertically movable fulcrum, in combination with means for moving said fulcrum simultaneously with movement of the lever upon said fulcrum.



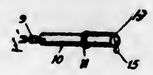
6. In a calculating machine, the combination of a column-actuator or lever, a bell-crank upon one of whose arms said lever is pivotally supported at one end, and connections between the opposite end of the lever and the other arm of the bell-crank for causing movement of the lever upon its fulcrum to rock said bell-crank and lower and raise said fulcrum.

1,391,073. ASH-SIFTER. GUSTAV H. PETERS and RAYMOND E. SHOARS, Milwaukee, Wis. Filed Nov. 18, 1918. Serial No. 263,006. 2 Claims. (Cl. 83—60.)



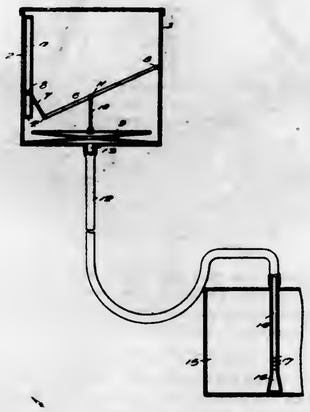
1. A closed ash sifter, comprising an inclined casing having foldable side and end walls and an open bottom portion, end portions of the casing also being open, an inclined screen mounted in the casing, a gated hopper connected to the casing wall forming one of the end openings, a cinder receptacle removably connected to the casing wall forming the other end opening, an ash receptacle removably connected to the casing and closing the bottom opening, and foldable legs for supporting the casing and the receptacles.

1,391,074. CUSHION-RIM. EARL T. PHELAN, Jackson, Mich. Filed Apr. 8, 1920. Serial No. 372,184. 11 Claims. (Cl. 152—36.)



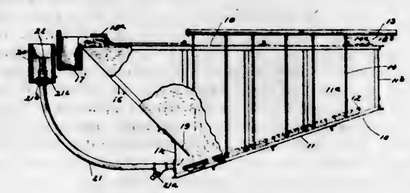
1. A cushion rim including inner and outer rim bands, cushioning means carried by the bands respectively, and toggle members bearing between said means to rock thereagainst sustaining the bands with respect to each other.

1,391,075. WATER-COOLER. FRANK A. PHILLIPPI, Pottstown, Pa., assignor of one-half to J. Roy Kinckiner, Pottstown, Pa. Filed Dec. 3, 1919. Serial No. 342,216. 4 Claims. (Cl. 62—142.)



2. A cooler comprising a cylindrical tank, a plurality of integrally formed partial partitions extending radially inward from the wall thereof, removable plate partitions extending between said fixed partitions throughout the length of said tank, said removable partitions containing a plurality of conical openings adapted to cause liquid to circulate, a cover having a convex portion suited to fit the upper edge of said tank, a ring having undercut portions extending adjacent to said tank near its upper end, bolts having offset ends engageable below said ring, said bolts passing through extensions formed with said cover, and means for clamping said bolts in position.

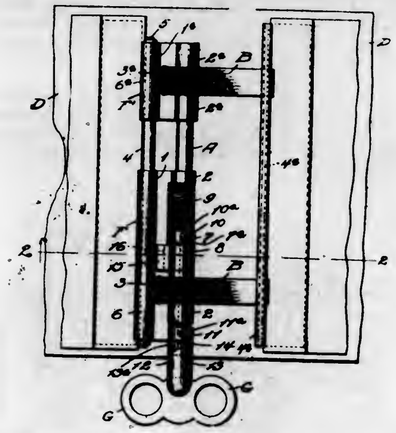
1,391,076. SHOE-SHINING MACHINE. WILLIAM H. POWERS, Eugene, Oreg. Filed June 23, 1920. Serial No. 391,041. 2 Claims. (Cl. 15—37.)



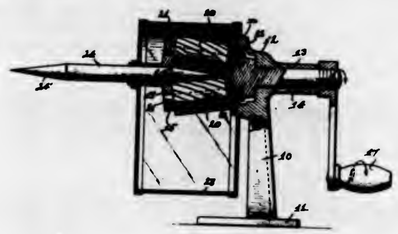
1. In a shoe shining machine, the combination of the flexible shaft, and a rotary brush, with a solid shaft attached to the end of the flexible shaft and entering the hub of the rotary brush, an end plate pivoted eccentrically to the end of the solid shaft, said end plate being swung by centrifugal force over the hub of the rotary brush to hold the rotary brush on the solid shaft.

1,391,077. FLUID-GAGE. WILLY RICHTER, Olmsted, Ill. Filed Mar. 14, 1918, Serial No. 222,362. Renewed July 30, 1920. Serial No. 400,210. 2 Claims. (Cl. 73—110.)

1. In a gage, having a casing provided with a vertically disposed elongated slot formed in one wall thereof, a transparent cover for said slot and provided with a series of graduations, a vertical guide arranged on the inner wall of the casing adjacent to said slot, inlet means for the casing, a fluid receiving diaphragm arranged in the casing over said inlet means and adapted to confine the fluid admitted through said means, a conduit engaged with the inlet means and adapted to be extended into a fluid container, a lever mounted for vertical movement in said casing, a rod pivoted to the lever and centrally fixed to said diaphragm, an arm pivotally engaged with the free end of said lever and extending into the slotted guide, and an indicator carried upon the free end of said arm and movable over the graduations.



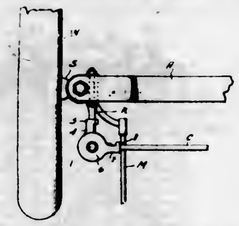
1,391,078. AERATION-CELL. GEORGE C. RISER, Jr., McGill, Nev. Filed May 29, 1918. Serial No. 237,187. 4 Claims. (Cl. 83—85.)



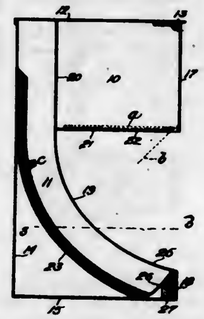
1. In apparatus of the class described, an aeration cell, a series of aeration pans carried thereby, and a concentrate launder, said series terminating short of said launder so as to provide a dead area within said cell intermediate said pans and said launder, said cell being provided with a top extending over substantially the whole of said cell, said top being provided with a discharge portion adjacent said launder.

1,391,079. LOOSE-LEAF BINDER. ADOLPH RUBIN, St. Louis, Mo., assignor to Sieber Products Mfg. Co., St. Louis, Mo., a Corporation of Missouri. Filed June 7, 1920. Serial No. 387,022. 15 Claims. (Cl. 129—41.)

1. A loose leaf binder provided with a winding shaft, a plurality of flexible leaf retaining members spaced apart and adapted to be connected to said shaft, and a plurality of separate and distinct supporting members for said winding shaft capable of being arranged in various positions so as to vary the spacing between said leaf retaining members.



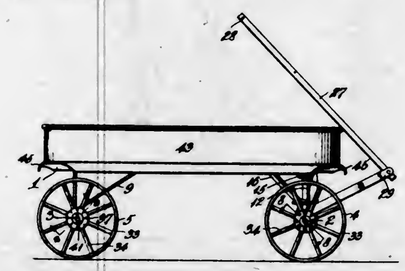
1,391,080. MEANS FOR SHARPENING PENCIL-POINTERS. RAYMOND R. RUNDELL, Elmira, N. Y., assignor of one-fourth to George C. Haesloop, Elmira, N. Y. Filed Aug. 12, 1919. Serial No. 316,984. 2 Claims. (Cl. 51—204.)



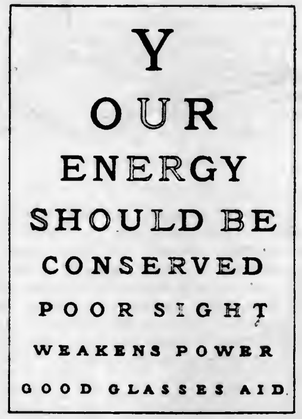
1. A new article of manufacture for regrinding the blades of a lead pencil pointer of a type having a pair of separated oppositely disposed and inclined combined revolving and reversibly rotatable cutters provided with cutting edges, which consists of an abrading device having a tapered end of such an angle and so formed, constructed and arranged as to be adapted to be inserted and held non-rotatably between the separated and inclined rotatable cutters and have frictional and grinding contact with substantially the entire cutting edges of said cutters when said cutters are simultaneously revolved and rotated about said tapered abrading device.

1,391,081. TENSION FOR STEERING-KNUCKLES. LEWIS J. RUSSELL, Oilton, Okla. Filed June 12, 1920. Serial No. 388,513. 1 Claim. (Cl. 280—89.)

A tensioning attachment for steering knuckles consisting of a pair of friction disks in mutual contact, a pivot bolt engaged centrally through the disks, a helical spring upon the threaded end portion of the bolt and adjusting nuts engaged with the bolt, the head of the bolt being at the opposite side of the disks from the spring and the length of the bolt being sufficient to receive between it and the adjacent disks the joint of a knuckle and reach rod through which the bolt is to be passed, the disks having each a radiating arm with prongs at its outer end, the prongs extending in the same direction at right angles to the planes of the disks and with the prongs of each arm spaced apart in a plane at right angles to the extension of the corresponding arm from its disk.

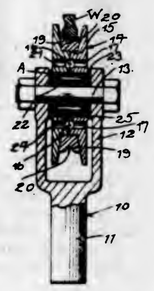


1,391,082. STATIONERY-CABINET. WILLIAM H. SMYTHE, Winthrop, Mass., assignor to Mary B. Smythe, Winthrop, Mass. Filed Apr. 3, 1920. Serial No. 370,928. 1 Claim. (Cl. 211—29.)



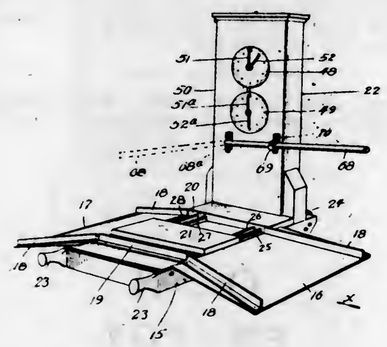
In a device of the character described, a compartment for paper sheets having a curved front wall and a correspondingly curved rear wall, the lower portion of the latter being inclined upwardly to a point closely adjacent the lower edge of the front wall, a narrow slit being provided at said point, and a rubber retarder extending higher than the lower edge of the slit, said front wall having a recess above said retarder.

1,391,083. WAGON. CHARLES F. STICH, Cleveland, Ohio, assignor to The Johns Machine and Stamping Works Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 8, 1919. Serial No. 288,439. 9 Claims. (Cl. 280—87.5.)



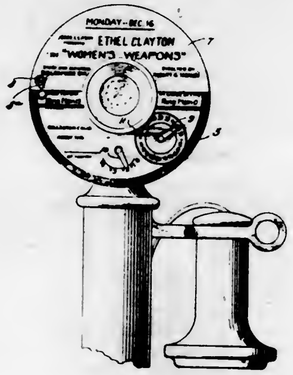
9. In a toy wagon, a body, rear wheels supporting the same, and a front axle structure therefor, comprising a brace, an axle carried thereby, wheels mounted on said axle, a fifth wheel, a fifth wheel bracket supporting the same, a king pin secured to the axle bracket and passing through the fifth wheel, an upper king pin bearing bracket receiving the king pin, and a spring arranged between the king pin and the king pin bearing bracket and forming a yielding mounting for the front axle.

1,391,084. EYE-TESTING CHART. WILLIAM MARSH UPDEGRAVE, Johnstown, Pa. Filed May 23, 1918. Serial No. 236,123. 1 Claim. (Cl. 283—1.)



An eye testing chart, composed of lines of letters, the letters arranged in words and the words arranged to express a thought, the letters of each line being of the same size and differing in size from the letters of the other lines, and certain of the letters of the lines being black and the other letters of such color as will appear black to a color blind person, whereby in testing each eye, one eye reading the black letters and the other eye the colored letters, neither eye will read a sequence that can be readily carried in mind when the chart is read by a non-color blind person.

1,391,085. TROLLEY-WHEEL. JOHN A. WENDELL, Montgomery, W. Va. Filed Mar. 7, 1921. Serial No. 450,210. 5 Claims. (Cl. 191—63.)

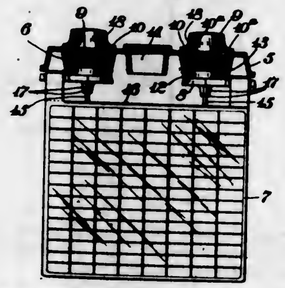


1. In a trolley, a pair of duplicate side members combining to form a wheel provided with a peripheral groove, an annular wear ring disposed within the groove, and an antifriction bearing for said wheel embodying a bushing having a driving fit with said side members and serving to hold said side members in assembled relation.

1,391,086. TALLYING-MACHINE. LINWOOD M. WHITEHEAD, Norfolk, Va. Filed Aug. 11, 1919. Serial No. 316,840. 11 Claims. (Cl. 235—99.)

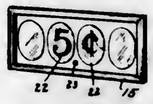
1. In a tallying machine, the combination of a platform, primary, depressible levers therein, connectible and disconnectible register actuating mechanism, operatively connected to one of said levers, setting means operated by one of said levers for coupling said register actuating mechanism, means for holding said setting means in operative position, mechanism operated by another of said levers for releasing said setting mechanism, and means for uncoupling said register actuating mechanism.

1,391,087. TELEPHONE ATTACHMENT. HERMAN F. ZINK, Jr., Chicago, Ill. Filed Feb. 9, 1920. Serial No. 357,163. 1 Claim. (Cl. 40—1.)



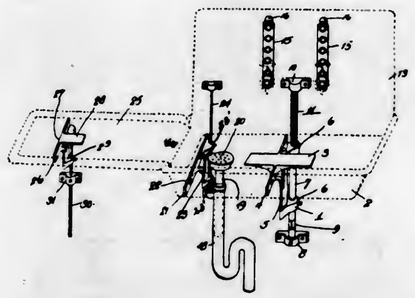
A telephone attachment comprising a disk having means for attachment to the transmitter mouthpiece, a pivoted pointer carried by the disk, a dial of numerals on the disk for said pointer, and a second pivoted pointer and dial therefor on the disk to indicate the number of complete revolutions of the first mentioned pointer, said pointers being independently and manually operable.

1,391,088. WATERPROOFING LEATHER, CLOTH, OR WOOD. JOHN ZOLTOWSKI, Milwaukee, Wis. Filed Apr. 13, 1921. Serial No. 461,033. 2 Claims. (Cl. 134—9.)



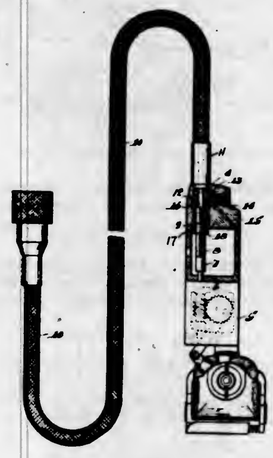
1. A water-proofing composition for leather, cloth, or wood, consisting of a mixture of lard, shoemakers' wax, and crude turpentine.

1,391,089. STORAGE BATTERY. EDWARD S. ADAMS and WALTER H. ADAMS, Columbus, Ohio. Filed July 12, 1920. Serial No. 395,555. 2 Claims. (Cl. 204—29.)



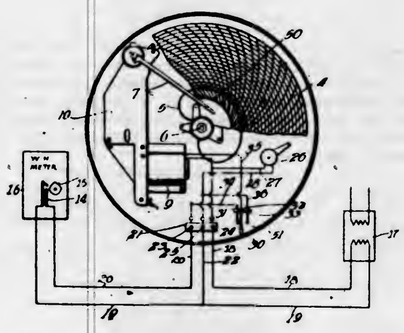
1. In a storage battery, the combination with a jar cover having a screw tapered socket open at its bottom, of a pillar post including a threaded stem to extend upward through the open bottom of said socket, and a tapered nut of lead threaded onto said stem and fitting in said socket.

1,391,090. PRICE-CARD HOLDER. WILLIAM M. ANDERSON, Minneapolis, Minn., assignor to Ideal Products Company, Minneapolis, Minn., a Limited Partnership. Filed Aug. 28, 1920. Serial No. 406,530. 4 Claims. (Cl. 40—10.)



1. A marker card holder comprising a marginal frame, a back plate attached thereto at one edge and having an arm attached to its free edge, and a pair of arms attached to said frame adjacent to the ends of the attached edge of said back plate, said arms being adapted to be opened up to embrace a shelf.

1,391,091. ADJUSTABLE SINK. EMERY H. ARBUCKLE, Cleveland, Ohio. Filed July 20, 1921. Serial No. 486,070. 4 Claims. (Cl. 4—36.)

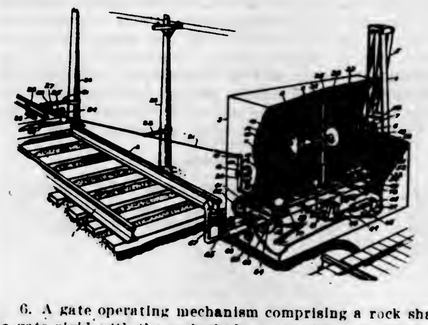


1. The combination with a sink, a bracket including a longitudinal plate and a transverse cross arm engaged with the bottom of the sink, a standard supporting the plate and cross arm, and provided with laterally projecting lugs, the uppermost lug being screw threaded, an adjusting rod provided with screw threads received in the screw threads in the said lug, the lower end of the said adjusting rod being provided with a support, and a square portion of the rod adapted to be engaged with a wrench whereby the said adjusting rod may be manually turned.

1,391,092. FLEXIBLE-SHAFT GUARD. CHESTER H. BEACH, Racine, Wis., assignor to Moore Electric Corporation, Chicago, Ill., a Corporation of Delaware. Filed July 7, 1919. Serial No. 309,128. 1 Claim. (Cl. 64—30.)

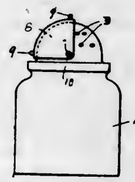
The combination with hair clippers consisting of a casing having an operating shaft therein, there being a bearing in said casing surrounding said shaft, of a flexible shaft inclosed in a sheath, said sheath being provided with a tubular tip surrounding the end of said flexible shaft, said tip fitting the bearing in said casing and the shaft in said casing fitting within and having a bearing in said tip, substantially as described.

1,391,093. METER. JOSEPH W. BICKEL, Chicago Heights, Ill. Filed Jan. 28, 1921. Serial No. 440,644. 6 Claims. (Cl. 234—3.5.)



3. In combination, a chart, a pointer coöperating with the chart, an actuating element for the pointer, and means for applying a force to said actuating means for checking the correct operation of the meter.

1,391,094. DETACHABLE CUFF. FRANK VINCENT BEACH, Chicago, Ill. Filed Jan. 9, 1920. Serial No. 350,286. 2 Claims. (Cl. 2—79.)



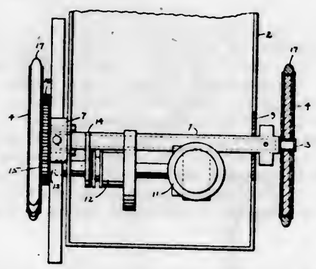
1. In combination, a shirt sleeve provided with a cuff band, said cuff band being provided at its ends with buttonholes; a cuff having substantially triangular pockets at its inner corners adapted to fit over the outer corners of the cuff band, said pockets being provided with buttonholes adapted to register with the buttonholes in the ends of the cuff band; and buttons detachably securing the cuff band in said pockets, substantially as described.

1,391,095. GATE-OPERATING MECHANISM. ERNST CHRISTENSON, Stockton, Kans. Filed July 21, 1921. Serial No. 486,375. 6 Claims. (Cl. 246—301.)

6. A gate operating mechanism comprising a rock shaft, a gate rigid with the rock shaft, means for normally holding the rock shaft inoperative, train-actuated means for releasing the rock shaft, a rocking guide member tiltable about a horizontal axis, means connecting the rocking guide member and the shaft to operate the shaft, a weight longitudinally movable in the guide to tilt the guide member, a check connected to the guide, means at one end of the guide for normally retaining the weight against movement and a releasing stop member for releasing and permitting the weight to automatically return to normal position.

1,391,096. SHAKER. ELZA HOWARD COPEN, Akron, Ohio. Filed Sept. 3, 1920. Serial No. 407,874. 1 Claim. (Cl. 65—45.)

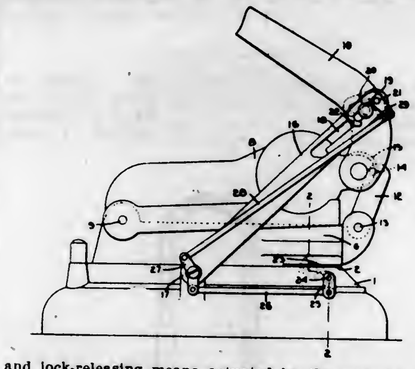
A container having an integral perforated dome-shaped top and a partition wall extending between said top and the bottom wall of the container and dividing the latter into separate compartments, each compartment being provided with an individual filling opening, a closure plate conforming in shape to said top and movable thereover to



permit discharge from one compartment while preventing discharge from the remaining compartment, pivot screws passing through said closure plate and threadedly engaged in the dome-shaped top, said screws being split longitudinally to frictionally engage the openings provided therefor in the closure plate whereby the latter is held from moving too freely relative to the container.

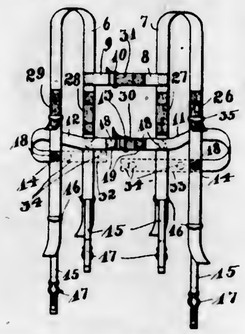
1,391,097. MILLING-CUTTER. EDWARD A. COWLES, Cleveland, Ohio. Filed Nov. 11, 1920. Serial No. 423,224. 3 Claims. (Cl. 29—105.)

1. A milling cutter comprising a metal head fashioned with separated slots whereby to impart a limited resilience to a portion of said head between said slots, a blade wholly occupying one of said slots, said head being further provided with a tapped opening, communicating with the other of said slots, and a screw adapted to coöperate with the threads of said opening and provided with a conical outer end surface adapted directly to engage and to spread apart the walls of the slot which said screw enters.



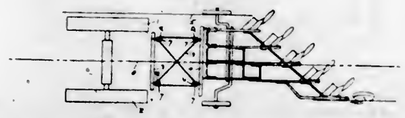
1,391,098. DRIVING MECHANISM FOR AUTOMOBILES. LEVITT LUZERN CUSTER, Dayton, Ohio. Filed Mar. 3, 1919. Serial No. 280,380. 2 Claims. (Cl. 180—62.)

1. In a device of the type specified, the combination with an axle of an automobile, a wheel freely secured on each end of said axle, of resilient means secured to the latter, and adapted to be twisted by it, a ledge fixedly secured to said axle, a prime mover supported by said ledge, driving mechanism connecting said prime mover with a wheel on said axle, and a body supported by said resilient means, provided with a vertical slot through which each axle end is vertically movable for the purpose described.



1,391,099. PERFORATING-MACHINE. ALFRED L. DAY, Brookline, Mass., assignor to Day Perforator Company, a Voluntary Association of Massachusetts. Filed Feb. 5, 1920. Serial No. 356,472. 3 Claims. (Cl. 101—19.)

1. In a perforating machine, the combination with perforating punches, of a pivoted head carrying a matrix member to actuate the punches, a lever for moving the head, means normally locking the lever from operation,



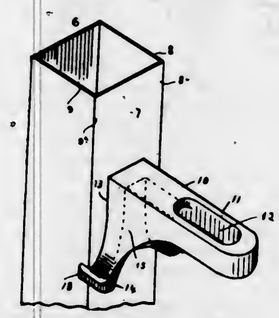
and lock-releasing means actuated by the material to be perforated as it is introduced into the machine.

1,391,100. HYGIENIC GARTER AND SUPPORTER. MARY ELINOR DELL, Glendale, Calif. Filed Jan. 25, 1921. Serial No. 439,727. 1 Claim. (Cl. 241—17.)

In a garment, shoulder straps to come over both shoulders of the wearer having means to receive garters on all four terminations, the shoulder straps being of non-elastic material, insertions of elastic material, of proportionally short sizes, in both shoulder straps at points in front and the back of the wearer, adjusting means in the elastic portions, cross straps between the shoulder straps extending around the body of the wearer up to the space between the front portions of the shoulder straps, the cross straps being mainly of non-elastic material, insertions of elastic material of proportionally short sizes, in the back portions of the cross straps, adjusting means in the elastic insertions in the cross straps, and means for attaching other garments to the device.

1,391,101. DRAFT MEANS. LORING B. DOE, San Francisco, Calif. Filed Apr. 20, 1920. Serial No. 375,398. 2 Claims. (Cl. 213—67.)

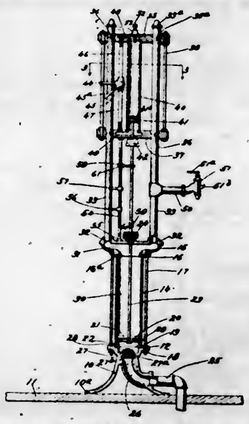
1. A draft means comprising four chain sheaves, two of said sheaves rotatably secured on the tractor and two ro-



tatably secured on a drawn vehicle, an endless chain reeved through and engaging said sheaves in such a manner that the said chain will assume substantially the form of a figure 8, said figure 8 being perpendicular to the line of draft, and having two sheaves, one on each implement in each loop of said figure 8, and in such a manner that each sheave will have a direct chain connection with the sheaves on both corners of the adjacent vehicle.

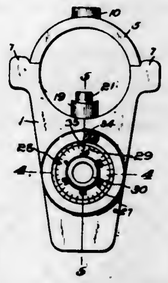
1,391,102. BOW-NECKTIE FASTENER. MAX FORD, New York, N. Y. Filed Oct. 22, 1919. Serial No. 332,454. 1 Claim. (Cl. 24—49.)

A ready-made bow tie having a centrally positioned band; and a clasp pin detachably positioned between the body of said tie and said band, adapted for detachably securing said tie to a soft collar and for connecting the adjacent ends of one of the folds of said collar, substantially as described.



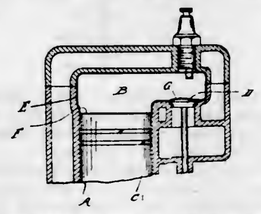
1,391,103. BRACKET FOR ANGULAR-WALLED TUBING. WILLIAM B. FOSTER, Utica, N. Y., assignor to Foster Brothers Manufacturing Company, Utica, N. Y., a Corporation. Filed June 10, 1920. Serial No. 338,068. 1 Claim. (Cl. 5—55.)

A bracket for use against angular-walled tubing comprising an outwardly-projecting shelf-portion, a downwardly-extending tube-engaging portion adapted to bear against one flat side of the tubing, said downwardly-extending portion having its lower part extended laterally sufficiently to bear against the opposite edges of the engaged tube side whereby the adjacent angles of the tube take the pressure from the bracket and fingers on said laterally extended parts extending around the said adjacent angles of the tube.



1,391,104. FLUID-ACTUATED LIQUID-MEASURING PUMP. JOSEPH R. GOULD, West Springfield, Mass. Filed Oct. 20, 1916. Serial No. 126,761. 6 Claims. (Cl. 221—103.)

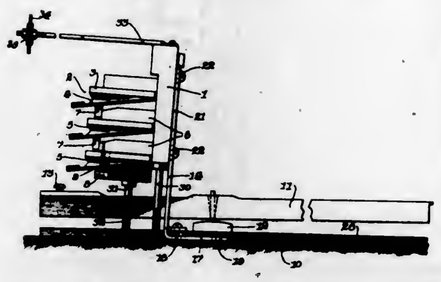
1. In combination, a liquid cylinder and a compressed fluid cylinder mounted in axial alinement with each other, a piston mounted in said liquid cylinder, an inlet valve carried by the piston, a conduit leading to the space on the inlet side of said piston, a second inlet valve leading from said conduit to said space, a second piston mounted in said compressed fluid cylinder, a piston rod connecting said pistons, means to admit compressed fluid to said compressed fluid cylinders on each side of said second named piston alternately, a stop member carried by said



piston rod, and an adjustable stop arm mounted adjacent said piston rod to engage said stop member and thereby regulate the length of stroke of said pistons.

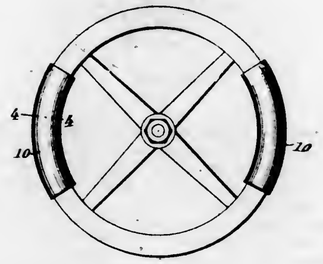
1,391,105. VEHICLE-LOCK. LESTER E. GRANT, Auburndale, Mass. Filed Apr. 15, 1920. Serial No. 374,001. 6 Claims. (Cl. 70—53.)

1. A lock for motor vehicles comprising a multi-part casing having a lock chamber, an opening in the wall thereof to display the face of the lock, lock retaining means, a bolt chamber, a bolt therein controlled by the lock in the adjoining chamber, a bushing on the bolt extended through the steering column, casing member securing means for securing the casing sections together, and means for anchoring the casing member securing means to prevent removal thereof and destruction of the lock.



1,391,106. INTERNAL-COMBUSTION ENGINE. FRANCIS WALTER GUIBERT, Detroit, Mich. Filed Jan. 25, 1919. Serial No. 272,996. 2 Claims. (Cl. 123—191.)

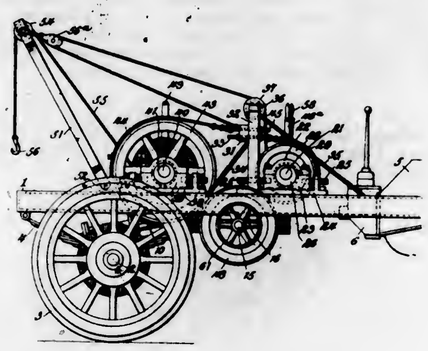
2. In an internal combustion engine, the combination with an explosion chamber including a cylinder wall and



a piston and valve, of linings upon said wall, piston and valve, exposed to the carbon gases or vapors and formed of material with a relatively large copper content.

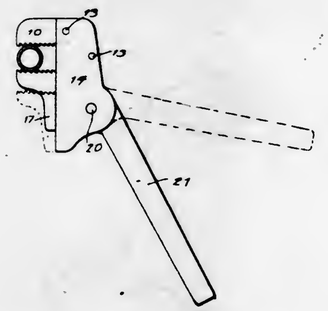
1,391,107. PLAYER-PIANO. AXEL G. GULBRANSEN, Chicago, Ill., assignor to Gulbransen-Dickinson Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 4, 1918. Serial No. 260,938. 5 Claims. (Cl. 84—70.)

1. In combination, a plurality of L shaped supporting brackets adjustably mounted upon the bed of a piano, a channel board adjustably secured to the upwardly projecting arms of said supporting brackets, a plurality of pneumatics secured to said channel board and means adjustably secured in the bed of the piano for supporting said channel board and pneumatics.



1,391,108. HAND-PROTECTION DEVICE. MARCIA C. HAMBLET, Salem, Mass. Filed Mar. 16, 1920. Serial No. 366,371. 3 Claims. (Cl. 74—33.)

1. A device of the class described, comprising a body portion adapted to encircle a handle, perforations adjacent one of the edges of the body portion, a perforated flap secured to the body portion at a distance from the opposite edge thereof, said perforated flap being adapted to be brought toward the perforated edge of the body portion and secured thereto by means of laces, and a flap interposed between the lacing and the handle.

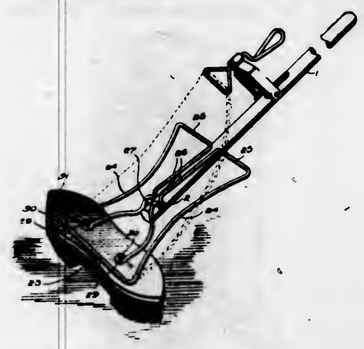


1,391,109. POWER-DELIVERING ATTACHMENT FOR AUTOMOBILE TRUCKS OR TRACTORS. LEO HAUBERT, Muskogee, Okla. Filed June 30, 1920. Serial No. 393,088. 4 Claims. (Cl. 212—8.)

1. In a motor vehicle, a power unit, a power shaft between the power unit and the drive axle of the vehicle, a jack shaft transverse of the length of the whole, friction disks on the jack shaft, winding drums to the front and to the rear of the jack shaft and movable individually into and out of engagement with the friction disks on the jack shaft, brake bands individual to and encircling

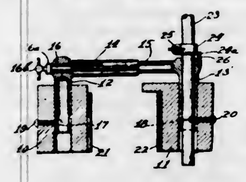
the drums, and means for moving the drums into active relation to the friction disks on the jack shaft or to the brake bands.

1,391,110. WRENCH. AARON R. HEANEY, Stillwater, Okla. Filed Apr. 2, 1921. Serial No. 457,943. 1 Claim. (Cl. 81—127.)



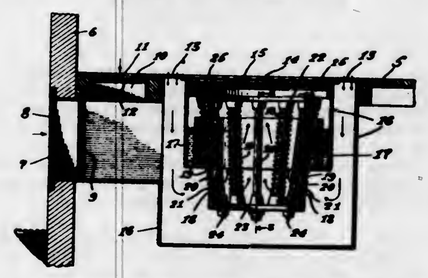
A wrench comprising a fixed jaw embodying a reduced extension projecting rearwardly and downwardly therefrom, side plates secured to said reduced extension and each provided at its forward side with angular flanges directed toward each other, a base member having grooves formed therein slidably receiving said flanges, a jaw formed upon said base at the end thereof next adjacent the fixed jaw, a rack formed upon the rear edge of said base and lying between said side plates, and a handle pivotally mounted between said side plates and embodying a mutilated gear meshing with said rack to shift said base toward and away from said fixed jaw, said base when withdrawn from said fixed jaw being completely engaged by the said flanges to be supported thereby.

1,391,111. BRUSH AND MOP HOLDER. FERRY F. HILL, Baltimore, Md., assignor to Malcolm W. Hill, Baltimore, Md. Filed Dec. 14, 1920. Serial No. 430,624. 3 Claims. (Cl. 15—56.)



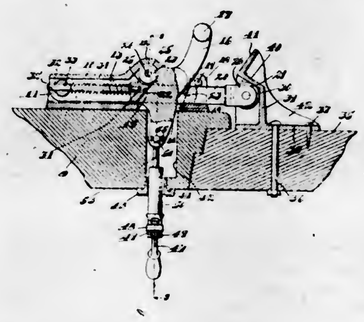
1. A mop holder comprising a handle, a mop supporting frame pivoted thereto, a mop having its forward end secured to the front of said frame, a rotatable support for the other end of said mop, and a bracket in which

said rotatable support is mounted, said bracket comprising a substantially U-shaped member pivotally mounted



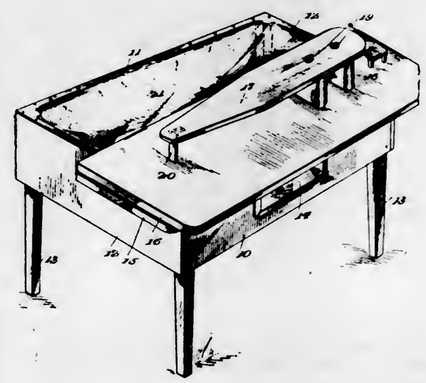
on said handle, the outer end of said bracket being shaped to form a bearing for said rotatable member.

1,391,112. BOOK-HOLDER. ANGELA C. HINZMAN, Chicago, Ill. Filed Jan. 26, 1920. Serial No. 354,055. 7 Claims. (Cl. 45—82.)



1. In a book holder the combination of a clamp comprising two blocks having substantially parallel circular holes through them, cylindrical metal members having a sliding fit in said holes, telescoping extensions extending toward and engaging each other from the upper ends of said members, and a screw extending through said extensions to draw said members together, one of said members being tubular, a rod extending vertically through said tubular member, a holding means for retaining said rod in desired position in said tubular member, said rod having an offset portion at its upper end, a book support, and a clamp connecting said support and offset portion to hold said support rigidly in desired position relatively to said offset portion.

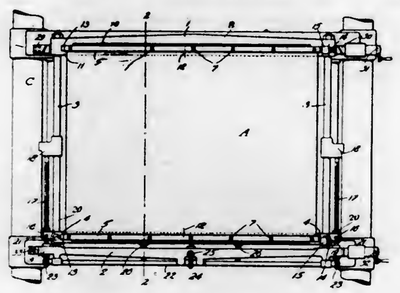
1,391,113. ELECTRIC HEATER. ANDREW J. HOLMES, Tacoma, Wash. Filed Aug. 27, 1920. Serial No. 406,317. 5 Claims. (Cl. 219—34.)



1. An electric heater comprising a housing; a grille for said housing having air intake openings formed therein; a casing centrally disposed within the said housing adapted to form an air heating chamber, said casing associated with said housing forming a conduit for the passage of air to be heated; a container for liquid formed on said casing within said air heating chamber; a downwardly converging heating element disposed within said air heating chamber; a grille for said air heating chamber having air outlet openings formed therein and controlling means for said openings.

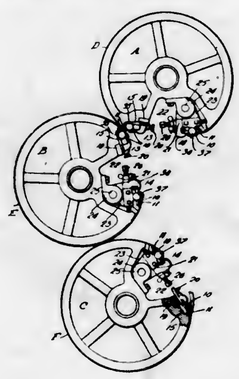
1,391,114. REFRIGERATOR-DOOR LATCH. WILLIAM E. HUBER, Chicago, Ill., assignor of one-third to Henry J. Erzinger and one-third to Alphonso S. Crosby, Chicago, Ill. Filed Nov. 8, 1919. Serial No. 336,615. 6 Claims. (Cl. 292—169.)

1. A lock comprising a slidably mounted bolt, an arm pivotally mounted adjacent to said bolt, a keeper in position to be engaged by said bolt, and means integral with said arm actuated by the swinging of said arm for forcing said bolt longitudinally into engagement with said keeper.



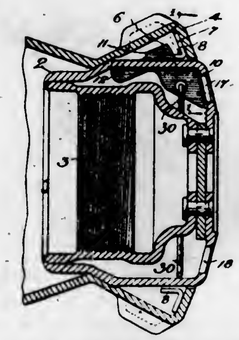
1,391,115. COMBINED TABLE AND IRONING-BOARD. GEORGE W. HUDSON, Lancaster, Ohio. Filed Feb. 25, 1920. Serial No. 361,246. 1 Claim. (Cl. 68—10.)

A device of the character described including a table frame, a fixed top section secured thereon and covering a portion of the frame, a movable top section hinged to the fixed top section, the two sections when alined horizontally covering the entire top of the table frame, an ironing board fixed to one side of the movable section and housed within the table frame when the two sections are horizontally alined, and an apron extending between the



fixed top section and the side and ends of the frame to house the ironing board when it is not in use and to support ironed articles in rear of the ironing board when the latter is in use.

1,391,116. HOLDING MEANS FOR PHOTOSENSITIVE PLATES AND THE LIKE. WILLIAM C. HUEBNER, Buffalo, N. Y., assignor to Huebner-Bleistein Patents Co., Buffalo, N. Y. Filed Feb. 27, 1919. Serial No. 279,492. 16 Claims. (Cl. 95—69.)

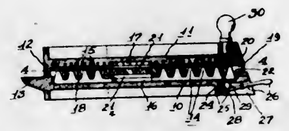


1. A holder for a thin sensitized printing plate, comprising a frame having holding members for opposite edges of the plate, projecting reinforcements on said plate adjacent opposite edges thereof, and means for detachably securing said reinforcements to said holding members.

1,391,117. PRINTING-PLATE OR THE LIKE AND MEANS FOR SECURING THE SAME IN PREDETERMINED POSITIONS IN PRINTING-PRESSES. WILLIAM C. HUEBNER, Buffalo, N. Y. Filed Dec. 29, 1919. Serial No. 348,079. 5 Claims. (Cl. 272.)

1. The combination with a press cylinder, of opposite holding members thereon, means for securing the opposite edges of a flexible sheet to said holding members, said sheet having at one end thereof a fixed rigid part, and one of said holding members having a rigid part arranged to detachably engage the rigid part on the sheet to locate said sheet accurately in a predetermined position lengthwise of the sheet on the cylinder, means for relatively moving said holding members to draw the sheet taut around the cylinder, and means for moving said rigid part on the sheet lengthwise of the cylinder to a definite point to locate the sheet accurately in a predetermined position.

1,391,118. HUB-CAP-LOCKING DEVICE. EMIL IBACH, Philadelphia, Pa., assignor to Budd Wheel Corporation, Philadelphia, Pa., a Corporation of Virginia. Filed Sept. 1, 1917. Serial No. 189,274. 12 Claims. (Cl. 301—9.)



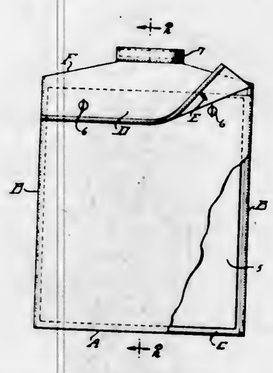
1. A device of the class described comprising the combination of inner and outer hubs, a hub cap detachably fitted on one of said hubs to hold the two hubs together, the side wall of said hub cap having a slot formed therein, a latch pivotally mounted in said hub cap and swinging in a plane radial to the axis thereof, said latch having a tongue projecting through said slot and a cam surface, a keeper member on one of said hubs in line with said tongue, the face of said cap being provided with a pair of holes, one of which is in line with said cam surface.

10. In a hub structure, the combination with an outer shell, of a hub cap formed in two telescoping sleeves secured together, said inner sleeve adapted to screw on a hub, and said outer sleeve bearing against said outer shell to removably hold the same in place, said outer sleeve being crimped at its inner end over the inner end of said inner sleeve, and a latch disposed between said sleeves to lock said cap in place.

12. In combination with the hub of a wire wheel, a cap for said hub with its face substantially flush with the end face of the hub; a locking device carried by said cap and accessible at its face and housed by said hub, and means for normally holding the locking device in locking position, said locking device being such as to enable it to be maintained in locking position during the operation of the wheel by centrifugal force.

1,391,119. MEAT-TENDERER. CARL OLAF JOHNSON, St. Paul, Minn. Filed Apr. 21, 1921. Serial No. 463,117. 6 Claims. (Cl. 17—28.)

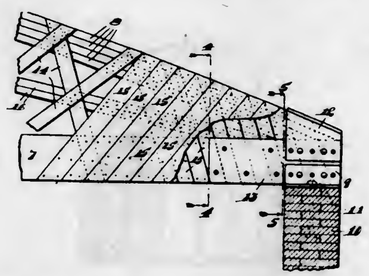
4. In a device of the class described, a pair of coöperating cutter members, one member being movable with respect to the other to permit the insertion of a piece of meat therebetween, also to cause the cutting of the meat and, further, to permit the removal of the treated meat therefrom, said members being supplied with registering depressions in their adjacent cutting faces to receive bones in the meat during the cutting operation.



1,391,120. AUTOMOBILE CAUTION-SIGNAL. ALDRED JAMES JONES, Detroit, Mich. Filed Sept. 10, 1917. Serial No. 190,590. 5 Claims. (Cl. 177—327.)

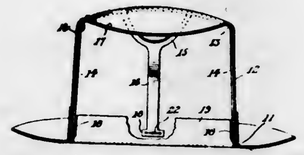
2. A signal for automobiles provided with electromagnetic operating means including a rockable shaft, a signal device carried by the shaft in visible position, a screw stem threaded into the shaft, and a chain connected at one end

to the stem and at the other to the electromagnetic means, whereby the effective length of the chain may be varied by the screw stem.



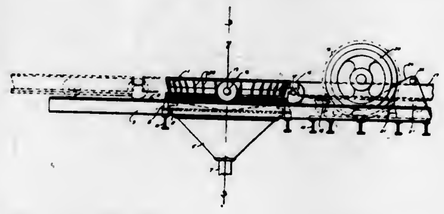
1,391,121. GARMENT-PROTECTOR. CHARLES J. KEPPEL, Monroeville, Ohio. Filed Oct. 28, 1919. Serial No. 333,897. 3 Claims. (Cl. 2—54.)

1. An article of the class described, comprising a strip of fabric folded to form inner and outer members of unequal length and having the marginal edges of the members secured together to form a pocket, the longer inner member being folded upon itself to form a flap overlying the upper end of the outer member and closing the pocket, the said flap being provided with button holes and having its folded edge cut away to form a neck opening, a collar secured to the neck opening, said collar being open at the back and having a resilient strip secured therein, and an insert of water proof material in the pocket and provided with buttons engaging the button holes of the flap.



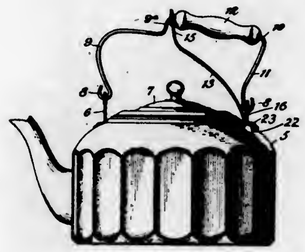
1,391,122. ROOF-TRUSS. SIMON D. KNUDSEN, Chicago, Ill. Filed May 5, 1919. Serial No. 294,630. 2 Claims. (Cl. 108—23.)

1. A truss comprising end members secured to an abutment, each of said end members consisting of two pairs of oppositely disposed angle irons secured together by means of a web extending into the truss section and a stringer formed of two parallel adjacent members having their ends positioned in said end members and extending on opposite sides of said web; means securing the ends of said stringer to said end members and to said web beyond said end members; a main chord formed of two



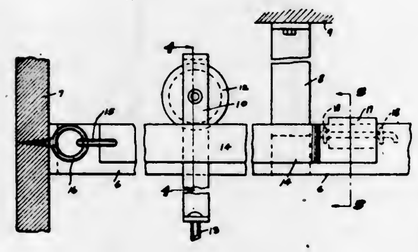
parallel adjacent members with a space between them, said members having their ends positioned in said end members, lattice work positioned in the spaces between the members of said main chord and said stringer and secured thereto, substantially as described.

1,391,123. HAT-EXTENDER. NEUFER KOYOMJIAN, New York, N. Y. Filed Sept. 22, 1920. Serial No. 412,074. 1 Claim. (Cl. 2—108.)



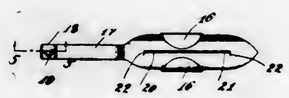
An extender for hats comprising a frame of sheet material adapted for use within the crown of the hat and having a central oval portion within which the centrally creased portion of the crown depends when the device is in use, with said legs flatly contacting the interior of the crown and terminating at points between the sweat-band and crown of the hat, anchoring feet transversely positioned at the free ends of the legs and semicircular portions connecting the laterally positioned legs with the sides of the oval adapted for receiving the side creases of the hat crown.

1,391,124. SINTER-PAN. STEPHEN A. KROM, Birmingham, Ala. Filed July 3, 1920. Serial No. 393,989. 5 Claims. (Cl. 266—21.)



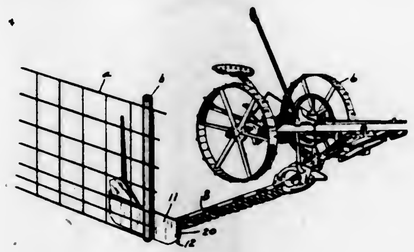
1. A sinter pan comprising a grate supporting section, and a movable charge retaining section above the grate adapted to be shifted laterally to clear the grate section.

1,391,125. HANDLE AND SHIELD FOR COOKING VESSELS. JOSEPH V. LAFOND, Chicago, Ill. Filed Nov. 30, 1920. Serial No. 427,329. 7 Claims. (Cl. 53—9.)



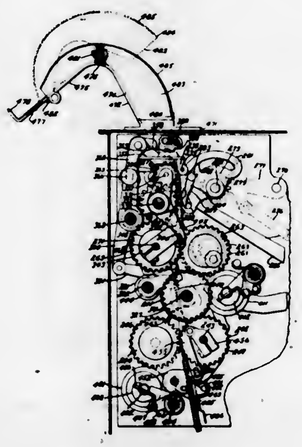
3. The combination with a vessel having a hinged bail, of a shield connected to the bail at its upper end and permanently united to the vessel at its lower end, whereby said shield maintains the bail at all times in an upright position.

1,391,126. MEAT-TRANSPORT. RUDOLPH P. LAMBERT, Chicago, Ill. Filed Oct. 25, 1920. Serial No. 419,418. 5 Claims. (Cl. 104—93.)



1. A meat transport comprising a track; a hanger traveling on said track and removable therefrom; and means located adjacent said track for simultaneously locking hangers thereon and releasing the same, substantially as described.

1,391,127. PENCIL ATTACHMENT. BENJAMIN LANE, Des Moines, Iowa. Filed July 10, 1919. Serial No. 309,912. 2 Claims. (Cl. 120—84.)

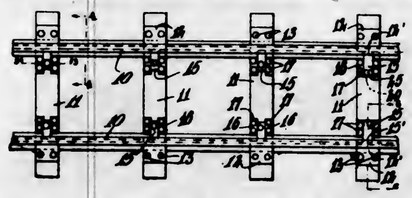


1. A pencil clip having a central longitudinal aperture, said clip having a raised portion on one side of said aperture, and cutter means formed at the edge of said raised portion, the edge of said cutter means extending toward the interior of said clip.

1,391,128. GUARD-SHOE FOR MOWERS. ALEXANDER LAURIE, Carroll, Nebr. Filed Aug. 16, 1920. Serial No. 403,772. 5 Claims. (Cl. 56—314.)

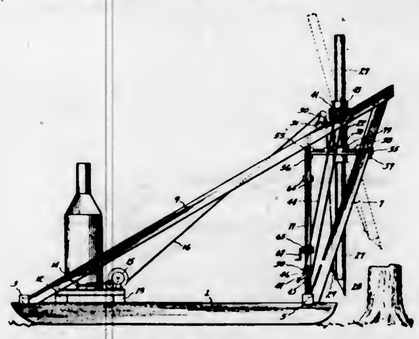
1. The combination with a mower, of a guard shoe secured at the outer end of its finger bar and set in a vertical plane outward of the outermost position of the sickle and the grain guard.

1,391,129. TICKET-PRINTING MECHANISM. CHARLES L. LEE, Dayton, Ohio, assignor to The National Cash Register Company, Dayton, Ohio. Filed July 20, 1916. Serial No. 110,317. 21 Claims. (Cl. 271—63.)



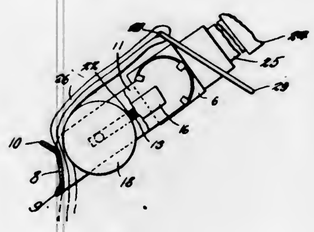
4. In a machine of the class described, the combination with a casing having an opening through which tickets are to be ejected, of ticket ejecting mechanism operable to eject tickets through the opening, an element carrying means for limiting outward movement of the tickets and means for limiting reverse movement of the tickets, said element being formed to produce an elevation between the opening in the casing and the means first mentioned, and a guide constructed to direct the ejected tickets over said elevation to a position between the two limiting means.

1,391,130. RAIL-JOINT FASTENER. ANDREW LETKO Indiana Harbor, Ind. Filed June 8, 1921. Serial No. 475,929. 3 Claims. (Cl. 238—331.)



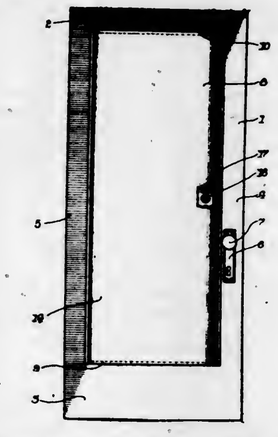
1. A rail fastener device comprising a plate adapted to engage one side of the base flange of the rail, a block

adapted to engage the other side of the base flange of the rail, means guiding said block for movement transversely



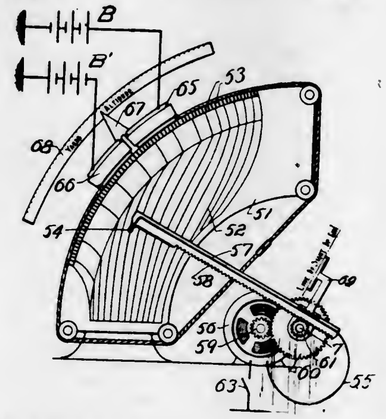
to the rail, and means engaging behind the said block to hold the latter in position, said last means comprising a flat spring having an offset adapted to engage the block.

1,391,131. STUMP-CHOPPING MACHINE. JOHN LYNCH and CHARLES MCGUIRE, Seattle, Wash. Filed Mar. 7, 1921. Serial No. 450,224. 5 Claims. (Cl. 144—193.)



1. A machine of the character described, comprising a frame, a shopping shaft guide pivotally supported by said frame, a chopping shaft slidably mounted for reciprocation in said guide, means for adjusting the guide to change the direction of the chopping shaft, means for rotating the shaft within the guide and means for operating the shaft.

1,391,132. MOP. JOHN MCNAUGHTON, New York, N. Y. Filed Oct. 8, 1920. Serial 415,569. 4 Claims. (Cl. 15—43.)



1. In a mop the combination with a front cross strip having side portions extending therefrom provided with notches in their free ends, of a cross strip including a central split sleeve and oppositely extending channel portions, lugs projecting from said channeled portions and seated in the notches, diverging retaining flanges extending longitudinally along the side strips, there being a slot therebetween, a housing slidable longitudinally in engagement with the flanges and held to the side strip thereby, a spring within the housing, an expressing roller having gudgeons projecting into the slots in the side portions, said springs thrusting against the gudgeons, and a handle seated within and extending from the split sleeve.

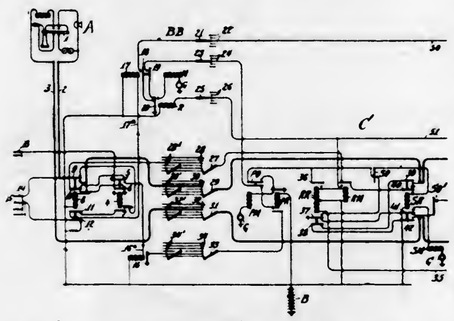
1,391,133. DOOR. FRANK J. MATCHETTE, Milwaukee, Wis., assignor to The Servidor Company, Wilmington, Del., a Corporation of Delaware. Filed Sept. 8, 1917. Serial No. 190,412. 8 Claims. (Cl. 20—16.)

3. In a device of the class described, a cabinet comprising top, bottom and side frame members, and doors hinged in said side members, said doors forming the entire sides of said cabinet and overlapping the frame members, said cabinet bulging out at the center substantially symmetrically on each side so as to complete a substantially oval cross section, the top and bottom frame members being curved to fit the inner surfaces of said doors.

1,391,134. ELECTRIC FUSE-SETTER CONTROLLER FOR ANTI-AIRCRAFT GUNS. ROBERT V. MORSE, Ithaca, N. Y., assignor to Morse Instrument Company, Inc., Ithaca, N. Y., a Corporation of New York. Filed Sept. 13, 1917. Serial No. 191,265. 11 Claims. (Cl. 235—61.)

7. In a fuse setter controller for anti-aircraft guns, the combination of an electrically operated mechanism for causing a movement to correspond to the desired fuse

setting for various angles of fire and a constant flying altitude of target, and means for varying the altitude in regard to which the mechanism operates.

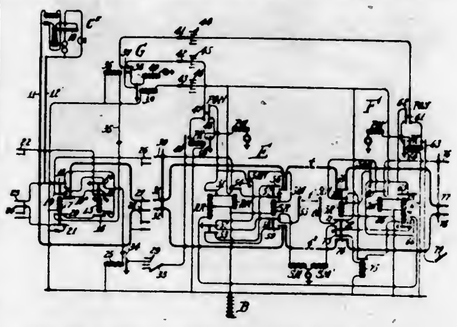


8. In a fuse setter controller for anti-aircraft guns, the combination of a mechanism for determining the fuse setting for the existing position of the gun when firing on a moving target, and a second mechanism arranged to give a lead over the first mentioned mechanism to compensate, by continuous anticipation, for the time involved in loading so that the fuse setting may be correct when the shell is in the gun at a future time when the gun is discharged, whereby the gun may be maintained with a lead corresponding merely to the time involved in the flight of the projectile.

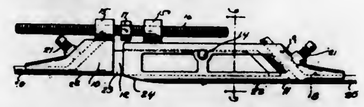
9. In a fuse setter apparatus for anti-aircraft guns, the combination of a fuse setter, automatic means for continuously setting the fuse setter for various angular positions and a constant altitude setting, and means for changing the altitude setting of the apparatus.

10. In a fuse setter apparatus for anti-aircraft guns, the combination of a fuse setter, and automatic means for continuously setting the fuse setter so that bursts are produced at a substantially constant altitude above the ground with changing angles of fire.

11. In a fire control mechanism for anti-aircraft guns, the combination of means for automatically determining the fuse setting required for a given position of the target, and an auxiliary means adapted to receive and transmit the fuse setting thus obtained modified so as to lead or anticipate the fuse setting automatically determined, to compensate for the change in the position of the target during the time of loading.



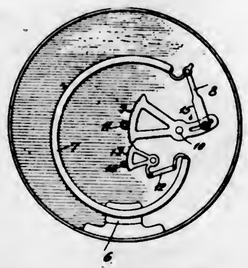
1,391,135. SEMI-AUTOMATIC TELEPHONE SYSTEM. GEORGE E. MUELLER, Aurora, Ill., assignor, by mesne assignments, to Kellogg Switchboard & Supply Company, a Corporation of Illinois. Filed Nov. 16, 1907. Serial No. 402,443. 58 Claims. (Cl. 179—27.)



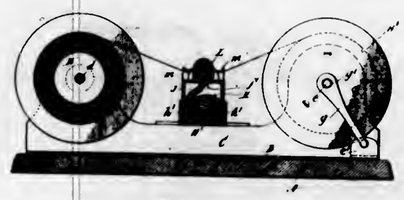
3. A semi-automatic telephone system including telephone lines, an operator's circuit, selective switching mechanism at the calling end of said circuit, operator's means for transmitting directive currents to said switches to extend the calling end of said circuit to desired lines, a calling telephone line, and a pair of electrically connected step by step traveling switches between said line and the answering end of said circuit, one of said switches, serving on initiation of the call, to connect with said calling line and the other to connect with said operator's circuit.

1,391,136. TELEPHONE-EXCHANGE SYSTEM. GEORGE E. MUELLER, Aurora, Ill., assignor, by mesne assignments, to Kellogg Switchboard & Supply Company, a Corporation of Illinois. Filed June 20, 1908. Serial No. 439,582. 42 Claims. (Cl. 179—27.)

8. In an electric signaling system, the combination with a signaling circuit, of a plurality of keys for controlling the transmission of signals over said circuit, and means whereby each manipulation of one of said keys, in the operation of transmitting a signal, changes in a predetermined manner the electrical effects produced by the subsequent manipulation of any of said keys during said operation of transmitting the signal.

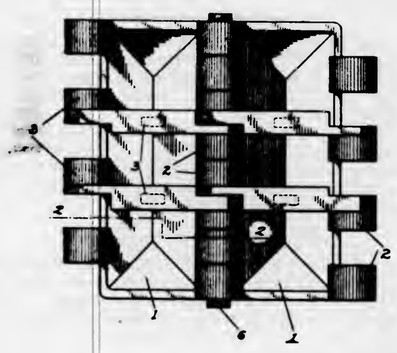


1,391,137. WIRE-SPLICER. JOSEPH O. MULLIGAN, McKees Rocks, Pa. Filed Apr. 30, 1921. Serial No. 465,899. 2 Claims. (Cl. 191—44.1.)



1. In a trolley wire splicer, relatively shifting sections adapted for engagement with the ends of a trolley wire, one of said sections having a longitudinal bore, means for shifting said sections toward and away from one another, a flat blade carried by one of the sections and fitting into the bore formed to the other section, and means extending through the wall of the bored section into the bore and engaging the blade for preventing shifting of the sections without the operation of the shifting means.

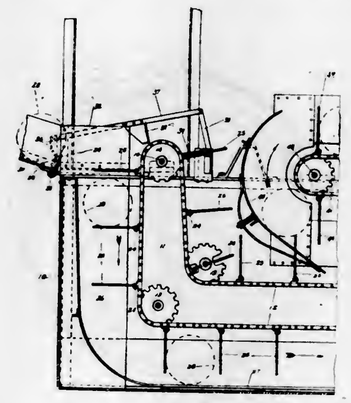
1,391,138. PRESSURE-GAGE. RALPH MCKINLEY NELSON, Sellersville, Pa., assignor to United States Gauge Company, New York, N. Y., a Corporation of Pennsylvania. Filed Sept. 20, 1920. Serial No. 411,429. 3 Claims. (Cl. 73—100.)



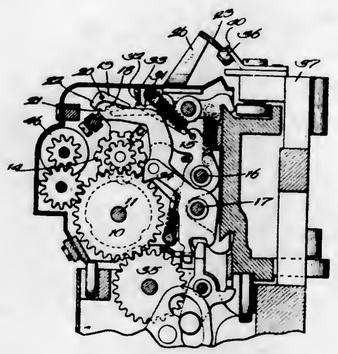
1. In a pressure gage, the combination with the same dial having two scales thereon and pointers for said scales, of a pressure tube rigidly mounted at a point intermediate its ends and nearer one end than the other, of means operated by the two free ends for turning the respective pointers proportionately to the movements of said ends.

1,391,139. INKER FOR TYPEWRITER-RIBBONS. WILLIAM R. ORMES, Waltham, Mass. Filed Dec. 27, 1920. Serial No. 433,318. 4 Claims. (Cl. 91—48.)

1. A device of the kind described comprising a base having reel supports mounted thereon, a tank support mounted between said reel supports, a tank detachably mounted in said tank support, a roll, a roll mounted on said tank, and guides mounted on said tank one on each side of said roll, one of said reel supports carrying a crank arm and the other having means adapted to apply tension to a reel mounted thereon.



1,391,140. TRACK-LINK FOR TRACTORS. THOMAS R. PAULSEN, Los Angeles, Calif. Filed Dec. 19, 1919. Serial No. 346,112. Renewed July 26, 1921. Serial No. 487,723. 1 Claim. (Cl. 305—10.)

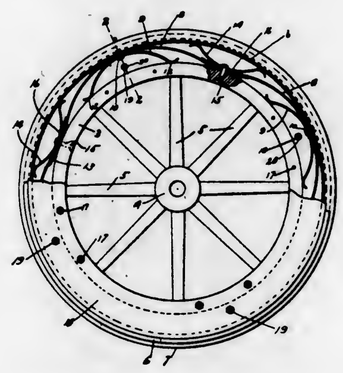


A link for tractor tread sections comprising a tread portion, parallel and horizontally alined webs arranged to support the rim of a sprocket wheel and to receive the teeth thereof therebetween and transverse bosses adapted to receive the sprocket teeth therenginst at the ends of the webs projecting therebetween, to a point adjacent the central plane between the webs, the boss at one end being in opposed relation from that at the other end, to permit the bosses of adjacent links to aline with each other and fit in the spaces between the inner termination of the bosses and the opposed webs.

4,391,141. CAN-WASHING MACHINE. WALTER H. PAULSON, Chicago, Ill., assignor to Harry D. Lathrop, Chicago, Ill. Filed May 22, 1920. Serial No. 383,333. 9 Claims. (Cl. 141—7.)

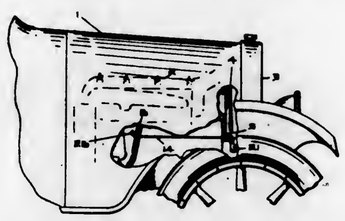
4. A washing machine comprising a tank; a conveyer passing downwardly into said tank adjacent one end thereof thence along the bottom thereof and then upwardly into a higher plane and back to a position adjacent the entry end of said tank, and finally upwardly and across the top of said tank above the normal fluid level thereof; and washing means cooperating with said conveyer during its travel above said tank, substantially as described.

1,391,142. LOCK FOR TOTALIZERS. ARTHUR F. POOLE, Kenilworth, Ill., assignor, by mesne assignments, to Remington Accounting Machine Corporation, New York, N. Y., a Corporation of New York. Filed Feb. 21, 1920. Serial No. 360,362. 9 Claims. (Cl. 235—130.)



4. In a calculating machine, the combination of a totalizer, means for inserting numbers therein, a traveling carriage, a locking bar in said totalizer, and means operated by the travel of the carriage for moving said bar to locking and unlocking positions.

1,391,143. VEHICLE-WHEEL. RANSOM E. RATHBUN, Sioux City, Iowa. Filed Apr. 12, 1921. Serial No. 460,666. 2 Claims. (Cl. 152—37.)

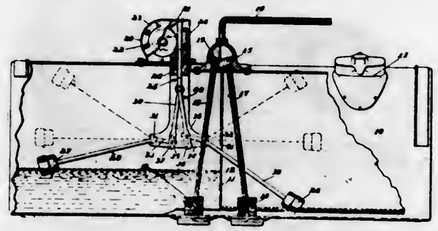


1. A vehicle wheel including a felly, a rim encircling and spaced from the felly, pairs of leaf springs arranged at intervals between the felly and rim, each pair including relatively long and short springs suitably secured at their centers to the rim, the end portions of the shorter spring being curved inwardly to engage the felly, and the end portions of the longer spring being curved inwardly and overlapped with the end portions of the corresponding springs of the adjacent pairs, leaf

springs disposed between the pairs and having their end portions in engagement with the rim and their intermediate portions resting on the overlapped end portions

of said long springs, said overlapping end portions being slotted longitudinally, and members on the felly passing through the slots and said third springs.

1,391,144. FUEL-MIXTURE CONTROLLER. RICHARD E. RUSSELL, Perrysburg, Ohio. Filed Sept. 20, 1919. Serial No. 325,266. 12 Claims. (Cl. 123—124.)



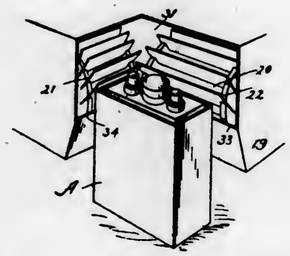
1. An internal combustion motor, a fuel supply intake therefor, a vehicle actuable by the motor, and mechanism affected by the speed of the vehicle coacting to modify fuel supply to the intake independently of the speed of the motor.

1,391,145. FLOUR-SIFTER. FRANK SMETANA, Chicago, Ill. Filed July 7, 1919. Serial No. 309,084. 4 Claims. (Cl. 83—60.)

1. In combination with a flour sifter having a sieve, an agitating member comprising a stem; flanges on the lower end of said stem; sieve sweeping means mounted in said flanges; a shaft mounted in said flanges; flour crushing members mounted on said shaft; and means for moving said sweeping means and crushing members over said sieve, substantially as described.

1,391,146. INDICATOR MECHANISM. MILTON TIBBETTS, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Dec. 16, 1914. Serial No. 877,539. 23 Claims. (Cl. 73—82.)

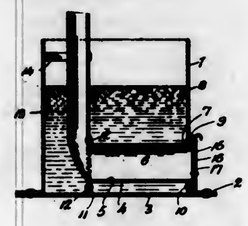
1. The combination with a tank having a plurality of compartments, of a single indicator device, and means controlled by the liquid level in the several compartments and adapted to operate the indicator to indicate the level in that compartment having the lowest level.



1,391,147. PROCESS OF SYNTHESIZING TITANIUM-NITROGEN COMPOUNDS. FOORD VON BICHOWSKY and JOHN F. HARTHAN, Pomona, Calif. Filed June 1, 1920. Serial No. 385,561. 4 Claims. (Cl. 23—13.)

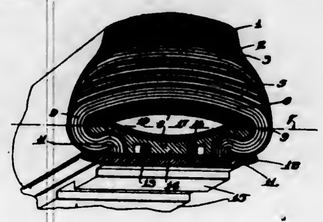
1. The process for synthesizing titanium-nitrogen compounds, which consists in heating an oxygen-containing titanium compound, carbon, an alkali metal salt and a metal of the iron group in the presence of nitrogen to form a nitrid.

1,391,148. PROCESS FOR THE SYNTHETIC PRODUCTION OF TITANIUM-NITROGEN COMPOUNDS. FOORD VON BICHOWSKY and JOHN F. HARTHAN, Pomona, Calif. Filed June 1, 1920. Serial No. 385,562. 9 Claims. (Cl. 23—13.)



8. The process for the synthetic production of titanium-nitrogen compounds, which consists in heating an oxygen-containing titanium compound in the presence of nitrogen and a hydrocarbon gas or vapor, and then recovering the resulting titanium-nitrogen compound.

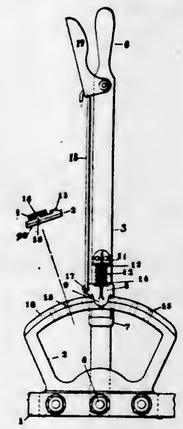
1,391,149. APPARATUS FOR SEALING STORAGE-BATTERY JARS. THEODORE A. WILLARD, Cleveland Heights, Ohio, assignor to Willard Storage Battery Company, Cleveland, Ohio, a Corporation of West Virginia. Filed Feb. 28, 1920. Serial No. 362,147. 13 Claims. (Cl. 18—5.)



1. In an apparatus for sealing storage battery jars, a receptacle adapted to be provided with sealing compound, and adjacent which a jar to be sealed is adapted to be placed, and means in the receptacle for wiping over the top edge of the jar when supported in a predetermined position with respect to the receptacle so as to deposit a sufficient amount of sealing compound for sealing purposes.

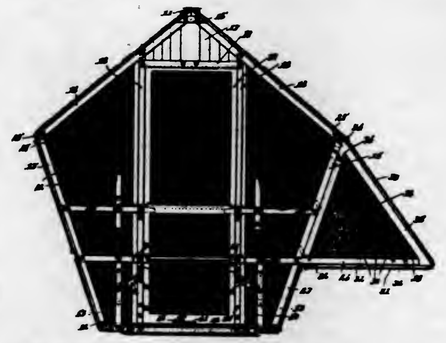
1,391,150. STOCK-WATERING TANK. EDWARD H. WILLIAMS, South Bend, Ind., assignor to Perkins Corporation, Mishawaka, Ind., a Corporation of Indiana. Filed Apr. 1, 1921. Serial No. 457,685. 1 Claim. (Cl. 126—367.)

The combination with a stock watering tank having a horizontally disposed bottom, of a heater therefor, said heater comprising a horizontally disposed casing forming a fire box, said casing being semi-circular in vertical transverse cross section and having its flat side in parallel relation to the bottom of the tank and spaced therefrom, the forward end of said casing extending through the front wall of the tank and secured thereto, the rear end of said casing terminating in a marginal flange disposed in a vertical plane, the lower side of said flange forming means for spacing the rear end of the casing from the bottom of the tank, a vertically disposed stack carried by the rear end of the heater and spaced from the rear wall of the tank, said stack being provided with a flange at its lower end, said flange being secured to the flange at the rear end of the horizontally disposed casing.



1,391,151. RESILIENT ANNULAR BODY. JOSEPH S. WILLIAMS, Riverton, N. J. Original application No. 761,192, filed Apr. 13, 1913. Divided and this application filed Dec. 20, 1917. Serial No. 208,037. 13 Claims. (Cl. 152—10.)

1. A resilient annular body comprising an annular and transversely elongated innermost portion bisected by the major transverse axis, of flattened arch formation in transverse cross section outwardly of said axis, with curvatures about the sides and inwardly of the seating parts, an annular and transversely disposed flexible tension belt in and about said flattened arch formation and in curvatures about the sides to the seating part, an annular and transversely disposed resilient supporting trussing portion bonded with and encircling said tension belt, an outer annular and transversely disposed outermost tension belt bonded with and encircling said resilient trussing portion, and a tread wearing part encircling and supported by said outermost tension belt.

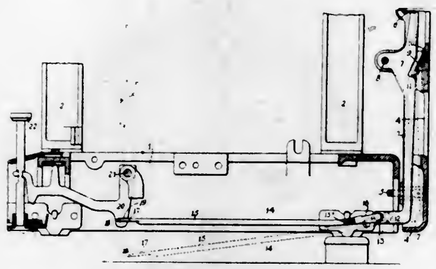


1,391,152. LEVER. FREDERICK D. WILSON, Moline, Ill., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed Oct. 3, 1919. Serial No. 328,227. 5 Claims. (Cl. 74—39.)

1. In a lever mechanism, the combination of a sector, a lever pivotally mounted to rock lengthwise of the sector, means on one side of the arc coacting with means on the lever to hold the latter from rocking, said means separable by springing the lever laterally whereby the lever

is free to be rocked, and means on the lever in contact with the other side of the arc to hold the lever from lateral movement, said means adapted to be raised to free the lever simultaneously with the lateral swing thereof.

1,391,153. SWING. BERNHARD H. WITTE, Chicago, Ill. Filed Apr. 12, 1919. Serial No. 289,505. 7 Claims. (Cl. 155—63.)



1. In a convertible frame swing suspended from a support having oppositely disposed seats, the back of one of said seats being pivotally mounted to move to a horizontal position and be retained in such position; a hinged leaf for engaging the outer end of said seat to cover same; and a member extending from one seat to the other to provide a bedding support, substantially as described.

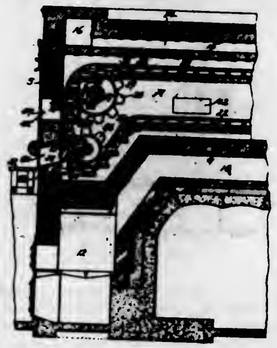
1,391,154. ALKALI SALTS OF OXIDIZED PROTALBINIC ACID AND OF OXIDIZED LYSALBINIC ACID AS STABLE PROTECTIVE COLLOIDS FOR MERCURY COMPOUNDS. MARI E. WOLVEKAMP, Oakland, Calif. Filed Mar. 27, 1920. Serial No. 369,204. 2 Claims. (Cl. 167—9.)

1. The alkali salts of oxidized protalbinic acid and of oxidized lysalbinic acid in combination with a mercury compound.

2. The alkali salts of oxidized protalbinic acid and of oxidized lysalbinic acid in combination with mercuric salicylate.

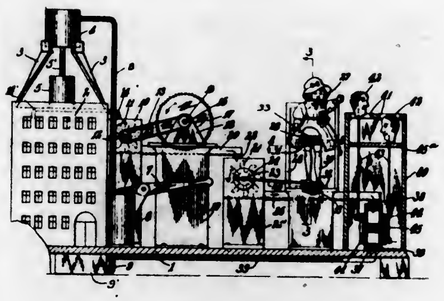
1,391,155. TYPEWRITING-MACHINE. OSCAR WOODWARD, Babylon, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed May 3, 1919. Serial No. 294,555. 4 Claims. (Cl. 197—178.)

2. In tabulator mechanism for typewriting and like machines, the combination of a detachable tabulator frame, a tabulator stop actuating-member carried by and detachable with said frame, a key controlled member carried by the frame of the machine, a link including means by which the length of the link may be adjusted at will, said link being pivoted to and supported at one end by the stop actuating member and removable therewith when the tabulator frame is detached, and means for detachably connecting the other end of said link to and supporting it by said key controlled member, the character of the detachable connecting means being such as to enable a detachment of the link to be effected by a mere lengthwise movement of the link from its normal position independently of the key controlled member.



1,391,156. RAZOR-STROP. LEO F. WORTH, South Bend, Ind. Filed Sept. 13, 1920. Serial No. 410,046. 1 Claim. (Cl. 51—198.)

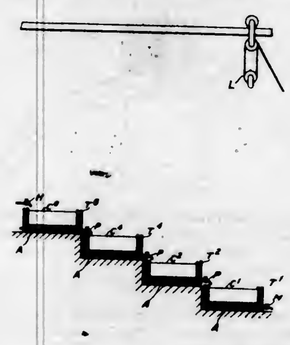
A razor strop comprising an elongated member formed from flexible stropping material and adapted to encircle the palm of the hand, said member being wider at its central point than at its ends and gradually tapering in width toward its ends, said strop being adapted to encircle the hand and have its wide portion centrally disposed within the palm of the hand, the forward edge of the palm registering portion of the strop terminating adjacent the inner joints of the fingers, and the rear edge of the strop terminating forwardly of the inner thumb joint, thereby allowing the strop to be flexed outwardly longitudinally incident to partial closing of the fingers of the hand.



1,391,157. BAKER'S OVEN. OTTO WUNDRACK, Maywood, Ill., assignor to Theresia Wundrack, Chicago, Ill. Filed Mar. 11, 1920. Serial No. 364,937. 4 Claims. (Cl. 107—57.)

1. In a bakers' oven, a baking chamber the entrance to and discharge from which is through its front wall, an endless hearth comprising endless chains, and a series of hearthstones suspended from said chains that have their supporting surfaces below their points of suspension throughout the length of said chains, and a longitudinally adjustable incline the highest end of which is at the rear of the discharge opening in the front wall of the oven and

which has a convex surface extending down from its highest end which is engaged *scrauing* by said hearthstones and tipped to dump their contents onto said incline.



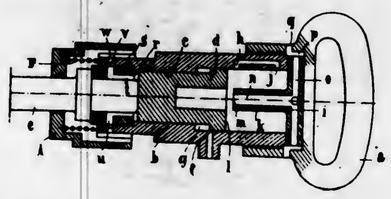
1,391,158. AUTOMATIC WATER-DRIVE FOR TOYS AND MACHINERY. BÉLA ZSARNAY, Belleville, N. J., assignor of one-half to Abraham Lewis, Newark, N. J. Filed Aug. 25, 1920. Serial No. 405,993. 3 Claims. (Cl. 46—37.)

1. In a toy, a water wheel, a compound doll figure comprising oppositely facing elements, a pair of legs for each element, and means connecting the said legs to the said water wheel for oscillating the legs of each element in unison.

1,391,159. METHOD OF MANUFACTURE OF MALT EXTRACT. SAMUEL HAROLD GREEN, Leiant, and JOHN DUNSTAN OPIE, Hayle, England. Filed Dec. 5, 1916. Serial No. 135,251. 1 Claim. (Cl. 167—4.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

The process of manufacturing extracts of malted materials, which consists in treating separated quantities of malted materials with hot water, in a series of steps, the first step being at the most favorable temperature for diastatic action and consisting chiefly in saccharifying the malted material with water already rich in extracted matters, intermediate steps consisting in further saccharification and partial washing of the malted materials for conversion of the starchy matters with the saccharifying action decreasing, the conversion increasing and the temperature increasing as the final step is approached, said final step consisting of a conversion at boiling temperatures whereby said starchy matters are carried into the

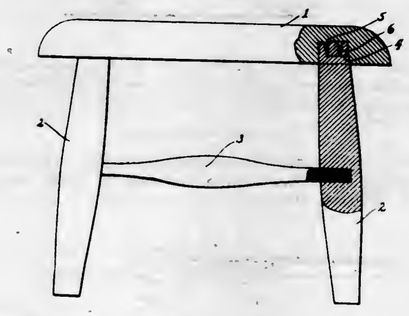
earlier-treated quantities of malt, each step being carried out during a fixed interval of time, and afterward concentrating the extract so obtained.



1,391,160. FOOD PRODUCT AND PROCESS FOR MAKING THE SAME. FREDERICK C. ATKINSON, Indianapolis, Ind., assignor to American Hominy Company, Indianapolis, Ind., a Corporation of New Jersey. Filed Apr. 4, 1919. Serial No. 287,521. 3 Claims. (Cl. 99—10.)

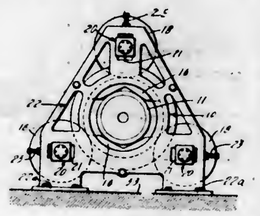
1. The process of preparing a food product consisting in cooking hominy, converting the same into flakes while at a high temperature and in a soft cooked condition resulting in tenacious flakes producing a hydrated form of starch, then drying, then crushing the dried flakes, and then screening out the product intermediate the finest and the coarsest, substantially as set forth.

1,391,161. FOOD PRODUCT AND PROCESS OF PREPARING. FREDERICK C. ATKINSON, Indianapolis, Ind., assignor to American Hominy Company, Indianapolis, Ind., a Corporation of New Jersey. Filed May 27, 1919. Serial No. 300,128. 2 Claims. (Cl. 99—11.)



2. The method of producing pre-cooked food products from cereals which consists in cooking the cereal in the presence of moisture and in a temperature between 85° to 100° centigrade, then crushing the moist and hot cooked product between rolls heated to a temperature of between 85° and 110° centigrade, then drying the product, and then grinding it, substantially as set forth.

1,391,162. PNEUMATIC HAMMER. ARMAND BAILLY, Paris, France. Filed July 7, 1920. Serial No. 394,591. 2 Claims. (Cl. 121—17.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

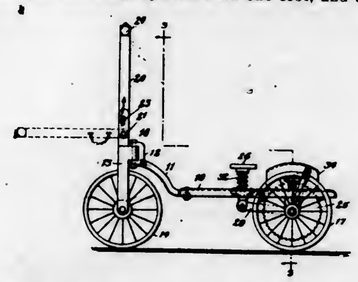


1. In a hammer, the combination of a cylinder; a handle connected to one end of the cylinder and provided with a central discharge tube for the spent motive fluid and with ducts leading from said tube to the atmosphere, said tube extending into the interior of the cylinder; a reciprocating percussive piston in said cylinder having an inwardly-extending recess in its rear end to receive said tube; means for supplying motive fluid under pressure across the cylinder; an annular shoulder on the rear portion of the piston to be acted on by said fluid; and a duct in the wall of the cylinder for by-passing the fluid from one side of said shoulder to the other.

1,391,163. JOINT. FRANK H. BANCROFT, Gardner, Mass., assignor to P. Derby & Company, Gardner, Mass., a Corporation of Massachusetts. Filed May 24, 1919. Serial No. 299,500. 4 Claims. (Cl. 20—92.)

1. A joint for wooden articles comprising a wooden member having a socket, a tubular ridge of wood projecting integrally from the base of said socket, and a second wooden member having an annular kerf therein, said second member being adapted to fit into said socket, the said ridge coöperating with said kerf to expand the end of said second member in said socket.

1,391,164. MACHINE FOR CENTRIFUGAL FORMATION OF PLASTIC BODIES. HENRY BARKSCHAT, Los Angeles, Calif. Filed Mar. 1, 1920. Serial No. 362,528. 6 Claims. (Cl. 25—30.)

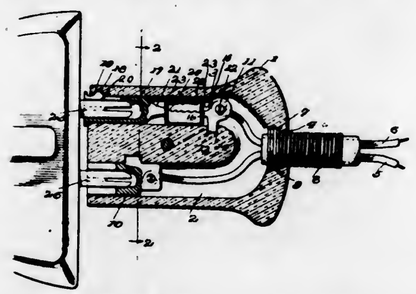


1. In a machine of the character described, a frame, a mold, and means for rotatably supporting the mold in the frame comprising a plurality of rollers carried by the frame around the mold to equally yieldingly support the mold.

1,391,165. CHILD'S VEHICLE. WILLIAM N. BEST, Brooklyn, N. Y., assignor of one-fourth to George B. Phelps, New York, N. Y., one-fourth to Sarah A. Meisser, Quincy, Ill., and one-fourth to Margaret Stella Spies, Creston, Iowa. Filed Feb. 25, 1921. Serial No. 447,637. 1 Claim. (Cl. 208—35.)

A child's vehicle having front and rear wheels, a platform upon which the child may stand, a steering handle for the front wheel, pivotal connections therefor, whereby a handle may extend forwardly, rearwardly or upwardly, means for locking the handle in its upwardly extending

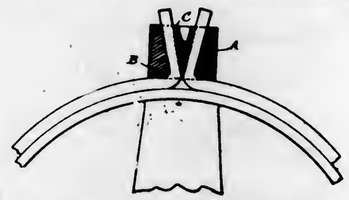
position, whereby the child may use it as a support while standing on the platform, vehicle propelling means including a pedal extending upwardly through said platform which the child may operate with one foot, and a seat of



a width substantially equal to that of the platform and detachably secured to the latter for covering and rendering inoperative said pedal when the vehicle is used for drawing the child.

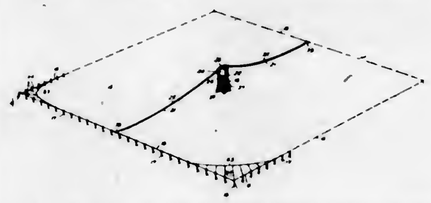
1,391,166. AUXILIARY HEATING-PLATE. JESSIE C. BRADLEY, Oakland, Calif. Filed Oct. 27, 1920. Serial No. 420,008. 2 Claims. (Cl. 126—216.)

1. A warming device including a ring adapted to rest under the top plate of a stove around the burner opening, a plate resting outside the depending edge flange of said top plate, a connecting member connecting said ring and said plate, and means for mounting the device under the top plate.



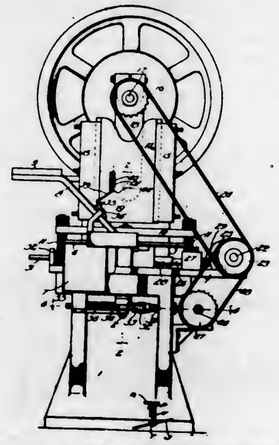
1,391,167. AUTOMATIC SWITCH. DEAN WILLIAM CARLSON, Manette, Wash. Filed June 12, 1920. Serial No. 388,627. 3 Claims. (Cl. 200—142.)

1. A plug switch including a casing having spaced terminal receiving channels, a contact member arranged in one of said channels and held against movement, a socket member removably secured in said channel, and a fuse strip arranged in said channel and bearing between the socket member and contact member.



1,391,168. DEVICE FOR FASTENING BELTS. FRANK W. CARLSON, Oilfields, Calif. Filed Feb. 14, 1919. Serial No. 276,958. 1 Claim. (Cl. 24—31.)

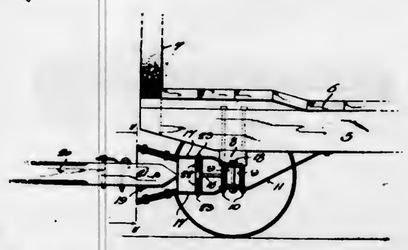
A belt fastener comprising a rectangular frame having an interior of trapezoidal cross section and provided with a plane outer face at the base of the trapezoid and longitudinally curved at the side opposite the plane face, and a wedge having fluted sides at substantially the angle of the inclined walls of the trapezoid, the wedge provided with sockets in its base and the base of the wedge when



inserted being substantially co-planar with the said plane faces, the interior end walls of the frame closely fitting and guiding the ends of the wedge.

1,391,169. AGRICULTURAL SYSTEM. GEORGE A. CASE, Joplin, Mo. Filed Apr. 1, 1920. Serial No. 370,462. 9 Claims. (Cl. 299—58.)

1. An agricultural system comprising a source of fluid supply, a flexible perforated pipe extending from said source of supply to the border of an area to be treated, an elevated track around the border of said area, a supporting cable between the fluid supply and said track, a trolley attached to said cable to run on the track, and slidable suspending means on said cable for holding the perforated pipe.

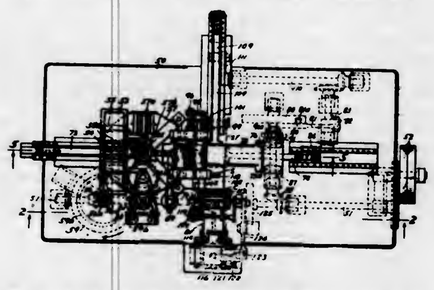


1,391,170. MACHINE FOR COMPRESSING LOCK-NUTS AND THE LIKE. ARTHUR B. CHADWICK, South Whitley, Ind., assignor to Grip Nut Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 24, 1918. Serial No. 251,264. 10 Claims. (Cl. 10—72.)

1. In a machine of the kind described, a compressing element, a coöperating reciprocating part arranged to depress said element, and mechanism for reciprocating said part,

in combination with a movable anvil block arranged beneath the compressing element, and means for moving said anvil to operative position to support a nut between said element and the block during the compression operation.

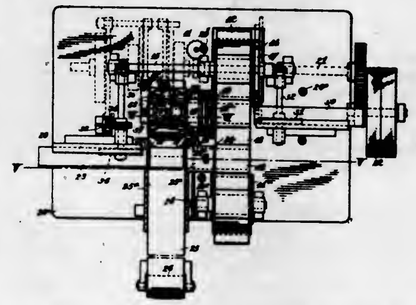
1,391,171. STEERING DEVICE FOR DRAWING-VEHICLES. HENRY DANIEL, Kiel, Wis., assignor to Kiel Machine Co., Kiel, Wis. Filed Sept. 25, 1919. Serial No. 326,247. 1 Claim. (Cl. 280—103.)



In a dirigible axle structure, the combination of a fixed axle, stub axles pivotally connected to the ends of the fixed axle and having steering arms extending forwardly, bowed companion links pivotally connected with the steering arms, companion bowed coupling arms pivotally connected to the upper and lower faces of the fixed axle centrally thereof and having their intermediate portions pivotally connected with the bowed companion links, said coupling bars terminating with divergent inclined faces, a hollow socket having companion divergent upper and lower walls, constituting seats for the divergent ends in rigid connection with the hollow socket head, and a tongue having its end in pivotal union with the socket head.

1,391,172. PRODUCTION OF ALUMINUM SALTS. CHARLES A. DOREMUS, New York, N. Y. Filed Oct. 28, 1919. Serial No. 333,914. 5 Claims. (Cl. 23—13.)

1. The process of producing aluminum salt solutions from alumina-bearing ores containing relatively large amounts of impurities such as iron compounds, silica or titanium oxid, which consists in roasting the ore, mixing it in suitable proportions with an acid capable of dissolving the alumina but leaving the other constituents as an insoluble residue, and separating the soluble aluminum salt and the insoluble residue.



1,391,173. METHOD OF AND APPARATUS FOR PACKAGING ARTICLES. HILARION DE ESCOBALES, New York, N. Y., assignor to H. Escobales Co. Inc., New York, N. Y., a Corporation of New York. Filed June 8, 1917. Serial No. 173,558. 50 Claims. (Cl. 93—4.)

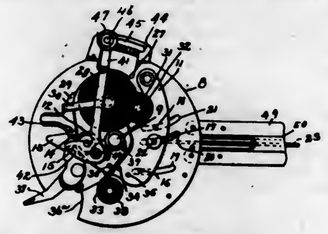
1. In packaging machines, wrapping mechanism having charge-receiving and wrapped-packet delivery stations and operative to wrap the article or charge while advancing from the charge-receiving to the packet delivery station, means for advancing the packet from said latter station in a predetermined path, means for positioning a stamp and a container blank at successive points in such path, and means for applying the stamp to the packet and for folding the container blank to inclose the packet and its applied stamp during travel in such path.

6. In a wrapping machine, means for conveying an assembled charge and wrapper along a predetermined path, and stationary elements adjacent said path for folding the wrapper about four consecutive faces of the charge, folding projecting marginal wrapper portions against the remaining charge faces to produce wing flaps, and folding said wing flaps flatwise against said remaining faces of the charge.

1,391,174. APPARATUS FOR PRODUCING PACKAGES. HILARION DE ESCOBALES, New York, N. Y., assignor to H. Escobales Co. Inc., New York, N. Y., a Corporation of New York. Filed Nov. 26, 1917. Serial No. 203,951. 67 Claims. (Cl. 93—2.)

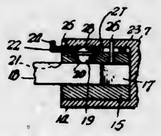
1. In apparatus for applying wrapping elements to an embryo package, means for applying a strip of sheet material to one end of said package with a portion of said strip extending onto an adjacent side of the package, and means for applying to the package a cup type wrapper with the bottom of the cup wrapper at the opposite end of the package, and with a side of the cup overlying said portion of the strip, the construction being such that the part of the strip applied to the end of the package will be uncovered by said cup wrapper.

1,391,175. SIZE AND STYLE STAMP FOR INSOLES AND OUTSOLES OF SHOES. WILLIAM E. EDWARDS, Johnson City, and HARRY O. STALKER, Binghamton, N. Y. Filed Sept. 17, 1920. Serial No. 410,909. 2 Claims. (Cl. 101—368.)



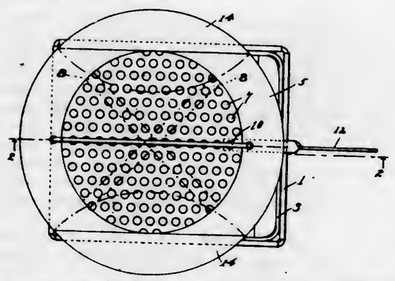
1. In a size and style stamp for insoles and outsoles, in connection with an operative vertical plunger part, supporting and moving a face plate in alinement with a bed plate beneath the same, and adapted to receive the pressure of the face plate, a sole pattern removably mounted on said bed plate, having a cross groove in the upper surface thereof, and a stamp having raised letters or figures in the upper face thereof mounted therein: a pressure plate mounted on said face plate in alinement with the pattern, a cross groove in the lower face thereof and means for vertical movement of the plunger and pressure plate.

1,391,176. LOCK-ALARM. LUIGI DELLAMARIA, Tulare, Calif. Filed May 21, 1921. Serial No. 471,323. 2 Claims. (Cl. 116—94.)



1. A lock alarm comprising a base plate; a spring mounted on said base plate; a hammer on the free end

of said spring; an operating member pivotally mounted on said base plate; a stopper pivotally mounted on the end of said operating member and adapted to engage said hammer at predetermined times; means mounted on said base plate to normally hold said stopper in its operative position and to be moved to render said stopper inoperative; means to hold said last means in its adjusted posi-

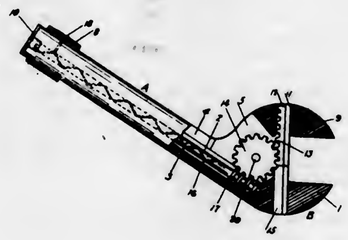


tion; a regulator pivotally mounted on said base plate adapted to release said hammer from said stopper; and means to adjust said last means to vary the travel of said hammer; a flexible connection from said operating member to a lock whereby when said lock is operated said flexible member will operate said operating member; and a bell mounted on said base plate.

1,391,177. CHUCK. GILES H. DU SELL, Chicago, Ill., assignor to Independent Pneumatic Tool Company, Chicago, Ill., a Corporation of Delaware. Original application filed Feb. 9, 1920, Serial No. 357,187. Divided and this application filed Jan. 10, 1921. Serial No. 436,053. 5 Claims. (Cl. 279—76.)

1. A chuck, comprising a head having a socket, a block with a recess to receive the shank of a tool fitted in said socket and held against rotation, said block having a hole therein arranged transverse to said recess and opening into the same, a plug slidably mounted in said hole and adapted to engage the tool shank for holding the same in said block, and a locking plate slidably mounted on said block between the same and said head and movable with respect to said plug into and out of position holding said plug in locking engagement with the tool shank.

1,391,178. ASH-SEPARATOR. HARRY T. EMERY, Norwood, Ohio, assignor of one-half to Miller Outcalt Dure, Norwood, Ohio. Filed May 29, 1920. Serial No. 385,345. 4 Claims. (Cl. 83—60.)

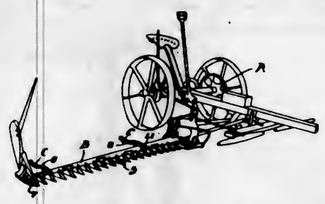


1. In combination with a furnace, a hopper arranged to be supported in said furnace under the grate bars thereof, said hopper being provided with hinged side walls to permit it to pass through the ash pit door of said furnace, and means for sifting ashes in said hopper.

1,391,179. MONKEY-WRENCH. EDWIN J. EVANS and GEORGE E. HEMPHILL, Salt Lake City, Utah, assignors to Universal Tool Company, a Corporation of Utah. Filed Dec. 30, 1920. Serial No. 434,082. 2 Claims. (Cl. 81—172.)

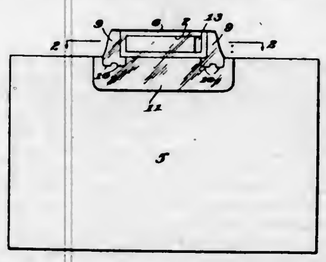
1. A monkey wrench comprising a longitudinally slotted and centrally bored shank with a jaw integral therewith; a rod having a helical groove cut therein and of two different pitches adapted to operate in the bore of said shank; a movable jaw; a flanged extension thereon having its face transversely threaded to engage in one portion of the groove of said rod and with the flanges engaging the edges of the slotted portion of said shank; a sleeve carried on said shank; and a pin fastened in said sleeve with its end engaged in the other portion of said groove.

1,391,180. WRENCH. EDWIN J. EVANS and GEORGE E. HEMPHILL, Salt Lake City, Utah, assignors to Universal Tool Company, a Corporation of Utah. Filed Mar. 2, 1921. Serial No. 449,167. 1 Claim. (Cl. 81—165.)



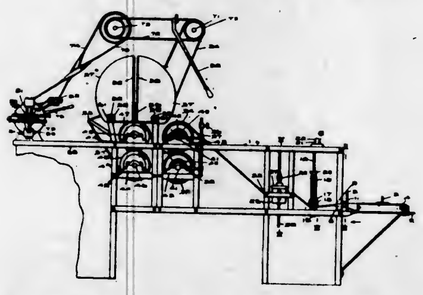
A wrench comprising a centrally bored shank with a longitudinal slot opening into said bore; an angularly disposed head integral with said shank and having one portion formed as a jaw; there being a guide recess cut through said head at an acute angle and connected with the bore of said shank; a movable jaw having a flanged web portion operable in said guide recess; a rack bar on the web portion of said movable jaw; a spirally grooved spindle carried in the bore of said shank; a worm pinion formed on one end portion of said spindle; a worm gear journaled in said head with its teeth engaging said worm pinion and rack bar; a sleeve slidable on said shank; and a pin carried in said sleeve with its inner end engaged in the groove of said spindle.

1,391,181. RUNNER FOR SICKLE-BARS. HARM FRANZEN, Phoenix, Ariz. Filed Dec. 15, 1920. Serial No. 430,933. 4 Claims. (Cl. 56—303.)



1. In a mowing machine, the combination of a cutter bar, of a runner attachment therefor including an attaching foot for engaging one face of the cutter bar, a fastening element arranged to extend through the said foot and

cutter bar, said runner having a slot therein, a clamp for engaging the face of the cutter bar opposite to the face

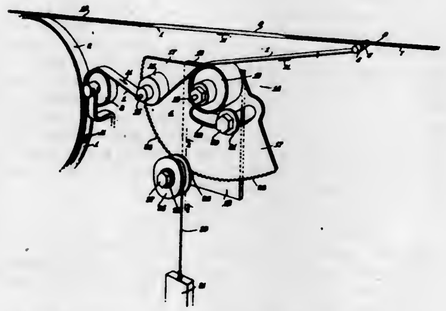


engaged by the attaching foot, and an adjusting bolt carried by the clamp and slidably mounted in said slot.

1,391,182. INDEX-CARD. LABURTON A. GALE, Belmont, Mass., assignor to Library Bureau, Cambridge, Mass., a Corporation of New Jersey. Filed Nov. 14, 1919. Serial No. 338,015. 6 Claims. (Cl. 129—16.8.)

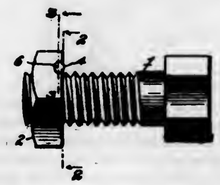
3. An index card comprising a body, and a composite tab attached to the edge of the body comprising a middle piece, end pieces, the bases of which are inset into recesses provided therefor in the margin of the card body, and a cover of transparent sheet material folded over said middle and end pieces with its margins secured to the card body.

1,391,183. MATERIAL-HANDLING. HERMAN A. GILLIAN, Toledo, Ohio, assignor to The Bacon Bros. Company, Toledo, Ohio, a Corporation of Ohio. Filed Apr. 15, 1920. Serial No. 374,061. 3 Claims. (Cl. 26—2.)



1. A material treating apparatus for strip fabric embodying a frame, a pair of opposing gripping rolls carried by the frame for receiving material therebetween, a steaming chamber carried by the frame adjacent the rolls, a pair of ironing rolls, and a pair of drawing rolls therebeyond, said ironing and drawing rolls being also carried by the frame, said drawing rolls being operable for pulling material through the receiving rolls, through the chamber and about the ironing rolls.

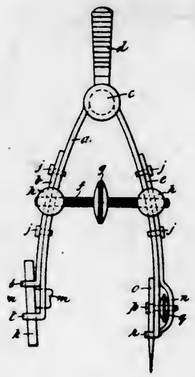
1,391,184. BELT-GUIDING MEANS. WILLIAM F. GRUPE, Hudson Heights, N. J., assignor to Endless Belt Corporation, Inc., a Corporation of New York. Filed May 31, 1919. Serial No. 300,930. 4 Claims. (Cl. 74—51.)



4. The combination of a substantially flat belt and means for diverting the path of travel of said belt at any given single location to provide for the travel of the belt in the flat position anteriorly and posteriorly of said given single location, said diverting means comprising a pair of guiding members arranged oppositely to one another and laterally of the belt, anterior means for mounting said pair of guiding members adjacent said given single location, said guiding members having guiding faces extending at an angle to one another, and adjustable means for said mounting means for adjusting the positions of said guiding members relative to said belt.

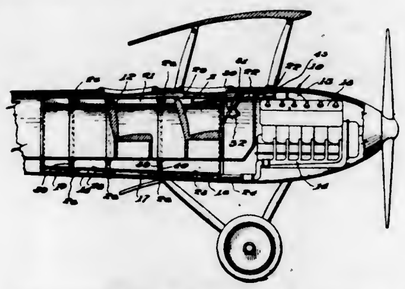
1,391,185. SELF-ADJUSTING TENSION MEANS. WILLIAM F. GRUPE, Hudson Heights, N. J., assignor to Endless Belt Corporation, Inc., a Corporation of New York. Filed May 31, 1919. Serial No. 300,931. 4 Claims. (Cl. 64—5.)

3. The combination with a belt, of an idler adapted to engage said belt, a segment, means for mounting said idler on said segment, a pinion, a fixed stud movably supporting said pinion, a sheave in fixed relation with said pinion, a yieldable element passing about said sheave and a replaceable weight connected to said yieldable element.



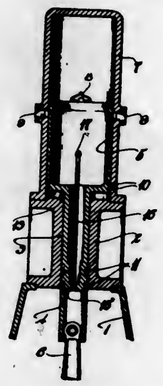
1,391,186. NUT-LOCK. RAYMOND T. HILL, Detroit, Mich. Filed Jan. 22, 1921. Serial No. 439,155. 3 Claims. (Cl. 151—34.)

1. In a device of the class described, the combination with a bolt provided with threads, of a nut on the threads



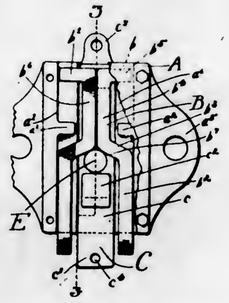
of said bolt, said nut provided with a pocket formed in its side, said pocket provided with a side-opening, a ball in said pocket and having a portion projecting through the side-opening thereof, and said ball engaging the threads of the bolt as and for the purposes set forth.

1,391,187. DRAWING-COMPASSES. JOHN HORWOOD, Hoxton, London, England. Filed Mar. 15, 1920. Serial No. 366,010. 1 Claim. (Cl. 33—154.)



Spring-bow compasses comprising a handle, a bow spring fixedly secured at its center to said handle, the legs of the bow-spring being arcuate and having perforated projections at their ends, one of said legs having secured thereto a member having a perforated projection spaced from the projection at the end of the leg, said leg being provided between said projections with a tapered slot, a spring clip slidable in said slot and adapted to hold a marker receivable in the perforations of said projections, the other leg being similarly slotted, means for adjustably securing a needle point in the perforation of said other leg, and means for adjusting the legs of said bow spring relaticely to each other.

1,391,188. COOLING SYSTEM FOR INTERNAL-COMBUSTION ENGINES. JOHN DEWEY HOUSTON, Prineville, Oreg. Filed May 13, 1919. Serial No. 296,856. 15 Claims. (Cl. 244—31.)

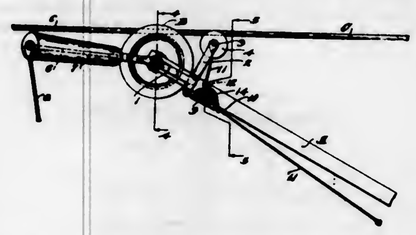


1. The combination with an internal combustion engine having a cooling chamber, of a radiator comprising a plurality of compartments, means establishing successive communication between said compartments, conduits establishing communication between said radiator and the cooling chamber of said engine, and means whereby certain of said compartments may be cut out of operative communication with said cooling chamber.

1,391,189. INTERNAL-COMBUSTION ENGINE. THOMAS A. HUTSELL, Spokane, Wash., assignor to The Hutsell Motor Company, Spokane, Wash. Filed Jan. 3, 1920. Serial No. 349,283. 1 Claim. (Cl. 123—74.)

The combination with a tubular cylinder and piston support and its cylinder and combustion chamber, of an open inverted piston, a hollow piston stem in said support, a partition closing the lower end of said stem and an oil pipe threaded therein with its upper end in the piston, radiating branch pipes from said oil pipe passed through the walls of said piston, said partition having an oil passage extending from the lower end of the oil pipe and said base having a supply passage adapted to register therewith, intake and exhaust ports to the cylinder, and means for establishing communication for a fuel charge between the combustion chamber and hollow piston stem controlled by the movement of the stem.

1,391,190. CLUTCH-TRIP MECHANISM. WILLIAM H. KAPPES, Cincinnati, Ohio, assignor to The Verdin, Kappes & Verdin Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Aug. 5, 1920. Serial No. 401,543. 6 Claims. (Cl. 192—116.)

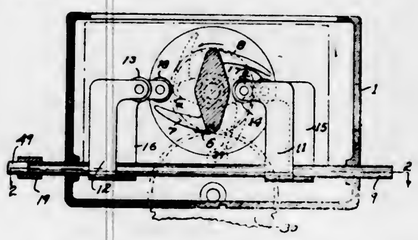


1. In a clutch trip device the combination with a trip bar, of means adapted to be separately reciprocated and a ball adapted to transmit the joint movement of the reciprocating means to the trip bar.

1,391,191. TROLLEY GUARD AND FINDER. PATRICK JOSEPH KELLEY, Detroit, Mich. Filed June 14, 1921. Serial No. 477,497. 3 Claims. (Cl. 191—73.)

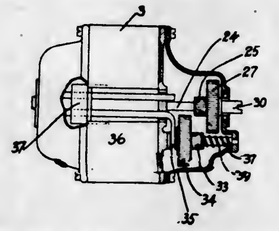
1. A finder for car trolleys comprising a bracket to be pivotally mounted on the trolley, said bracket including

spaced divergent arms constituting journals, tapered rollers mounted on the latter for feeding the wire in-



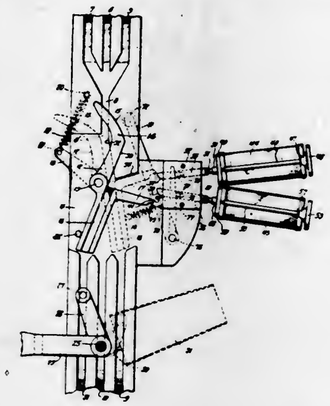
wardly into the groove of the trolley wheel, and means for swinging said bracket on its pivots to render said rollers operative.

1,391,192. SPRING SUSPENSION FOR VEHICLES. GEORGE MORTIMER KELSEY, Grand Forks, N. D. Filed Dec. 22, 1920. Serial No. 432,485. 2 Claims. (Cl. 267—19.)



1. The combination with the semi-elliptical supporting springs of a vehicle chassis, the adjacent ends of which are free, of equalizing bars pivotally supported by the opposite sides of the chassis and extending parallel thereto, having their opposite ends pivotally connected to the adjacent free ends of the semi-elliptical supporting springs, and other spring means arranged between the opposite end portions of the equalizing bars and the corresponding portions of the vehicle chassis sides.

1,391,193. AUTOMATIC GEAR-SHIFTING DEVICE. JOHN KIRKEBY, San Luis Obispo, Calif. Filed Nov. 27, 1920. Serial No. 426,792. 5 Claims. (Cl. 74—58.)

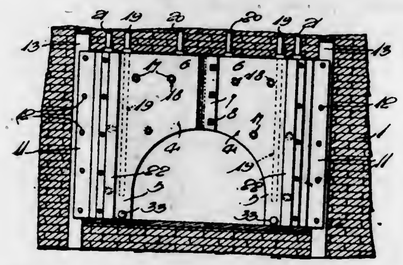


1. A gear shifting device for a sliding gear change transmission, comprising horizontal rods controlling the shifting rods, a pair of arms rigidly secured to each horizontal rod, a cam shaft mounted transversely to said rod in operative relation to the arms, said cam shaft having two opposing cams extending throughout its operative area adapted to dispose all the arms simultaneously at an equal distance from its axis, whereby all gears are thrown into neutral upon a certain turning of said cam shaft, and tangential fingers on each cam of increasing radial distance from its axis adapted to engage, on a continuation of the turn, any one of the arms and to push it farther from its axis, whereby a corresponding gear is engaged.

1,391,194. ENGINE-STARTING SYSTEM. CHARLES F. KETTERING and WILLIAM A. CHRYST, Dayton, Ohio, assignors to The Dayton Engineering Laboratories Company, a Corporation of Ohio. Original application filed May 25, 1915. Serial No. 30,399. Divided and this application filed Oct. 31, 1917. Serial No. 199,411. 9 Claims. (Cl. 290—31.)

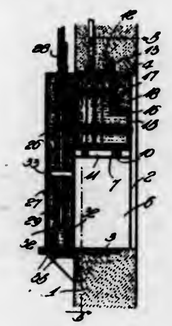
8. In an engine starter, the combination with a dynamo-electric machine having an armature and field magnets; of means for connecting the engine and machine including a shiftable gear; and means for actuating said gear including a part independent of said armature and shiftable into proximity to adjacent poles of said field magnets by magnetic attraction.

1,391,195. SWITCHING OR SELECTING MECHANISM. LESTER L. LADD, Chicago, Ill., assignor to Photometric Products Corporation, Chicago, Ill. Filed Dec. 13, 1920. Serial No. 430,268. 30 Claims. (Cl. 83—92.)



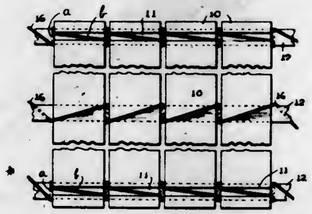
1. A device of the character described comprising a plurality of substantially parallel horizontally extending tracks, a switch member adapted to assume a plurality of positions relative to said tracks to direct a member traveling along a common track into any one of said tracks and means for controlling the position of said switch member.

1,391,196. OPEN-HEARTH-FURNACE DOOR AND FRAME. GEORGE LAW, York, Pa. Filed May 6, 1920. Serial No. 379,393. 1 Claim. (Cl. 122—498.)



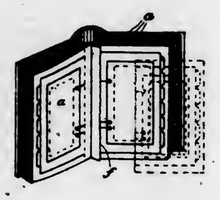
The combination with an open hearth metal furnace having a rectangular door opening and vertical bars at the sides of said opening; of two substantially flat, inverted L-shaped, ring angular, water casings disposed in a common vertical plane and snugly received in said door opening with the free ends of their horizontal arms abutting each other and detachably bolted together,

vertical flanges on the outer edges of said vertical arms of said casings and extending throughout the length thereof, said flanges being detachably bolted to said vertical bars and serving both as attaching means and stiffening means for the vertical edge walls of the



casings, a pair of parallel vertical tracks secured to the outer side walls of said vertical arms of the casings and extending throughout the length thereof to additionally stiffen said casings, said tracks having inturned flanges parallel with and spaced outwardly from the casings, and a door slidable between said tracks.

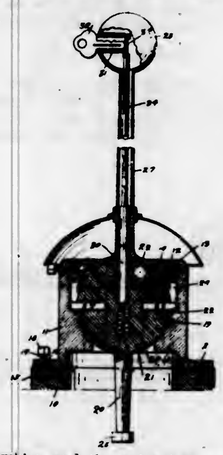
1,391,197. OPEN-HEARTH-FURNACE DOOR AND FRAME. GEORGE LAW, York, Pa. Filed July 15, 1920. Serial No. 396,395. 1 Claim. (Cl. 122—499.)



The combination with a metal furnace having a rectangular door opening: of an arched water-cooled door frame fitting snugly in said door opening, the crown of said frame having the upper and lower halves of its back wall offset horizontally, forming a horizontal ledge extending forwardly from the upper edge of said lower half and a vertical wall rising from the front edge of said ledge, said ledge and wall jointly providing a right-angular seat extending throughout the length of said crown, a rigid beam snugly received in said seat and anchored at its ends in the furnace wall, means rigidly securing said vertical wall to said beam to reinforce said crown; said crown being transversely divided at its central point into two sections, a pair of angle iron bars extending longitudinally along the upper edges of said sections and having their inner ends bent to form upstanding lugs disposed in contact with each other, means securing said lugs together, one flange of each angle iron bar being secured to said crown while the other flanges of said bars are embedded in the furnace wall, a pair of relatively short angle iron bars having horizontal flanges extending transversely of and secured to the lower edges of the aforesaid crown sections, said bars having vertical flanges in contact with each other, and means securing these vertical flanges together.

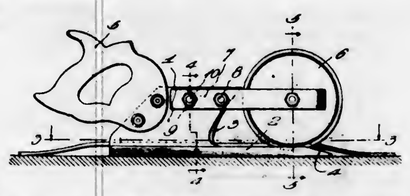
1,391,198. BARREL OR CRATE. GEORGE A. LE FEVRE, Richmond Hill, N. Y., and HUBERT HUTCHINSON, Newark, N. J., assignors to Paxflat Barrel & Crate Corporation, New York, N. Y., a Corporation of New York. Filed Mar. 23, 1920. Serial No. 368,069. 7 Claims. (Cl. 217—44.)

1. A structure of the kind described having a body portion formed of parallel slats, flexible hoops extending across the outer parts of the slats, means for fastening the hoop ends together, inner bands or binders extending across the inner parts of the slats opposite the hoops, and a connection between the inner bands and the outer hoops which permits the hoops to slide endwise of themselves.



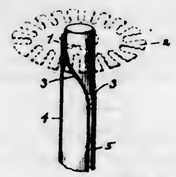
1,391,199. MANUFACTURE OF BOOKS. RICHARD BORLASE MATTHEWS, East Grinstead, England. Filed Jan. 9, 1920. Serial No. 350,324. 2 Claims. (Cl. (283—63.)

1. A book made up of pages printed in multiple form, folded, cut and adapted to be permanently bound in sections in a book, each of said pages having a narrow blank outer binding edge formed by a narrow strip along one side, sewn and permanently bound with the page in book form, an indication on each page parallel with said binding edge along which the remaining portion of the page may be separated from said strip, and markings adjacent said indication serving to enable the separated portion of the page to be accurately perforated and filed away in a loose leaf binder, each of said pages having letter press only in a space inclosed by the edges of the sheet to be separated, for the purposes set forth.



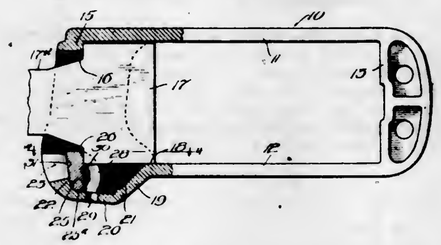
1,391,200. LOCKING DEVICE FOR GEAR-SHIFT LEVERS. CLAUDE E. MENTZER, Des Moines, Iowa, assignor, by direct and mesne assignments, to The Eclipse Machine Company, Elmira, N. Y., a Corporation of New York. Filed Oct. 28, 1919. Serial No. 334,060. 2 Claims. (Cl. 70—128.)

1. In a device of the class described, a lever member mounted for universal movement, a second lever member adjacent thereto for universal movement, a recess in one of said lever members, a spring actuated tumbler in said recess, the other of said lever members being hollow, a lock controlled actuating arm in the other of said lever members, the parts being so arranged that when the actuating member is in one position of its movement and the recess in the first lever member registers with the hollow end of the other lever member, said tumbler will be projected into the other lever member, whereas when the actuating member is not in this position of its move-



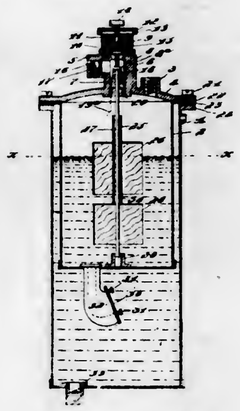
ment, the tumbler and the actuating member will stand with their adjacent ends at the joint between the two lever members, thereby permitting free movement of one lever member with relation to the other.

1,391,201. LINOLEUM-CUTTER. WILLIAM J. MILLS, Hazleton, Pa. Filed July 1, 1920. Serial No. 393,287. 2 Claims. (Cl. 164—84.)



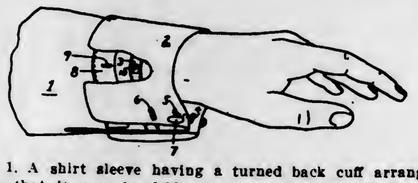
1. A cutter of the character described, comprising a blade disposed in a vertical plane and having an operating handle at its rear end, the front end of said blade being sharpened, a pair of strips secured to opposite sides of said blade at the lower edge of the latter, said strips extending forwardly from the blade and being beveled to slide beneath the material being cut, an arm secured to the upper edge portion of said blade and extending forwardly therefrom, and a rotary cutting disk mounted on the front end of said arm, the lower edge portion of said disk being received between the front ends of said strips.

1,391,202. DISK-STACKING DEVICE. WILLIAM E. MOORE, Detroit, Mich., assignor to William J. Hartwig, Detroit, Mich. Filed Nov. 8, 1920. Serial No. 422,532. 5 Claims. (Cl. 29—84.)



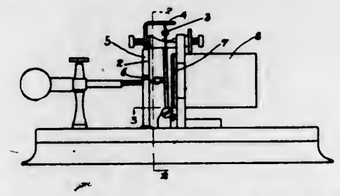
1. In a stacking device for the disks of armature cores, the combination of a pedestal and a collar rotatable thereon, said pedestal having a transverse groove across its top and said collar having a rib extending downwardly into said groove, a hub on the collar having a central hole adapted to receive a stacking pin, and means to turn the collar back and forth on a vertical axis.

1,391,203. DRAFT-GEAR YOKE. GEORGE C. MURRAY, Chicago, Ill. Filed Dec. 11, 1919. Serial No. 344,003. 13 Claims. (Cl. 213—42.)



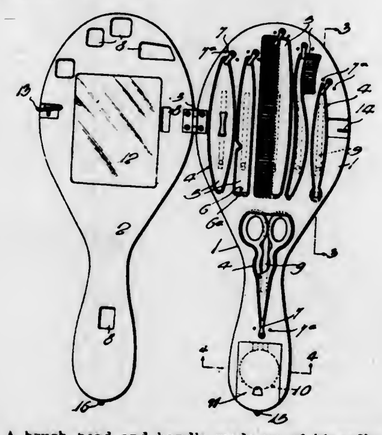
1. The combination with a yoke having upper and lower arms and a hooded forward end, of a drawbar having a shouldered butt adapted to be received within said hooded end, said lower arm being adapted to engage and support said butt, means carried by said yoke for engaging one shoulder of said butt, a movable block being adapted to be tilted upwardly and forwardly about its lower edge into position to engage the other shoulder of said butt after the latter has been inserted in said yoke, and means formed integrally with said yoke for holding said block in said last-named position after it has been tilted.

1,391,204. FUEL-FEEDING SYSTEM. WILLIAM H. MUZZY, Chicago, Ill. Filed Dec. 17, 1920. Serial No. 431,343. 8 Claims. (Cl. 158—36.)



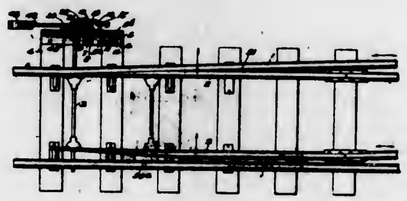
1. In a vacuum fuel feeding tank, the combination with a vacuum receptacle, of an atmospheric tank into which it discharges, a suction connection for the vacuum receptacle, a connection for feeding gasolene to the vacuum receptacle, an atmosphere valve and an operating plunger therefor situated at opposite sides of the suction connection and mounted for movement of the plunger toward and from the atmosphere valve, the suction-caused movement being toward the valve in the direction for opening the latter, and a float in the vacuum receptacle for controlling the plunger.

1,391,205. SHIRT-CUFF. GEORGE NEWMAN, San Francisco, Calif. Filed Oct. 11, 1920. Serial No. 416,190. 3 Claims. (Cl. 2—79.)



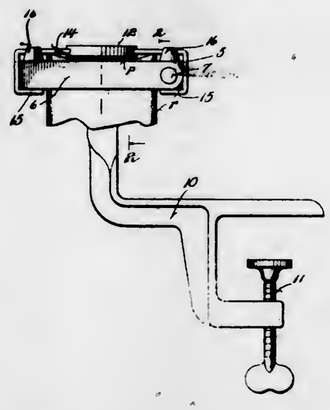
1. A shirt sleeve having a turned back cuff arranged so that it may be folded to present a clean cuff edge when the original edge has become soiled or worn and means carried by the sleeve and cuff for adjusting the length of the sleeve when the cuff is adjusted from normal position so that the length of the sleeve and cuff is at all times the same.

1,391,206. TELEGRAPHIC INDICATOR. SHERMAN G. NYE, Denver, Colo., assignor of one-half to D. B. Simon and one-fourth to I. Mann, Denver, Colo. Filed Oct. 23, 1919. Serial No. 332,682. 5 Claims. (Cl. 177—329.)



1. In combination with a relay having an armature, of a current detector suspended at one end of the relay, adapted to be attracted against the end of the relay for producing a visible and audible signal of the electric condition of the relay.

1,391,207. HAIR-BRUSH. GARABED OHANIAN, Paterson, N. J., assignor of one-half to Harootun Chekenian, Paterson, N. J. Filed Mar. 17, 1921. Serial No. 452,918. 2 Claims. (Cl. 132—27.)

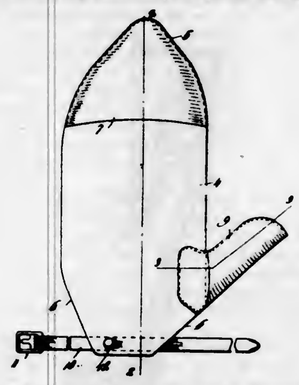


2. A brush head and handle made up of hingedly connected separable sections corresponding in shape, one of said sections being formed in its inner face with a plurality of comparatively shallow recesses, each one being shaped to conform to the outline of a toilet article which is to be placed therein, one of the end walls of the recesses being undercut to provide shoulders, beneath which one end of the articles are to extend, pivoted latches coöperative with the other ends of the articles, and flat springs in the bottoms of the recesses to automatically eject the articles therefrom when the latches are released.

1,391,208. SWITCH-STAND. CHARLES PARTINGTON, Cincinnati, Ohio, assignor to The Cincinnati Frog & Switch Company, Cincinnati, Ohio, a Corporation of Ohio. Filed July 9, 1920. Serial No. 394,999. 6 Claims. (Cl. 246—411.)

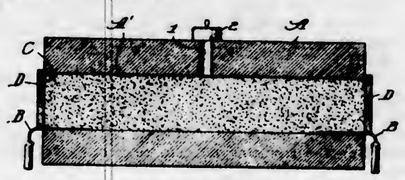
1. A device of the class described, an angle base plate, a lever pivoted to the under horizontal side of said plate on a vertical axis, a lever pivoted on the vertical side of said plate on a horizontal axis, and a connecting link between said levers, its opposite ends having a universal coupling connection with the lever to which it connects.

1,391,209. DEVICE FOR REPAIRING INNER TUBES. WALTER J. RALEY, Milwaukee, Wis. Filed Dec. 8, 1919. Serial No. 343,203. 4 Claims. (Cl. 18—18.)



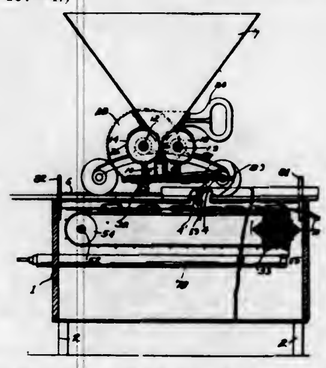
1. An inner tube repair device comprising a base block, means for securing a section of inner tube on one face of the base block, a sleeve secured to and extending from the opposite face of the base block, and a pivot support member detachably engageable in said sleeve.

1,391,210. CONTROL-GLOVE. JOHN G. ROPIAK, Chicago, Ill. Filed Oct. 15, 1920. Serial No. 417,168. 1 Claim. (Cl. 2—104.)



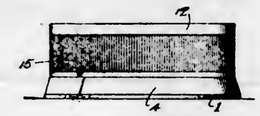
A glove including a flat palm engaging body, a blank engaged across one end of the body with its margin secured

to the margin of the body to provide a single stall for the reception of the tip ends only of all of the fingers, and



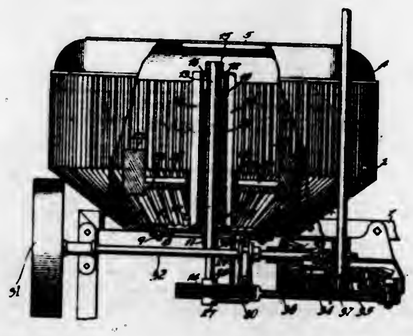
a second blank secured to said body reversely folded upon itself, and the marginal edges thereof secured to provide an inclosed thumb stall.

1,391,211. DRY-CELL MATERIAL AND METHOD OF MANUFACTURE. OTTO E. RUHOFF, Madison, Wis., assignor to French Battery & Carbon Co., Madison, Wis., a Corporation of Wisconsin. Continuation of application Serial No. 166,246, filed May 3, 1917. This application filed Jan. 31, 1920. Serial No. 355,479. 12 Claims. (Cl. 204—29.)



1. A depolarizing mixture for dry cells having as one of its constituents calcined lamp-black obtained by subjecting ordinary commercial lamp-black to prolonged heat treatment at high temperature, said calcined lamp-black being characterized by a relatively low volatile substance content.

1,391,212. DOUGHNUT FORMING AND COOKING MACHINE. WILLIAM F. SCHALLER, San Francisco, Calif. Filed Apr. 20, 1920. Serial No. 375,385. 5 Claims. (Cl. 107—4.)

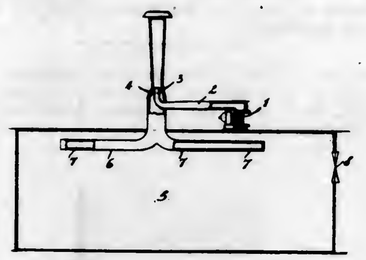


5. A doughnut forming and cooking machine comprising an oil receptacle, a carriage movable along the same, a dough hopper, a die, means to force the dough from the hopper through the die, means to intermittently cut off the dough to form the doughnuts as the carriage is moved along the oil receptacle, means operated by the movement of the hopper to discharge the doughnuts from the oil receptacle, a second oil receptacle, a chute connecting the first oil receptacle and the second oil receptacle and arranged to invert the doughnuts as they fall into the second receptacle.

1,391,213. STERILIZER. IVAN M. SCHNEIBLE, Greenwich, N. Y., assignor to Elsie Kinne Schneible, Greenwich, N. Y. Filed Oct. 29, 1919. Serial No. 334,128. 5 Claims. (Cl. 167—3.)

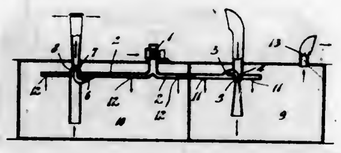
1. A device of the class described comprising an imperforate disk-like fuel-holding base; a top; means for connecting the base with the top; and a casing carried by the top and upstanding above the top, to form a sterilizing receptacle closed at its lower end by the top, the casing being movable on the top, toward the base, to effect a collapsing of the device.

1,391,214. WASHING-MACHINE. HOWARD F. SNYDER, Newton, Iowa, assignor to The Maytag Company, Newton, Iowa, a Corporation of Iowa. Original application filed Mar. 11, 1915, Serial No. 13,560. Divided and this application filed Dec. 18, 1916. Serial No. 137,528. 3 Claims. (Cl. 68—15.)



2. In a washing machine, a tub having a bottom provided with an enlarged opening, a removable closure for said opening, a sleeve integral with said closure and extending upwardly into the tub, an oscillatory shaft journaled in said sleeve, a carrier secured to said shaft and having a rotating fit with the bottom of said sleeve, and a dolly slidably mounted on said carrier and having upwardly extending clothes engaging members.

1,391,215. HIGH-CARBON STEEL-IRON ALLOY. JAMES RAMSEY SPEER, Trappe, Md. Filed June 16, 1920. Serial No. 389,319. 3 Claims. (Cl. 75—1.)



1. An alloy having iron-steel characteristics and containing carbon not less than one per cent., chromium, molybdenum, silicon, sulfur, phosphorus and manganese.

1,391,216. SYSTEM OF VENTILATION. ALEXANDER WILLIAM STEWART, Glasgow, Scotland. Filed Nov. 20, 1917. Serial No. 202,944. 1 Claim. (Cl. 98—27.)

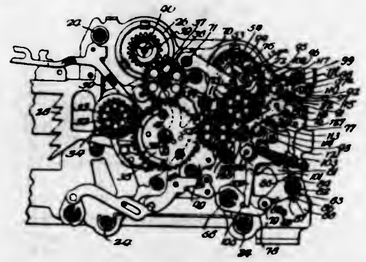
In combination, a compartment having an air inlet, piping in said compartment having air openings, an air eductor constituted by a double truncated cone connected to said piping within said compartment, said eductor projecting from said compartment, a nozzle coaxial with said eductor, said nozzle located adjacent to the plane of truncation of said eductor and directed away from said compartment, and a fan having its intake side exterior to said compartment and its discharge side connected to said nozzle.

1,391,217. SYSTEM OF VENTILATION. ALEXANDER WILLIAM STEWART, Glasgow, Scotland. Filed Nov. 20, 1917. Serial No. 202,945. 1 Claim. (Cl. 98—27.)

In combination, two compartments, an air inductor fitted to one compartment, an air eductor fitted to the other compartment, the inductor and the eductor each affording communication between the relative compartment and the space exterior to said compartment, the inductor and the eductor each formed as a double truncated cone, a nozzle in the inductor, said nozzle directed toward the first named compartment and located approximately in the plane of truncation of the inductor, a nozzle in the eductor, said second named nozzle directed away from the second named compartment and located approximately in the plane of truncation of the eductor, a fan having its intake exterior to said compartments, piping connected to the discharge side of said fan, and branches from said piping to said nozzles.

1,391,218. FASTENER. JAMES D. SWIBES, Detroit, Mich., assignor of one-half to Andrew Harris, Detroit, Mich. Filed Nov. 6, 1920. Serial No. 422,184. 5 Claims. (Cl. 292—95.)

1. In a fastener, the combination with a body, of a hook movable angularly and transversely with respect to said body, means for yieldingly moving said hook transversely in one direction, and a cam member for moving said hook



transversely in the opposite direction upon relative angular movement of said body and cam member.

1,391,219. ENZYMIC SUBSTANCE AND PROCESS OF MAKING THE SAME. JOKICHI TAKAMINE, New York, N. Y., and JOKICHI TAKAMINE, Jr., Clifton, N. J. Filed Jan. 23, 1918. Serial No. 213,431. 19 Claims. (Cl. 99—11.)

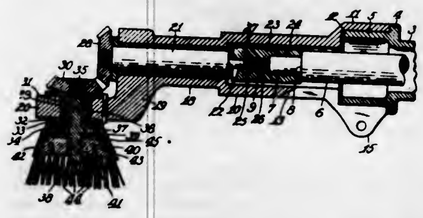
2. The process which consists in propagating a fungus upon a culture medium, then extracting the soluble content of the culture medium having the fungus growth thereon, then adding an antiseptic to the extract and subjecting the resulting mixture to a comparatively low heat.

16. As a new article of manufacture a stable enzymic solution is clear and transparent and free from decomposing or fermenting bacteria, of slightly nutty taste and musty odor, possessing strongly diastatic and other enzymic properties, gives no coloration when an alcoholic solution of gum guayacol and hydrogen peroxid is added thereto, and contains a large amount of phosphate as a mineral constituent, a comparatively small amount of sugar and a fairly large amount of proteid organic matter.

1,391,220. CALCULATING-MACHINE. JOSEPH A. V. TURCK, Wilmette, Ill., assignor to Felt & Tarrant Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 24, 1920. Serial No. 376,190. 72 Claims. (Cl. 235—82.)

1. In a calculating machine provided with keys; ordinal actuating devices; ordinal registering wheels actuated by

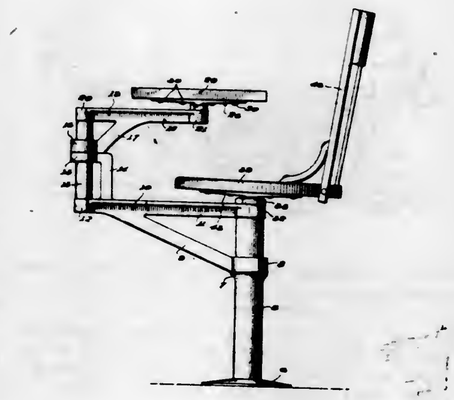
said devices; carrying springs; driving connections between said registering wheels and said actuating devices, including, driving intermeshing gears; and means for detraining said gears to permit the carrying springs to unwind and return said registering wheels to zero; in combination: an additional set of registering wheels; and means adapted, on such detraining of the driving intermeshing gears, to gear the last-mentioned registering wheels at will to said ordinal registering wheels, for turning the additional set of registering wheels, as the ordinal registering wheels are turned to zero; substantially as specified.



24. In a calculating machine provided with a set of ordinal registering wheels, and means for turning said wheels from varying positions to zero positions, in combination: an additional set of registering wheels, carrying mechanism therefor, and means operable for gearing either the carrying mechanism or said ordinal registering wheels to said additional set of registering wheels; substantially as specified.

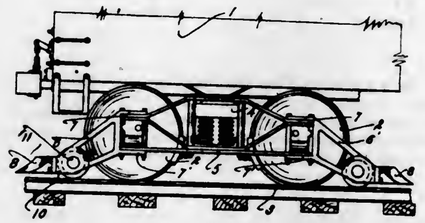
33. In a calculating machine, in combination: a set of ordinal accumulator registering wheels rotatable on a fixed axis, including gearing for turning them; means for turning said wheels from varying positions to zero positions; an additional set of registering wheels also rotatable on a fixed axis; means for moving gearing of said first set of registering wheels into position for being entrained with said last named set of registering wheels; and means for entraining said last named set of registering wheels with said first named set of registering wheels, when gearing of the latter has been moved into such entraining position; substantially as specified.

68. In a key-driven calculator; accumulator-mechanism capable of receiving and storing power, a series of actuators for storing power in said accumulator-mechanism, in combination with a second accumulator mechanism adapted to receive the power stored in the first accumulator mechanism to register a total, substantially as specified.



70. In a calculator, a series of register wheels, carrying springs for actuating said wheels in a carrying of the tens, and means whereby the said carrying springs themselves may turn the register wheels in forward direction advancing from divers numerical positions to zero, to effect a zeroizing operation; substantially as specified.

1,391,221. BRUSHING OR POLISHING APPARATUS. FRANK P. TUTTLE, Indianapolis, Ind., assignor to The Cleveland Osborn Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 14, 1918. Serial No. 249,856. 3 Claims. (Cl. 15—37.)

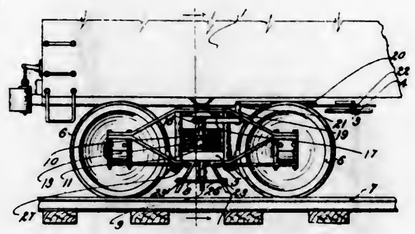


1. In a brushing or polishing apparatus, a brush holder comprising a flat bottom and a flaring side wall thereon, a screw-threaded axle stud extending through said bottom from the rear side thereof, said stud having a collar thereon against said rear side and having also an operating shank extending from the collar, and a core screwed onto said stud and having a groove in its peripheral portion adjacent to said bottom, the front portion of said core having a greater diameter than the grooved portion of the core, in combination with a brush between said side wall and said core and having a portion arranged in said groove.

1,391,222. CHAIR. LEE VAN FLEET, Parkersburg, Iowa. Filed Oct. 6, 1919. Serial No. 328,779. 5 Claims. (Cl. 155—128.)

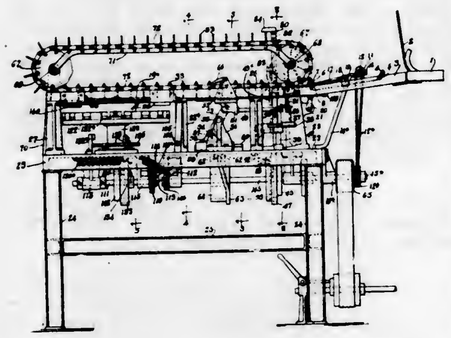
1. In a device as set forth, the combination of a pedestal, a nut threaded on the upper end of said pedestal and provided with an axial bore, a chair seat, a stem carried by and depending from the center of the under surface of said chair seat, ball races formed in the upper and lower ends of said nut and surrounding said axial bore, bearing balls in said ball races, means carried by said stem for confining said bearing balls in said ball races and to provide anti-friction bearings between the stem and nut.

1,391,223. DERAILING-GUARD. HOMER S. VOTAW, Chopaka, Wash. Filed Jan. 27, 1921. Serial No. 440,352. 2 Claims. (Cl. 105—215.)



1. The combination with a railway car truck including its side frames, of complementary extensions thereon formed with journal bearings, an axle having journals in said bearings, wide, flanged wheels on said journals and shoulders on the axle co-acting with the extensions for retaining said wheels, and a fender bar having its ends attached at the extremities of said extensions.

1,391,224. RAILWAY-BRAKE. HOMER S. VOTAW, Chopaka, Wash. Filed Jan. 27, 1921. Serial No. 440,353. 2 Claims. (Cl. 246—171.)

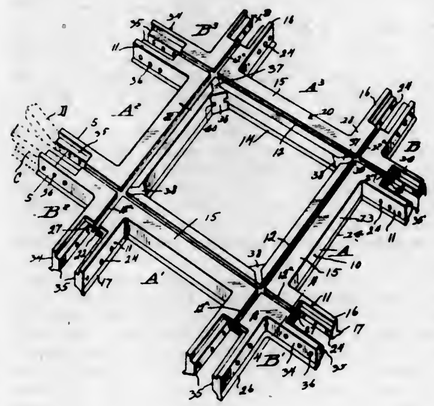


1. The combination with a railway car truck bolster and the air brake equipment including a control valve, of a contact bar adapted to be elevated, and means actu-

ated by the elevation of said bar to control said valve, front and rear guard bars for said contact bar, and

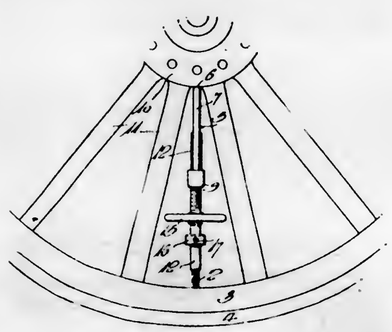
breakable connections between said guard bars, for the purpose described.

1,391,225. MACHINE FOR PACKING MATCHES. NOAH L. WARNER, Ashland, Ohio, assignor to The Reliable Match Company, Ashland, Ohio, a Corporation of Ohio. Filed July 9, 1920. Serial No. 395,141. 33 Claims. (Cl. 226—11.)



1. In a match-packing machine, the combination, of a divider adapted to enter into and withdraw from a quantity of matches for segregating separate batches of matches, with match-conveying means including devices to receive each batch and maintain its segregation.

1,391,226. REVERSIBLE FROG. RICHARD P. WEAVER, Carlisle, Pa. Filed Nov. 27, 1920. Serial No. 426,738. 10 Claims. (Cl. 246—471.)

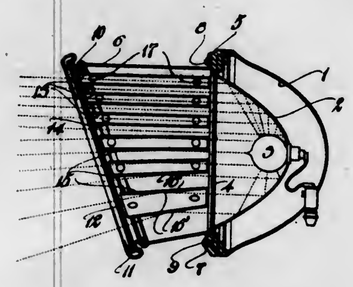


1. A frog formed of an integral middle section and two lateral supporting sections, the middle section being reversible top to bottom and having upon its opposite faces all of the wheel supporting tread portions of the frog, the tread portions of the middle section extending above the upper edges of the lateral supporting sections in all positions of the middle portion.

1,391,227. SECTIONAL RAILWAY-CROSSING. RICHARD P. WEAVER, Carlisle, Pa. Filed Feb. 2, 1921. Serial No. 441,914. 11 Claims. (Cl. 246—463.)

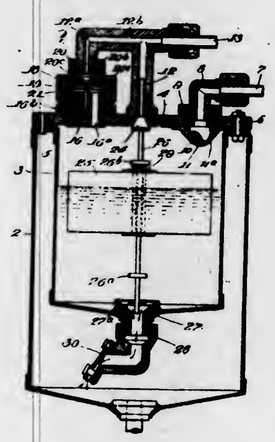
1. A railway crossing formed of a plurality of sections, each section having interlocking engagement with the next adjacent sections, and wedges holding the sections in interlocked engagement.

1,391,228. TIRE-VALVE COMPRESSOR. CHARLES B. WEBSTER, Fall River, Mass. Filed June 17, 1920. Serial No. 389,711. 3 Claims. (Cl. 29—84.)



1. A valve stem compressor comprising a hub engaging element, a plunger having threaded connection with the hub engaging element and adapted to engage the end of a valve stem, means for rotating the plunger to move the same outwardly and force a valve stem through a wheel felly and rim, and means for engaging a wheel felly to limit movement of the plunger through the felly and rim.

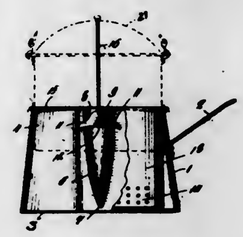
1,391,229. AUTOMOBILE-HEADLIGHT. GUSTAVE A. WENDT, Spokane, Wash. Filed June 28, 1920. Serial No. 392,361. 1 Claim. (Cl. 240—48.4.)



The combination with a headlight and lamp, of a hood attached to the lamp, a group of fixed, horizontally arranged and regularly spaced tubular members forming flat plates within the hood for distant distribution of

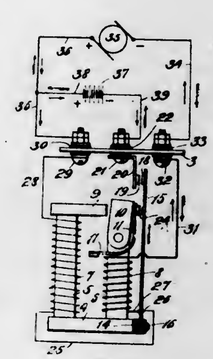
light rays, and a group of angularly disposed tubular members forming flat reflecting plates, each of said

plates having an under reflecting surface for direct illumination of the roadway in the immediate vicinity of the lamp.



1,391,230. VACUUM FUEL-FEED DEVICE. FREDERIK G. WHITTINGTON, Chicago, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed Jan. 10, 1921. Serial No. 436,062. 8 Claims. (Cl. 158—36.)

1. In a vacuum fuel feed device having a vacuum chamber provided with liquid inlet and outlet; suction connections, and an air inlet, the air inlet comprising a valve chamber having an air inlet port and a port leading to the vacuum chamber; a valve in said valve chamber which seats at both said ports, whereby it cuts off communication between them; a suction duct leading from said valve chamber at the opposite side of said valve from said first mentioned ports, and means for partially offsetting the suction operative through said duct to reduce the partial vacuum in said valve chamber at said opposite side of the valve therein.

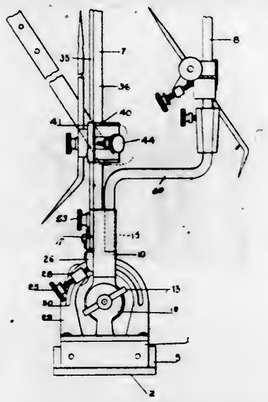


1,391,231. KETTLE. DELLA C. WILSON, Eagle Rock, Calif. Filed Oct. 4, 1920. Serial No. 414,475. 1 Claim. (Cl. 53—1.)

1. In a device of the class described, the combination with an outer upwardly tapering receptacle provided with opposing outwardly dished inverted cone shaped channel ways, a handle fixed to said receptacle, a perforated cylindrical inner receptacle adapted to snugly fit into said outer receptacle, opposing lugs fixed to the outer wall of said inner receptacle whereby said inner receptacle may be held

in a draining position on the upper edge of said outer receptacle, handle ears fixed to said inner receptacle above said lugs, a handle held to said ears, and caps loosely hinged to said outer receptacle for closing said channel ways, all as and for the purposes set forth.

1,391,232. MASTER CUT-OUT FOR STORAGE BATTERIES. JAMES M. WILSON, Newark, N. J., assignor, by mesne assignments, to Herman C. Heidrich and John G. Bender, Newark, N. J. Filed July 23, 1919. Serial No. 312,692. 3 Claims. (Cl. 200—102.)

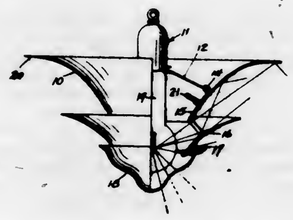


1. In a cut out of the character described, the combination of a fixed pole-piece and a movable pole-piece coöperating to attract or repel each other to cause one pole-piece to move toward or from the other, a resilient member adjacent said movable pole-piece carrying a contact adapted under the resiliency of said member to be in circuit closing relation with a fixed contact and means whereby said movable pole-piece is adapted, when repelled, to deliver a hammer or impact blow to said member to open said contacts.

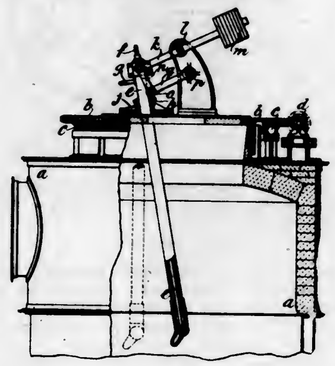
1,391,233. COMBINATION-GAGE. EDWARD WULZ, New York, N. Y. Filed Jan. 22, 1920. Serial No. 353,377. 7 Claims. (Cl. 33—169.)

1. A machinist's marking gage comprising a base, a stub pivotally mounted thereon, means for securing the stub in any desired position with relation to the base, an upright removably connected to the stub, a second upright removably connected to the stub and offset from the first-mentioned upright, a block slidable on the first upright, means

for clamping scribers or measuring instruments to the block, and means for securing scribers or measuring instruments to the second upright in the desired position and for adjusting them with relation thereto.

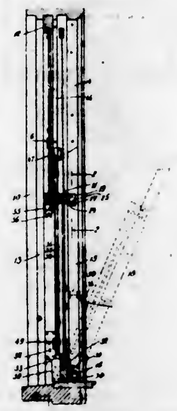


1,391,234. MAGNETO-IGNITION APPARATUS. ALBERT AICHELE, Baden, Switzerland, assignor to A. G. Brown Boveri & Cie., Baden, Switzerland. Filed May 15, 1917 Serial No. 168,734. 3 Claims. (Cl. 171—209.)



1. A multipolar bell-shaped permanent magnet for magneto ignition apparatus, magnetically conducting cross pieces directly connecting similar poles of the magnet, and a supporting stub shaft for the magnet connected with its poles.

1,391,235. LIGHTING UNIT. ROBERT WINFIELD BAYLEY, Brooklyn, N. Y., assignor to Bayley & Sons, Inc., Brooklyn, N. Y., a Corporation of New York. Filed July 31, 1919. Serial No. 314,553. 7 Claims. (Cl. 240—92.)

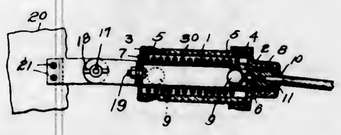


1. A lighting fixture comprising the combination with a source of light of an upper member, both sides of said member being adapted to serve as reflectors, a translucent bowl below the upper member and flexible means to support said bowl and members in spaced relationship so that a portion of the direct light rays will reach the ceiling, a portion will be reflected upward from the surface of the upper member, a portion of the direct rays will escape laterally as a flood light intermediate the lower surface of the upper member and the upper surface of the bowl and thence to the working plane.

1,391,236. APPARATUS FOR AGITATING THE FUEL IN GAS-GENERATORS. GEORGE HERBERT BENTLEY and EDMUND GARDNER APPLEBY, Westminster, London, England. Filed Sept. 1, 1920. Serial No. 407,371. 2 Claims. (Cl. 48—85.2.)

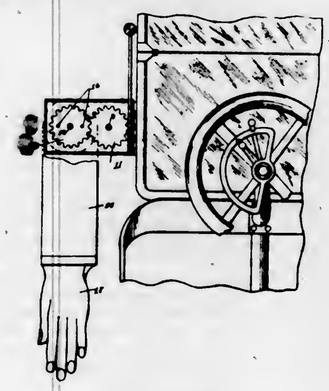
2. In a gas generator, a poker, a balance weight connected to the poker, a bearing slidably mounted on the poker, a sliding socket on the generator adapted to support the bearing, arms pivoted to the poker, a bar carried by the arms, links connecting the arms to the generator and means for rotating the poker.

1,391,237. WINDOW STRUCTURE. JOHN STONE BERRY, Plainfield, N. J. Filed Sept. 15, 1919. Serial No. 323,838. 11 Claims. (Cl. 20—12.)



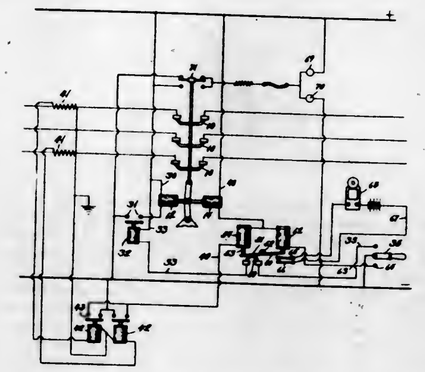
1. A window structure comprising a casing, a sash slidably mounted in the casing, guide strips at the inner side of the sash movably mounted on the casing, means for holding the strips in place on the casing, members mounted on said strips and having extensions in parallelism with the plane of said window, members mounted on said sash adapter to engage with said extension members, thereby affording a connection between said sash and strips and means for locking said sash and strips in their coöperating position.

1,391,238. CONSTRUCTION OF PULLEY AND FRICTION-WHEEL LAGGING. JULIEN A. BRIED, Oakland, Calif., assignor of one-half to Samuel L. Rogers, San Francisco, Calif. Filed July 28, 1919. Serial No. 313,860. 11 Claims. (Cl. 64—45.)



1. On a friction wheel, a strip lagging of friction material adapted to automatically tighten itself upon the wheel through rolling pressure of use.

1,391,239. SPARK-INTENSIFIER. WILLIAM BROAD, Beaver Falls, Pa., assignor of three-fourths to Harry E. McLain, Pittsburgh, Pa. Filed Sept. 30, 1920. Serial No. 413,939. 6 Claims. (Cl. 123—148.)



1. The combination with an automobile provided with an internal combustion engine for propelling it, a source of electric current supply, and an ignition circuit between the engine and current supply; of a condenser electrically connected to said circuit, said connection including a gravity switch adapted to disconnect the condenser from the circuit when the automobile ascends a hill.

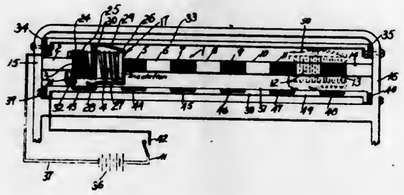
1,391,240. TRAFFIC-SIGNAL. FRANK L. BUFF, Wichita, Kans. Filed Dec. 12, 1919. Serial No. 344,376. 1 claim. (Cl. 116—52.)

The combination with a main plate having a jaw, of a clamping plate, a housing plate held to the main plate by the clamping plate, a housing plate secured to and spaced from the main plate, meshing gears carried by the main plate and between the housing plates, a bracket extending from the main plate, a controlling lever carried by the bracket, a gear movable with said lever and meshing with one of the gears in the housing, said lever being movable in a plane intersecting the plane of movement of the gears, an index on the bracket, and means movable with the lever and coöperating with the index for designating the degree of rotation of the gears.

1,391,241. LOCKOUT-RELAY. GEORGE A. BURNHAM, Saugus, Mass., assignor to Sears B. Condit, Jr., Brookline, Mass. Filed Dec. 8, 1917. Serial No. 206,148. 5 Claims. (Cl. 175—294.)

4. In combination with an electrically operated switch having an opening coil, an alarm, means controlled by an overload in the circuit controlled by the switch for operating the opening coil to open the switch and also to operate said alarm, a remote control device operable to control said opening coil, and means governed by said remote control-device for operating said opening coil to open the switch independent of the operation of said alarm.

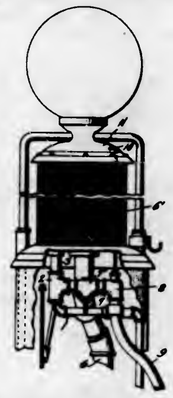
1,391,242. SCREWDRIVER. GEORGE P. BUTLER, New Haven, Conn., assignor to Winchester Repeating Arms Co., New Haven, Conn., a Corporation. Filed Aug. 13, 1920. Serial No. 403,215. 1 Claim. (Cl. 279—104.)



A screwdriver having a wooden handle, formed with a transversely-notched tapering tenon and with a central longitudinal shank-receiving bore, a correspondingly transversely-notched ferrule encircling the said tenon, a bolster applied to the shank and provided with locking-lugs entering the transverse notches in the said tenon, an expansible shank-retaining cup located in the bottom of the said bore, and a shank having at its inner end a tapering head separated from the body of the shank by an annular shoulder, whereby the said handle, bolster and shank are held against rotation and whereby the head of the shank expands the cup and embeds the outer end thereof into the side walls of the said bore in the handle so as to hold the cup against longitudinal displacement in the bore and the head against longitudinal displacement in the cup.

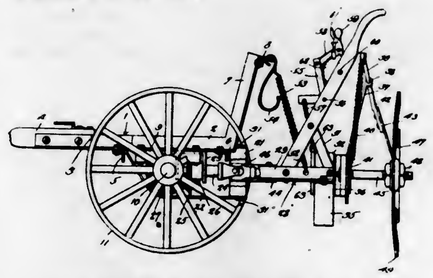
1,391,243. SIGNALING DEVICE. WILLIAM H. CARPENTER, Brooklyn, N. Y. Filed Sept. 27, 1919. Serial No. 326,928. 2 Claims. (Cl. 200—152.)

1. A circuit closer of the type capable of being worn upon the hand and adapted to be respectively tilted to open and closed circuit positions upon moving the hand from the steering wheel of an automobile and extending the hand to a signaling position comprising a wrist engaging strap, a tube having circuit wires operatively connected thereto, said tube having a main lead and a laterally disposed well, the well being in open communication with said main lead, a quantity of mercury arranged in said tube, contacts located within the main lead and connected with said circuit wires, and means for supporting said tube from the strap so that when the hand of the operator is engaged with a steering wheel; the aforesaid lead will be disposed with relation to said well to cause said mercury to be contained in said well and away from said contacts, and whereby a movement of the hand from the steering wheel and to a signaling position, the said tube will be canted and the mercury moved from the well into the said main lead and in circuit closing engagement with said contacts.



1,391,244. TYPEWRITER ATTACHMENT. GUILLERMO CASTELLANOS, Los Angeles, Calif. Filed July 2, 1919. Serial No. 308,242. 4 Claims. (Cl. 172—126.)

2. An electro-magnet comprising a suitably mounted core comprising alternate sections of magnetic and non-magnetic materials, a solenoid comprising two coils mounted end to end and slidably mounted on said core, contact means to energize said solenoid to cause relative movement between it and the core, said means consisting of a contact bar of magnetic material, a similar contact bar having a contact face constructed of alternate sections of magnetic and non-magnetic material, contact means on the solenoid contacting with said bars to alternately energize the coils.

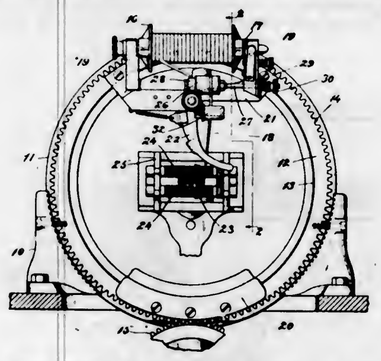


1,391,245. VENT DEVICE. JOHN J. CATRON, Bonham, Tex. Filed July 28, 1919. Serial No. 313,922. 5 Claims. (Cl. 137—78.)

5. In apparatus of the character described, the combination with a receptacle, of a gravity liquid discharge pipe having connection with the receptacle, a valve connected in said pipe, a drain hose connected with the pipe, and a tube connected with said pipe near said valve and extending upwardly beyond the maximum level of the liquid within the said receptacle, said tube having its

bore permanently open to permit of the passage of air therethrough in opposite directions.

1,391,246. COTTON-CHOPPER. BENJAMIN P. COLLIER, Albany, Ala. Filed Oct. 13, 1920. Serial No. 416,633. 5 Claims. (Cl. 97—46.)

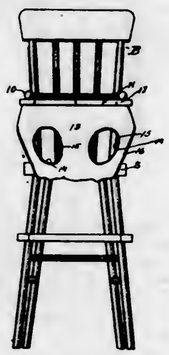


1. In a device of the class described, a main frame; a ground wheel journaled thereon; a loop-shaped bracket; a pivot element uniting the bracket with the main frame for swinging movement on a vertical axis; an auxiliary frame including side members and a bearing carried thereby; a pivot element uniting the side members with the bracket to permit a vertical swinging movement of the auxiliary frame with respect to the bracket; a shaft including parts, one of said parts being journaled on the main frame, and the other of said parts being journaled in the bearing; a universal joint connecting said parts of the shaft and located within the bracket; an operative connection between the first specified one of said parts of the shaft and the ground wheel; and a rotary hoe carried by the other of said parts of the shaft.

1,391,247. THREAD-GUIDE FOR BALL-WINDERS. HAROLD A. DENMIRE, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Nov. 21, 1918. Serial No. 263,507. 4 Claims. (Cl. 242—3.)

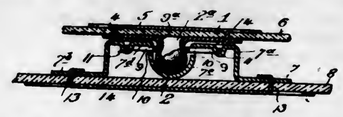
1. In a machine for winding elastic rubber thread into a ball, the combination of a holder having means for turning the ball on different axes to give a spherical winding, a rotary ring winder carrying an elongated thread spool, a guide roller on said winder mounted to rotate on an axis transverse to the axis of the spool and so positioned as to receive the thread from said spool

approximately at right angles to the axis of said guide roller, but from various directions, and turn its course



in a substantially fixed direction through less than a complete turn, and means on said winder for guiding the thread from said roller onto the ball.

1,391,248. METHOD OF FORMING GRAIN-SHOCKS. FREDERICK B. ENDERS, De Quincy, La. Filed June 24, 1920. Serial No. 391,372. 1 Claim. (Cl. 130—20.)

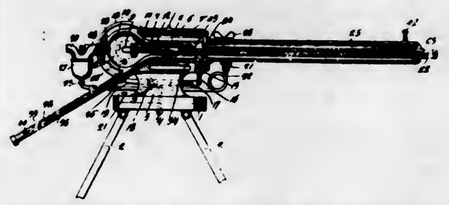


The hereindescribed method of forming a shock which consists of placing a bottom sheaf flat on the ground with its head portion bent upwardly and backwardly upon the sheaf and then placing additional sheaves with their heads superimposed on the head of the bottom sheaf.

1,391,249. ATTACHMENT FOR HIGH CHAIRS FOR BABIES. TRESSIE V. FINNEY, Oildale, Calif. Filed Jan. 24, 1921. Serial No. 439,460. 1 Claim. (Cl. 155—189.)

An attachment, for high chairs embodying the usual pivotal tray, support for the pivotal tray when in horizontal position and a seat, comprising a pliable member having its upper end permanently secured to the sides of the forward edge of the tray and its lower end detachably secured to the under surface of the seat, said pliable member being provided with openings for the reception of the legs of the child occupying the chair, said pliable member when detachably secured to the under surface of the seat preventing pivotal movement of the tray.

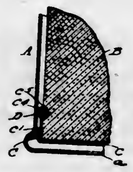
1,391,250. SNAP-FASTENER. ADOLPH FRANKEL, New York, N. Y. Filed Nov. 26, 1920. Serial No. 426,389. 5 Claims. (Cl. 24—218.)



5. A snap fastener comprising complemental members, one of said members comprising an elongated plate having a button-like projection, the other member having a base and a raised portion provided with an outer wall spaced from the base, said wall having a hollow extension projecting toward the plane of the base and provided with a side slot, said wall having an ear, and a spring having one portion secured in said ear and another portion located in said slot to engage said projection, the first named member having slots on opposite sides of said projection, a plate having prongs to enter said slots, the base of the second named member having slots on opposite sides of said projection, and a retainer plate having prongs to enter said slots.

1,391,251. SLIP-JAW WRENCH. MICHAEL I. GINSBURG, Philadelphia, Pa. Filed Apr. 2, 1919. Serial No. 286,919. Renewed Feb. 17, 1921. Serial No. 445,854. 1 Claim. (Cl. 81—165.)

In a wrench of the character described, a head having a stationary jaw and a shank formed therewith, a movable jaw having a tail piece formed therewith adapted to slide in the head, a sectional thread formed upon the tail piece, an adjusting nut meshing with said sectional thread, a bushing fitted to the adjusting nut, a sliding pintle passing through the head and the bushing of the adjusting nut, a cap secured upon one end of the pintle, shoulders formed within the head, a spring confined between said cap and shoulders, a handle pivoted within the shank, and a locking bolt pivoted to the handle in such manner as to pass into and out of engagement with the bushing of the adjusting nut when the handle is swung to and fro.



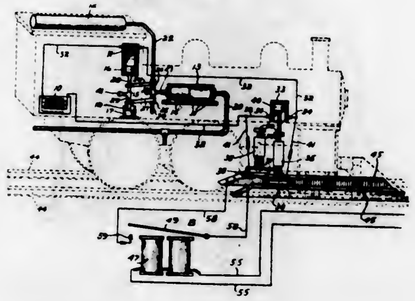
1,391,252. MACHINE-GUN. RAY O. HOOKER, Utica, Kans. Filed Oct. 29, 1919. Serial No. 334,181. 3 Claims. (Cl. 89—7.)

1. A machine gun comprising a base, a cylinder supported on the base and having an opening in one end thereof, a carbureter secured to and communicating with

the opposite end of the cylinder, a piston operable in the cylinder, a barrel secured to the end of the cylinder and communicating with the opening therein, a fuel chamber surrounding the barrel, means for feeding a bullet to the opening in the cylinder, and means for feeding fuel from the fuel chamber to the carbureter.

1,391,253. HOLDER FOR SEMISOLID MATERIALS. CHARLES G. HORNUNG, Buffalo, N. Y., assignor to Larkin Co., Buffalo, N. Y. Filed Jan. 9, 1920. Serial No. 350,267. 4 Claims. (Cl. 206—56.)

1. A container for a stick of material comprising a tubular housing having an open end, and a finger opening in its other end, a dished member adapted to slide in said housing, said dished member comprising a base upon which an end of said stick is adapted to rest and upwardly extending fingers on said base arranged at the sides of said stick, and a resilient member bearing on said stick and engaging said fingers for yieldingly pressing said fingers into gripping engagement with said housing.



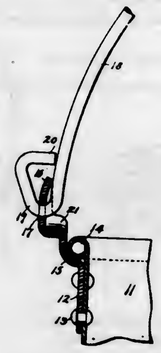
1,391,254. CHAIN FOR VEHICLE-TIRES. HENRY M. HULL, Fairfield, Conn. Filed Oct. 23, 1920. Serial No. 418,927. 7 Claims. (Cl. 152—14.)

1. A chain of the character described, consisting of a plurality of links each having complementary joint members, and a locking strip for positively holding said joint members to each other.

1,391,255. AUTOMATIC TRAIN-STOPPING MECHANISM. NEWTON C. KEELING, Danbury, Conn. Filed Mar. 3, 1920. Serial No. 362,946. 3 Claims. (Cl. 246—181.)

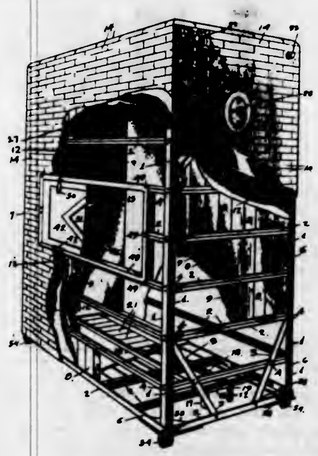
1. Automatic train stopping mechanism comprising a compressed air cylinder having extending therefrom a pipe provided with two valves and an outlet end, a stopping cylinder provided with ports and carrying a loose piston, a pipe connecting the stopping cylinder with the compressed air cylinder pipe at a point between its valves, means consisting of a solenoid in circuit for holding one of the valves open and the other closed, automatic means

for breaking the circuit to change the position of each valve, a brake pipe having connection with the stopping cylinder, and subsequently operable automatic means associated with said circuit breaking means for closing the circuit.



1,391,256. INDUCTION-COIL STRUCTURE. ARTHUR ATWATER KENT, Ardmore, Pa., assignor to Atwater Kent Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Continuation of application Serial No. 131,749, filed Nov. 16, 1916. This application filed July 9, 1921. Serial No. 483,423. 26 Claims. (Cl. 175—360.)

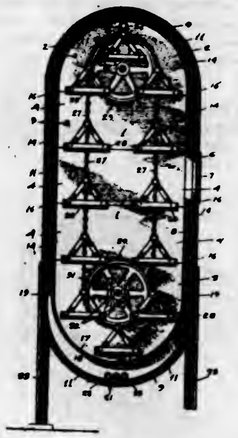
26. An ignition induction coil unit comprising the combination of a tubular casing, an induction coil therein, a diaphragm within and extending across said casing at one end of said induction coil, a cap on said casing spaced from said diaphragm to form a chamber, and a resistance disposed in said chamber and connected with the primary winding of said induction coil.



1,391,257. BAIL-EAR AND BAIL. JOSEPH F. LAMB, New Britain, Conn., assignor to Landers, Frary & Clark, New Britain, Conn., a Corporation of Connecticut. Filed June 5, 1919. Serial No. 301,989. 6 Claims. (Cl. 220—91.)

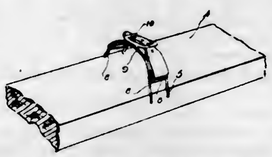
1. As a new article of manufacture, a bail ear having an extended bearing portion for frictional braking engagement with the bail as the bail swings, whereby the bail

may be frictionally held in the various positions to which it may be moved.



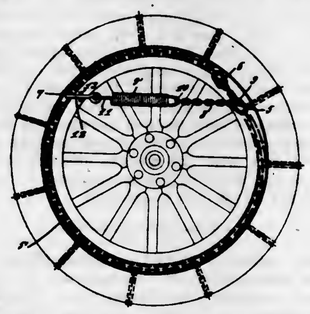
1,391,258. BAKING-OVEN. ERNEST E. LINDSEY, San Francisco, Calif., assignor to Bake-Rite Oven Manufacturing Company, a Corporation of Nevada. Filed Apr. 16, 1919. Serial No. 290,500. 4 Claims. (Cl. 72—16.)

1. In an oven adapted for baking purposes, the combination with a metallic frame for the top, the bottom and the sides of the oven, of horizontal girders spaced for supporting heat-insulating material; metallic reticula secured against the outer and inner surfaces of said heat insulating material in the top and sides; and tile outside of the outer reticulum in the sides; said frame, girders, insulating material, reticula and tile being mortared together to form a homogeneous wall structure.



1,391,259. SECTIONAL BAKING-OVEN. ERNEST E. LINDSEY, San Francisco, Calif., assignor to Bake-Rite Oven Manufacturing Company, a Corporation of Nevada. Continuation of application Serial No. 227,597, filed Apr. 9, 1918. This application filed May 12, 1919. Serial No. 296,638. 5 Claims. (Cl. 107—57.)

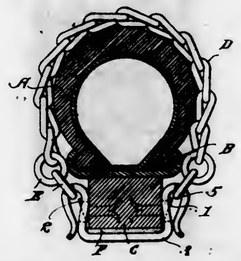
1. A sectional baking oven comprising arcuate top and bottom sections; intermediate sections arranged to be connected between said top and bottom sections; a combustion chamber formed within the bottom section and ar-



ranged to heat the inner arcuate surface thereat; and means for continuously moving a product to be baked along a path adjacent to said heated arcuate surface.

1,391,260. TOE-STRAP FOR SKEES. MARION E. MCCLELLAN, McClellan, Minn. Filed Sept. 8, 1920. Serial No. 408,982. 1 Claim. (Cl. 46—67.)

A toe-strap for skees including lugs each of which consists of a strand of wire, the opposite ends of which are pointed and penetrated in the side of the skee, the intermediate portion of said strand being extended upwardly and inwardly toward the longitudinal center of the skee, a bar connecting the sides of the strand and a strap extending from one lug to another and adapted to embrace the foot of the user of the skee.



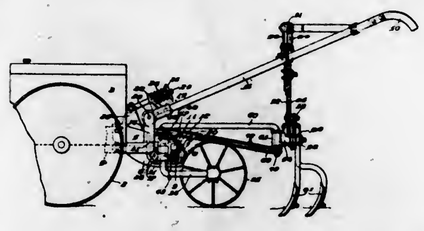
1,391,261. AUTOMOBILE-TIRE CHAIN. DAVID MCCOMB and JOHN MCCOMB, Stoughton, Wis. Filed Apr. 2, 1921. Serial No. 457,985. 2 Claims. (Cl. 152—14.)

1. In combination with links of an anti-skid chain, a securing means including a securing chain having one

end thereof connected to one of the end links of the chain, the intermediate portion of the securing chain passing through the adjacent end link of the chain, from where the same is passed through the first mentioned link, and resilient means for connecting the securing chain to the anti-skid chain.

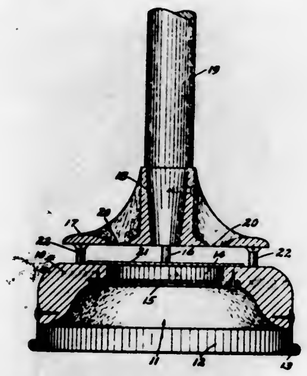
1,391,262. TRACTION DEVICE. WILLIAM H. MCLAUGHLIN, Hartford, Conn., assignor to Cassius S. Chase, Hartford, Conn. Filed July 13, 1917. Serial No. 180,328. 6 Claims. (Cl. 152—14.)

1. A resilient clip adapted to have positive engagement with a wheel felly and provided with a portion in arranged position extending across the inner peripheral face of the felly and with side portions having means to receive respectively the terminal portions of an anti-skid or traction element, each side portion being provided with a face to engage a lug, the engaged face of which lies substantially in a plane transverse of the wheel, whereby the resilient clip in applied relation will be held firmly against movement radially as a whole toward the hub of the wheel, but may be easily and quickly removed by a lateral pull on one of the side portions.



1,391,263. TRACTION DEVICE. WILLIAM H. MCLAUGHLIN, Hartford, Conn., assignor to Cassius S. Chase, Hartford, Conn. Filed July 13, 1917. Serial No. 180,329. 3 Claims. (Cl. 152—14.)

1. A wheel felly, in combination with two resilient plates adjustable with relation to each other to engage the opposite faces of said felly, means for holding said plates in adjusted relation to each other, said felly and said plates being provided with inter-engaging means, some of the engaging faces of which extend in a plane transverse of said felly, and a traction element removably connected to said plates, the sides of said plates being provided with means to receive the respective terminal portions of said traction element, the device as a whole being removable, without movement of the plates relative to each other and without affecting the adjusted relation of the parts, by disengaging one of the sides of said resilient plates by a lateral pull.

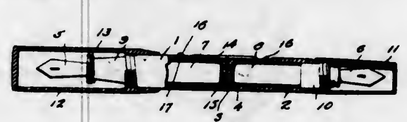


1,391,264. AGRICULTURAL IMPLEMENT. JOSEPH MADER, Philadelphia, Pa., assignor to S. L. Allen & Co., Inc., a Corporation of Pennsylvania. Filed June 9, 1920. Serial No. 387,522. 7 Claims. (Cl. 97—42.)

1. The combination with a wheeled vehicle having a frame, a transversely extending wheel bar adapted for oscillation in a vertical plane with respect thereto and a pair of caster wheels carried by said bar, of means for effecting a draft connection between an agricultural implement and said wheeled vehicle comprising a plurality of draft rods, means for supporting said rods above said

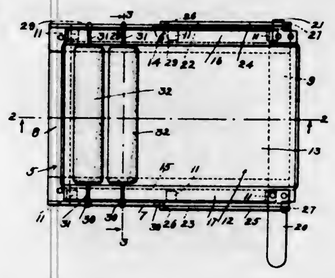
bar and said caster wheels, means for operably connecting said rods and said implement, a transversely extending bar connecting the forward ends of said rods, a transversely extending bar connecting the rear ends of said rods, and a link extending between said bars and pivotally connected thereto.

1,391,265. SUCTION-WASHER. MARTEN MANFRED, Santa Barbara, Calif. Filed Mar. 24, 1921. Serial No. 455,195. 6 Claims. (Cl. 259—143.)



1. A washing device comprising a member provided with an opening, a perforated disk supported by and arranged above said member, and a valve member loosely arranged between said member and said perforated disk, so that upward movement of said device would close said opening.

1,391,266. PICKER-STICK. HENRY W. MORGAN and JAMES O. WHITENER, Greenville, S. C. Filed June 8, 1921. Serial No. 475,978. 5 Claims. (Cl. 139—22.)



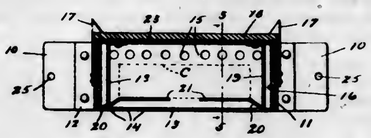
5. The combination of a picker stick and a flexible checkstrap, and a freely rotatable roller appliance mounted in the stick in the plane of the strap and having a length approximately equal to the width of the strap.

1,391,267. FOUNTAIN-PEN. NORMAN H. A. NELSON, Flint, Mich. Filed May 7, 1920. Serial No. 379,560. 5 Claims. (Cl. 120—42.)

2. A pen of the class described comprising a body formed of a pair of sections, a reservoir bulb mounted within each section, said body provided with an elongated slot formed therein, a pivoted lever inclosed between said sections and fitting snugly within said slot, each end of said lever being upturned for producing a compression knob adapted to engage a reservoir within the body of the pen, and each section provided with a dished-out portion located near each end of the lever for facilitating the lifting of the lever and swinging thereof to a desired position.

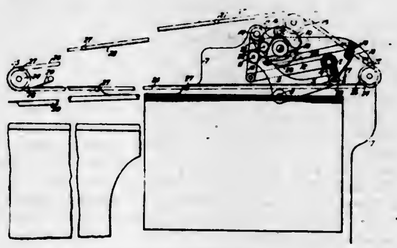
1,391,268. GRIDDLE. FRANCIS J. T. O'BRIEN, Los Angeles, Calif. Filed Oct. 14, 1919. Serial No. 330,631. 6 Claims. (Cl. 53—5.)

1. A griddle adapted to be placed adjacent a heating unit provided with means for supporting a food product of cylindrical formation, and means independent of said supporting means for rotating said food product.



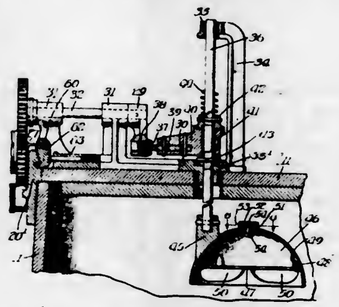
1,391,269. GRIDDLE. FRANCIS J. T. O'BRIEN, Los Angeles, Calif. Filed Feb. 7, 1920. Serial No. 356,910. 7 Claims. (Cl. 53—5.)

1. A griddle construction, comprising a stationary member adapted to rest over a heating unit, a slidable member mounted on said stationary member, means for supporting a cylindrical food product for rotation in said slidable member so that its peripheral surface will contact with said stationary member, and means for reciprocating said slidable member.



1,391,270. AUTOMOBILE-RADIATOR HEATER. URIAH V. O'DANIEL, Greencastle, Ind. Filed Mar. 26, 1921. Serial No. 455,918. 4 Claims. (Cl. 126—350.)

1. A radiator heater comprising an open-topped casing disposable against the front of a radiator, means for clamping the casing to the radiator, a cover for closing the top of the casing, said casing being provided with draft holes at its lower portion, and being provided in its wall

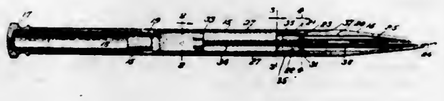


toward the radiator with heat discharge openings, and a holder depending from the cover for supporting a carbon brick.

1,391,271. MEANS FOR FEEDING SHEETS OF PAPER. SYDNEY PAYNE and ELKANAH STOTT, Otley, England, assignors to Payne & Sons (Otley) Limited, and William Dawson & Sons (Otley) Limited, Otley, Yorkshire, England. Filed Apr. 4, 1921. Serial No. 458,458. 7 Claims. (Cl. 271—28.)

1. In means for feeding sheets of paper one at a time from a pile, the combination of a pair of endless chains, means for imparting motion to said chains, a flexible tray carried by said chains and adapted to pass over said pile of sheets, and means for raising the leading edge of the top sheet of the pile whereby the tray is enabled to come between the top sheet and the pile.

1,391,272. GEARING FOR WASHING-MACHINES. ARTHUR H. PETERS, Fort Wayne, Ind. Filed Aug. 2, 1916. Serial No. 112,641. 13 Claims. (Cl. 74—14.)



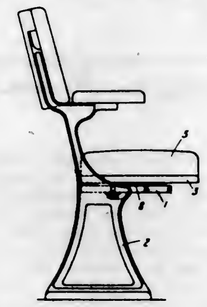
6. In apparatus of the class described, a support, a shaft mounted thereon, a driving gear on said shaft, a hinged member on the said support, a horizontal shaft on said hinged member, and driving connections, including an idler, between said gear and said horizontal shaft, substantially as described.

12. In apparatus of the class described, a support, a vertical reciprocatory shaft rotatably mounted on said

support, means on said support for reciprocating said shaft and comprising two slidably contacting surfaces, and means for increasing the pressure between said surfaces at a given portion of the reciprocatory travel of the shaft sufficiently to cause said surfaces to move together to cause said shaft to periodically rotate.

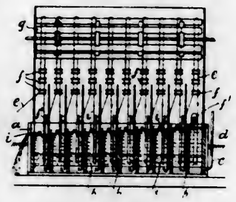
1,391,273. LEAD-PENCIL. ABRAHAM POLLAK, New York, N. Y., assignor to Samuel Kanner, New York, N. Y. Filed Feb. 2, 1921. Serial No. 441,739. 8 Claims. (Cl. 120—18.)

1. In a pencil, an exterior barrel, a hollow tip-member whose rear end portion is within the forward end of said barrel and provided with an annular groove, a longitudinal sleeve within said barrel and having forwardly projecting arms engaging the sides of the rear end of said tip-member and formed with depressions to lie within said annular groove, an internally threaded nut confined within said tip-member, a clutch-sleeve for leads within said tip member, a longitudinal screw-passing through said nut and entering said clutch-sleeve for projecting the lead therefrom, and means within said sleeve for guiding said screw and holding the same against rotation except therewith, said barrel and sleeve being rotatable for rotating said screw.



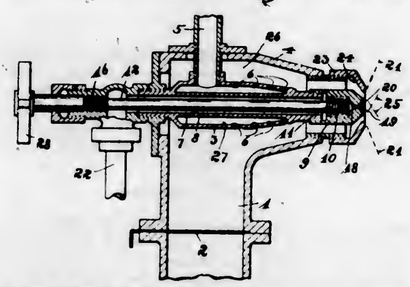
1,391,274. SHAVING-GAGE. GEORGE POSNICK, Springfield, Mass. Filed Dec. 20, 1920. Serial No. 431,901. 5 Claims. (Cl. 132—45.)

4. In a guide device for use in determining the line at which the hair is to be trimmed at the forward and upper edge of the ears, and comprising a band adapted to be passed over the head of the user, one end of the band having a loop for engaging the upper and rear sides of the ear, the other end of the band having a razor receiving gage device pivotally connected thereto, said gage device having a plurality of projections that are arranged at an angle to each other for receiving the rear edge of a razor blade, as described.



1,391,275. SEAT. WILLIAM JOSEPH RIDER, Horley, England. Filed Jan. 3, 1921. Serial No. 434,702. 3 Claims. (Cl. 155—115.)

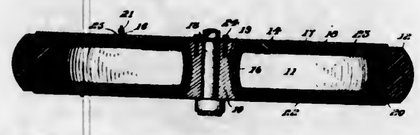
1. A seat comprising a relatively fixed plate, a relatively movable plate carrying the seat proper and operatively connected to said relatively fixed plate by a bolt and slot, mechanism intermediate between said relatively fixed and movable plates consisting of wire rope and of a peripherally grooved plate coöperating with said wire rope and having its axis coincident with the axis of said bolt, and a spring for returning said movable plate to



its normal position when displaced therefrom, substantially as described.

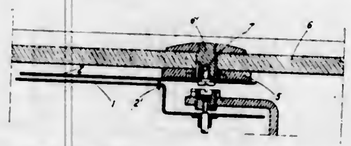
1,391,276. MACHINE FOR WASHING, SATURATING, AND SIMILARLY TREATING TEXTILE FABRICS AND YARNS IN ROPE FORM. FREDERIC ROBERTS, Accrington, England, assignor of one-half to The Calico Printer's Association, Limited, Manchester, England. Filed Nov. 1, 1919. Serial No. 335,144. 4 Claims. (Cl. 8—19.)

1. In a machine for treating textiles in rope form, the combination of a liquid receptacle divided into a plurality of compartments, each having a perforated false bottom, each compartment communicating with a succeeding compartment below the false bottom thereof, means for supplying a liquid to the last compartment of the series, means for conducting a rope of textile material into and out of successive compartments, the direction of progress of said rope being counter to the flow of liquid through the receptacle, and adjustable means for guiding said rope in its passage from one compartment to another.



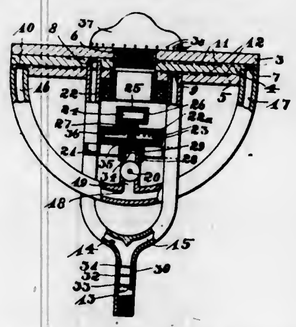
1,391,277. HYDROCARBON AND GAS BURNER. EDWIN E. RUSHTON, Los Angeles, Calif. Filed Sept. 30, 1920. Serial No. 413,811. 6 Claims. (Cl. 158—73.)

1. In a burner of the class described, a controlling valve having gradually deepening threads forming the passage-



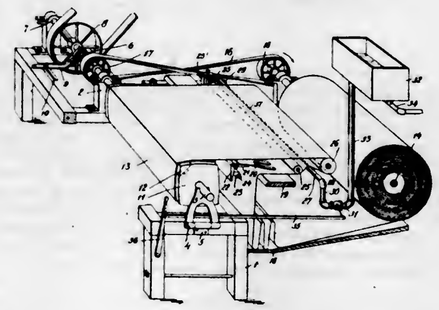
adjusting and controlling means of the valve and having setting means to move the valve in longitudinal direction independent of the adjusting and controlling means.

1,391,278. RESILIENT WHEEL. RUDOLPH SCHEEL, Dixon, Calif. Filed Apr. 29, 1919. Serial No. 293,380. 1 Claim. (Cl. 152—29.)



A resilient wheel comprising a hub, a separable tread member spaced from said hub, positioning plates at the ends of said hub and between which said tread member is received, a casing in the space between said hub and tread member having a side slot therein provided with closing means, and a pneumatic tube received within said casing.

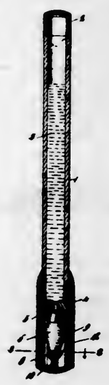
1,391,279. INDICATING DEVICE. EDOUARD SEIGNOL, Neuilly, France. Filed Jan. 9, 1920. Serial No. 350,272. 3 Claims. (Cl. 116—129.)



1. An indicating device, comprising an indicator hand, a maximum pointer adapted to be moved with said indicator hand, and a permanent magnet in contact with said maximum pointer for maintaining the pointer in its maximum position, that portion of the maximum pointer in contact with the magnet being disk-shaped and the axis on which the pointer revolves passing through the center of the disk.

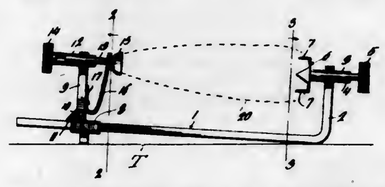
1,391,280. GASIFYING DEVICE. NOBLE W. SHELDON, Los Angeles, Calif. Filed Nov. 8, 1920. Serial No. 422,664. 7 Claims. (Cl. 158—53.)

7. In a gasifying device, a top having circulating conduits embodied in the material having also inlet and outlet conduits in communication with the conduits in the top and having a discharge passage through the top, a preheating nozzle disposed below the top in communication with the outlet conduit of the top having means for adjusting the nozzle in the direction toward and relation to the passage in the top, and a main discharge nozzle disposed below the top in communication with the outlet conduit of the top having adjusting means for adjusting the main nozzle in relation to the passage in the top adapted to shut off the preheating nozzle from the outlet communication with the top.



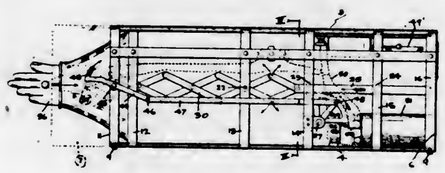
1,391,281. COATING DEVICE. GEORGE C. SNYDER, New York, N. Y. Original application filed Jan. 17, 1919, Serial No. 271,592. Divided and this application filed July 3, 1919. Serial No. 308,582. 8 Claims. (Cl. 91—43.)

1. In apparatus for coating sheet material with liquids, a member over which the material is adapted to be drawn and having an opening along its upper side through which the liquid may flow to the surface of the material, and a valve placed below the level of the opening for controlling the flow of liquid therethrough.



4. Apparatus for coating the underside of sheet material with a continuous film of adhesive, comprising a pipe provided with a continuous channel along the top thereof in communication with the interior of the pipe, the channel being of a length about equal to the width of the sheet material, the top of the pipe being provided with laterally extending passages in communication with said channel.

1,391,282. FOUNTAIN-BRUSH. PHIL A. STEPHENS, St Louis, Mo. Filed Sept. 22, 1920. Serial No. 412,055. 2 Claims. (Cl. 15—49.)



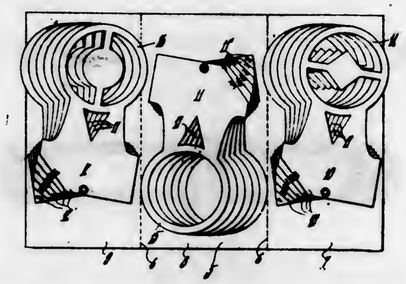
1. A fountain brush for sign-painters, including a liquid containing body equipped with a solid rubber brush member provided with a bore, which communicates with said body, and a cap for the brush end of said body, a portion of which is formed to provide a stopper for the outlet end of the brush.

1,391,283. CORN-HOLDER. ALBERT G. SUDERMAN, River Rouge, Mich. Filed Apr. 27, 1920. Serial No. 376,981. 1 Claim. (Cl. 294—5.)

An ear corn holder comprising a base bar having a fixed arm extending laterally therefrom, and a movable arm slidable thereon, bearings carried by said arms, shafts rotatable and slidable in said bearings, ear penetrating elements carried by the inner end of one shaft and a cap by the inner end of the other, means on the outer end of one shaft for rotating it, and bar gripping means carried by the movable arm to hold said arm in adjusted position, and a spring secured at one end to said movable arm and bearing at its other end against said cap whereby the movable arm is forced into biting engagement with the bar, and the cap clampingly engaged with the ear of corn to be held.

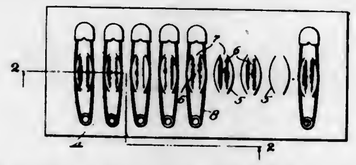
1,391,284. TRAFFIC-SIGNAL. ELI A. SUTZ, Oakland, Calif. Filed Feb. 12, 1920. Serial No. 358,033. 2 Claims. (Cl. 116—40.)

1. A traffic signal comprising a casing having a door pivotally mounted over an end thereof; an independent frame member mounted in said casing; a "lazy tongs" having a portion thereof pivotally connected to said frame and an index signal fixed on an end of said "lazy tongs"; and rack and segment means secured to said frame for moving said "lazy tongs" into the extended position through said door or retracted position within said casing.



1,391,285. BELT-COUPLING. JULIUS A. TURNER, New Marlboro, Mass. Filed Apr. 13, 1921. Serial No. 460,966. 3 Claims. (Cl. 24—33.)

3. The combination with a belt, of fastening-pieces arranged in spaced alternation in the belt-ends, each of the said fastening-pieces having an eye and a tangentially-arranged clenching-tail, and the tails of the said fastening-pieces being passed diagonally through the square edges of the belt-ends and clenched upon the outer faces of the same, the eyes of all of the fastening-pieces being located in line between the belt-ends and receiving a coupling-pin.

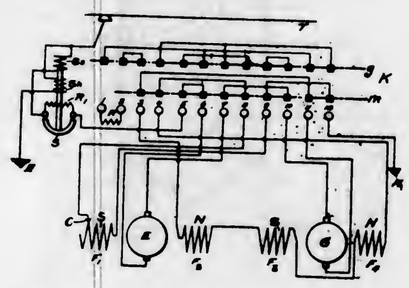


1,391,286. COLOR-CHART. CHARLES E. VAUTRAIN, Holyoke, Mass. Filed Apr. 10, 1920. Serial No. 372,886. 9 Claims. (Cl. 88—14.)

1. A color chart comprising in combination, a support, a plurality of groups of colored elements mounted thereon, each of said groups comprising a plurality of relatively movable elements arranged so that any element of any

group may be brought into an overlapping relation with any of the elements of any other group.

1,391,287. DISPLAY-CARD FOR SAFETY-PINS. JINDŘICH WALDES, Prague, Bohemia. Filed Aug. 1, 1919. Serial No. 314,757. 2 Claims. (Cl. 211—34.)

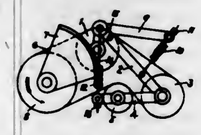


1. A safety pin card having slits therein arranged in pairs converging at opposite ends forming a pin holding device between each pair of slits which is narrow at each end and relatively wide in its middle portion, and which is of greater length than width, thus comprising two lips for engaging the pin.

1,391,288. HAIRPIN-PACKAGE. JINDŘICH WALDES, Prague, Bohemia. Filed Aug. 21, 1919. Serial No. 318,945. 1 Claim. (Cl. 206—66.)

A package for hair pins, comprising an integral sheet divided into back, front and side portions and having a flap extending from one end of the back portion, and ears extending from the ends of the side portions, the flap being turned inward upon the back portion and the front portion being folded over upon the back portion and upon the flap; the sides of the sheet being doubled upon themselves longitudinally and folded transversely over upon the rear portion of the package while the ears are turned over upon the upper portions of the sides.

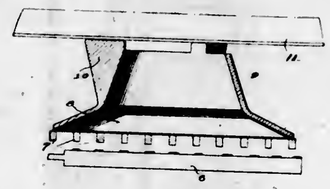
1,391,289. REGENERATIVE MOTOR-CONTROL SYSTEM. SAMUEL T. WEBSTER, St. Louis, Mo., assignor, by mesne assignments, to General Electric Company, a Corporation of New York. Filed Apr. 7, 1911. Serial No. 619,617. 33 Claims. (Cl. 172—179.)



1. The method of braking a series motor which comprises connecting a portion of its field winding in shunt to its armature and another portion in series with the armature to the line in order to return energy to the line when the motor acts as a generator.

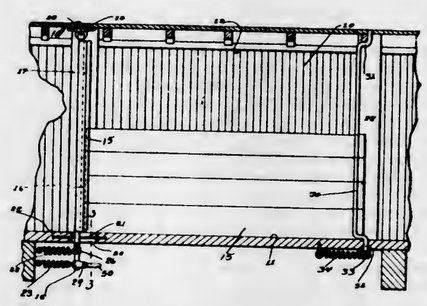
9. In a regenerative control system, the combination with a source of current, of a plurality of motors adapted to act as generators and return energy to said source, a resistance in the motor circuit, and means for automatically cutting out said resistance when a regenerated current flows to said source.

11. The method of braking a series motor which comprises connecting a portion of its field winding in shunt to its armature and another portion in series with the armature to the line in order to return energy to the line when the motor acts as a generator, and then disconnecting the motor from the line and short circuiting the motor.



24. In a regenerative control system, the combination with a line circuit, of a plurality of series motors having armatures and field windings and adapted to act as generators, means for connecting said motors with said line circuit to receive current therefrom and act as motors, means for connecting the armatures of said motors to said line circuit, means for connecting the field windings of one of said motors to the armature of the other motor, and means for connecting the field windings of said second motor, adapted to cause said motors to act as braking generators and return an automatically controlled current to said line circuit.

1,391,290. TRANSMISSION MECHANISM. EMILE JOHN WELFFENS, West Withington, Manchester, England. Filed Oct. 3, 1918. Serial No. 256,740. 8 Claims. (Cl. 74—21.)

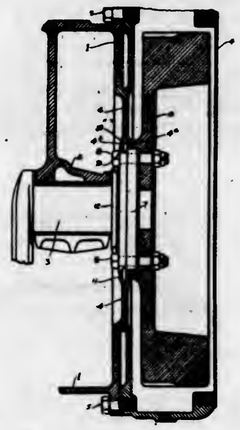


1. In a motion transmitting device comprising a driving member rotatable in a fixed plane, a driven member adapted to reciprocate in a path tangential to said driving member, and flexible means for transmitting motion from said driving member to said driven member, the combination of means for supporting said driven member in driving relation to said driving member and automatically adjustable during the travel of said driven member for neutralizing the variations of distances between the axes of said driving and driven members.

1,391,291. HEAT-DEFLECTOR AND DRAFT-CREATING DEVICE. ALBERT JULIUS ANDERSON, Ashtabula, Ohio. Filed Dec. 31, 1920. Serial No. 434,300. 3 Claims. (Cl. 126—215.)

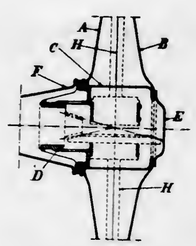
3. In a device of the character described, a block having a vertical bore therethrough and formed with an upper and a lower portion, the lower portion being flared outwardly and the upper portion being flared inwardly to constrict the bore of the block, and a series of laterally extending lugs carried by the block and projecting slightly beyond the upper end thereof.

1,391,292. GRAIN-BOARD HOLDER. JOSEPH AMY AXT, Amboy, Minn. Filed Oct. 7, 1919. Serial No. 329,068. 2 Claims. (Cl. 20—30.)



1. A grain door holder comprising a shaft having an offset jaw; means for mounting the shaft at its upper end for axial rotation and for swinging movement in a vertical plane; spring means for rotating the shaft in one direction; means under the control of an operator for rotating the shaft in an opposite direction; and means for imparting swinging movement to the shaft.

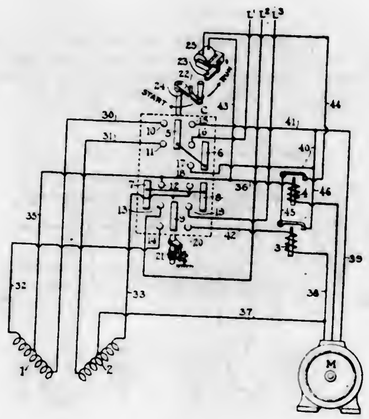
1,391,293. OIL-SEALING DEVICE. CHARLES BALOUGH, Canton, Ohio, assignor to The Hercules Motor Manufacturing Company, Canton, Ohio, a Corporation of Ohio. Filed Jan. 27, 1920. Serial No. 354,400. 3 Claims. (Cl. 286—10.)



1. In a structure of the character described, a liquid container having a wall provided with a circular opening, a circular revoluble member in said opening, with a space about the same, said wall having an annular chamber about said member, said member being provided with an upwardly and inwardly inclined circular face, ar-

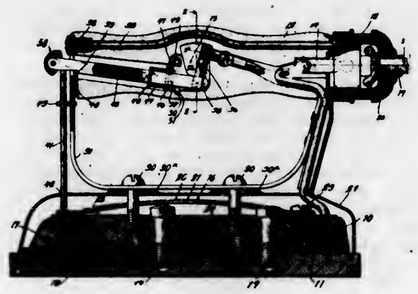
ranged to direct liquid from a portion of the space between said wall and member into the interior of said

container, said face extending with a gradually increasing diameter from a point in line with said chamber to a point in proximity to the interior of said container.



1,391,294. BACK AXLE FOR MOTOR-CARS. MARIUS JEAN BAPTISTE BARBAROU, Paris, France. Filed June 10, 1920. Serial No. 388,043. 3 Claims. (Cl. 74—56.)

1. A back axle for motor cars comprising a back axle body formed of two half shells of stamped sheet metal secured to each other in a vertical plane along their entire length, a removable framing adapted to be inserted into the back axle body and to support the rear axle gearing, trussing means outside said framing adapted to act as a stay in the central portions of said half shells and fastening means for securing said removable framing and said trussing means in position.

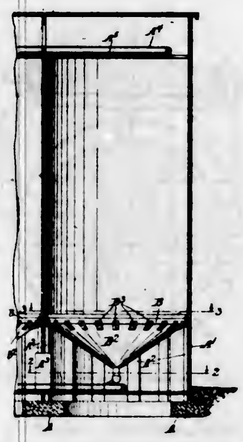


1,391,295. MOTOR-CONTROLLER. THOMAS E. BARNUM, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed July 23, 1917. Serial No. 182,184. 10 Claims. (Cl. 172—179.)

1. The combination with a polyphase alternating current motor, a plurality of compensator windings and a polyphase supply circuit, of a plurality of contacts and coöperating members insulated to provide a number of poles not exceeding the number of lines of said supply circuit and circuit connections whereby said contacts and coöperating members in one relation provide for connection of said windings to said supply circuit and completion of the circuit of said motor inclusive of said

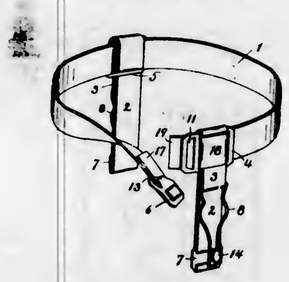
windings and in another relation for disconnection of said windings from said supply circuit and connection of the motor directly to said supply circuit.

1,391,296. ELECTRIC IRON. REUBEN B. BENJAMIN, Chicago, Ill., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 8, 1919. Serial No. 343,251. 11 Claims. (Cl. 219—25.)



1. An electric iron comprising a body portion provided with an electric heating element and a handle, a switch in said handle arranged to be manually set in open or closed condition, thermostatic means for opening the switch upon rise of temperature in the iron to a predetermined point, and means arranged for manual setting and capable of being set while the iron is in use for raising the temperature at which said switch will be opened by the thermostatic means.

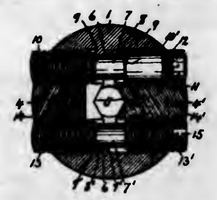
1,391,297. GRAIN-ELEVATOR. THOMAS D. BUDD, Chicago, Ill. Filed Apr. 12, 1920. Serial No. 373,058. 16 Claims. (Cl. 72—6.)



12. A receptacle for finely divided materials, having a vertically disposed wall, a downwardly funneled hopper

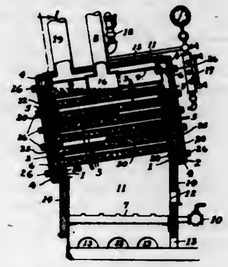
bottom, foundations adapted to support said wall and bottom, and means associated with said bottom adapted

to direct the weight supported by said bottom directly downwardly upon said foundations.



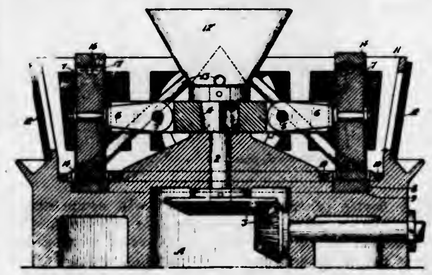
1,391,298. HOSE-SUPPORTER. JAMES H. BURT, Springfield, Mass., assignor, by direct and mesne assignments, to Thrift-Garter Co., Inc., New York, N. Y., a Corporation of New York. Filed July 29, 1920. Serial No. 399,730. 3 Claims. (Cl. 241—6.)

1. As an improved article of manufacture, a hose supporter comprising a band adapted to encircle the leg, slotted fastening members connected with the terminals of said band, and solely dependent on friction to hold them in place, said band having a looped part along one side of and between two of the slots in one of said fastening members, and tabs independent of said band and carried through another slot in and over the top of said last-named fastening member, and between said member and said looped part of the band, and also solely dependent on friction to hold them in place, said tabs being provided with stocking fastening members.



1,391,299. DRILL-CHUCK. HERMAN CASLER, Canastota, N. Y. Filed Sept. 3, 1919. Serial No. 321,394. 2 Claims. (Cl. 279—6.)

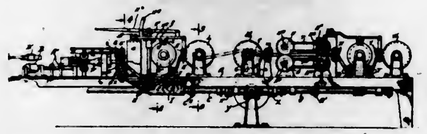
1. In a chuck of the character described, the combination of a pair of jaws, a rotary threaded spindle for moving one jaw toward and from the other jaw, means for holding said spindle against endwise movement, an axially movable rotary spindle having threaded engagement with



both jaws, and means for limiting the axial movement of the last named spindle.

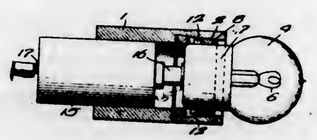
1,391,300. WATER-TUBE BOILER. WILLIAM COUNCEL, St. Louis, Mo., assignor of one-half to James Roche, St. Louis, Mo. Filed Feb. 21, 1921. Serial No. 446,700. 1 Claim. (Cl. 122—360.)

A water-tube boiler, comprising two cylindrical headers, water-tubes connected to said headers, and each of the latter comprising a circular tube-sheet having a marginal flange, a removable cover-plate therefor having a marginal flange adapted to telescopically engage the said marginal flange of the tube-sheet, a series of anchor-bolts passing through said tube-sheets and through their cover-plates, as well as through the water space of said header, said bolts being arranged near said flanges and being adapted to removably clamp the parts together, and make a tight joint between said tube-sheet and cover-plate, stay-bolts detachably connecting the tube-sheet and cover-plate, and arranged at suitable intervals within the space bounded by the said anchor-bolts, and detachable nuts on the outer ends of said anchor-bolts and stay-bolts, whereby the said cover-plate may be removed for cleaning and repairs.



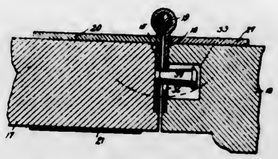
1,391,301. ORE-MILLING MACHINE. JOHN J. CRANMER, Pine Grove, Calif., assignor of one-fourth to Lee Payton, Pine Grove, Calif., and one-fourth to Joseph W. Preston, Jr., San Francisco, Calif. Filed Nov. 26, 1919. Serial No. 340,703. 4 Claims. (Cl. 83—45.)

2. In an ore milling machine, a muller, a plurality of shoes secured on the outer face of the muller, said shoes



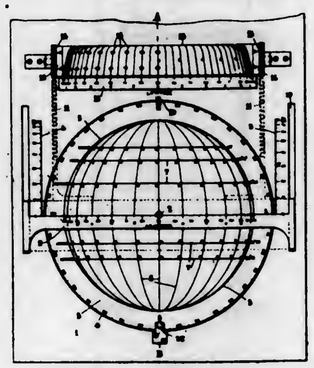
being cam-shaped and presenting a high and a low end, a recess formed in the high end of each shoe for the reception of the rear low end of the shoe disposed in front thereof, and a single securing means for each shoe.

1,391,302. PROCESS FOR MAKING BELTING. OTTO CZARAN, Long Island City, N. Y. Filed Jan. 28, 1919. Serial No. 273,649. 4 Claims. (Cl. 69—21.)



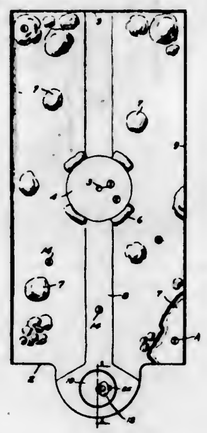
1. The process of making leather belting of desired cross-section consisting in cutting a strip of leather from the outer edge of a sheet of belting material, first forming said strip to the extreme width desired, then shaping it to desired cross-section, drawing it through a fluid bath under tension, thereby stretching the leather and causing the same to absorb a portion of said fluid, thence compressing said strip thereby smoothening and hardening the same, and then passing it between polishing wheels substantially as described.

1,391,303. CONNECTOR. HARRY A. DOUGLAS, Bronson, Mich., assignor to Douglas & Rudd Mfg. Co., Bronson, Mich., a Corporation of Michigan. Filed Aug. 9, 1917. Serial No. 185,251. 8 Claims. (Cl. 173—328.)



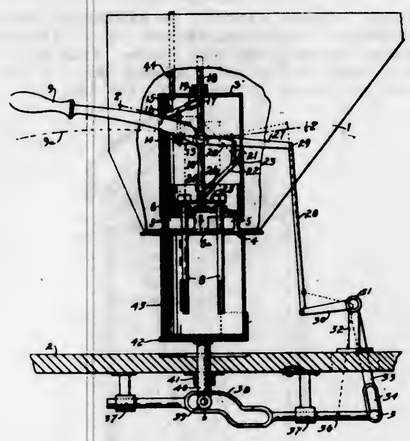
3. A circuit connector including a shell, an expansible and contractible contact carrier receiving ring movable within the shell and having wedging engagement therewith, said ring being positioned normally at substantially the limit of its non-wedging movement, and means energized by the insertion of a contact carrier within said ring operating to move the ring in a wedging direction and thereby contract the same upon the carrier, said means being ineffective to move the ring from normal position during insertion and removal of the contact carrier in and from the ring.

1,391,304. LOCKING HINGE OR CONNECTOR. FRANCIS J. DOWLING, New York, N. Y. Filed June 2, 1920. Serial No. 386,008. 10 Claims. (Cl. 16—106.)



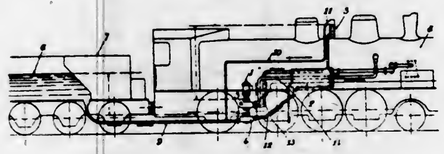
2. A device of the character set forth comprising a pair of plates, pivot means serving to provide for the movement of one of the plates in the arc of a circle with respect to the other plate, rigid tapering means fixed to one of the plates and overlapping the other plate and serving to prevent relative movement between the plates in any other direction than in the direction stated.

1,391,305. NAVIGATIONAL INSTRUMENT. ROBERT ALLON ELDRIDGE, Herne Bay, England. Filed July 12, 1920. Serial No. 395,702. 5 Claims. (Cl. 33—80.)



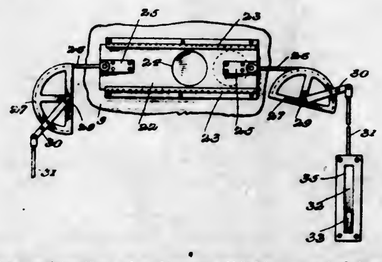
1. A navigational instrument comprising a base, a disk mounted so as to turn on said base, said disk having a plurality of lines representing time angles and the declinations of selected celestial bodies marked thereon and being adapted to be set in various positions according to observations for the purpose of taking readings, a slider slidably connected to the base for parallel movements over the disk, said slider being adapted to be moved over the disk so as to enable readings to be made on the disk, a member having lines representing azimuths marked thereon, and means coöperating with the slider for enabling the azimuth to be read directly from said surface.

1,391,306. GAME. RALPH ELIASER, San Francisco, Calif. Filed June 10, 1920. Serial No. 387,866. 12 Claims. (Cl. 46—61.)



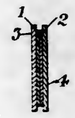
1. A game comprising a board having evaluated areas, a manually controlled and operated figure pivotally connected to the board to turn to different directions over the areas and having a club for driving a ball, and a tee at the axis of rotation of the figure to hold a ball to be struck irrespective of the direction of the stroke of the club.

1,391,307. CANNING-MACHINE. REUBEN B. ERICH, San Jose, Calif. Filed Feb. 1, 1921. Serial No. 441,648. 8 Claims. (Cl. 226—112.)



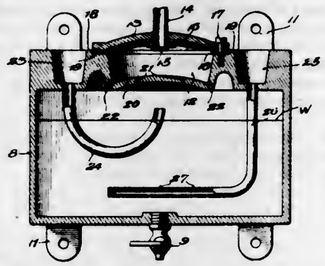
1. A canning machine including a hopper having a discharge opening formed therein, means for supporting a can in operative relation to said opening, a chamber arranged above said opening and provided with a passage to said hopper, a plunger operatively mounted in said chamber to open and close said passage, an element mounted to reciprocate through said plunger and extend into a can positioned therebelow, and means for operating said plunger and element in opposite directions.

1,391,308. MEANS FOR SUPPLYING STEAM-BOILERS WITH FEED-WATER. SEBASTIEN OTTO ALFRED FIEDLER, Paris, France, assignor to L'Auxiliaire Des Chemins De Fer Et De L'Industrie, Paris, France. Filed Mar. 30, 1921. Serial No. 456,816. 3 Claims. (Cl. 103—79.)



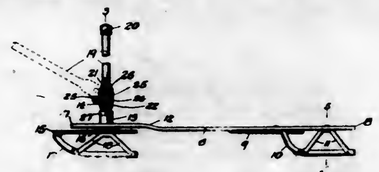
1. An installation for supplying steam boilers with feed water, comprising in combination a feed water tank, a tandem pump having a cold water cylinder and a hot water cylinder, a water-heater, an expansion vessel in communication with the atmosphere at its upper part, said expansion vessel being located on a level higher than both the level of the feed tank and the level of the hot water cylinder of the pump, means connecting the inlet of the cold water cylinder of the pump to the feed tank and the outlet to the water-heater, means connecting the inlet of the hot water cylinder of the pump to the water heater and the outlet to the boiler, means for connecting the lower part of the expansion vessel with the water heater at the highest point which can be reached by the water in the latter and means for establishing a communication between the upper part of the expansion vessel and the feed water tank.

1,391,309. DAMPER FOR VENTILATING SYSTEMS. WILLIAM G. FORCIER, Wollaston, Mass. Original application filed July 31, 1919, Serial No. 314,405. Divided and this application filed Feb. 14, 1920. Serial No. 358,802. 1 Claim. (Cl. 251—51.)



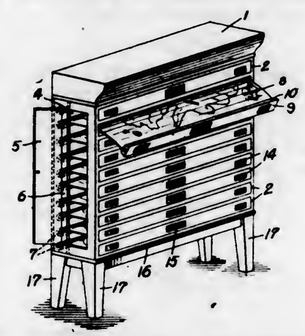
The combination of a damper slidably mounted to cover or uncover a ventilating opening, segments disposed adjacent the ends of said damper and connected therewith, levers mounted below the damper, and connections between said levers and the respective segments.

1,391,310. COLOR PHOTOGRAPHY. WILLIAM FRIESE-GREENE, London, England, assignor to Colour Photography Limited, London, England. Original application filed July 8, 1919, Serial No. 309,455. Divided and this application filed Jan. 31, 1921. Serial No. 441,495. 4 Claims. (Cl. 95—2.)



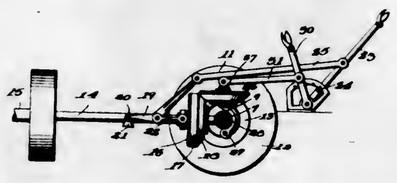
4. A color-photography process comprising simultaneously exposing without a light filter or other color-screen two superimposed sensitized surfaces placed face-to-face of which the one nearer the incident light is an ordinary non-color sensitized surface and the other is a panchromatic sensitized surface.

1,391,311. AERATED WATER-SUPPLY DEVICE. CLARENCE M. FROST, Attleboro, Mass. Filed Feb. 7, 1920. Serial No. 357,001. 5 Claims. (Cl. 183—24.)



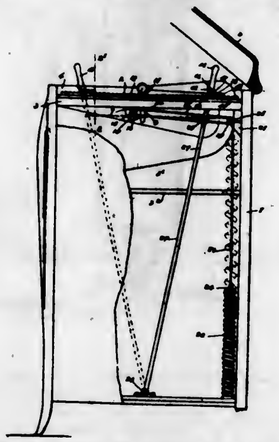
1. A device for supplying aerated water to an internal-combustion engine comprising a water-container having a chamber in its upper portion, a perforated partition between said chamber and the lower portion of the container, a tube arranged to discharge air above the water level upwardly against said partition, another tube arranged to discharge air into water in the container, and an outlet member from said chamber arranged to be connected with an engine.

1,391,312. SLED. EDWARD J. GEBHARDT, Hoboken, N. J. Filed Aug. 25, 1920. Serial No. 405,907. 1 Claim. (Cl. 280—16.)



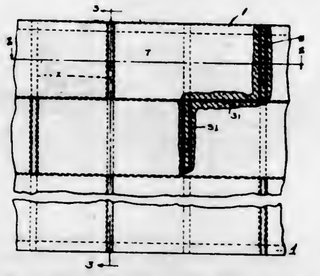
A sled of the class described involving a main body or platform portion having countersunk feet receiving recesses or receptacles.

1,391,313. FILING-CABINET FOR PLANS. VICTOR GEOFFRION, L'Assomption, Quebec, Canada. Filed Dec. 1, 1919. Serial No. 341,730. 1 Claim. (Cl. 40—83.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



A filing cabinet for maps and the like, having a plurality of parallel slots formed in its front wall, and division bars between said slots and defining the longitudinal edges thereof; a plurality of spring rollers mounted within the cabinet in parallel relation to one another and to said slots and directly behind the latter; a flexible map attached along its rear edge to each roller and normally rolled up thereon by the action of the roller spring, certain of the division bars being removable from the cabinet wall to permit the insertion of the maps and rollers into the interior of the cabinet, and being provided on their opposite end faces with spring-actuated fastening means detachably engaged with the said cabinet wall to hold them in place; and a panel to which each map is secured along its forward edge, adapted to fit conformably in the respective slot, with its outer face flush with the outer face of the front wall of the cabinet.

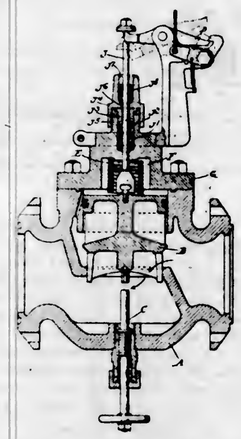
1,391,314. TRANSMISSION-GEARING. RALPH DOUGLASS GEORGE, Kansas City, Mo. Filed June 18, 1920. Serial No. 389,898. 6 Claims. (Cl. 74—26.)



4. In a transmission gearing of the character described, a driven shaft including two sections, a differential connecting said sections and having an internal gear constituting its master gear and means for driving said driven shaft through said differential including a driving pinion engaging the internal gear thereof.

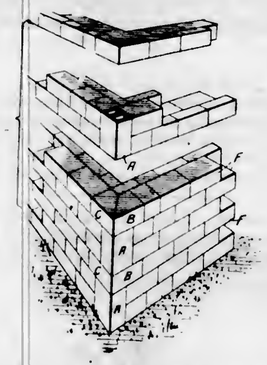
1,391,315. SPRING WINDING OR STRESSING MECHANISM FOR TALKING-MACHINES. WILLIAM EDWARD GORDON, Winnipeg, Manitoba, Canada. Filed Nov. 11, 1919, Serial No. 337,232. Renewed Aug. 15, 1921. Serial No. 492,587. 7 Claims. (Cl. 185—39.)

1. In a talking machine, the combination with the turntable spindle, of a helical spring having one end fast, a pivoted lever, a flexible connection between the lever and the other end of the spring, a wheel over which the connection runs, a shaft rotatably carrying the wheel, means for coupling the wheel to the shaft when rotating in one direction and a driving connection between the shaft and the spindle.



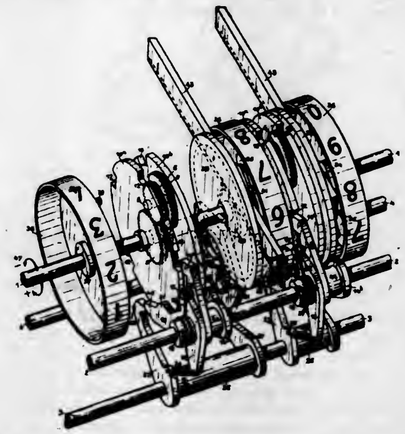
1,391,316. CONSTRUCTION OF WALLS OF PREFORMED UNITS. HUGH R. HADFIELD, Akron, Ohio. Filed Jan. 27, 1920. Serial No. 354,497. 6 Claims. (Cl. 72—16.)

1. A wall construction comprising studs having projections making shoulders with the faces of the studs and tiles adapted to fit against the faces of said studs and the sides of such projections, the sides of such projections and said tiles being provided with alined grooves adapted to receive a grouting to tie said studs and tiles together.



1,391,317. VALVE-STEM PACKING. CHARLES C. HANSEN, Chicago, Ill., assignor to Refrigerating Specialties Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 12, 1918. Serial No. 249,461. 5 Claims. (Cl. 286—17.)

5. The combination with a stem mounted for vertical reciprocation but normally at rest of two lubricant chambers about said stem one above the other, a passage connecting them adapted to allow lubricant to flow from the upper chamber to the lower irrespective of the movement of said stem and lubricant in them in contact with

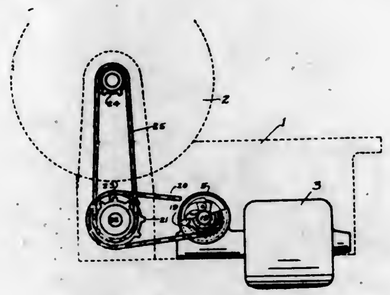


said shaft, the upper chamber provided with an opening for the introduction of lubricant the depth of the lubricant in the upper chamber being substantially as great as the excursion of the stem.

1,391,318. HOLLOW-WALL CONSTRUCTION. FREDERICK HEATH, Tacoma, Wash., assignor to Heath Unit Tile Company, Tacoma, Wash., a Corporation of Washington. Filed Sept. 23, 1916. Serial No. 121,760. 4 Claims. (Cl. 72—41.)

4. A hollow wall construction consisting of a plurality of courses of horizontally laid hollow blocks, the voids of said blocks running in a horizontal direction, the blocks of certain courses having a corner block consisting of one of the hollow blocks laid vertically, other adjacent courses consisting of hollow blocks laid horizontally, the corners of said last named courses comprising a pair of mitered hollow blocks having voids registering with the voids of said horizontally laid blocks, said mitered blocks being placed together along their mitered edges to provide continuous air spaces, the upper and lower edges of the mitered blocks being arranged to engage the ends of the vertically disposed blocks in adjacent courses so as to cover the voids in the vertically disposed blocks.

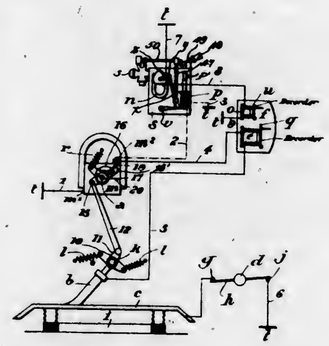
1,391,319. TENS-CARRYING MECHANISM OF COMPUTING-MACHINES. KARL HOECKEN, Berlin-Friedenau, Germany. Filed Sept. 18, 1917. Serial No. 191,080. 17 Claims. (Cl. 235—139.)



1. In a computing machine, the combination of a rotary actuating member adapted to be rotated during the computing operation; a numeral member; a higher order numeral member; movable means adapted to be actuated by said actuating member and to move said higher order numeral member an increment on each actuation; and means controlled by said first named numeral member and adapted to cause said movable means to be actuated by said actuating means.

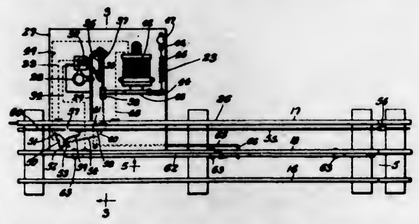
3. In a computing machine, the combination of a rotary actuating member adapted to be rotated during the computing operation; a numeral member provided with a carrying means; movable means adapted to be actuated by said actuating means; a positioning member; a higher order numeral member adapted to be moved one step by and on each movement of actuation of said actuating means; means whereby said higher order member may be operated by either the movable means or the positioning member the one independently of the other; means controlled by said carrying means adapted to establish an operative connection between said actuating means and said movable means; and means adapted to automatically release said connection.

5. In a computing machine, the combination of a rotary actuating member adapted to be rotated during the computing operation; a numeral member provided with a carrying means; a higher order numeral member; movable means adapted to rotate said higher order member an increment on each actuation by said actuating member; a positioning member; means whereby said higher order member may be operated by either the movable means or the positioning member the one independently of the other; and means controlled by said carrying means adapted to establish an operative connection between said actuating means and said movable means.



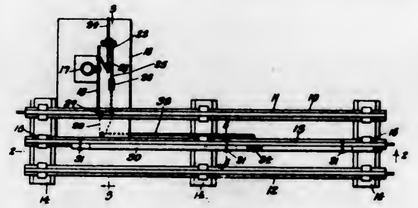
7. In a computing machine, the combination of a rotary member; an actuating member; a normally moving operating means; a differential operatively interposed between said means and members; a locking means adapted to be moved to lock either member and release the other, and normally locking the actuating member; a numeral member provided with a carrying means to cause said locking means to release the actuating member and lock the rotary member; an actuating device on said actuating member; a movable means adapted to be rotated by said device; a positioning member; a higher order numeral member; and a differential operatively interposed between said higher order member, said positioning member and said movable means.

1,391,320. OPERATING MECHANISM FOR SLICING-MACHINES. ERNEST K. HOOD, Indianapolis, Ind., and WALLACE B. WOLFF, Chicago, Ill., assignors to The American Slicing Machine Co., Chicago, Ill., a Corporation of New York. Filed Dec. 23, 1918. Serial No. 267,996. 3 Claims. (Cl. 74—7.)



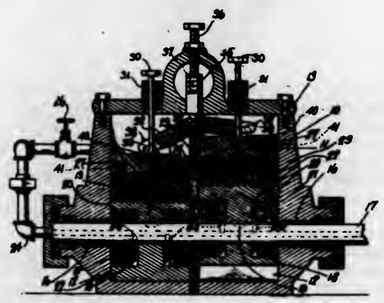
1. A transmission mechanism comprising a motor, a reduction gear unit, unitary therewith; a power-transmitting connection connected to said gear unit, including interchangeable gear elements and an overrunning clutch; and a hand-operated device geared to the transmitting connection at a point in the connection more remote from the motor than the clutch.

1,391,321. INDICATING, RECORDING, AND CONTROLLING DEVICE ACTUATED BY AN ELECTRIC CURRENT. JOSEPH ERNEST COLAS and EDMOND LOUIS MARIE RAGONOT, Paris, France. Filed July 17, 1913. Serial No. 779,604. 3 Claims. (Cl. 246—69.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



2. An electrical signaling apparatus comprising in combination means carried on a locomotive for generating a current at the time the locomotive passes a predetermined section of track, connections between said means and ground including a switch which is closed when the signal is at clear, a recording apparatus controlled by said current generating means for recording the passage of a signal not at clear, a recording apparatus for recording the passage of a signal at clear, and parallel circuits for said apparatuses leading from said current generating means, the circuit for said second mentioned apparatus including said switch, the circuits of said recording apparatuses being so proportioned that when the circuit of the second apparatus is closed sufficient current is available for the first recording apparatus to operate it.

1,391,322. BLOCK SYSTEM FOR ELECTRIC-RAILWAY TRAINS. AINSLEY L. JONES, 2d, Mariners Harbor, N. Y. Filed Jan. 22, 1921. Serial No. 439,067. 15 Claims. (Cl. 104—153.)



10. A block system for miniature electric railways comprising a plurality of electric signal post constructions located at predetermined points along the track of a railway and provided with electric elements, the electric elements of said signal post constructions being in electrical connection with the current carrying rails of the railway track, and mechanical means in operative connection with said signal post constructions for automatically operating the signal elements thereof to move the same into danger positions in the progress of one or more electric locomotives or cars over the track of said railway.

1,391,323. STOP DEVICE FOR ELECTRIC-RAILWAY TRAINS. AINSLEY L. JONES, 2d, Mariners Harbor, N. Y. Filed Jan. 22, 1921. Serial No. 439,068. 10 Claims. (Cl. 246—187.)

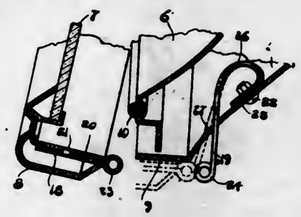
1. A stop device for electric railways of the class described comprising a rail composed of insulating material mounted longitudinally of and in connection with one of the current carrying rails of a railway, and means for moving said insulating rail into position to break the circuit to a locomotive or car as it passes thereover.

1,391,324. PUMP. HENRY M. KEITH, West Frankfort, Ill., assignor to Keith Pump Company, West Frankfort, Ill. Filed Sept. 7, 1920. Serial No. 408,457. 5 Claims. (Cl. 103—44.)

1. A rotary pump including a rotor chamber having an inlet and an outlet port, a shaft rotatable within the chamber, a rotor fixed upon the shaft, a packing interposed between said ports and engaging the periphery of said rotor, friction elements connecting the walls of said chamber, and means whereby said elements are controlled by the high pressure of the fluid passing through the pump.

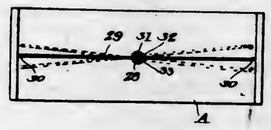
1,391,325. GREASE-GUN. FRANK B. KILLIAN, New Dorp, N. Y. Filed Jan. 22, 1918. Serial No. 213,212. 11 Claims. (Cl. 221—79.)

1. A combined shipping package and grease gun comprising a shell, a plunger of sufficient rigidity to smooth out such indentations as may form in the shell and movably fitted therein, and means supported at opposite ends of the shell and operative to maintain the plunger centered transversely in a fixed plane transverse to the axis of the shell with sufficient rigidity to cause the plunger to smooth out such indentations and to move the plunger longitudinally therein.



1,391,326. TOILET-PAPER HOLDER. JOHN FRANCIS KILLIAN, Stockton, Calif. Filed Jan. 28, 1921. Serial No. 440,561. 3 Claims. (Cl. 211—31.)

1. A toilet paper holder including a spindle adapted to receive a paper-roll thereon, and a tapered plate extending longitudinally of the spindle and fixed directly thereon, whereby the roll-core may be wedged thereon to hold the roll against rotation relative to the spindle.



1,391,327. FASTENING FOR AUTOMOBILE-LAMP CLOSURES. EUGENE A. KUEN, Cincinnati, Ohio, assignor to The Thos. J. Corcoran Lamp Company, Cincinnati, Ohio. Filed July 23, 1920. Serial No. 398,476. 5 Claims. (Cl. 16—128.)

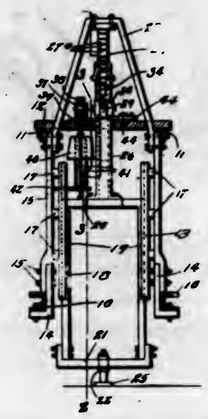
3. In combination with a lamp body, and a closure for the body, a fastening comprising a rigid member secured to one of said parts, a spring member secured to another of said parts away from the rigid member, and means

adapted detachably to connect the members when the spring member is flexed to bring it under tension, whereby the closure will be held yieldingly toward the body.

1,391,328. TRAIN-STOPPING DEVICE. WILLIAM LEACH, Moose Jaw, Saskatchewan, Canada. Filed Mar. 27, 1920. Serial No. 369,292. 3 Claims. (Cl. 137—139.)

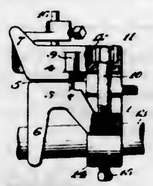
1. In a train stopping device, the combination of a car, a train line pipe beneath the car, a valve provided with two outlet ports, a lever adapted to operate the valve and cause it to register with either of the ports, said lever being operable by a stationary signal man, located at the side of the car when the car is moving in either direction.

1,391,329. THERMOSTATIC DEVICE. EDMUND B. LENNIG, San Francisco, Calif., assignor to Thermic Engineering Co., San Francisco, Calif., a Corporation of California. Filed June 26, 1917. Serial No. 177,084. 4 Claims. (Cl. 200—138.)



1. In a thermostat device, a pivoted switch having a laterally extending arm, an adjustable screw projecting through said arm, a counterbalance carried by said arm, below the latter and at one side of its center of gravity of said arm to effect the automatic depression of said arm, a contact post with which said arm normally contacts, and a thermostat, located above said counterbalance, extending in substantial parallelism with said arm and coöperating with the lower end of said screw to move said arm out of contact with said contact post.

1,391,330. LIFTING AND SWINGING SUPPORT FOR RAILWAY MOTOR-CARS. JOSEPH E. LOEFFLER, St. Louis, Mo. Filed Mar. 21, 1921. Serial No. 453,938. 6 Claims. (Cl. 254—86.)

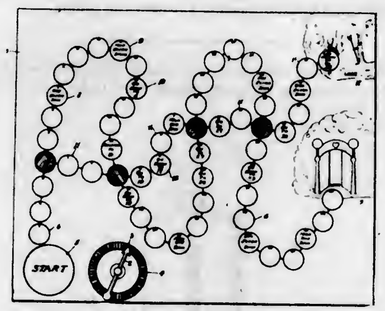


1. The combination of a motor car, vertically disposed guideways fixed thereto, a slidable member mounted in said guideways and adapted to be moved in position on the ground, a housing carried by said slidable member, a ver-

tically disposed member secured to said motor car and having its lower end slidably mounted in said housing, and a

lever pivotally mounted on said housing and adapted to operatively engage said vertically disposed member.

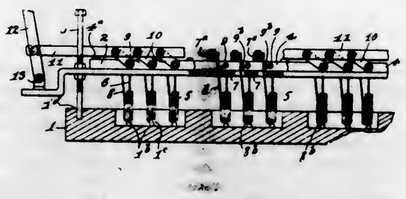
1,391,331. SLUB-CATCHER. JOHN O. MCKEAN, Westfield, Mass., assignor to Foster Machine Company, Westfield, Mass., a Corporation of Massachusetts. Filed Sept. 16, 1920. Serial No. 410,637. 6 Claims. (Cl. 28—20.)



5. A slub catcher comprising an integral resilient yoke, the branches of which form between them a slit for the passage of the yarn, said slit having parallel walls, and a screw spanning the branches for springing one of the branches out of its normal position to vary the width of the slit and at the same time to maintain the parallelism of its walls.

1,391,332. PROCESS OF OXIDIZING GASES. RALPH H. MCKEE, New York, N. Y. Filed Apr. 5, 1919, Serial No. 287,740. Renewed Feb. 10, 1921. Serial No. 444,001. 6 Claims. (Cl. 23—1.)

1. The process of oxidizing gases which comprises passing said gases together with a sufficient amount of oxygen in contact with a catalyst comprising hydrated silica gel, substantially as described.

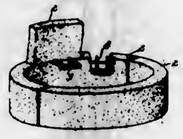


1,391,333. GAME. WILLIAM F. MCMANUS, Oklahoma, Okla. Filed Oct. 8, 1920. Serial No. 415,540. 1 Claim. (Cl. 46—63.)

A game board over which tokens are to be moved at chance-determined intervals and having displayed thereon a connected series of stations defining a main path over which the tokens are to be moved, and a second connected

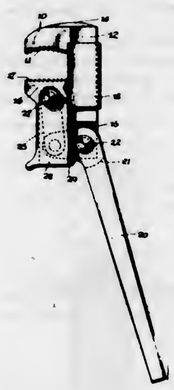
series of stations defining a shorter path intersecting and extending across the path defined by the first-mentioned stations.

1,391,334. MOLD-INSERT-FEEDING MECHANISM. LOUIS C. MARTIN, Willoughby, Ohio. Filed Dec. 29, 1920. Serial No. 433,767. 12 Claims. (Cl. 18—1.)



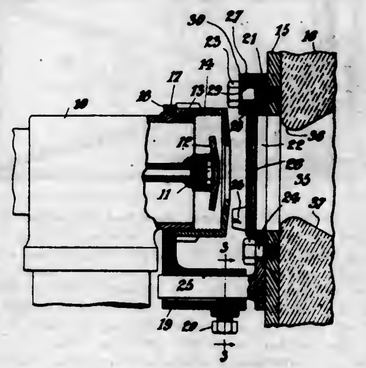
1. In a mold insert feeding device, an insert feeding and guiding member vertically supported above the mold cavity and carrying a plurality of superposed inserts, a movable element at one side of said member provided with an insert supporting, depositing and separating portion, and means for throwing said depositing and separating portion into and out of engagement with said inserts.

1,391,335. PISTON-RING. WALTER DAVID MATHEWS, Marlette, Mich. Filed Dec. 1, 1919. Serial No. 341,642. 1 Claim. (Cl. 74—109.)



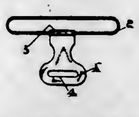
A piston ring comprising two similar sections each having a diagonal gap, the gaps being diametrically opposite in the assembled ring, each section including a circular portion of uniform width and thickness and further including an outwardly extending flange having its greatest thickness opposite the gap of the other section and tapering gradually toward both ends, the ends terminating considerably short of the gap, and an inwardly extending radial pin on each section, the other section being recessed for the accommodation of the pin.

1,391,336. REINFORCED-CONCRETE MANHOLE AND SEWER-INLET CASING. AUGUST H. MEINERS, St. Louis, Mo., assignor of one-half to Ernst Paffrath, St. Louis, Mo. Filed Jan. 22, 1921. Serial No. 439,236. 1 Claim. (Cl. 72—100.)



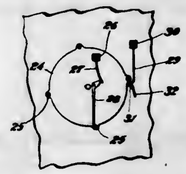
A knock-down reinforced concrete manhole and sewer-inlet casing, composed of a series of ready-made layers of semicircular sections having their end-joints overlapped by adjacent sections, and the ends of two sections of each layer being abutted; there being opposite registering recesses in certain sections at the joint between them; and metallic L-shaped steps placed partly in the recesses of the under sections, and partly in the recesses of the section immediately above it, the outer arm of said steps being in a vertical position, and in contact with the exterior wall of the adjacent section, to laterally hold said sections in place, and prevent inward movement of said steps.

1,391,337. WRENCH. ARTHUR WELLS MINNEY, Stockton, Calif. Filed Mar. 3, 1921. Serial No. 449,296. 2 Claims. (Cl. 81—126.)



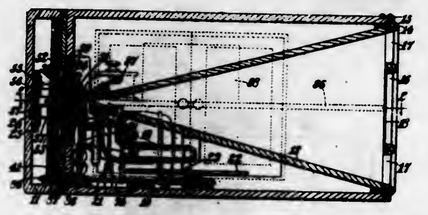
1. A wrench of the character described comprising an outer jaw having a shank provided with inclined side faces comprising shoulders on the line of juncture of the shank with the jaw, an inner jaw having a guide embracing said shank and provided with angular flanges slidably engaged with the shoulders of the shank, said shank having a reduced extension at its outer end, a handle having a bifurcated end embracing said reduced extension, a pivot pin extending through said bifurcated end and said reduced extension, said bifurcated end being provided with a pair of lateral arms, a link having one end received between said lateral arms, pivot pins extending through said link and said lateral arms and a pivot pin connecting the other end of said link to said inner jaw, said inner jaw having a depending guard incasing said link and said lateral arm and preventing lateral displacement of the pivot pin connecting the links and the lateral arms.

1,391,338. BURNER-SUPPORT. ALBERT W. MORSE, Forest Hills, N. Y., assignor to The Anthony Company, Long Island City, N. Y., a Corporation of New York. Filed Mar. 11, 1919. Serial No. 282,048. 6 Claims. (Cl. 158—1.)



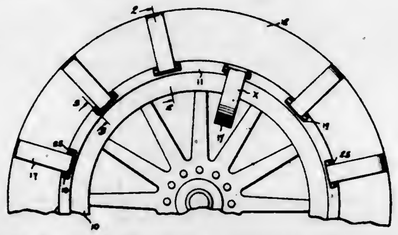
1. The combination of a burner, a furnace, a burner support, an adjustable connection between the burner and the furnace comprising a pin and socket slidably contacting, and a shutter pivoted on said support.

1,391,339. NECKTIE-SUPPORT. WALTER R. MORSON and EDGAR BEAUMONT JARVIS, Toronto, Ontario, Canada. Filed Apr. 19, 1917. Serial No. 163,274. 2 Claims. (Cl. 24—56.)



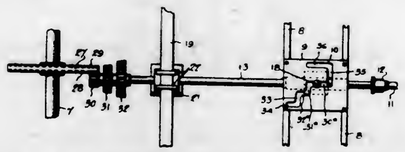
1. A tie support comprising an attaching member having an oblong transverse slot formed therein and a transverse loop member having a tie holder secured to the attaching member, the support being adapted to fit over a collar button provided with a flattened shank of approximately the same size and form in cross section as the slot aforesaid, and with support retaining means adapted to pass through the slot.

1,391,340. TIMEPIECE-MOVEMENT. THOMAS F. I. O'BRIEN, Brooklyn, N. Y. Filed Aug. 20, 1920. Serial No. 404,754. 2 Claims. (Cl. 58—116.)



1. In a time piece movement, the combination with motive means, of a rotary member constantly actuated in one direction, said member having protuberances thereon, stop means for engaging said protuberances and interrupting rotation of said member, and releasing means for said stop means adapted to be deflected by engagement with said protuberances, said releasing means being mounted eccentrically with respect to the rotary member so as to disengage the protuberances at a predetermined position so as to return to normal position and release said stop means from the next protuberance.

1,391,341. MOTION-PICTURE APPARATUS. NOEL PEMBERTON-BILLING, Hertford, England. Filed Jan. 12, 1921. Serial No. 436,743. 4 Claims. (Cl. 88—18.8.)

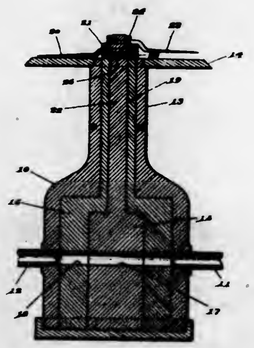


1. A device of the class described, including in combination, a picture supporting member having a continuous band of pictures on one side thereof and mounted for both rotary and lateral movement, said support having ratchet teeth on the opposite side thereof and lying in a continuous band corresponding in shape to the band of pictures, a toothed driving member in mesh with the ratchet teeth for effecting rotation of said support, and stationary means separate from said driving member in continual engagement with the support for effecting lateral movement thereof as it rotates.

1,391,342. ANTISKID DEVICE. OSWALD S. PULLIAM, New York, N. Y. Filed July 12, 1919. Serial No. 310,324. 2 Claims. (Cl. 152—14.)

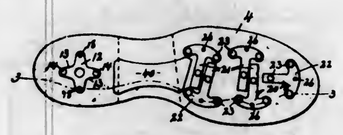
1. A device of the character described comprising in combination, a wheel, a rim, a plurality of anti-skid devices carried by said rim and adapted for movement into operative position in engagement with the tread of said tire, and out of operative position out of engagement with the tread of the tire, and a sliding bolt for locking said anti-skid elements in both their operative and inoperative positions.

1,391,343. TRANSMISSION. OSWALD S. PULLIAM, New York, N. Y. Filed July 28, 1919. Serial No. 313,766. 2 Claims. (Cl. 74—58.)



1. A driving member, a driven member, a shaft connecting the driving member with the driven member, a plurality of gears carried by the shaft and adapted to individually engage the driven member, means for moving the shaft longitudinally to cause individual engagement of said gears, and means for moving the shaft transversely to permit of one of the gears carried by said shaft engaging the driven member upon its opposite side to reverse the direction of travel thereof.

1,391,344. PILE-DRIVING APPARATUS. ALEXANDER GEORGIEVITCH ROTINOFF, London, England. Filed June 17, 1921. Serial No. 478,398. 9 Claims. (Cl. 61—78.)



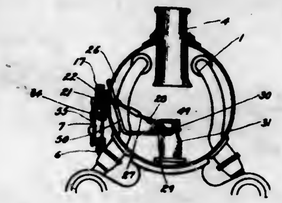
1. For driving tubular structures into the soil, the combination of, a tubular member, a tapered nose at the lower end thereof having driving connection with the tubular member, a monkey guided to rise and fall in an approximately vertical path and in falling to strike the top of the tubular member, a second monkey within the tubular member and immediately behind the nose of the same, means for causing the upper monkey to rise and to be dropped alternately on to the top of the tubular member, and non-rigid means having in itself a comparatively small inertia effect connecting the lower monkey to the upper monkey, whereby the lower monkey is made to follow the movements of the upper monkey.

1,391,345. GASOLENE-VALVE LOCK. SAUL SARMAS, Philadelphia, Pa. Filed Oct. 4, 1920. Serial No. 414,413. 1 Claim. (Cl. 251—6.)

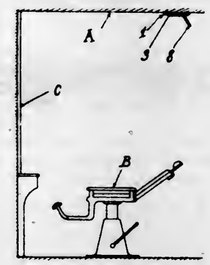
A valve comprising a plurality of nested valve members having fluid passages arranged for registry, the upper end of each member carrying an indicating hand which is adjustable thereabout, and each of said members being formed with a transverse opening in parallel relation to its fluid passage for coöperative reception of a tool to hold the members with their fluid passages in registry when the hands are being adjusted.

1,391,346. CLEAT ATTACHMENT FOR FOOTBALL-SHOES. JOSEPH KARL SCHWARZER, Syracuse, N. Y. Filed Apr. 26, 1921. Serial No. 464,658. 1 Claim. (Cl. 36—59.)

In a foot-ball shoe, a one-piece leather sole and heel, a thin metal plate applied to the upper face of the heel and provided with pendent hollow bosses projecting through apertures in the heel portion and threaded internally, a heel-lift applied to the under side of the heel portion and provided with apertures registering with the first named apertures and frusto-conical spurs having their larger ends flat and bearing against the under side of the heel and provided with central upwardly projecting threaded members screwed into the internally threaded bosses, an extra sole applied to the lower face of the main sole portion, a series of relatively thin metal plates secured to the upper face of the main sole portion in spaced relation and provided with hollow bosses projecting upwardly through apertures in the main sole portion, said extra sole being provided with apertures registering with those in the main sole portion, and separate conical studs having their larger ends flat and engaged with the under side of the extra sole and provided with upwardly projecting threaded members screwing into the hollow bosses.



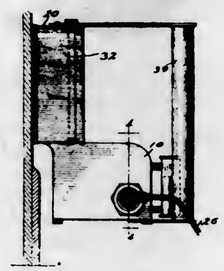
1,391,347. FLOAT-OPERATED CIRCUIT-CLOSER. JOSEPH I. STANFA, Erie, Pa. Filed Aug. 24, 1917. Serial No. 187,977. 2 Claims. (Cl. 200—84.)



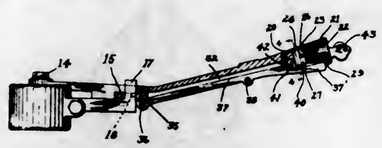
1. In a circuit closer, the combination with a receptacle, inwardly extending ears carried by the receptacle, a float lever having downwardly extending ears intermediate its ends extending between the ears carried by the receptacle and having an angular opening therein, insulating blocks within said openings, a pivot extending through the ears carried by the receptacle and through the blocks, a float carried by the inner end of the lever, and a terminal detachably mounted on one end of the lever and another terminal mounted on the receptacle, whereby the raising of the float causes the outer end of the lever to engage the receptacle and complete the circuit.

1,391,348. DRAFT-REGULATOR. HENRY V. STEVENS, Emporia, Kans. Continuation of application Serial No. 284,756, filed Mar. 24, 1919. This application filed June 7, 1920. Serial No. 386,953. 10 Claims. (Cl. 162—8.)

1. In a draft regulator for steam boiler furnaces, a nozzle having an expansible and contradictible ring at its outlet and to vary the effective port area of said nozzle, means responsive to boiler pressure for expanding and contracting said ring, and a boiler pressure actuated lubricating means for supplying lubricant to said ring.

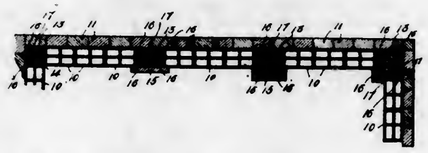


1,391,349. DISPLAY-PANEL. DOLPHUS M. TOLTON, Pomona, Calif. Filed Feb. 23, 1921. Serial No. 447,309. 3 Claims. (Cl. 40—125.)



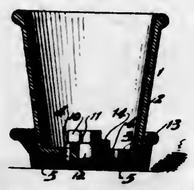
1. A device of the class described comprising a panel made in the shape of a frame, means for supporting an object in the frame, said panel having sockets in one side thereof and a mirror frame having projections thereon for engaging said sockets for holding the mirror frame in an inclined position relative to the panel.

1,391,350. STEAM WALL-PAPER REMOVER. ARTHUR WALLACE TUCKER, Tulsa, Okla., assignor of one-half to J. P. Riche, Kansas City, Mo. Filed Oct. 5, 1920. Serial No. 414,893. 6 Claims. (Cl. 216—8.)



5. In a steam wall paper remover of the character described, a reservoir for water having a steam space and a steam outlet, a distributer arranged over the steam outlet of the reservoir and having an opening, a distributer screen of wire mesh covering said opening, and a series of deflectors directing the steam toward the screened opening of the distributer.

1,391,351. LOCK. HENRY G. VOIGHT, New Britain, Conn., assignor to Sargent & Company, New Haven, Conn., a Corporation of Connecticut. Filed Dec. 12, 1917. Serial No. 206,768. 14 Claims. (Cl. 70—132.)

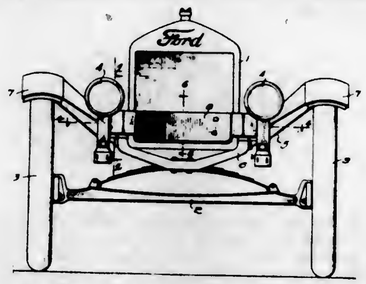


1. An adjustable lever having a slot extending lengthwise of the same, a rocking member mounted within said slot, and a key-controlled lock mounted within said lever, said lock provided with rotatable means operable by a key and movable thereby into position to block the rocking movement of said member within its slot.

1,391,352. FIREPROOF BUILDING CONSTRUCTION. ALFRED P. WARD, San Antonio, Tex. Filed Oct. 1, 1917. Serial No. 194,220. 5 Claims. (Cl. 72—16.)

1. In wall construction, the combination of a plurality of tiles laid up with vertical spaces between the facing ends of certain of the tiles, a brick facing laid up against the outer sides of said tiles and across said vertical spaces to close the same, and poured cementitious elements molded in said spaces between the tiles and the brick.

1,391,353. FLOWERPOT OR OTHER VESSEL. RUSSELL D. WELLS, Royersford, Pa. Filed Aug. 21, 1920. Serial No. 405,170. 5 Claims. (Cl. 47—19.)

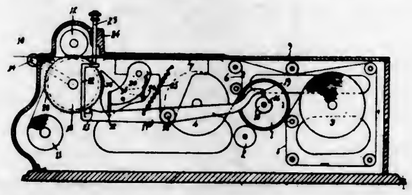


2. A flower pot or other vessel having a base provided with ports and parallel walls on the bottom of said base, into the spaces between which walls said ports discharge.

5. The combination of a vessel, a saucer therefor, spacing devices intermediate the bottoms of said vessel and saucer, and locking means common to said saucer and vessel, whereby a partial axial rotation of either will immovably lock said saucer with respect to its vessel, the bottom of said vessel having ports therein leading to the passages between said spacing devices.

1,391,354. WATER-HEATER. ROBERT W. WIEDERWAX, Atlantic City, N. J., assignor, by direct and mesne assignments, to Geist Manufacturing Company, Atlantic City, N. J., a Corporation of Delaware. Filed Dec. 23, 1920. Serial No. 432,795. 8 Claims. (Cl. 126—350.)

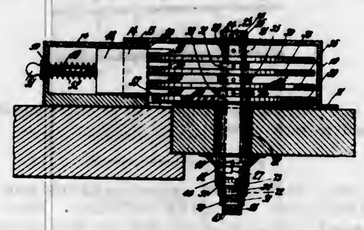
1. In a device for heating the circulating fluid in cooling systems of motor vehicles, the combination with a radiator, of a relatively shallow casing arranged in front of said radiator, a casing arranged in the rear of said



radiator, and burner casings arranged at each side of said front casing and communicating therewith.

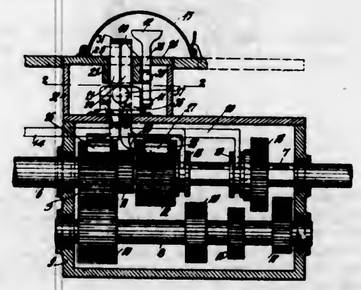
1,391,355. AIRCRAFT. NICOLAS WOYEVODSKY, London, England. Filed May 12, 1919. Serial No. 296,700. 18 Claims. (Cl. 244—12.)

1. A craft formed throughout of pterygoid aerofoil cross section inclosing all structural parts, in which the aerofoil section while maintaining a constant contour increases constantly in length from one longitudinal section of the aircraft to another.



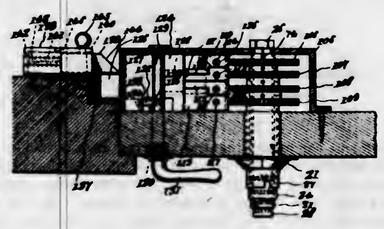
1,391,356. PRINTING AND SERVING MACHINE. CLAYTON E. WYRICK, Albany, N. Y., assignor to Multi-Print System Co., Inc., Chicago, Ill., a Corporation of South Dakota. Filed Dec. 7, 1918. Serial No. 265,772. 8 Claims. (Cl. 101—227.)

1. In a printing and serving machine, a printing roll, there being a paper roll formed of a spirally wound strip adapted to be withdrawn in printing contact with the printing roll, withdrawing means therefor, a spring actuated locking device for preventing withdrawal of the strip, a control device on the printing roll adapted to release the locking means to actuation by the spring at predetermined intervals.



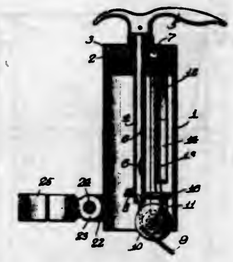
1,391,357. PERMUTATION-LOCK. RICHARD BAER, New York, N. Y. Filed May 19, 1920. Serial No. 382,645. 4 Claims. (Cl. 70—53.)

1. In a lock, a casing, a shaft on said casing, a plurality of superimposed relatively rotatable sleeves upon said shaft, a plurality of locking members operatively connected to the respective inner ends of said sleeves, and disposed in spaced relation to each other, the outer ends of said sleeves being exposed to permit of independent operation thereof to bring said locking members to predetermined relation with each other, said members being provided with cut-outs adapted to be alined in said predetermined relation, and a keeper provided with a plurality of spaced portions adapted to be disposed in the



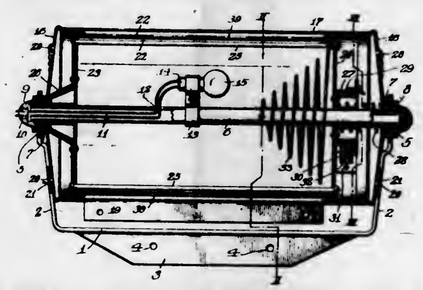
spaces between said locking members and adapted to be released from engagement with said locking members upon alinement of said cut-outs in said predetermined relation.

1,391,358. LOCKING DEVICE FOR MOTOR-VEHICLES. RICHARD BAER and HUGO KOPP, New York, N. Y. Filed July 1, 1920. Serial No. 393,348. 11 Claims. (Cl. 70—90.)



1. In combination with change speed mechanism, including rotatable power transmission elements, one of said elements being axially shiftable for connection and disconnection with respect to the other element; means for locking said elements against rotation when in disconnected relation.

1,391,359. PERMUTATION-LOCK. RICHARD BAER, New York, N. Y. Original application filed May 19, 1920, Serial No. 382,645. Divided and this application filed June 2, 1921. Serial No. 474,359. 4 Claims. (Cl. 70—53.)

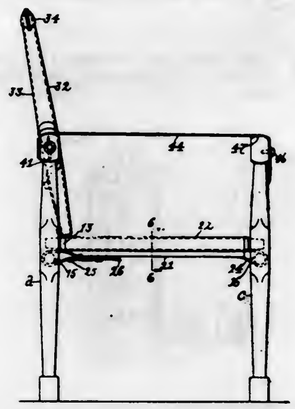


1. In a lock, a casing, a shaft in said casing, a plurality of superimposed relatively rotatable sleeves upon said shaft, a plurality of gears respectively mounted upon the inner ends of said sleeves, the outer ends of said sleeves being exposed to permit of independent operation thereof to turn said gears, a plurality of relatively movable members having teeth engaging said respective gears, and having bolt engaging portions, a bolt in said casing adapted to be retracted and propected, and having means to engage said bolt engaging portions in retracted position, and in a predetermined position of said sleeves in which said portions are in alinement with said means on said bolt.

1,391,360. AUTOMOBILE-SIGNAL-CONTROLLING DEVICE. WALTER L. BEACH, Flint, Mich. Filed Dec. 15, 1919. Serial No. 344,874. 6 Claims. (Cl. 74—5.)

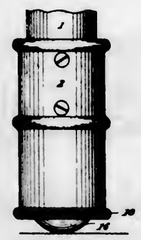
3. A controlling device adapted for operating a signal, comprising a cylinder, a reciprocatory and rotary operating member slidable in said cylinder, a flexible member connected to said operating member and adapted for operating a signal, and a stop member supported at one end of said cylinder and extending into said cylinder parallel to said operating member and adapted to limit the movement of said operating member.

1,391,361. EXHIBITOR FOR SIGNALS. WALTER L. BEACH, Flint, Mich. Filed Mar. 8, 1920. Serial No. 364,277. 4 Claims. (Cl. 116—43.)



1. An exhibitor for signal purposes, comprising a bracket having end arms, a casing, caps on the ends of said casing, circumferentially disposed teeth on said caps adapted to engage in said arms and hold said casing relative to the end arms of said bracket, and a rotary sign member in said casing.

1,391,362. KNOCKDOWN CHAIR. EDWARD BICKEL, Seattle, Wash. Filed Oct. 16, 1919. Serial No. 330,986. 3 Claims. (Cl. 155—196.)



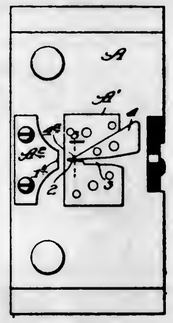
1. In a knock-down chair, in combination, a frame comprising upright corner posts or members provided with sockets, cross bars removably inserted into said sockets to connect the corner posts together, a flexible seat member provided with loops through which are passed the front and side cross bars, and having straps to engage the rear cross bar, bars pivoted to the rear corner posts to form a back supporting frame, a flexible

back member provided with side loops for the reception of the upper portion of said pivoted bars and having side flaps passed about the lower part of said pivoted bars, and

provided with straps and buckles to connect the side flaps together, and flexible side arms connecting the rear and front corner posts.

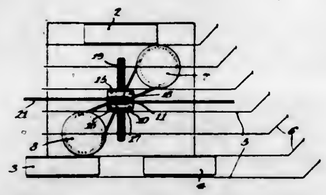
1,391,363. FURNITURE-CASTER. LUKAS BOZIK, Livingston, Ill. Filed Mar. 22, 1921. Serial No. 454,597. 1 Claim. (Cl. 16—151.)

A furniture caster of the type described comprising a caster body having sockets at the upper and lower ends thereof, an anti-friction bearing ball supporting frame positioned within the lower socket and interlocked with the walls thereof, a caster ball extending into said socket and frame, a ring threaded into the end of the lower socket for retaining the caster ball in position, said bearing ball supporting frame including an annular band, an arched spider-shaped frame carried by said band and having ball-receiving openings therein, and radial lugs carried by said band, the inner face of the lower socket having T-shaped grooves therein into which the band lugs are received for retaining the bearing ball frame within the caster body.



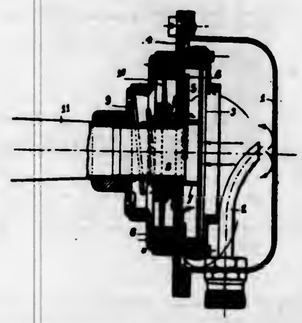
1,391,364. JOINT. CARL V. BULOW, Bridgeport, Conn. Filed Sept. 20, 1920. Serial No. 411,638. 7 Claims. (Cl. 287—104.)

1. A joint consisting of a pair of interlocking members and a pair of cut-away tubular members rotatably mounted thereon, said tubular members capable of rotating on said interlocking members as a unit to be positioned so



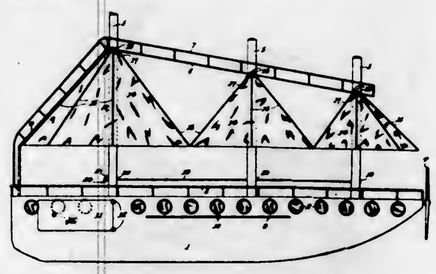
that said interlocking members can be either moved from or held to each other.

1,391,365. METHOD OF AND APPARATUS FOR MANUFACTURING CROCHET-NEEDLES. GUSTAV A. CARLSON, Chicago, Ill., assignor to The Boye Needle Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 31, 1920. Serial No. 407,236. 3 Claims. (Cl. 78—81.)



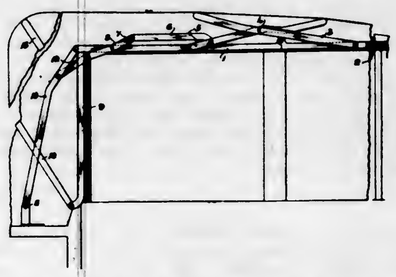
1. The method of manufacturing a crochet-hook which comprises stamping the extremity of a shaft between dies to form a hook and a central fin surrounding the hook; then forcing the hook into a female die by means of a male die, the dies being adapted to completely sever the fin from the hook.

1,391,366. MOTOR-PLOW. PAUL LOUIS CHAMPONNOIS, Villiers-le-Sec, Creuilly, France. Filed Jan. 29, 1913, Serial No. 744,987. Renewed Mar. 31, 1921. Serial No. 457,360½. 1 Claim. (Cl. 104—169.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



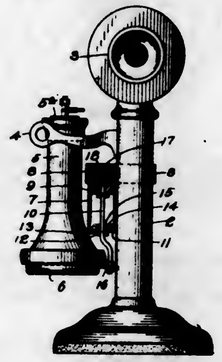
A device for propelling and steering an automobile plow with hauling rope, having a system of rope disks around which the fixed rope is wound the plow being propelled along this rope which is guided by drums adapted to be displaced transversely characterized by the arrangement according to which the steering apparatus consists of a block which forms a nut upon two horizontal transverse screw spindles, said block being adapted to be moved along said spindles, and having two vertical loose rope disks situated in a longitudinal plane and four drums with vertical axles arranged between said horizontal rope disks under the fixed frame of the plow.

1,391,367. SOUND SIGNALING DEVICE. LOUIS CHOLLET, Paris, France. Filed Aug. 11, 1919. Serial No. 316,827. 18 Claims. (Cl. 116—138.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



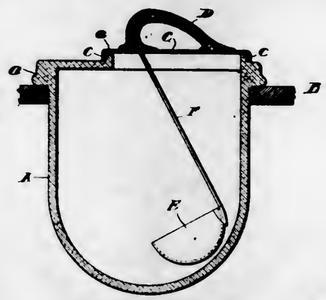
1. A sound signaling device comprising in combination a rigid plate, an axially vibrating tube facing and at right angles to said plate, and means to project a stream of fluid under pressure through the opening of variable cross section between said plate and said tube.

1,391,368. HYDROPLANE. JOHN CISON, Wausau, Wis. Filed Nov. 24, 1920. Serial No. 426,218. 3 Claims. (Cl. 244—2.)



1. A hydroplane comprising a body, a propeller at the forward end thereof, side fins and rudders carried by the body, parachute sections disposed above said body, and an observation platform positioned above said parachute sections.

1,391,369. FOLDING OR COLLAPSIBLE HEAD OR HOOD OF VEHICLES. ARTHUR SAM CHESTON, London, England. Filed Apr. 29, 1920. Serial No. 377,665. 2 Claims. (Cl. 296—116.)

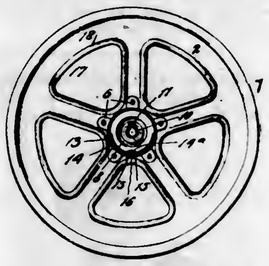


1. In hoods for vehicles, the combination with a cant-rail, of a folding pillar, a link connecting said pillar to the cant-rail, a hinged rear stay pivoted at its upper end directly to the cant-rail, and a link connecting said pillar and the rear stay, so that when the hood is collapsed, the rear stay causes said cant-rail to move rearward relatively to the pillar so that the rear end of the cant-rail extends beyond the end of the pillar.

1,391,370. SUPPORT FOR TELEPHONE-RECEIVERS. CHARLES M. CLARKE, Sewickley, Pa. Filed Aug. 13, 1918. Serial No. 249,735. 14 Claims. (Cl. 179—146.)

5. Means for temporarily supporting a telephone receiver in operative relation to its supporting fork and for lowering it thereinto, having a supporting device and means for interposing a decreasing resistance thereto.

1,391,371. COMBINED COVER AND LADLE. ERNEST L. CONDON, Medway, Mass., assignor to United Soda Fountain Company, Boston, Mass., a Corporation of Massachusetts. Filed Jan. 7, 1920. Serial No. 349,898. 8 Claims. (Cl. 215—1.)

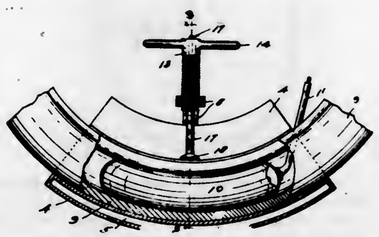


1. A cover for a receptacle having a ladle depending from its under side, said ladle comprising a shank and a bowl, and an elongated handle extending transversely across the top of the cover, the axis of the ladle shank lying in the vertical plane of said handle.

1,391,372. FILM-REEL. ANDREW J. CONNELL, College Point, N. Y., assignor, by mesne assignments, to The Central Metal Products Corporation, a Corporation of Delaware. Filed Oct. 30, 1919. Serial No. 334,429. 5 Claims. (Cl. 242—70.)

5. A sheet-metal film-reel embodying opposing sheet-metal wings, each having a series of corresponding triangular cut-out portions to form spokes and a hub portion provided with an inwardly extending ridge and corresponding axial apertures to form a central bore, a sheet-metal

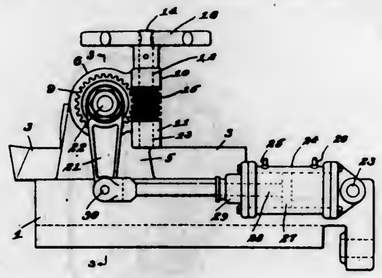
film-hub fitting over said ridge and having a series of radial flanges at each side thereof abutting against the inner



surfaces of said spokes and welded thereto and a sheet-metal machine-hub fitted in said axial aperture and having flanges abutting against the outer edges thereof.

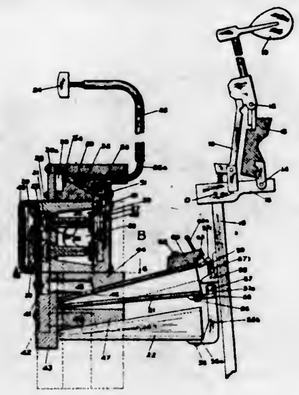
1,391,373. BRACKET FOR SPRING-BAR BUMPERS. WILLIAM G. COX, Cleveland, Ohio. Filed July 5, 1921. Serial No. 482,331. 6 Claims. (Cl. 293—55.)

4. A bracket for spring bar bumpers, comprising a pair of clamping plates having spaced clamping tongues at one end thereof and a projecting lip at the bottom of one of said members adapted to support said member upon a portion of an automobile frame, and a clamping bolt adapted to secure said parts together.



1,391,374. TIRE-PRESSURE DEVICE AND GAGE FOR VULCANIZING-MOLDS. CURLAW DUNCAN and BROUGHAM G. DUNCAN, Minneapolis, Minn. Filed Feb. 25, 1921. Serial No. 447,900. 10 Claims. (Cl. 18—45.)

1. In a vulcanizing apparatus, the combination with a mold, of a pressure gage operative to put a predetermined pressure on a tire in the mold.

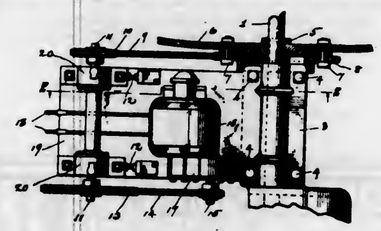


1,391,375. TOOL-HOLDER. ERNEST L. FICKETT and VLADIMIR CHARUSHIN, Fitchburg, Mass., assignors to Manning, Maxwell & Moore, Inc., New York, N. Y., a Corporation of New Jersey. Filed Sept. 30, 1920. Serial No. 413,722. 24 Claims. (Cl. 82—36.)

2. In combination in a tool holder, a support, a fixed clamping jaw therein, a shaft journaled to turn relatively to said support, a cam carried by said shaft, a movable jaw suspended from said cam and actuable

thereby, and power means mounted upon said support for turning said shaft.

1,391,376. PLAYER-PIANO. STANLEY I. FISHER, Chester, Pa., assignor to The Pratt Read Player Action Company, Deep River, Conn., a Corporation of Connecticut. Filed Apr. 24, 1918. Serial No. 230,417. 42 Claims. (Cl. 84—50.)

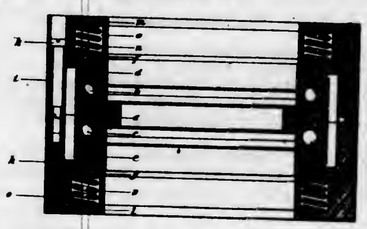


1. In a pneumatic player action, a wind chest having valve chambers in the front part of the same connected by ports with the main tension chamber and atmosphere, double valves in said valve chambers to control said ports, a cap plate applied to the front of the chest and provided with valve ports for coöperation with one or more of said valves but mounted independently of the same, separate horizontally movable actuators for said valves in said chest, said chest being provided at the rear with diaphragm chambers, diaphragms in the diaphragm chambers for operating said actuators, the latter being arranged to support and guide the corresponding valves, and pneumatics beneath the chest in communication with said valve chambers.

1,391,377. CURRENT-GENERATING PLANT. OLIVER P. FRITCHLE, Denver, Colo. Filed Nov. 15, 1920. Serial No. 424,274. 4 Claims. (Cl. 290—55.)

1. A current generating plant comprising a wind wheel, a shaft therefor, upper and lower bearing plates secured by bolts, and a driving member secured to the wheel, in

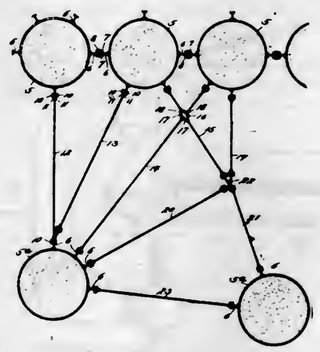
combination with a current generating plant comprising a dynamo-electric generator and gearing by which it is



driven from said driving member, said generator and gearing being secured to a rigid plate having apertures through which are passed the bearing bolts.

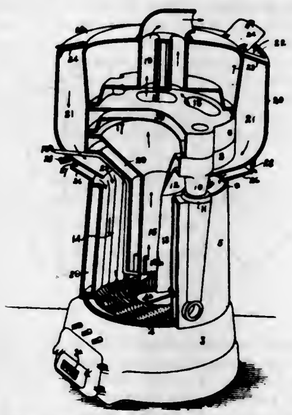
1,391,378. COMBINED NUT AND BOLT LOCK. ALANSON D. GASTON, Washington, D. C. Filed Sept. 26, 1918. Serial No. 255,840. 10 Claims. (Cl. 151—35.)

5. A nut lock in the form of a perforated concavo convex metal washer having a series of slots entering from the outer edge and a series of slots entering from an inner edge adapted to engage the surface of a bolt, the metal of the outer edge between the slots being laterally offset to form a tooth engaging part, substantially as described.



1,391,379. BALL-BEARING. MAX GOHLKE, Pankow, near Berlin, Germany. Filed May 23, 1919. Serial No. 299,376. 2 Claims. (Cl. 64—49.)

2. The combination, with a ball thrust bearing unit comprising two rows of balls, an interposed runner ring, an outer race ring associated with each of said rows, and a bearing ring engaging each race ring; of a two-part casing wherein the bearing unit is rotatably inclosed, each of the casing parts being formed with a series of inwardly-opening internal sockets, and said parts being also formed with series of registering screw holes; springs fitted in said sockets and bearing at their exposed ends against the bearing rings; and screws adjustably engaged in the registering screw holes to fasten the casing parts together and to regulate the tension of the springs.

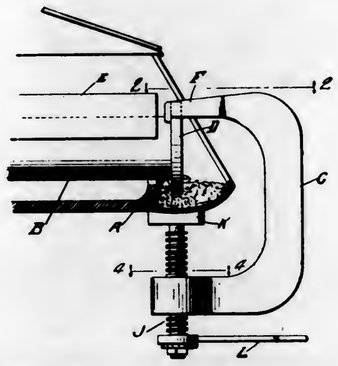


1,391,380. DEEP-SEA CONSTRUCTION. WILHELM GRIESSER, Joplin, Mo., assignor to William C. Griesser, Pittsburgh, Pa. Filed May 15, 1920. Serial No. 381,538. 10 Claims. (Cl. 61—46.)

1. A deep sea construction comprising tubular units having closed bottoms for receiving a filling of material of sufficient weight to sink said units until the closed bottoms thereof rest upon the sea bottom, means extending between said units having longitudinal slidable connections therewith, whereby said tubular units may

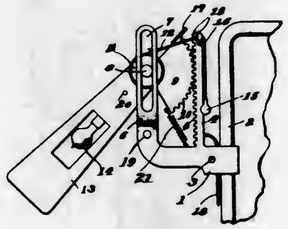
have an automatic settling movement with relation to said means, and tubular sections of different widths applied to the upper ends of the tubular units to give the latter a uniform top level.

1,391,381. SECTIONAL BOILER. ELBERT O. HASKINS, Rutherford, N. J., assignor to Richmond Radiator Company, a Corporation of Delaware. Filed July 18, 1917. Serial No. 181,190. 13 Claims. (Cl. 122—218.)



6. In a sectional boiler, the combination with a fire box section, a water section and a dome section superposed in order, of a combustion chamber section supported by said fire box section and provided with an extension depending into the fire box section and spaced therefrom to form a fire space, means for supplying fuel to the top of said space, a magazine section surrounding said water section and said dome section and opening into said fire space, said magazine section provided with a fuel supplying opening and a door for closing said opening to prevent the combustion level of the fuel from raising up into the magazine.

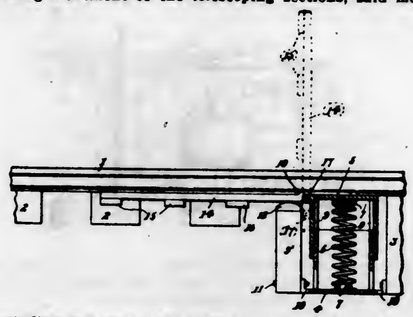
1,391,382. RAILWAY-JOURNAL-BOX JACK. JAMES L. HAWLEY, Savannah, Ga., assignor of one-half to John M. Hawley, Blythewood, S. C. Filed Feb. 19, 1921. Serial No. 446,422. 1 Claim. (Cl. 254—34.)



A railway journal box jack comprising a clamp having a yoke and pair of integral jaw members extending at

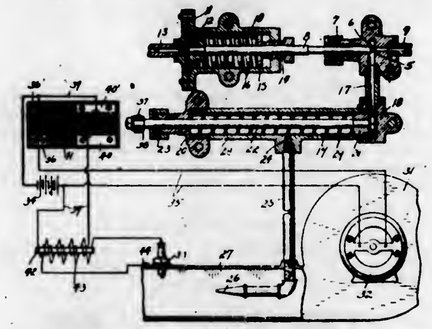
substantially right angles with the yoke and in angular relationship with each other whereby they may engage the end of the axle at two separated points, and means

on the lower portion of said yoke adapted to engage the journal box for raising and lowering it with respect to the axle.



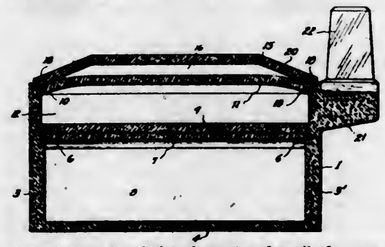
1,391,383. SIGNAL FOR AUTOS. WILLIAM M. HOWELL, Youngstown, Ohio. Filed Oct. 29, 1920. Serial No. 420,479. 1 Claim. (Cl. 116—54.)

A direction indicator, comprising a supporting bracket adapted to be clamped upon an upright of the windshield of a motor vehicle, two arms extending vertically upright from said bracket, one carrying gear teeth, the other being bifurcated, and carrying vertical slots in the bifurcated arms, a drum journaled to ride in said slots, said drum carrying a rigid gear sector adapted to mesh with said gear teeth, and a rigid semaphore arm, a cable wound upon said drum, an operating knob at the end of said cable, whereby upon a pull on said cable the drum is caused to ride in said slots and the semaphore horizontally displayed.



1,391,384. CATTLE-GUARD FOR RAILROAD-CROSSINGS. JOE IHNAT, Nashua, Mont. Filed Jan. 22, 1921. Serial No. 439,210. 1 Claim. (Cl. 39—19.)

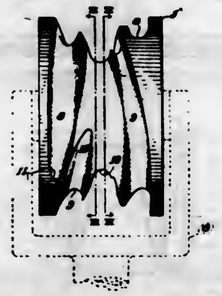
A cattle guard for railroad crossings comprising a resilient trip device formed of telescoping sections of U-shape in cross section, interlocking connections between the telescoping sections including cut-out portions in the side walls of the lower stationary section for receiving struck-out angularly bent flanges of the side walls of the upper sliding section, pairs of lugs carried by the upper edge of one section, a guard frame pivotally mounted in said lugs and means disposed beneath said guard frame to move the same from a horizontal to a perpendicular position upon sliding movement of the telescoping sections, said means



including a transverse bar fixed to one of the telescoping sections.

1,391,385. FUEL-BURNING APPARATUS. ERA C. JACOBSEN, Oak Park, Ill., assignor, by mesne assignments, to American Steam Truck Company, Chicago, Ill., a Corporation of Delaware. Filed Mar. 29, 1920, Serial No. 369,800. Renewed May 9, 1921. Serial No. 468,046. 10 Claims. (Cl. 158—28.)

12 Fuel burning apparatus comprising a blower circuit; an ignition circuit; contacts in said circuits; a switch member; and a member operable by fuel under pressure, connected with said switch member and adapted to move the latter from one of said contacts to the other.

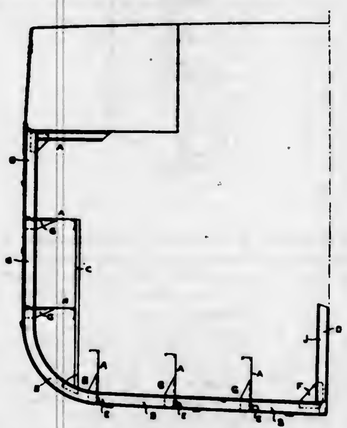


1,391,386. BURIAL-VAULT. THOMAS F. JETER, Snohomish, Wash. Filed May 6, 1920. Serial No. 379,201. 2 Claims. (Cl. 72—7.)

1. A burial vault of the character described comprising a sealed casket chamber, a dead air chamber above the casket chamber and a ventilated air space above the dead air chamber.

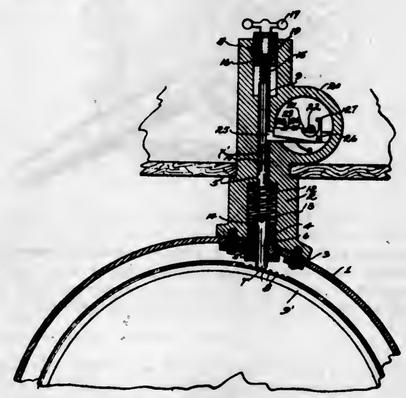
1,391,387. TROLLEY-FINDER. LUDWIK KARANDYSZEWSKI, Schenectady, N. Y. Filed May 5, 1921. Serial No. 467,135. 1 Claim. (Cl. 191—75.)

A trolley finder in the form of a wheel having a central annular groove about the periphery thereof and formed with a pair of overlapping spiral cam grooves at each side of said annular groove, the cam grooves at one side being of a pitch opposite to the pitch of those at the other side, and grooves extending from different points on the periphery of the wheel adjacent one side of the latter



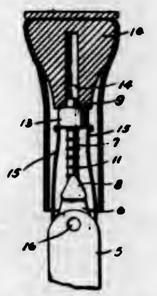
completing but a one-half circle around the periphery of the wheel where they terminate in communication with said central groove, the spiral grooves at each side of the annular groove being in overlapping relation and within the same radial plane.

1,391,388. APPARATUS FOR AUTOMATICALLY PAINTING ARTICLES IN BULK. JULIUS E. KARL, Peoria, Ill. Filed Oct. 4, 1918. Serial No. 256,894. 15 Claims. (Cl. 91—44.)



1. In an apparatus for the purposes described, in combination, a wheeled carriage for containing articles to be treated, a track arranged whereby the said carriage in passing over it will be tipped in all directions, and means for conveying a treating material and discharging it upon said articles.

1,391,389. CONSTRUCTION OF SHIPS. JAMES FOSTER KING, Glasgow, Scotland. Filed Oct. 6, 1920. Serial No. 415,154. 2 Claims. (Cl. 114—79.)

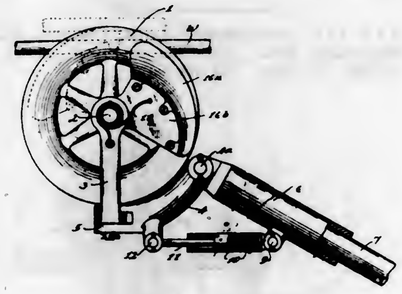


1. An oil-tank ship comprising in combination, a hull, a plurality of exceptionally large widely spaced longitudinal web frames arranged over the girth of the hull below the lowest deck or tier of beams, and a plurality of relatively small longitudinally-spaced transverse frames shaped to conform to the contour of the ship and connected to said longitudinal web frames, whereby floors or their equivalent wide spaced bottom transverses may be dispensed with.

1,391,390. AUTOMOBILE-LOCK. CHARLES KNAPP, Minneapolis, Minn. Filed Oct. 18, 1919. Serial No. 332,080. 1 Claim. (Cl. 70—90.)

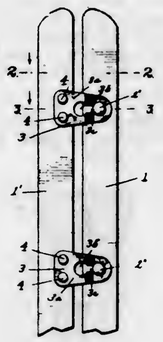
In an automobile lock the combination of a casing, a lock bolt slidably mounted in said casing, a spring for holding said lock bolt in an extended position, a shaft joined to said lock bolt, but allowing a definite slidable movement in relation thereto, rotatable means carried by said casing for lifting said shaft and thereby said lock bolt, a lock including a bolt positioned in said casing, said bolt being engageable with said shaft, and means in said lock for withdrawing said bolt from engagement with said shaft.

1,391,391. SHOE-PROTECTOR. WILLIAM H. KOENEN, St. Louis, Mo. Filed Nov. 15, 1920. Serial No. 424,093. 3 Claims. (Cl. 12—126.)



1. A shoe protector comprising a last and a last support, a pin carried by the last support, springs carried by the last support, and a spreader mounted on said pin, said spreader operating when it is depressed to force apart the free ends of the springs and to cause said springs to clear the bottom of the last and pass along the sides thereof.

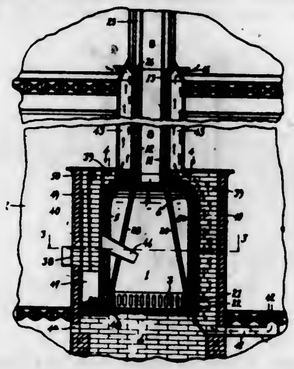
1,391,392. TROLLEY-RESTORING MECHANISM. GEORGE A. LAFONTAINE, Los Angeles, Calif. Filed Nov. 7, 1918. Serial No. 262,391. 1 Claim. (Cl. 191—60.)



In a device of the character described, in combination, a trolley pole and trolley wheel, a yoke pivotally held on said

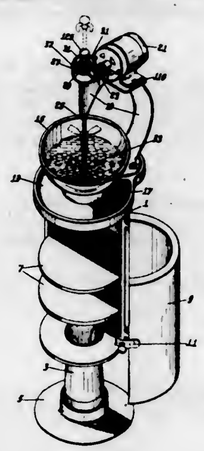
pole and capable of movement about a horizontal axis, a swivel wheel support pivoted to said yoke and having a vertical axis for permitting the turning of said wheel corresponding to a bend in the trolley wire, a cylinder pivotally

connected with said pole, a plunger pivotally connected with said yoke and slidable in said cylinder and a spring interposed between the end of said plunger and said cylinder, for holding said wheel in operating position.



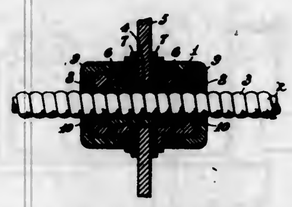
1,391,393. FRONT STEELS ON CORSETS. AUGUSTE JEAN LECOUTRE, Worcester, Mass., assignor to Royal Worcester Corset Co., Worcester, Mass., a Corporation of Massachusetts. Filed May 27, 1919. Serial No. 300,075. 2 Claims. (Cl. 24—222.)

2. The combination with corset steels, of a stud, and a clasp, the clasp having inclines on its outer surface for pressing the bases together when engaged, and having its inner surface extending all in one plane, to prevent improper engagement of the stud and clasp.



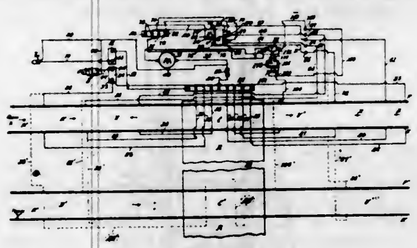
1,391,394. HEATING SYSTEM. JOSEPH C. LOYER, Detroit, Mich. Filed July 24, 1918. Serial No. 246,481. 8 Claims. (Cl. 126—132.)

1. In a heating system for buildings, the combination of a fire box formed of hollow metal walls providing water reservoirs converging at the top, the top having an opening, a smoke flue connected with the said opening, water reservoirs provided about the smoke flue and opening into the converging ends of the said hollow fire box walls, tubes on each side of the interior of the fire box, the tubes on one side being connected with the bottom of the hollow side walls and extending upward and connecting with the same side directly below the connection



with the flue reservoir on that side, the pipes on opposite sides of the box converging at the top, and a grate at the bottom of the said fire box.

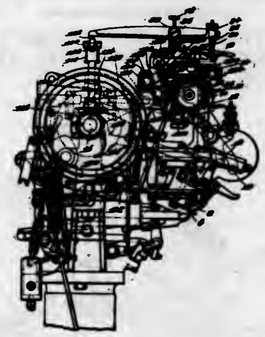
1,391,395. APPARATUS FOR HANDLING STAIN. THOMAS LUND, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Feb. 18, 1918. Serial No. 217,882. 2 Claims. (Cl. 259—134.)



1. An apparatus for stirring stain comprising a table for supporting the liquid to be stirred, a motor carrying standard secured to the table and having an arm overhanging the liquid, a cup-shaped oil retaining casing carried by the overhanging arm, a worm gear and a driving worm rotatable within the casing, there being vertically alined bores through the overhanging arm and the worm gear, a stirrer having a stem slidable through the bores, a pair of fingers on the stem extending outwardly and downwardly and with rounded ends, and a pair of widely spaced projections formed on the gear whereby the stem can be readily placed in driving engagement with the gear upon downward movement of the stem.

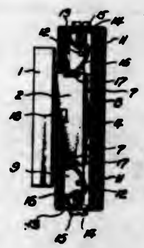
1,391,396. BUSHING. ADNAH MCMURTRIE, New York, N. Y. Filed July 5, 1918. Serial No. 243,306. 2 Claims. (Cl. 286—16.)

1. A bushing of the class described, comprising a central nipple threaded exteriorly, a plurality of intermediate nipples threaded interiorly and seated upon said central nipple toward the respective ends thereof, and a plurality of outer nipples screwed upon said intermediate nipples, in combination with a plurality of gaskets interposed between said outer and intermediate nipples in position to be constricted into water-tight engagement with an axially arranged conduit member passing through an aperture in a wall, and gaskets surrounding said central nipple in position to be forced against the opposite sides of said wall, surrounding said aperture, by engagement of said intermediate nipples with said gaskets.



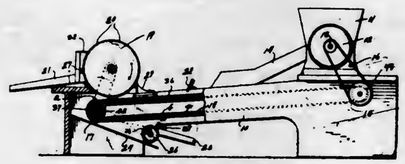
1,391,397. AUTOMATIC RAILROAD-GATE. FRANK MAJCHROWICZ, Cleveland, Ohio. Filed Apr. 21, 1921. Serial No. 463,201. 5 Claims. (Cl. 246—129.)

1. A railway safety device for highway crossings comprising an oscillating gate adapted for movement across the highway, an electric lamp upon the gate, an electrical bell adjacent the gate, an electric circuit for the lamp adapted for automatic closing when the gate is closed, an insulated track section over which a train is adapted to pass before reaching the crossing, electrical connections for the rails of said section and said bell, an automatic switch in the bell circuit normally open when the gate is open, a second insulated track section between the bell section of track and the highway, an operating motor for the gate in circuit with said second track section adapted for closing the gate when the circuit between the rails of said second track section is closed by a train positioned thereon, an electrical cut-out for the motor, an insulated track section across the highway with the rails thereof electrically connected to the cut out adapted upon closing the circuit between the rails by a train upon the crossing for actuating said cut out whereby the circuits for the opening and closing track sections is rendered inoperative.



1,391,398. SEWING-MACHINE. WILLIAM C. MEYER, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Original application filed May 6, 1916, Serial No. 95,893. Divided and this application filed Sept. 6, 1918. Serial No. 252,969. 11 Claims. (Cl. 112—59.)

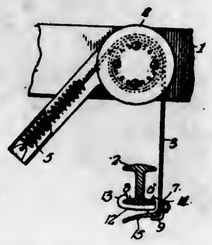
1. A tension device for sewing machines having, in combination, a tension wheel, a brake for the tension wheel, a brake actuating spring, operative connections between the spring and the brake, and means for automatically adjusting relatively certain of said connections



to cause the spring to act with a pressure which is uniform for any given speed of the machine regardless of wear on the parts of the brake.

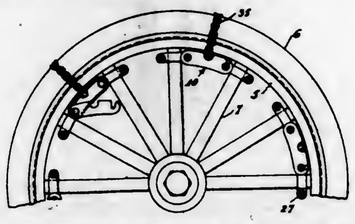
1,391,399. FUSE. BENJAMIN L. MOSS, Detroit, Mich. Filed Mar. 22, 1920. Serial No. 367,921. 10 Claims. (Cl. 200—131.)

1. In a cartridge fuse, a holder having a three walled groove, and a bowed fuse in said holder groove and protruding therefrom.



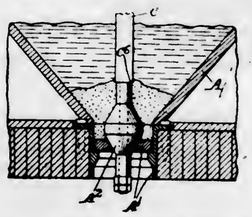
1,391,400. ORE-SEPARATOR. JOHN J. NEVILLE, Clifton Forge, Va. Filed June 18, 1921. Serial No. 478,704. 3 Claims. (Cl. 83—71.)

1. An ore separator of the character described including a supporting frame, an endless carrier traveling thereon and supporting a plurality of transversely extending electro-magnets disposed in proximity to each other and each provided with a projecting contact, a drum disposed above the path of travel of the carrier and in proximity thereto and carrying a plurality of electro-magnets mounted thereon, means for energizing the electro-magnets of the drum from a point immediately above the carrier to a point where the electro-magnets are moving downward and forward, and means for energizing the electro-magnets of the carrier from a point on the upper flight of the carrier forward of the drum to a predetermined



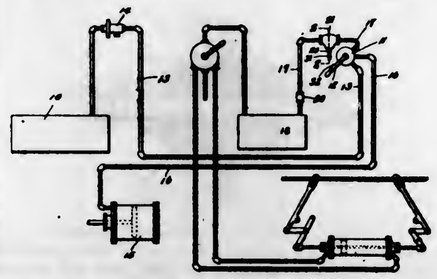
point on the lower flight of the carrier to thereby cause magnetic particles not acted upon by the drum to be held to the carrier for a predetermined distance as it traverses its lower flight.

1,391,401. CLAMPING DEVICE. JAMES C. NICHOLS, Berwyn, and ELMER RYDER, Argo, Ill. Filed Sept. 3, 1920. Serial No. 407,956. 2 Claims. (Cl. 267—10.)



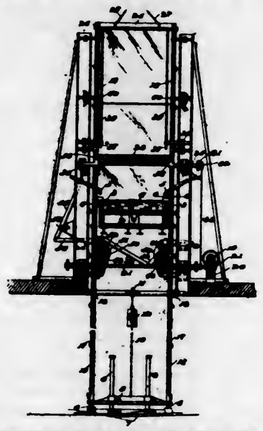
1. The combination with a strap and a member, of means for clamping the strap to said member, comprising inner and outer plates adapted to receive the strap between them, the inner plate having a flange to engage over said member, and clamp bolts extending through said plates on opposite sides of the strap and having hooked ends to engage over that edge of the member opposite to said plates.

1,391,402. WHEEL-CHAIN FOR VEHICLES. JAMES POWERS, New York, N. Y. Filed Sept. 5, 1919. Serial No. 321,912. 7 Claims. (Cl. 152—14.)



1. In combination, a wheel having a pocket thereon; and a chain secured to said wheel and adapted to be passed around the wheel tire or stored in said pocket, one end of said chain being anchored against circumferential displacement relative to the wheel.

1,391,403. HUTCH-VALVE. AXEL G. J. RAPP, Chicago, Ill., assignor to Link-Belt Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 27, 1919. Serial No. 273,278. 5 Claims. (Cl. 137—21.)

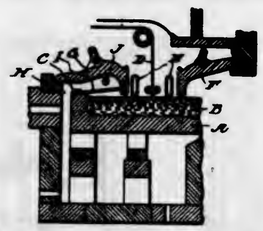


1. A hutch valve assembly, comprising a tubular socket, a shoulder therein, a flat apertured valve plate resting loosely upon the shoulder, a valve member adapted to reciprocate toward and from the plate to open and close the aperture, and a part associated with said member and adapted at all times to project beyond the plate.

1,391,404. AIR-BRAKE APPARATUS. JOHN M. READEY, St. Louis, Mo. Filed July 19, 1920. Serial No. 397,281. 8 Claims. (Cl. 303—58.)

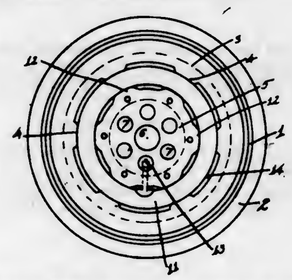
1. The combination with an air brake apparatus including an engineer's valve, of a container connected to the exhaust port of said engineer's valve, a valve for controlling the passage of exhaust fluid pressure from the engineer's valve to said container which valve is adapted to be opened by movement of the handle of the engineer's valve to permit the exhaust of fluid pressure to atmosphere and means under control of the pressure within the container for controlling the operation of said valve.

1,391,405. SHEET-GLASS-DRAWING MACHINE. CLARENCE A. RHONEMUS, Charleston, W. Va., assignor to The Libbey-Owens Sheet Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Apr. 19, 1919. Serial No. 291,214. 14 Claims. (Cl. 49—17.)



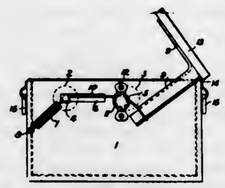
1. In a sheet glass drawing mechanism, the combination of a receptacle containing molten glass, with a series of vertically-moving width-maintaining devices on opposite sides of said receptacle removably engaging the edges of the sheet at the formative point.

12. In a sheet glass drawing mechanism, the combination of a pot containing a mass of molten glass and having oppositely-disposed discharge portions below the glass level, and vertically moving longitudinally slotted tubes having transverse openings therein, with transverse glass scoring mechanism entering said opening, and longitudinal glass scoring devices.



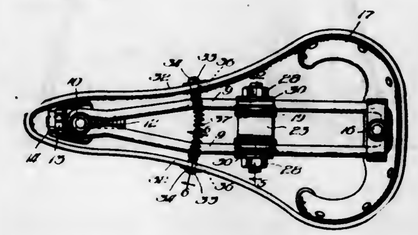
1,391,406. SHEET-GLASS-DRAWING APPARATUS. CLARENCE A. RHONEMUS, Charleston, W. Va., assignor to The Libbey-Owens Sheet Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Dec. 30, 1919. Serial No. 348,319. 3 Claims. (Cl. 49—17.)

1. In a sheet glass drawing apparatus, a receptacle for molten glass from which the sheet is drawn, a cooler for the sheet adjacent the drawing point, gaseous heating means above the molten glass for heating the surface glass,



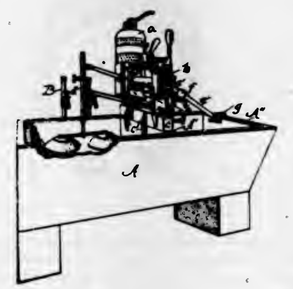
and a shield between the heating means and the glass, transmitting the heat downwardly therethrough, but preventing direct contact of the hot gases with the cooler.

1,391,407. PNEUMATIC WHEEL. JOSEPH W. RICKETTS, Detroit, Mich. Filed Feb. 3, 1917. Serial No. 146,361. 1 Claim. (Cl. 152—46.)



In a pneumatic wheel, a felly carrying a tire, a central hub portion, the felly having a part extending toward the hub and the hub being of the same width and in the same plane as the inwardly extending portion of the felly, an inflatable tube circular in cross section between the felly and hub portions, a valve stem for the tube, the inner periphery of the felly and the outer periphery of the hub providing a seat for the tube each being provided with corresponding recesses and pairs in radial alinement, plates secured to opposite sides of the hub portion and engaging the felly, the plates being centrally apertured and exposing the hub and being formed with annular recesses inclosing the tube space between the said felly and hub, the said hub having a central aperture for an axle and a second aperture extending transversely therethrough at a distance from the center of the hub, said hub having a radial aperture extending between the second aperture and a recess in the tube seat for reception of the valve stem.

1,391,408. WRINGER FOR MOPS, FLOOR-CLOTHS, AND THE LIKE. SAM WATSON ROBBINS, Bristol, England. Filed Oct. 6, 1920. Serial No. 415,086. 1 Claim. (Cl. 15—12.)

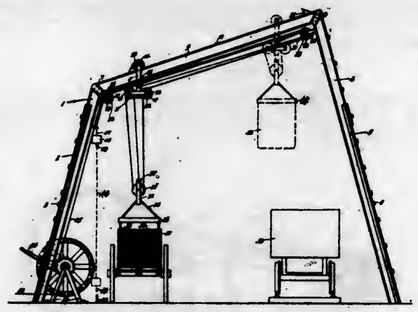


A wringer, comprising a receptacle, a pedal pivotally secured to the upper edge of said receptacle and adapted to swing inwardly over the receptacle when depressed, thereby to form a cover for said receptacle, a pair of rollers mounted for rotation within the receptacle, one of said rollers being slidable toward the other, a toggle connection between said pedal and slidable roller for sliding the same in one direction, and a pair of springs disposed outside of the receptacle and automatically operable on removal of pressure from said pedal for sliding the roller in the opposite direction and simultaneously returning the pedal to its initial position.

1,391,409. SADDLE. HENRY T. ROBERTS, New York, N. Y. Filed July 3, 1919. Serial No. 308,393. 3 Claims. (Cl. 208—15.)

1. A one piece truss for a saddle consisting of a continuous member of loop form closed at its ends, the side members thereof extending substantially parallel and enlarged midway their length to form clamping buttons, for the purpose set forth.

1,391,410. WASHING-MACHINE ATTACHMENT. FRANK E. ROBERTSON, Cleveland, Ohio, assignor to The P. A. Geier Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 16, 1918. Serial No. 235,005. 7 Claims. (Cl. 68—19.)



1. In mechanism of the class described, the combination with a stationary tub structure, of a washing machine and its operating motor, and a relatively resilient intermediate member positioned between the tub structure and the washing machine and firmly secured to each, substantially as set forth.

1,391,411. HOISTING APPARATUS. AVELINO FERNANDEZ ROCES, Manzanillo, Cuba. Filed Oct. 30, 1919. Serial No. 334,547. 2 Claims. (Cl. 212—87.)
